"The best history of American literature thus far written by anybody."—*The Dial.*

A Literary History of America

BY BARRETT WENDELL

PROFESSOR OF ENGLISH LITERATURE IN HARVARD UNIVERSITY. Pp. xi, 574, 8vo, $3.00.

From "The Dial."

"Space forbids us to continue the subject any farther, but enough has been said to show how fruitful a formula has been applied by Professor Wendell to the analysis of our literary past. It remains to add that he has produced incomparably the best history of American literature thus far written by anybody, a history that is searching in its method and profound in its judgments, on the one hand, and, on the other, singularly attractive in the manner of its presentation."

SPECIAL CHAPTERS ON

Mather	Bryant
Edwards	Emerson
Franklin	Whittier
Brown	Longfellow
Irving	Lowell
Cooper	Holmes
Poe	Whitman

From the "Boston Transcript."

"The best book that its author has yet produced. . . . We must admit that Mr. Wendell has made a calm and particularly well-studied survey of the whole field, and that his view, when all allowance is made, is a wonderfully clear-sighted one."

From "The Outlook."

"One of the most elaborate and detailed studies of American literature which has yet appeared, covering every phase of its development down to the present time, with a concluding chapter which interprets the spirit and genius of that literature."

Judge Grant's "Unleavened Bread" on its appearance eight months ago was acknowledged as the most noteworthy novel dealing with a purely American theme of contemporary interest thus far published. Since then the novel has attracted more and more serious attention. It is now selling in its 43d thousand.

Unleavened Bread

By ROBERT GRANT. 12mo, $1.50.

William Dean Howells in the Easy Chair of "Harper's Magazine":

"Mr. Robert Grant, in his 'Unleavened Bread,' has made a success worthy of the signal quality of one of the truest studies of our civilization."

Prof. Harry Thurston Peck, in "The Bookman":

". . . '*Unleavened Bread*' has the rare merit of growing more and more absorbingly interesting as it nears the end. No casual review can do justice to the admirable skill Mr. Grant has shown in the development and conduct of the story, nor can we give an adequate idea of the point, the keenness and the pungency with which he has hit off a thousand little things, each of which, in itself, is of no particular importance, but all of which when taken together make the book a marvellous picture of American life to-day. The social part of it and the political part of it deserve equal praise; and while the local color—whether the scene be Benham or New York or Washington—is perfect, the story as a whole is free from localism and is absolutely national."

The Nation.

NEW YORK, THURSDAY, JANUARY 3, 1901.

The Week.

The announcement is made from both Copenhagen and Washington that President McKinley has bought the Danish West India islands for the sum of $3,216,000, subject to the appropriation of the money by Congress. As this step has been taken by negotiation with a foreign government, it is a treaty and remains to be ratified by the Senate. It is reported that Mr. Lodge, at whose initiative the purchase has been made, has counted noses and is able to assure the President that the necessary two-thirds vote can be obtained. This was Mr. Seward's belief when he negotiated the purchase of the islands of St. Thomas and St. John in 1867, but it turned out otherwise. It may turn out otherwise now. Circumstances are not favorable just now for the acquisition of colonies. The Porto Rico experiment is not a success. The inhabitants are in a state of desperate poverty, if not of starvation. Their political status is undetermined. A decision of the Supreme Court involving the questions of free trade and of citizenship is pending. Even the most rampant Expansionist may well pause while such momentous issues are undetermined, for of course we do not want to take more colonies until we know what we are going to do with those we now have.

Moreover, we ought to have passed the stage of expansion mania which the Spanish war brought on. It has cost us a vast sum of money and a pitiful load of blood-guiltiness, and we cannot yet see the end of either the one or the other. May we not ask what use we can make of these Danish islands if we have them? If lodgment in the West Indies for naval purposes is sought for, we have that already in Porto Rico. The port of St. Thomas may be more favorable in some respects, but it is more unfavorable in others, being notoriously subject to earthquakes. It was nearly ruined by one shortly after Mr. Seward's treaty for its purchase was rejected. The island of St. John is worthless. That of Santa Cruz contains only 51,000 acres of land. More than nine-tenths of its inhabitants are negroes and mulattoes, and its population of all kinds has been diminishing for years. Regarded as an investment of money, it will be a dead loss, and worse. The United States could not afford to take the islands as a commercial venture if offered to us for nothing. Nobody can form a perception of the penury of those little bits of islands without visiting them. The average wages of laboring men are only twenty cents a day throughout the group, and employment is not steady even at that rate. It is to be hoped that Congress will refuse to annex any more poorhouses to our domain without counting their future annual cost.

The Administration's plan to bend Cuba to its wishes is gradually becoming apparent. It is a compound of delay and commercial pressure. Nothing is to be decided that can possibly be adjourned from day to day. Cubans ask in vain what the policy of our Government is. No clear and positive outline of it has been given or will be given. Things are to be allowed to drift. The longer the Constitutional Convention sits, the sharper the factions which develop in it, the better will Washington be pleased. It all serves to waste time and exhaust the patience of the Cubans. This is our *mañana* policy, coolly borrowed from Spain. Settle nothing, postpone everything, and trust that time will give you all that you desire. With this smiling delay goes the method of insinuating that annexation will be greatly to Cuba's money profit. Much is made of the one great market for Cuban products—the United States—which Secretary Root intimated might be lost to Cuba if independent. Some sugar-planters of Matanzas have already taken the alarm, and have asked Gen. Wood to see that the American duties on sugar were made less burdensome. He told them he thought their demands just, and that he would forward them to Washington. From there they will be told that if the Convention does what is "right," all will be arranged. Our information is, however, that the majority of the Convention will withstand both covert threats and indirect bribes, and adopt a plan of thoroughly independent government for Cuba.

Wayne MacVeagh is another of those prominent Republicans who voted for McKinley in order to defeat Bryanism, but who reserved the right to fight the policy of Imperialism more vigorously than ever after the reëlection of the President. Mr. MacVeagh accents the conclusions reached by Froude, that if there be one lesson which history clearly teaches, it is that free nations cannot govern subject provinces; and that if such a nation is unable or unwilling to let its dependencies share its own Constitution, the Constitution itself will fall in pieces from mere incompetence for its duties. The ex-Attorney-General is willing to admit that the President has done what he believed to be his duty in trying to suppress resistance to the authority of the United States in the Philippines, but he adds:

"That attempt at suppression has been going on for nearly two years, and has inflicted a vast amount of slaughter, disease, and misery on our own sons, as well as on those who resist our authority, and I cannot understand why anybody, whether an Imperialist or an Anti-Imperialist, should not rejoice at seeing a stop put to further slaughter, a general amnesty proclaimed, and the Philippine Islands, for the present at least, granted the same form of Territorial government as we have just established in the Sandwich Islands, and as our Territories have always enjoyed."

The most striking thing about such a deliverance as this from ex-Attorney-General MacVeagh, as about previous ones in much the same line from Congressman McCall and ex-President Harrison, is that they provoke scarcely any criticism from the Republican press. The most loyal supporters of the Administration are coming to recognize that it cannot resist the force of such arguments from such authorities.

The "declaratory statement" which Minister Conger reports that he filed along with his signature to the Chinese Joint Note, has not been cabled in detail, but it appears to be a nobly Pickwickian document. It practically says, if the accounts of it may be believed, that the President authorized Mr. Conger to sign only against his will and with many misgivings, and, besides, notifies China and the other Powers that Mr. McKinley has not the Constitutional power to do what the Note says he will, even if he wanted to, which he doesn't. This, we believe, is called diplomacy. By any other name it would appear as foolish. The Chinese Emperor may conclude to take a leaf out of American diplomatic methods, and accept the Note in the same way in which our Minister signed it. Following our example, he could assent to the demands made upon him, and then say, as the old French Legitimist said to Niebuhr about the Charte, that it had been granted, but that, of course, nobody expected the King to observe it.

Possibly the way out of the tangle of treaty and legislation respecting an interoceanic canal may yet be found in the completion of the Panama Canal. At the annual meeting of the Panama Company in Paris on Thursday last, it was reported that negotiations to that end are pending between the company, the United States, and Colombia. Americans surely have every reason to hope for such a solution of the difficulty. The Panama route has just been vouched for by our own engineers as not only feasible, but on technical grounds superior to the Nicaragua location. Under the terms of its charter and existing treaties, the Panama Canal would be as wholly neutralized as if it were a natural channel of the sea. It could be finished at a saving of

6367

at least $50,000,000, as compared with the Nicaragua Canal. Here certainly is a case for American "horse-sense" and French lucidity to find a meeting-place and make a friendly agreement. If we refuse a fair offer, and proceed to build and fortify our own canal, what will happen was clearly intimated at Paris. The maritime nations of Europe will feel compelled to furnish funds and guarantees to the Panama Company. Then we should have two canals, neither of which could pay; and our sly little military short cut, for our own exclusive use in time of war, would be paralleled and made perfectly vain.

Notwithstanding the fact that there has been a strong and well-paid lobby at Washington, known and read of all men working for the Ship-Subsidy Bill during the past two years, many persons have been persuaded that the foreign steamship lines have raised a large sum of money for the purpose of defeating the bill, that they also have had agents at work in Washington, and that they have paid money to the Reform Club and to newspapers to influence public opinion. No doubt this incorrect notion has been spread abroad by Hanna, Griscom, and Smith. At all events, it has gone abroad. Fortunately, there is one way to settle the question definitely and to determine who and what are the lobby influences at work on the Ship-Subsidy Bill. Congress itself can investigate this matter through a committee. It can summon and interrogate the principal agents of the foreign steamship lines. They are all, we believe, American citizens, and are amenable to process, but if any should seek to evade process, suspicion would justly fall upon them. We presume that our suggestion will fall upon deaf ears. We do not believe that Mr. Hanna wants any authentic information on this subject. His purpose can be best accomplished by throwing out hints and innuendoes; but if he really wants to know the facts about the lobby pro and con, the means for acquiring them are quite within his reach.

Congressman Bailey of Kansas is a farmer, but he made a very strong speech against the Grout bill for the suppression of oleomargarine. In the first place he exposed the false pretence that agriculture is specially interested in the fight against oleomargarine. The latter article is composed of the fat of cattle and swine, and the oil of cotton seed, all three ingredients being products of agriculture. Who, then, are the people who are making such a deparate push against oleomargarine? They are chiefly those who manage creameries. There are good creameries and bad creameries, and Mr. Bailey knows both kinds. One of the latter, situated at Hutchinson, Kansas, undertakes the renovation of miscellaneous butter. The stuff comes in from the surrounding country at the rate of about 500 pounds per day. It is made by farmers' wives and carried to the country merchants, who dump the sweet and rancid indiscriminately in barrels which they forward to the creamery from time to time. There it is worked over with soda and rinsed off, salted, colored yellow, printed, and put on the market as Creamery No. 2. "In this same manner," says Mr. Bailey, "the renovating or processing of butter is carried on all over our country." The point of this is that the Grout bill, while professing to protect the public against impure and deleterious compounds, really aims to suppress and keep out of the market the only article which is made under Government inspection and must necessarily be pure. The factories where rancid butter is worked over, doctored, drugged, and turned out as Creamery No. 2 are not interfered with.

The investigations of the Booz Court of Inquiry developed from day to day more and more discreditable facts as to West Point hazing methods. It was bad enough that cadets should confess that their perverted system of cadet "honor" makes them consider themselves superior to regulations and oaths, but on Friday there were also brought out authenticated cases of downright brutality. Cadet MacArthur has the reputation of being one of the most promising young men at West Point, having ability and industry. The only possible reason for hazing him until he fell into convulsions was the fact that his father is commander of 70,000 troops in the Philippines. It is useless in the face of such occurrences as have already been related to talk of the desirability of a "little" hazing to take the freshness out of newly arrived cadets. No set of young men have ever been found at any institution who could be trusted to see that the process stopped at the right time. It has inevitably developed into brutality wherever tried. If conclusive evidence of the serious ill-treatment of Cadet Booz has not been brought out by the Board of Inquiry, it is already evident that West Point's reputation has been smirched in a way to injure the standing of that institution for years to come.

Some self-gratulation is heard at the Treasury Department as a result of what is called the success of the refunding operations under the law of 1900. There was $839,000,000 of three classes of bonds, bearing interest at 3, 4, and 5 per cent. respectively, all maturing within eight years, for which the holders were authorized to receive new bonds running thirty years at 2 per cent. interest, plus a cash bonus computed on a certain basis fixed in the law. Rather more than one-half of these bonds were sent in and exchanged, and the cash bonus paid amounted to $42,000,000. The saving in interest on these bonds till the time of their maturity was about $10,000,000, and this saving forms the subject of congratulation. The fact that these bonds have to run some twenty-two years longer than the old ones is ignored. Two per cent. interest on say $450,000,000 of bonds is $9,000,000 per annum, or $180,000,000 for twenty-two years, all of which will be a dead loss if the Government should be able to pay off these bonds at or before their maturity. The loss will be in proportion to the amount that might be paid off at or near maturity. It will be remembered that Secretary Windom, in a case where a large amount of the public debt drawing 6 per cent. interest came due, extended them, with the consent of the holders, at a lower rate of interest, not for a definite time, but during the pleasure of the United States, thus enabling the Government to pay them at par at any time. Such a method of dealing with the outstanding 3s, 4s, and 5s was entirely feasible. It was not adopted in the present case, for the reason that it was deemed best to postpone consideration of the national bank-note question to a more convenient season. If the bonds were paid off at maturity, the existing security of the bank-notes would be removed, and the necessity of providing something else to take its place would become pressing. This may have been a good reason, politically speaking. It may have been unwise to bring on too many financial questions for solution at once, or to allow them to drift. But that view does not justify the Treasury Department in treating the American people as infants by assuring them that they have made a great saving when they have actually made a loss.

Bryan has been making another speech at his home, in which he referred to the matter of his future. He said that the question whether he should ever be a candidate for office again was one which "must be determined by events," and added that "time may prove that my work is to advocate rather than to execute." This sounds as though even Bryan had been affected by the fact that, under his leadership for the second time, the Democratic party had encountered a defeat far more overwhelming than when he first ran for the Presidency. It is certainly plain that Democrats generally throughout the country have been profoundly impressed by this showing. Nothing could be clearer than the evidence that Democrats are tired of a policy which has brought the party into the contemptible position that it now occupies, and are in no mood to accept as a perpetual candidate the man who has twice led them to defeat. "An election does not change principles," was one of Mr. Bryan's remarks on Wednesday

week. But it often does settle the attitude of the nation toward principles. In 1868 the Democratic National Convention declared that "we regard the reconstruction acts (so called) of Congress, as such, as usurpations, and unconstitutional, revolutionary, and void." There was a principle for which the Democratic party stood. The election showed that the country would not accept this principle. The people declared that they accepted the reconstruction legislation as valid, and that they proposed to have the Government conducted on that theory, as it has been ever since that day. If there had been a Bryan then, he might have insisted that the party should "reaffirm the New York platform of 1868" indefinitely, and the party could have gone on getting beaten indefinitely. But there was a Tilden, and by 1876 he had succeeded in persuading a Democratic National Convention to adopt a platform declaring "our devotion to the Constitution of the United States, with its amendments universally accepted as a final settlement of the controversies that engendered civil war"; and on that platform the Democrats carried all the doubtful States, for the first time since 1856.

That was a refreshing announcement about the Governor-elect which came from Albany on Thursday—that Mr. Odell would not avail himself of the authority granted by the last Legislature to appoint a law adviser at a salary of $5,000, with an allowance of $4,000 for clerk and stenographer hire, but would call upon the Attorney-General for all opinions and for an examination of legislative measures. This is what an Attorney-General is for—in the language of the statute, not only to prosecute and defend all actions and proceedings in which the State is interested, but also to "have charge and control of all the legal business of the departments and bureaus of the State, or of any office thereof which requires the services of attorney or counsel in order to protect the interests of the State." The Attorney-General is authorized to appoint such deputies as he may deem necessary, and if a deputy is required for the special purpose of examining bills during the three months that the Legislature is in session, one can be employed for this quarter of the year at small expense. It is a piece of ridiculous extravagance to maintain an Attorney-General's department which is established to attend to the legal business of the State, and then expend $9,000 a year extra for a legal adviser to the Governor.

It is most gratifying news that the destruction of the Palisades by blasting operations has been stopped, and that a feasible project has been devised for saving these wonderful cliffs to delight future generations. Commissioners appointed by the Legislatures of New York and New Jersey last winter have been working quietly and effectively, until they have now made an agreement with all the parties concerned that there shall be no more blasting before next June, nor ever after that date if their scheme can be carried out. The $5,000 appropriated by the New Jersey Legislature was devoted to the expenses of surveys, title searches, and the like, while the $10,000 from the State Treasury of New York has been paid down to bind a bargain by which all the quarry properties will be sold for $132,500. Certain men in New York city have agreed to contribute privately $122,500, the remainder of the purchase price of these properties, provided the Legislatures of New York and New Jersey will this winter appropriate enough money to enable the joint Commission to acquire all the other property on which it has options between Fort Lee and Huyler's Landing, and a sufficient sum to construct a driveway at the base of the Palisades. The largest and most influential property-owners have agreed to give the face of the Palisades and sell the land between the base of the cliffs and the Hudson River on reasonable terms, upon the understanding that the Commissioners will try to establish an interstate park embracing all the land from the top of the steep edge of the cliffs down to the water's edge, to construct a driveway at the base of the cliffs as speedily as possible, and to have ferries connect this driveway with the driveways on the New York side of the river.

A new member of Parliament, Mr. Markham, brought a most serious matter to the attention of the Commons in connection with the troubled state of affairs in South Africa. This was, that all civil appointments of any value made by Sir Alfred Milner in the Rand or in the Orange River Colony had been given to men directly connected with the Jameson raid. Mr. Markham specified case after case, and was able, from his recent travels in South Africa and his intimate knowledge of the ins and outs of the Johannesburg conspiracy, to show how scandalous the business had often been. The Dutch can scarcely be blamed for distrusting the English good faith if they now see the Cape Government ostentatiously rewarding those whom an English court had found guilty of violating the Foreign Enlistment Act, and plotting against a friendly state. The thing is, in fact, so indefensible that the Chancellor was fain to assure the Commons that many of these unhappy appointments must have been made under a misapprehension or temporarily; at any rate, the Government would see that the blunder was righted.

Paul Leroy-Beaulieu's call for an "economic alliance" in Europe, in order to withstand the increasing pressure of American industrial competition, is a return to an ancient thesis of his. He has before advocated a European Zollverein. Being an enlightened economist, he has naturally argued for the freeing of trade from every needless fetter. It is only a new form of attack by which he now shows the industrial drag of protective tariffs. His contention is that Europe, to meet the challenge of the young giant of the West, must strip herself of all such impedimenta as interstate taxes on trade. But M. Beaulieu has against him not only the national jealousy, or ill-will, which leads France and Germany to penalize each other's commerce, but also the fact that militarism makes it necessary to scrape together every penny which taxation can possibly be made to yield. The French economist would have gone more directly to the mark if he had cried aloud for disarmament, as the only alternative to industrial decadence. Yet his confession that American "infant" industries are now driving European manufacturers to the wall, has its distinctly comic side in view of the Washington notion that our many puling infants are still in need of Government posset. An infant that has jumped out of bed and taken to beating its mother obviously requires no further coddling.

The royal commission of inquiry into the Italian Tammany, the Camorra of Naples, has pursued the dilatory methods characteristic of such bodies, but certain startling facts have already been made plain. For years past the city has kept no accounts of moneys expended. This, the defenders of the Camorra say, is presumptive proof that it has been spent honestly, or, if not quite that, it is at least time to stop an inquiry when you find that the absence of accounts makes it impossible to prove that the money has been spent dishonestly. Even more startling were the revelations of the previous life of Deputy and City Councillor Casale, the local boss, whose ill-judged suit for libel precipitated the whole investigation. Again it was the Socialist organ, *La Propaganda*, which brought the truth to light. The news is in the form of an official report made years ago by a local Prefect to Giolitti, then Prime Minister. The report stated that Casale had been dismissed from the army for breach of regulations, that he had subsequently enriched himself through ministering to the basest passions of the youth whom he corrupted. In this way he became a power in Naples—a man whose whisper could kill a score of fair reputations. The political uses of such a man became apparent to the boss of the time, De Zerbi, and it was he who undertook Casale's political education. He found an apt pupil, and this man, uneducated and grossly immoral, has for years ruled Naples by blackmail.

THE FINANCIAL YEAR.

The year 1900 has been marked by the largest merchandise export trade in American history; by much the largest shipment of manufactures; by the largest expansion ever known in our money circulation; by the greatest iron production; by the heaviest volume of trade, as measured in clearing-house exchanges; by the highest aggregate of railway earnings; by the largest total of bank loans, sustained by the largest total of cash reserves in bank. Statistics not yet officially completed will undoubtedly show American gold production in 1900 to have exceeded all precedent, and the output of mineral products generally will equally surpass every previous record. If it were possible to trace the export of American capital, in the form of floating or fixed investment on the European markets, we should have the most striking exhibit of all.

Economists have not yet thoroughly sifted out the various causes for this remarkable rise in financial prestige, culminating in the last year of the century. Many factors have combined to produce such a phenomenon, and the test of a few more years will be necessary before their relative importance can be satisfactorily weighed. The bounty of nature—accidents, in large part, of climate and weather—accounts for a good deal. No human foresight could have predicted the coincidence of a series of bountiful American grain harvests with either deficient crops or impaired storehouse supplies abroad. The European "cotton famine" of the past year, which, through the immense expansion of our cotton exports, both in volume and in value, brought the autumn's outward trade to its unprecedented height, was due to circumstances quite beyond our control. One very important test of the permanency of this trade revival will be furnished when our crops some season run short, or when agricultural production in the outside world exceeds, as it undoubtedly will, all its previous records.

But it has been the function of the year 1900 to show that other forces have been at work in the problem than those of 1880, for instance, of 1891, or even 1897—in each of which years abnormal foreign demand for American farm products gave this country an advantage over the rest of the commercial world. More than in any earlier decade of prosperity, the epoch culminating with 1900 has been marked by resolute liquidation of debt by American industry. This has been manifest in numerous directions. The paying-off of farm mortgages came first; but the wholesale redemption of our securities held abroad was only another move of the same nature. The large American corporations have followed the same lead—if not by actual redemption of debt, at least by the raising of fresh capital by new shares instead of fixed liabilities, and by using surplus revenue for improvement of property, instead of resorting to the money market. Each of these processes, considered in the abstract, might be taken as the plain dictate of common sense, but this sort of common sense is not always, perhaps not usually, witnessed in times of great prosperity. No country has been more fruitful than the United States in examples of farmers using one good harvest as a basis for wholesale borrowing to prepare for another; of railroad companies issuing bonds for every conceivable purpose, because they could be readily sold; of the country as a whole increasing its debt to foreign capital to sustain domestic speculation. More causes than one have operated in this use of the new resources to cancel old debt, but the hard experience of 1893 and 1894, when the lessons of it were finally mastered, had very much to do with the events of the subsequent half-dozen years. It is undoubtedly true that the world at large has experienced a revival of profitable industry during this period, and that in any case the United States would have had some share in the results. Our share, however, has been out of all proportion to that of other nations.

The question of the permanency of the new American position in finance may properly be judged in the light of these circumstances. One reason for the very great confidence in American finances now exhibited both at home and abroad is the visible demonstration that the country's prosperity stands on a solid basis. Where American industry is competing on equal terms with the outside world, and leading, there is little danger of any overwhelming trade reaction here. Where the West is the creditor of the East, and the East is the creditor of Europe, conditions which brought down the fabric of American finance in 1890 and 1893 have wholly ceased to exist. Whether they will exist again in the future depends on the manner in which that country makes use of its present remarkable situation. Unbridled speculation is the greatest danger which now besets it, for experience teaches that the strongest position can be impaired or reversed by a popular mania of this sort. Yet even here the inference from last year's history is that such a movement is likely to be checked in time.

THE ALL-POWERFUL SENATE.

"Resolved, that the power of the Senate has increased, is increasing, and ought to be diminished." Some such parody of the historic Parliamentary resolution concerning the English Crown might well be introduced in our House of Representatives. The facts are beyond dispute. They are now so patent that even a foreign writer like Jules Roche, discussing the jealousy shown towards the French Senate by the popular chamber, puts it down as incontrovertible that in the United States the Representatives are "almost nothing," while the American Senate is "by far the more powerful of the two houses of Congress."

See how the present legislative situation at Washington bears out this judgment. The Senate has as yet done nothing—if we except the way in which it has "done" the Hay-Pauncefote treaty. But it is expected to have the final word in everything. What form is the Army Bill to have when it goes on the statute-book? Ask the Senate. In what way will taxes be reduced? Senators alone can tell. Will there be a ship-subsidy bill, an interoceanic canal bill, an oleomargarine bill, a bill on any subject you can mention? Go to the Senate wing of the Capitol to find out. Everybody can see this clearly in the recess lull. When Congress meets again, all eyes will be upon the Senate. What it will do, or refuse to do, is the one question which all who are interested in national legislation, whether routine or extraordinary, would like to have answered. The House cuts but a small figure comparatively. It is counted on to do obediently whatever the party managers ask of it. The only real contest will be in the Senate. By comparison, indeed, the House seems, in M. Roche's words, "presque rien."

How complete a reversal of historic position this is, one perceives on recalling the fact that it was the House in which for many years our most active spirits found their favorite theatre. The Senate was long the home of theoretic statesmen—the Websters and Calhouns—who delighted in high debate about the fundamental principles of government; but it was in the House that daring tribunes made their reputations and powerfully moulded legislation. Henry Clay and John Quincy Adams, among the elders, Randall and Blaine and Carlisle and Reed, of a later day—it was the American House of Representatives which enabled them to display their peculiar talents and win their especial fame. Who that is mindful of the way in which the House, when dominated by these personalities, held the rapt attention of the nation, can fail to see that its glory has now largely departed, and been given to another—the Senate?

One reason of the transfer to the Senate of power over the legislative business of the country is, paradoxically, that the Senate is a body so poorly fitted to transact business. What we mean is this. Since the adoption of the Reed rules, the House is a legislative machine under perfect control of the majority. It registers the decisions of a party caucus with speed and accuracy. But this, curiously enough, and certainly quite beyond the intention of Mr. Reed, has had the effect of making the Senate almost su-

preme in all matters in debate between the two houses. The way it works is as follows. Senators carefully nurse along a contentious bill. They debate it interminably; they amend it to their taste; at length, after the semblance of a terrific struggle, they pass it. Then they go into conference with the House, and solemnly declare that the bill must be made law exactly as it left the Senate. To send it back again would mean to defeat it altogether. "You know we cannot close debate," the Senate conferees say to the Representatives. "You see what a fight we had to get the measure through as it stands. Now, if you want anything done at all, take the bill as we give it to you, for it will be killed if you send it back to the Senate. In the House you can put through anything you like. We in the Senate are at the mercy of obstructionists. So take it or leave it."

Of how many important bills has this been practically the history in recent years! In the matter of the Wilson Tariff Bill, of the Voorhees amendments to the repeal of the Silver-Purchase Law, of the Dingley Tariff, of the Porto Rico Bill, the Senate has compelled the House to give way. And in all cases the deciding reason has been substantially the threat of no legislation unless the Senate might dictate. In other words, party government has thorough control of the House; it has only partial control of the Senate. The "courtesy of the Senate" has prevented the adoption of the *clôture*, and has at the same time hindered the party in nominal majority from making its will effective. Senators think they have a personal and prescriptive right to shape legislation by "courtesy." "Courtesy" is more powerful than party. The reciprocity treaties, for example, are Republican party measures, if anything can be, but Republican Senators are hanging them up on personal grounds. Some Senator points out that the French treaty would affect the manufacturers of cheap jewelry in his State, and "courtesy" is appalled at the thought of taking it up against his objection. So it is hung up to dry and die.

To complete the tale, we have only to add the President's abject surrender to the Senate. In matters of legislation, in treaties, in patronage, he has no will or wish against the Senate. It finds him a dutiful recording clerk to write its commands into law, to fill out commissions for its appointees to office. No wonder that, with such a profuse flinging of power into its hands, the Senate has become the central and driving force of our national legislative machine. Its successive usurpations have been silently effected, but we see what they have come to in total. The present juncture, when the two months remaining of the session are to be taken up with so much important legislation, and when the Senate, having so far done nothing, is openly preparing to determine the form of everything, should open many eyes hitherto blinded to the increasing and undue power of our upper chamber.

A more vigorous protest, a better fight for its prerogatives, might be expected from the House of Representatives, were it not for one thing. Every Representative hopes in his heart to be Senator one day, and, therefore, thinks twice before trying to clip the wings of power which he may come to exercise himself. But the abuse is getting too obvious, the balance of legislative power too seriously disturbed. We cannot go on much longer letting all our great public measures be moulded in secret by men who do not even acknowledge the obligation of party, much less national interest, and who insist upon shaping or misshaping laws in accordance with their own personal aims, or those of the special interests they represent. The House will have to make a stand, and we hope to see it do so soon. It would be a most healthy thing if the House were to resent and resist the overweening pretensions of the Senate, even to the point of forcing an extra session of Congress.

THE SHIP-SUBSIDY HUMBUG.

The facts which militate most strongly against the Ship-Subsidy Bill are the news items which are constantly appearing in the press. Here, for example, is one which was published December 21, 1900:

"AMERICAN STEEL PLATES CHEAPEST.

"GLASGOW, December 20.—Clyde shipbuilders recently placed orders for 150,000 tons of steel plates in the United States, at a saving of £50,000 ($250,000). The depression in the Scotch steel and malleable-iron trades is acute. Fourteen furnaces will be damped at the end of the year. The steel works are talking of closing indefinitely."

This is one of the notorious facts relating to the comparative cost of shipbuilding here and abroad, yet they are generally ignored by those who are demanding the ship subsidy. There was a time, before we had begun to do much in the way of building iron and steel ships, when such ships could be built more cheaply in England than here; but as far back as 1869, when a committee was appointed by Congress to investigate shipping interests, John Roach testified: "If Congress will take of the duties from American iron, reducing it to the price of foreign iron, then we are prepared to compete with foreign ship-builders. The labor question is misstated. We are prepared to meet that difficulty and to ask no further legislation on the subject."

As a result of this representation, Congress long ago put all materials for ship-building for the foreign trade on the free list, but the change of trade conditions has made even that unnecessary. Now we can sell at a profit in Great Britain steel plates and even coal coming from Pennsylvania, and, with the cheaper price of American wood and the superiority of American machinery and of American workmen, the trade conditions are already in our favor as the result of a perfectly natural and healthy outgrowth of our own resources and abilities. Aside from the iniquity of the Subsidy Bill as a piece of state socialism and class legislation, there is no more reason for subsidized American shipyards than for subsidized American bicycle factories.

Nor is there any justification for a subsidy on the ground of the higher wages of an American crew. American wages, as a whole, are considerably higher than wages abroad, but the fact that we can compete in innumerable manufactured articles with any foreign nation shows that, for a given result, American labor costs no more per unit of work done than the less efficient foreign labor. But even if there were no element of increased efficiency represented by the higher American wages, this Ship-Subsidy Bill is not drawn so as to meet even that difficulty. This is one of the points on which the bill, which starts out with a sensational appeal to American patriotism by claiming that it will increase the number of American sailors, utterly breaks down when it comes to the test of manning the subsidized ships. The bill purports to require that at least one-fourth of the crew of a subsidized ship shall be United States citizens, but this requirement is absolutely neutralized by the provision that, "if an American crew cannot be reasonably obtained," foreigners may be hired. That is, the ship-owner may offer wages at the market rate, and if Americans will not ship at that rate, he may make up a crew of foreigners. In other words, after having been compensated in advance out of the public taxes because he said that he was obliged to pay high American wages, he may, nevertheless, for all that the bill contains, go on paying the market rate and pocket the subsidy.

This clamor for a ship subsidy is a fair sample of what may be expected from corporate interests which have once tasted the advantages of Governmental interference in their behalf, for there is virtually no other industry which at present receives greater benefits from the Government. In addition to the free raw materials (even if those were necessary to meet competition, as, we repeat, they are not), our navigation laws prohibit the registry by Americans of foreign-built ships. They absolutely prohibit foreign vessels from engaging in the enormous American coastwise commerce—and this is a provision which has no counterpart in British law.

Attention has been directed more than once to the fact that the pending bill gives the largest subsidies to the fast-sailing passenger ships which carry little freight, although the pretence is made that it is a bill to promote the export trade. The New York

Press, a pretty sound Republican paper, has at last taken notice of this fact, and advises the friends of the bill to drop this feature of it and make it what it purports to be, a bill to promote commerce rather than excursion parties to Europe. In order to save the bill, the *Press* urges Senator Hanna to "set the American Line Jonahs ashore," and the *Tribune* apparently endorses the sentiment by reprinting it in a conspicuous place. Mr. J. A. Heckman, whose name we seem to remember in connection with the Shayne Association and the baggage controversy, writes to us also protesting against legislation whose design or tendency is to furnish cheap fares at the public expense for tourists who go abroad to get their clothes. We agree fully with Mr. Heckman as to this.

Among the humbugs that we have had occasion to expose in the course of the controversy on this subsidy measure is the pretence that the bill is needed to promote ship-building in American yards. We have shown that any artificial stimulus is quite unnecessary, since the shipyards have more orders on hand than they can execute. In confirmation of this fact, we may point to the testimony given before the Industrial Commission on the 21st of December by Mr. Charles H. Cramp, who said:

"The shipyards in either America or England cannot build ships enough to supply the demand."

This interesting fact was stated by Mr. Cramp as one of the reasons why he favored the Subsidy Bill. We cannot commend the logic of his statement to the Commission, but we are sure that he speaks knowingly of the rush of orders for new ships and the impossibility of filling all of them. Whatever may be the case with those who navigate American ships, the men who build them are not the fit subjects of alms.

ROOSEVELT'S TERM AS GOVERNOR.

How truncated and, on the whole, disappointing the Governorship of Theodore Roosevelt has been, he himself is a witness. On the 12th of last February he gave out an official statement at Albany, assigning as the reason why he could not and would not be a candidate for the Vice-Presidency the fact that the "great problems" which he had faced in New York had been only "partially solved." His work, he said, was but "begun," and he needed (and, of course, was determined to have) three years more to carry it to "a successful conclusion." Not only, however, did he fail to get the two years more of office which he desired; he did not even utilize the one year which remained to him. Gov. Roosevelt was elected for the Constitutional term of two years; he gave his services to the State for a period not to exceed eighteen months. This is the first great fact which glares at us in his record. Since last June he has been bodily out of the State a large part of the time; the State has apparently been out of his mind nearly all of the time. Don't come to me, he said a few weeks ago, when approached for sympathy and coöperation in the urgent work of reform in city and State; "my work is done." This is the same work, be it remembered, which he said last February was only "begun." There is a tombstone wonder, what it ever was begun for if so soon it was to be done for.

We see, however, in this broken and baffled career as Governor a kind of sardonic comment of fate upon one of Col. Roosevelt's favorite political maxims, namely, that the true reformer must never be in a hurry. He himself used to be. Ex-President Harrison has laughingly described the ardor of the Roosevelt whom he knew as Civil-Service Commissioner under his Administration. That impetuous young man wanted to reform everything "right away." But that was before old experience had taught him the sound philosophy of reform—which is, not to undertake or expect very much, and to be content with a little progress each year, knowing that you will be there next year and the year after to get a little more. But in real life, the Governor must now see, the thing does not work that way. Just as he is laying out his long and beautiful programme of progressive reform, "comes the blind Fury with the abhorred shears"—that is, Platt with a tricky nomination for the Vice-Presidency—"and slits the thin-spun life." The real moral of Roosevelt's experience is that reformers should ever be mindful that they must work while it is day, for the night cometh when no man can work. Therefore, they must demand at once and vehemently even that "impossible best" which Roosevelt sneers at, since his heralded plan of partial and leisurely reform is too apt to result in such disappointments as the Governor tacitly confesses have befallen him.

His successes as Governor have been so considerable as to show how easily they might have been much greater. With vigor and courage he insisted upon stiffening the civil-service laws, out of which his predecessor had boasted of taking the "starch." The Legislature made a wry face, but did as Gov. Roosevelt, in the high prestige of his first days in office, ordered it to do. The result was the strongest and most stringent civil-service law that we have ever had. This makes it seem the greater pity that the Governor refused later on to place certain classes of appointees—the tax-transfer appraisers, for example—under the provisions of his admirable law, although urgently requested to do so by business interests, by civil-service reformers, and by his own State Civil-Service Commission, and although he himself was on record against the flimsiness of the reasons he gave for not doing it. A similar inconsistency, or letting-down, appears in the character of the Governor's appointments to office. His announced standard at first was, the best man he could get; his practical if not confessed standard afterwards was, the best man the machine would let him have. Col. Partridge, a fine appointee, he put at the head of the State Public Works in defiance of the machine; when it came to ousting Payn from the office of Superintendent of Insurance, the Governor allowed Platt to dictate Payn's successor. We thus get, in retrospect, a total impression of hesitation and vacillation in a man from whom we had the right to expect uncompromising thoroughness and persistency in the cause of reform.

One of the strange illusions about Gov. Roosevelt—we are not sure whether he entertains it himself—is that he is fond of work. What he is really fond of is excitement. It is the clamorous life which most appeals to him. By a truly hard-working Governor we understand a man who will, when necessary, tie himself to his desk for fourteen hours out of the twenty-four and tear the heart out of documents, accounts, legislative bills, appeals, petitions; who will make himself personally acquainted with the details of the management of the prisons and asylums and hospitals of the State; who will carefully investigate public expenditures; who will ascertain his power and duty under the Constitution and laws, so as to refrain from hastily taking a position which he will have to abandon later as ridiculous; who will set himself to understand a tax law before he exerts all the power of the Executive to compel the Legislature to pass it, and then be obliged to call an extra session to undo his blunders. Work, thus understood, is obviously not of the kind that Gov. Roosevelt delights in. He would undertake it only on condition that "living pictures" should show him in the act, or that he be allowed to break off every five minutes to address the people. It is notorious that no Governor of recent years has been so ignorant of the actual business of the State. The charitable institutions have suffered palpable neglect during his term of office. His successor is already compelled to take up reforms and reorganization which Roosevelt should long ago have made his care. But such plodding labors are not for him.

When Col. Roosevelt was Police Commissioner in this city, Republican politicians used chucklingly to say that they found him "an easy mark." This did not mean that his integrity could be overcome, but only circumvented easily. The way to his confidence and favor, once discovered, was of a sort that the wayfaring man could not err therein. We believe the sly people who thought him "easy" considered his fundamental test of character to be something like the poet's "vociferated logic,"

a noisy man being, with him, "always in the right." However that may be, it is certain that, later on, an astute judge of men, Boss Platt, found out Roosevelt's secret and played upon it to the discomfiture of his hopes and plans. Ambition, combined with a dread of breaking with his party machine, was the magic ring, Platt discovered, upon which he had only to rub in order to bring the rough-riding jinn obediently to heel, saying, "Here am I."

Col. Roosevelt brought to the Governorship qualities and a conception of office not unlike those of the Emperor William. He might have been justly called our "Theodore the Sudden" (*der Plötzliche*). A restlessness of temperament almost pathological, love of excitement, a fatal fondness for haranguing the public, brilliant and dashing personal qualities—these characteristics are showy, attractive, and win to their possessors troops of friends; but do they make the strong and efficient public servant? We can only say that Gov. Roosevelt's achievement and defeats in office simply confirm the long experience of mankind. Bolingbroke is the type of the glittering statesman who seeks office for the excitement it affords, and Bagehot's verdict upon his career and its lessons seems almost as if written to fit the Albany career of Roosevelt.

"We see in Bolingbroke's case," he writes, "that a life of great excitement is incompatible with the calm circumspection and the sound estimate of probability essential to great affairs; that, though the excited hero may perceive distant things which others overlook, he will overlook near things that others see; that, though he may be stimulated to great speeches which others could not make, he will also be irritated to petty speeches which others would not; that he will attract enmities, but not confidence; that he will not observe how few and plain are the alternatives of common business, and how little even genius can enlarge them; that his prosperity will be a wild dream of unattainable possibilities, and his adversity a long regret that these possibilities have departed."

THE CONGRESS AT PHILADELPHIA.

PHILADELPHIA, December 29, 1900.

Six years ago this month the affiliated philological and archæological societies met at Philadelphia in joint session to commemorate the death of Professor Whitney. This week the same societies, seven in number, met again on exactly the same days of the month, though for no more special purpose than to extend to each other the hand of fellowship, unless perhaps the close of the century and coincident anniversary of Chaucer's death were strands in the cord that on this occasion bound them together. The seven organizations are (omitting from their titles the superfluous "American") the Oriental, the Biblical Literature (and Exegesis), and Dialect Societies; the Philological, Spelling Reform, and Modern Language Associations; and the Archæological Institute. Thirty-five universities and colleges were represented, and more than an hundred papers were read at this Congress. No one pretended to hear quite all of these, though it was evident, from the worried faces and restless peregrination of some of the visitors, that only the impossibility of being in half-a-dozen places at once prevented them from gathering up all the wisdom brought hither from China, England, and the Pacific Coast, to say nothing of that produced nearer to the point of distribution.

Interesting was the relation of subjects discussed to the number of papers. The Dialect Society was without special sessions; but it held a business meeting, and for the rest sat quiescent under the wing of the Modern Language Association. The Spelling Reform Association was apparently content to be here in spirit. One looked in vain for any bodily manifestations of its presence, and its chief exponent, the venerable Dr. March, gave as his contribution not a paper on Spelling but on Modern Language Work. Is it possible that the Reform has reformed? But if no college interested itself in this erst burning question, all the more was it evident how great is the interest of the majority of philologists in historical and archæological work, between which, however, and pure philology on the one hand and Oriental research on the other the barriers are slight. Some of the Oriental papers were really archæological, and both the Archæological and Philological Societies sat amicably together in joint session on Friday, the second day of the Congress. At the sessions of these two societies were presented altogether over sixty papers. Linguistic and phonetic papers were rare, but nearly a dozen syntactical studies were offered. The fact that to some of the associations this was the only gathering in the year, while to others it was an additional meeting, doubtless had something to do with the amount of work shown. The Oriental Society, for example, convenes again in Easter week for its annual meeting, and this "extra" occasion brought out only a third of the usual number of papers.

From another point of view it was of passing interest to see where the work is doing in the various fields represented by the Congress. It was to be expected that the East would send more representatives than the distant West; it was in fact scarcely to be hoped that delegates should come from beyond the Middle West. But not only did Chicago and Michigan send speakers (not to count those who came with nothing to say), but at least one representative was welcomed from each of the universities of Kansas, Missouri, Oregon, and California. Nearer home, Harvard's several delegates covered most of the fields of research, as did those from Yale and Cornell, while Johns Hopkins and Columbia, besides their quota, sent a special orator apiece to show that scholars can be witty as well as wise. For, besides the research-papers in a narrower sense, it was arranged that there should be a few exercises of a more general character. All of Thursday afternoon and evening was devoted to these, beginning with the thoughtful address of welcome by Provost Harrison, who, in a cordial speech, voiced the hospitality which offered the use of the University buildings to the societies, and gave them a formal though no less agreeable reception on Thursday evening. The brilliant and characteristic address of Professor Gildersleeve on the Oscillations and Nutations of Philology concluded this series of general papers, while between the two came eight short addresses from delegates chosen by the different societies, Profs. Marquand and Sterrett, for example, representing the archæologists; Profs. Moore and Haupt, the Orientalists; and President Wheeler speaking for the philologians. At a later meeting, on Friday evening, Professor Price addressed as its President the Modern Language Association with a paper on the New Function of Modern Language Teaching, which all the affiliated societies were invited to hear and were well rewarded in hearing. An agreeable side of this Congress was the Chaucer session on Saturday morning, which many were obliged to miss, owing to the uncompromising nature of railway time-tables. Those who lived near enough to remain for this and still reach home before Sunday, enjoyed among other things Professor Schofield's and Professor Mead's studies of Chaucer's Sources, and that of the Structure of Chaucer's Verse by Professor Bright.

As said above, the delegates of many Eastern universities represented also most of the societies. Thus, from Harvard, Yale, Columbia, Cornell, and Johns Hopkins came in each case papers covering nearly all the fields of work. The same is true of Bryn Mawr, which, as was to be expected, had left no province unworked. It is a pleasant duty to notice also that Bryn Mawr did not stand alone among women's colleges in offering results of original investigation. Barnard sent Professor Earle, and two excellent papers came from Smith College—one by Miss Scott on a source of Shakspere hitherto unappreciated, and one by Miss Boyd, "A Settlement of the Geometric Period at Karusi in Crete." Not without significance, perhaps, is the fact that all the representatives of Indiana, Mississippi, Missouri, Kansas, and Northwestern Universities belonged to the Modern-Language or Dialect Societies. Conversely, not a paper presented at the Oriental or Archæological Societies came from those regions, though the universities of (Ohio) Western Reserve, Michigan, and California, and Iowa College had delegates in the archæological body; the Oriental Society (as here represented by speakers) not being more Occidental than Chicago, if one dare suggest that Chicago is not in the East. Almost the same line marks off the productive members of the Philological Association, before which papers were read from the East, Iowa, Western Reserve, Chicago, Michigan, and California. That is to say, the East, the Western East (if one may use the expression), and the Northwest and Far West showed a greater influence of classical work, while the Southwest inclined more to modern language, to judge by the returns of this Congress. But, on the other hand, five out of the seven scholars who represented the University of Pennsylvania spoke only to the Modern Language Association, wherein perhaps Professor Learned's influence was potent. Of course, there is not basis here for more than a suggestion, which should, perhaps, be couched rather as an inquiry as to how far localization of aims may be true, especially as there are Orientalists in Tennessee and even in Texas. Among those present from abroad, it was pleasant to greet Dr. William A. P. Martin, recently returned from Pekin, who, by special invitation, addressed the general meeting on an autopsy of Chinese Diplomacy; and it was good to meet again one long-absent professor, now of Oxford, Louis Dyer, who read at the archæological session a paper,

illustrated by slides of seals, on "New Aspects of Mycenæan Cultus."

Turning from these more prominent aspects and less familiar participants in the Congress, one scarcely knows where to begin or when to stop in enumerating the various papers read really or "read by title," the latter being a mystic addition to some dozen papers, usually implying that the writer of the paper has a hidden treasure which he will reveal in time, though now man may know only of its existence. But if the arrangement of the programme be followed, where the Oriental Society, oldest of the seven, has precedence, then may be mentioned in order the paper of the Rev. Dr. Winslow on "First Dynasty Discoveries," that of Professor Barton on "An Androgynous Babylonian Divinity," and that of Professor Robinson on his discovery of the Edomite High Place, on the Semitic side; while, on the Aryan side, Professor Oertel discussed *âpâna* as in-breathing, Dr. Gray continued his valuable Avestan contributions, and the present writer gave literary illustrations of the "Hindu Custom of Dying to Redress a Grievance."

For the philologians alone, Prof. J. H. Wright offered Notes on Demosthenes, Professor Hempl revivified the Salian Hymn; Professor Bennett discussed the so-called Stipulative Subjunctive; Professor Ashmore spoke on Bennett's Critique of Elmer's Theory of the Subjunctive; Professor Platner reviewed the Archaic Inscription in the Forum, and Drs. Sanders and Kellogg spoke of the Younger Ennius, and of Cicero's Letters, respectively, to select at random a few among many studies, further mention of which lack of space alone prevents. Still less complete must be the review of the scores of papers offered by the archæologists. President Wheeler told of Archæological Work under the Auspices of the University of California; Professor Perrin discussed the Hiereiai of Hellenikos and the Burning of the Argive Heraion; Professor Frothingham, the Contents of Etruscan Tombs; Professor Fowler, the Connection of Phidias with Perikles (the authors will pardon some abbreviation of title), while, at the pleasantly united conference of the Philological and Archæological Associations, Professor Seymour contributed an exhaustive study of Homeric Slavery and Servitude; Professor Wheeler showed the origin of a bronze statue of Heracles in Boston; and Professor Chase illustrated Sun Myths in Lithuanian Folk-songs. Many of the papers were illustrated by means of the stereopticon, and several of the writers read papers in more than one department. So great was the number of papers that the session was prolonged into Saturday.

In the Society of Biblical Literature and Exegesis, Dr. Peters spoke on the "Religion of Moses"; Professor Thayer gave a report on the Palestinian School; Prof. T. F. Wright spoke on the Queen of Heaven; Professor Haupt, on "Interpolations in the Book of Proverbs"; and several scholars already named as contributors in the foregoing lists presented papers of value at this session, also. Among the most important essays read at the Modern Language Association, "The Home of the Heliand," by Professor Collitz, and the fruitful "Researches in Experimental Phonetics," by Professor Scripture, deserve (if one may discriminate) special mention, although (to omit all papers "read by title") Professor Wood's "Semasiology of Color Words" can scarcely be passed without a word of appreciation. The same is true of Prof. F. M. Warren's "Sources of *Thèbes* and *Énéas*." This session closed with a striking illustration of modern "Literary Manners," given by Mr. C. M. Magee.

It would be pleasant to give better than headings, but one could not condense enough to furnish much more than is offered by the titles thus hastily selected. These will show, in some degree, at least, the wide range of subjects and interests exhibited in this second Congress of the affiliated societies, the only objection to which is its multifarious character. For scientific purposes a congress is too kaleidoscopic, and as there is little time to discuss anything, there is no use in reading some of the technical papers. But, as a spectacle, it is inspiring. Nor can that subordinate but important function of the congress, namely, to converse, be easily estimated at its real value. Many came not for platform-speeches, but for reunion, where wisdom might be inhaled incidentally amid the talk of friends. For them, too, provision was made, and the hospitable University and hard-worked Local Committee, however small their reward in appearance, will at least be enriched by the thought that they not only have done much to further zeal in good work by thus bringing the societies together, but they have also received the blessing of the individual lone student, who welcomes new wisdom, but needs still more the grateful sense of kind.

WASHBURN HOPKINS.

FOGAZZARO.

ALASSIO, November 17, 1900.

There seldom exists a thoroughly adequate reason for publishing the biography of a man, a literary man at least, while he is still alive. This applies with special force to a writer like Fogazzaro, who has never given the world anything to talk about except his books; who, although an unusually successful author, as things go in Italy, was until recently read only among the most cultivated classes, while his person was unknown to the public. When, many years ago, I bought a copy of 'Daniele Cortis,' the bookseller told me that the work already ranked "almost as a classic." Indeed, the first translation had been published by Henry Holt in New York, and it had attracted attention in other countries, but in Italy it had gone through no more than four editions. That was already a success for an Italian novel at the time. The author's other works—the poems ("Miranda," "Valtolda," etc.), 'Malombra,' 'Il Mistero del Poeta,' were successful in the same modest measure. Italians, as a rule, did not read Italian novels—as, indeed, especially among "smart" people, there are many who do not even yet. But there came a change. Before and after 1890, Italian books had occasionally received the honor of translation, 'Daniele Cortis' among them. It was in the early months of 1896 (January-April) that our author was discovered in Paris; the Italians were having their turn of French popularity. The effect of this discovery in Italy, where the good opinion of France is apt to have the value of final authority, was tremendous. In fifteen years previous to '96, seven editions of 'Malombra' had appeared; in that year were published three new ones, and three years later the number had reached seventeen. 'Daniele Cortis' could boast of but four editions in the eleven years of its life, but between '96 and '99 no less than eighteen were issued, while 'Piccolo Mondo Antico,' published when the tide of popularity had already set in, counts more than thirty. Popularity and consequent sale of works have, in these last years, been helped by a lecture delivered by Fogazzaro in Paris in the French tongue, and very well received, and perhaps yet more, with the upper classes at least, by the author's attitude toward religion. He is "the believer," *il credente*, and has been adopted by the well-thinking as their representative writer, a sort of standard-bearer. Now the champion, even of the best cause in the world, is apt to be esteemed by the vulgar among his followers less for his intrinsic merits than for his supposed value to themselves. The result is pure gain to those who otherwise might never have read Fogazzaro's charming books; but religion in Italy is very near to politics, and politics lend but a troubled light to judgment of literature.

Fogazzaro's sudden leap into notoriety naturally suggested to publishers the want of a biography, and in 1897 an exceedingly slender performance was put forth by Sebastiano Rumor, nearly half of which in bulk and more than half in importance consisted of a bibliography of the poet's works, even to the least of them, and of the critical articles to which they had given occasion. This bibliography, brought down to date, is embodied in the volume before me.* Of its numbers (one hundred and fifty nearly), four novels, two volumes of tales, and two of poems contain all that most readers need care to know. In Sig. Molmenti's book the remainder, after deduction of the bibliography, is of far greater value than in that of his predecessor. It is scarcely exact to call it a biography: the few elementary facts relative to Fogazzaro's life contained in it are scarcely more than a mere student of literature might reasonably insert in a volume of criticism. Fortunately, Sig. Molmenti did not think it necessary to eke out his facts by indiscretions; he has given us a book which might be better entitled, 'About Fogazzaro's Works and Some Other Things.' Under that title scarcely anything but good could be said of it.

We have, then, a series of essays, some in criticism and all connected more or less intimately with the published writings of Fogazzaro. The first is on the return of the century to faith and the ideal, after a middle period of exaltation of science, of materialism and positivism. The review ranges easily from Manzoni to Zola and from Buckle to Sar Péladan. A relation between it and the subject of the book is made at the end by including Fogazzaro among the distinguished representatives of the new direction.

The other two essays, apart from a chapter of biography and another on the character of the man, are rather more intimately connected with the matter in hand. They are (1) on the Italian attitude towards landscape beauty, and (2) on the theory of evolution. The distinguishing mark of Fogazzaro's poetry renders the first quite pertinent, while his adaptation of the theory of Darwin to Christian belief, a system of which Sig. Molmenti somewhere says in effect that Fogazzaro is the sole exponent, without followers, gives good reason for the second. Without such amplitude of treatment this

*'Pompeo Molmenti: Antonio Fogazzaro, la sua Vita e le sue Opere.' Con acqueforti e la bibliografia del Fogazzaro compilata da Sebastiano Rumor. Milan: Hoepli. 1900. Pp. 245.

book would have been a mere pamphlet, and as the three digressions are good reading, we can receive them with thanks. But before saying anything further of them, we ought to mention one feature of the book that is less acceptable.

The facts of the biography are few, and at times it seems that Sig. Molmenti has thought necessary to smother them in flowers of speech in order to give importance to their scarcity and simplicity. How is this for a statement that Fogazzaro was born? "Nacque in Vicenza, la bianca, graziosa città, patria del Palladio, che la adornò di molti edifici, ridenti nella loro classica euritmia." Our language can with difficulty render this passage without making it appear awkward and hobbling as well as swollen; rather than be unnecessarily unjust we leave it as it is. There is not much of this sort of thing, however, and we may return to the Italian attitude towards landscape beauty. It is a common statement of English writers that the Italians have no sentiment for nature, basing the accusation upon the predominance given to the human figure in painting, and the fact that in literature landscape is, relatively, slightly treated. It is, therefore, interesting to know what a cultivated Italian has to say about the matter, and to many it will be a relief to learn that these children of the sunny land are not quite so insensible in this respect as their critics would make them out to be. Their sentiment of nature is different from ours, *voilà tout.* "Imaginations classic and serene are the Italians, and rarely can one find in their poetry that quite modern sentiment of a gentle pantheism enfolding mountain and plain, fields and woods, which gives rise in many poets of Germany, France, and England to such pleasant sports of fancy (*fa soavemente fantasticare*)" Sig. Molmenti adds that the Italian tongue has no equivalent for our "reverie." The dictionaries, indeed, translate it by *meditazione*, which goes to show that the dictionary-makers at least do not apprehend its meaning. The word *fantasticare*, used just now, suggests the doubt that, after all, the thing may not be quite unknown to Italian youth. However that may be, Sig. Molmenti maintains that Italians are not deficient in love of landscape beauty; their appreciation is æsthetic rather than sentimental or psychological. Formerly exceptions were rare; some of the masters of the *quattrocento* in painting reveal an exquisite sense of the spiritual aspect of landscape, as, among poets, does Dante, and, after him, Petrarch and Leopardi. Is he sure that he has forgotten no one? The moderns, at any rate, are like the rest of the world. D'Annunzio, notwithstanding his artificiality, is a genuine poet of the inner sense of landscape, and so are many others; but Fogazzaro above all is an interpreter of nature, the peer of those northerners who *soavemente fantasticano.*

There are readers, and not necessarily stupid ones either, who may fail to follow Sig. Molmenti in some of the distinctions of this chapter. Where he is incontestably clear, however, as well as interesting, is in his literary criticisms. Here he shows an independence of judgment thoroughly to his credit. With generous admiration for the poetry of Fogazzaro, he allows that the poet is not equal to the prose-writer, and quotes the saying of some one that in the verses "there is too much poetry and too little verse." With regard to 'Malombra,' while doing justice to the admirable delineation of characters, the humor, the beauty of some of the descriptions, he has no tenderness for its melodramatic framework. He also makes common cause with those who censure the personification of natural features: "the blades of grass that listen motionless to the distant music," "the voices of the leafage," and many similar embellishments, which disappear entirely in the soberer style of the later works. In his account of two of these, 'Daniele Cortis' and 'Piccolo Mondo Antico,' he regards the former as the greater work of art, while he follows all the world in giving his heart to the latter. With pardonable confusion between heart and judgment, he agrees with the sentence of Arturo Graf, that no work has appeared in Italy since 'I Promessi Sposi' worthier to be put alongside of that unique romance. The 'Mistero del Poeta' appeared like a delicate intermezzo between the two more stirring performances, and among the tales that from different periodicals have been gathered into the two volumes, 'Fedele' and 'Racconti Brevi,' there are a good number that may be cordially recommended to the lovers of good things. To mention but one in the former volume, "Pereat Rochus," the story of the sublime obstinacy of a humble country priest, told with lightness of manner and an exquisite play of humor, is nothing less than a little masterpiece.

Sig. Molmenti closes his account of the literary work of Fogozzaro with some revelations (if indiscretions, we are glad to condone them) about a forthcoming novel, 'Piccolo Mondo Moderno,' which promises to be rich in the quality that the present writer cannot help esteeming finest among all that make precious the novels we have considered—their humor. It brightens the lurid background of 'Malombra,' and softens the severity of 'Daniele Cortis,' and in 'Piccolo Mondo Antico' is the charm of charms that brightens and sweetens the whole book, and is great part of the secret of its popularity. Others have celebrated in Fogazzaro the Christian evolutionist, or the *credente*, or the moralist, or the writer *comme il faut;* for us it is enough that, among the crowd of dreary, morbid, pessimistic novels, his few shine with kindly light, clear, sweet, and wholesome. This for the general public is perhaps their most endearing quality. "Good wine needs no bush"; but for those who do not know it, it may be said that the vintage to which Sig. Molmenti invites us is of the best, sparkling, delicate, and sound. S. K.

Correspondence.

THE EXCAVATIONS AT ASSOS.

To the Editor of The Nation:

Sir: It is twenty years since two young Boston architects, Messrs. Clarke and Bacon, made an adventurous trip through the Grecian Archipelago in the little cutter *Dorian*, looking for a site for explorations in Greek archæology. The result of their preliminary examination was that, in 1881, the Archæological Institute of America sent out to Assos an exploring party, tempted by the insufficiently examined acropolis, and especially by the ruins of its remarkable temple, which had been described and illustrated by Texier in a way to excite curiosity as much as to gratify it. This exploration, the first serious undertaking of the Institute, was made by Messrs. Clarke and Bacon with a young Englishman, Mr. Koldewey, who has since become noted among English archæologists, assisted from time to time by several American students. It not only proved the best possible school to Americans for the study of Greek archæology and its methods of investigation, bringing up their work at once to the level of modern attainment, but produced a valuable and interesting examination of the city of Assos, and especially of its temple, which, as the excavation showed, had been but very imperfectly studied by previous explorers, and even misleadingly reported. The work was done with a thoroughness and exactness that are believed to be final.

A preliminary report of the excavations which were carried on in the seasons of 1881, 1882, 1883, published at the time, showed the thoroughness and scholarly method of the study, and added to our knowledge of the temple, which is in some ways unique. The completion of the full report has been long awaited, Mr. Clarke, who had the text in charge, being prevented from finishing his work on it; and now the Institute, rather than delay longer, has decided to publish all the illustrations in the large folio form which their scale and importance call for, with the necessary comment. This will be under the care of Mr. Bacon, whose remarkable pen-drawings are the substance of the publication, and Mr. Koldewey. It will add to the illustrations of the temple, which have already been published in part in the papers of the Institute, the yet unseen material, illustrations of the Agora, of the surrounding buildings—the stoas, Greek and Roman baths, Council Hall, Theatre, Gymnasium, an early Byzantine church—the street of tombs, and a variety of lesser material, as well as the encompassing city walls, which are one of the most interesting groups of Greek fortifications that are left to us. With the drawings will be many photographs, also the work of the explorers.

The Institute has issued a prospectus which shows invitingly on a somewhat reduced scale the character of the book and the quality of the illustrations. Among these are conspicuous the impressive plan of the streets and buildings of the city as they were uncovered, and a striking photographic picture of the old harbor with its mole as they now appear, which fills one with amazement at the statement of Texier that he could find no traces of a harbor anywhere. There will be five sections of the book, published at $5 each, and the Institute, not having funds at hand for the publication, appeals to its members and to the public to forward subscriptions, as far as possible, in advance. The undertaking is one that does honor to American scholarship and benefit to the world of students; it is to be hoped that the response will be a ready one. W. P. P. L.

Cambridge, Mass., December 27, 1900.

"FAIR PLAY."

To the Editor of The Nation:

Sir: As a constant reader of the *Nation* in this land of my adoption I cannot, though an American imbued with strong affection

for my native land, in justice allow the statements made by "Equity" in your issue of November 15 to pass unchallenged.

Lord Roberts has certainly ordered that all Boer farmhouses found concealing ammunition, or used as defences from which firing is carried on against British troops, are to be burned to the ground. In these cases they are simply powder-magazines and hostile positions to be taken. All Boers have been duly warned of this proclamation, and disregard it at their own risk. It would be well for "Equity" to read the history of our own war and Sheridan's devastation of the Shenandoah Valley.

As for the women and children, they have been in all cases treated kindly, and conveyed to places of safety. It is morally impossible to fight in kid gloves with velvet cushions, and a people who deliberately declare war upon another must be prepared to take the consequences. When the refugees from Johannesburg were travelling to Cape Town in the open cattle trucks provided by the Boers, loyalist mothers trying to alight at wayside stations to find a cup of water for their parched and fevered children were turned back at the pistol's mouth by Boers only to find on their return the little ones gasping in death. The following is an extract from a letter written on the 23d of October by a private in the Seaforths to his mother:

"We got the order to go to Jagersfontein, as the Boers had risen and were doing some damage to the English there. The Boer commandant got about 500 Boers into the town into his garden in the night time. The Seaforths were lying in the town square, about ten yards from the house, and as the cooks got up in the early morning to make breakfast and were putting on their kits, the Boers opened fire on them from behind the wall, about ten yards off. In an instant all were out, but the first volley they got killed their commandant and about sixteen men. There was one of our wagon-men lying under a wagon when he saw a woman running out of a house towards him. He thought she was going to speak to him when she shot him."

These facts, sir, speak for themselves, and in the name of that justice which is the birthright of free men the world over I ask your indulgence in publishing these remarks.—Your obedient servant,

B. M. DUDGEON.

21 WOODLANDS TERRACE, GLASGOW,
December 17, 1900.

CICERO AND THE TROGLODYTES.

TO THE EDITOR OF THE NATION:

SIR: I have just seen W. F. P.'s open letter in the *Nation* of December 6, 1900, in regard to my article on the Troglodytes of Cappadocia in the September *Century*. In that article I stated that, as Proconsul, Cicero had probably seen the cone-pyramids of Cappadocia and mentioned them as "latebræ." This statement must fall to the ground, for W. F. P. points out—and I am grateful to him therefor—that the speech was written before Cicero became proconsul. But W. F. P. is mistaken when he avers that this fact invalidates my whole argument. So far as the argument is concerned, it does not matter one whit whether Cicero *saw* the cone-pyramids or spoke of them from *hearsay*. I used the passage in Cicero with diffidence. I was striving for the truth, and am still. Consequently, I make a slight alteration in my standpoint, and admit that Cicero had not *seen* the cones at the time he wrote the speech on the Manilian Law, but it still remains inherently probable that he had *heard* of them. And that *he knew of them*, whether as an eye-witness or from hearsay, is the only point that is of value for my argument.

W. F. P. upbraids me for vagueness of reference. The vagueness is there, but it is not my fault. Editors are supreme, and often use the blue pencil to the keen regret of the writer. In my paper I not only referred to Cicero de Imperio Cn. Pompeii iii, 7, but I quoted the words in question, "ita regnat, ut se non Ponti neque Cappadociæ latebris occultare velit."

To give credit where credit is due, I should state that my attention was called to this important passage by Prof. F. A. Gallup of Hamilton, N. Y.

Very respectfully yours,

J. R. S. STERRETT.

AMHERST, MASS., December 26, 1900.

A PHILOLOGER'S ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: In the recently issued fourth part of volume eight of the Publications of the Modern Language Association, there appears a paper whose form is such as to offend any one of taste in matters of speech usage, especially those of us who feel that cultivated expression in the mother-tongue should be the aim of all modern-language men.

There are not only such provincialisms as "at time" for "at times" (p. 473), "on a whole" for "on the whole" (p. 487), but also a frequent betrayal of illiterate half-acquaintance with the form and use of words. Thus, the verb *predominate* is always used in place of the adjective *predominant*—for example, "the predominate use of the plural," etc. (pp. 445, 482, 487); and at the top of page 476 we even find *-ly* added to the verb in the effort to make an adverb of it: "The stem is used predominately in the plural." The word *usage* seems to be regarded simply as an elegant form of the ordinary word *use*, hence we read of "the usage of stems in the meaning of other stems" (p. 487).

There is an abundance of slovenly and obscure or ambiguous sentences, such as are given in elementary books on rhetoric as a warning to beginners:

"It is an interesting fact that the language . . . is very irregular . . . both in the declension as well as in gender" (p.445).

"A few stems ending in *-el* become feminine, because of the general tendency toward feminization and to [*sic*] various associations" (p. 463).

"*Bahn* MHG. *ban(e)* mf. is in *K* f. throughout Hiob 23, 11, due partly to *die strasse* and other stems denoting means of travel, but principally to discriminate from the similar stem *bann* MHG. *ban*, meaning *ban*" (p. 455).

"Either it is due directly to *die platte*, or *die platte* influenced the stem to take on *-e* in the singular and then it falls under the influence of the numerous feminine stems ending in *tze*" (p. 456).

It is apparent that the writer has not even a clear idea of what a sentence is. At times he runs two distinct sentences together, with only a comma to mark the boundary:

"A glance at this list will show that the stems are used mostly in the singular, a striking proof for [*sic*] the important part played by the plural usage in determining the gender change, associations are present in every case which prevent the transition to the feminine gender" (p. 450).

At times even the comma is wanting:

"See *das maul* associations occur with domestic animal names" (p. 473).

On the other hand, a final clause is sometimes cut adrift from its sentence and left to shift for itself:

"Associations being again present which explain the transitions" (p. 466).

Punctuation is largely dispensed with:

"become masculine attracted by the numerous masculine stems ending in *-er*" (p. 469).

"Compare also the list of names denoting members of the body which pass from the masculine to the feminine gender due to plural usage" (p. 476).

"The feminine stems which become in N H G. neuter are with but few exceptions in *K* already neuter" (p. 481).

At times there is a helpless attempt at following some rule:

"The masculine stems have not yet taken on the *-n*, in the nominative and the *-s* in the genitive" (p. 444).

"The plural is always strong sometimes with, sometimes without *-e*" (p. 482).

The Modern Language Association of America has become a large and important organization, and its publications are constantly demanding more respect in the world of letters. This lack of vigilance will therefore be a matter of deep regret and humiliation, both to officers and to members. Believing it incumbent on one of us promptly to note and acknowledge this slip, I venture to request you to publish this communication. A MEMBER.

Notes.

There has recently been discovered in London the British headquarters' colored manuscript map of New York and environs during the period of the Revolutionary War. It extends from below Governor's Island to above Harlem, a distance of about eighteen or nineteen miles. It shows the fortifications, defences, topography, streets, roads, etc., together with the harbor, islands, water-ways, river frontages, etc., on the Hudson and East Rivers, and the military works on Long Island, including Brooklyn; also Paulus Hook and parts of the Jersey shore. It has a copious table of references to the various works, with notes in many cases as to the time of their construction. This very elaborate drawing, ten feet by four feet, on a scale of about six and a half inches to a mile, is being handsomely reproduced, for subscribers only, by B. F. Stevens, No. 4 Trafalgar Square, London, in careful facsimile on 24 numbered sheets, which can be joined and mounted like the original as a wall map or preserved in a portfolio. The map was kept up from time to time by the successive engineers under the British commanders-in-chief, Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, down to the approximate date of the evacuation of New York under the Paris Treaty of Peace.

The scattered "Genealogical Gleanings in England" of Mr. Henry F. Waters in the New England *Historical and Genealogical Register*, including the brilliant discoveries regarding the pedigrees of John Harvard, Roger Williams, and George Washington, will, if sufficient support be extended, be published in two volumes of about 800 pages

each, by the New England Historic-Genealogical Society. Subscriptions, at ten dollars (or $10.50 for mailing), may be addressed to Benjamin B. Torrey, Treasurer of the above society, at No. 18 Somerset Street, Boston. The work will contain an index to more than 30,000 names and about 8,000 places; and it should be added that the Southern as well as the New England immigrants are traced by wills, etc., in Mr. Waters's impartial scheme. No such body of material for establishing a family connection between the two sides of the Atlantic has ever been accumulated.

We may mention, in this connection, a very useful undertaking on the part of Mr. Charles Knowles Bolton, Librarian of the Boston Athenæum, namely, a pamphlet of 139 pages, entitled 'Marriage Notices, 1785-1794, for the Whole United States, Copied from the *Massachusetts Centinel* and the *Columbian Centinel*' (Salem, Mass.: Eben Putnam). Any one who has ever sought information of this character from the old files, not always complete, as here, will appreciate this conspectus. Mr. Knowlton classifies the parties into celebrities, well-to-do persons, printers (by courtesy of the craft), and eccentrics. In many cases, no doubt, former residence in Boston occasioned the insertion of a notice. We should hope obituary notices were taken down along with the marriages, and may yet be published in similar form—but with greater accuracy.

The Reform Club of this city has undertaken to publish a 'History of Tammany Hall,' upon which Mr. Gustavus Myers has been engaged for five years. It will appear very shortly.

The address of Mr. Choate, American Ambassador to England, on Lincoln, at Edinburgh, on November 13, will be published directly by T. Y. Crowell & Co., who have also in press 'Questions of Empire,' Lord Rosebery's Glasgow address of November 16, and 'Problems of Evolution,' by F. W. Headley.

'The Love Letters of Victor Hugo,' 1820-1822, to Mlle. Adèle Foucher, namely; 'The Love Letters of Bismarck,' to his future wife, Fräulein Puttkamer; a 'Life of the Emperor Frederick,' from the German of Margaretha von Poschinger; 'Labor,' by Émile Zola; and 'A New Way around an Old World,' by the Rev. Francis E. Clark—whose new way is the trans-Siberian railway—are among the February publications of Harper & Bros. Messrs. Harper, by the way, announce that, by special arrangement, Mark Twain will hereafter write exclusively for their periodical publications and the *North American Review*.

W. H. Lowdermilk & Co., Washington, will publish during the present month 'The Songs of Alcæus,' memoir and text, with literal and verse translations and notes by James S. Easby-Smith, M.A., of Georgetown.

The nineteenth century, in the view of the editor of the *Almanach de Gotha* (Gotha: Perthes; New York: Lemcke & Buechner), is a slovenly tenant, who leaves much clearing up to be done by his successor. The untidiest corner is decidedly China, about which all news is stale as soon as received, and none authentic. In South Africa the tenants are still disputing, and all the poor editor can do is to leave each Dutch republic the simulacrum of independence, as heretofore, and at the same time consign both to the list of England's colonies, with such grim entries as these: "Orange River Colony. Gouv. [. . .] . . . . Troupe de police: *Baden-Powell*, maj.-gen." "Vaal River Colony. Gouv. [. . .] . . . . Troupe de police: *Baden-Powell*, maj.-gen." Then there is another year added to the discrepancy between Julian and Gregorian calendars, and for 1901 the difference will be thirteen days instead of twelve; but this change could not well be noted throughout. Finally, the industry of promoting counts to princes has gone on actively during the past twelvemonth, making more trouble in the genealogical department. The preliminary population figures of our United States census are given a place at the end. The President of Brazil is one of the four personages honored with a portrait in this volume.

'Hazell's Annual' for 1901 (London: Hazell, Watson & Viney), has not labored under all the embarrassments experienced at Gotha. It has found a field for active enlargement in the South African war, of which it details the engagements to date, with lists of casualties, "names of the heroes who have won the V.C.," Parliamentary proceedings, etc., etc.; and China has furnished another field of like character. Biographies of the military leaders have naturally been looked after, and all the new members of the House of Commons are similarly accounted for. There are four new maps, showing contact of "spheres of influence" from which friction may at any time arise. The brief summary of United States history for 1900 gives the issue of the Presidential election. The census figures are not comprehended. The 'Annual' continues to justify its good reputation as "a cyclopædic record of men and topics of the day."

'The *Daily Mail* Year Book' for 1901 (London: Harmsworth Brothers) opens with curt biographies of the day's celebrities, "personally revised in nearly every instance"—Aguinaldo being obviously one of the exceptions; and probably Canon Ainger did not invent the encomium of himself as "an exquisite elocutionist, and one of the finest living critics of pure literature." Peers, Baronets, and M.P.'s are next listed, and after that it is difficult to classify the miscellaneous information pitchforked together. Section 11 is geographical; section 12 is labelled "Professional and Business."

Mrs. Stowe and Miss Perot have had the clever idea of representing, in verse and by pencil, various domestic animals put in a position where they can play upon children the thoughtless tricks that children now too frequently inflict upon them ('Our Turn,' Baltimore: Washburn). It is a real pleasure to the sympathetic friend of cruelly teased domestic pets to see the tables turned; and for the child itself to see these transmutations between the teaser and the teased cannot but be most effective in the inculcating of gentleness and sympathy towards animals. The child that has once been through this book can never again torture his pets without having a vivid picture arise in his mind of how it would feel if he were himself in the animal's place. What this may mean in the way of his attitude towards the peoples who may stand for Boers and Filipinos when he has grown up, it would be difficult to estimate.

In his four stories of experiences in the civil war and in frontier fighting ('Thrilling Days in Army Life,' Harpers), Gen. George A. Forsyth records personal memories which, when skilfully and vividly presented as here, are read with lively interest even though, as in the two reminiscences of the civil war, "Sheridan's Ride" and "Last Scenes at Appomattox," they can add no new facts to history. Sheridan, in the notable achievement of turning rout into victory at Cedar Creek, appears, through our author's presentation, as a much less tumultuous and stormy commander than legend has been wont to depict him.

The importance of the subject discussed by Mr. Alfred Russell of the Detroit bar, under the title 'The Police Power of the State' (Chicago: Callaghan & Co.), justifies our calling attention to his work. It is more of a digest than a treatise, the number of cases cited being enormous, and hence is not adapted for continuous reading. But the arrangement is such as to make it practicable to ascertain the trend of decisions in different departments of social activity, and thus to show the extent to which our law is really "judge-made." The general result, however, is far from reassuring. The decisions, even in the same court, are so conflicting as to make it almost impossible to lay down any rule as to the limits of the police power. Mr. Russell asserts that nine-tenths of the legislation of the States during the year 1899 was in the exercise of this power—a fact sufficient in itself to establish the presumption that the power is abused. The courts exert, on the whole, a restraining influence; but it is impossible to maintain that they do so in accordance with clearly defined and generally accepted Constitutional principles.

Both Thomas Aitken's 'Roadmaking and Maintenance' (London: Charles Griffen & Co.; Philadelphia: Lippincott) and George W. Tillson's 'Street Pavements and Paving Materials' (John Wiley & Sons) treat of country roads as well as of city streets, but the first deals mainly with European and the second with American practice. The nineteenth century has witnessed a marvellous progress in rational and economic methods of street-construction, beginning with macadam roads and ending with brick and asphalt pavements. Road-making is now an established branch of civil engineering, with principles and practice as clearly defined as those of railroad work. Anybody may build a road or street, but it is now definitely settled that a county or city must employ a trained engineer in order to secure results which shall be the most economic—that is, which shall be of greatest value to the community at the lowest cost of construction and maintenance. Both of these volumes are valuable aids to this end.

We have been tardy in noting Salomon Reinach's paper on the 'Survivals of Totemism among the Ancient Celts,' a reprint from the *Revue Celtique*. Without attempting to exhaust the subject, for which a volume would be necessary, the author indicates, from sculptured remains, the traces of totemistic conceptions of the horse, mule, crane, bull, boar, snake, and crow. The paper begins with a discussion of a passage in Cæsar's 'Gallic War,' in which the Roman conqueror mentions the Britons as keeping the hare, cock, and goose, not for food, but *animi voluptatisque causa*. Cæsar's explanation is, of course, impossible; the Britons were not animal- or bird-fanciers. If to them certain animals were *nefas*, the custom must be a survival of totemism. Reinach touches upon the Capitoline goose legend of ancient Rome, and regards the

goose as the totem of a Roman clan. His strictures upon the theory that the prohibition of certain animals as food—for example, the pig—could have originated as a sanitary measure, are well worth pondering. Interesting, also, is his treatment of the goddess Artio and her Bear (a sculpture discovered at Muri), in connection with the legend of the founding of Bern. Everything in the paper, however, is interesting. In thirty-eight pages the reader is led over a wide field, his eyes are opened to the profound difference between totemism proper and anthropomorphic animal-worship (theriolatry), between theriolatry and the fully developed mythology of classic literature.

Libraries as well as Oriental scholars will be interested in the second part of the 'Orientalische Bibliographie' which has just appeared in Berlin. This part completes the thirteenth volume of the series, and contains an extremely comprehensive and well-arranged list of the important works relating to the East which were issued in the second half of 1899. It is interesting to note some three hundred titles of books and articles pertaining to China and Japan alone. There are as many on India; and the other Eastern countries are represented in proportion. An excellent index of authors' names is added. The American Oriental Society, as well as the Royal Academy of Sciences of Bavaria and the German Oriental Society, contributes a share to carrying on the publication, which is ably conducted under the editorial supervision of Dr. Lucian Scherman of Munich. America is represented on the list of scholars who collaborate with him.

We have from the Boston Museum of Fine Arts specimen pages of their projected 'Catalogue of the Morse Collection of Japanese Pottery.' The work is in charge of Prof. Edward S. Morse, the gatherer and present curator of what is generally regarded as a collection of unique historical importance for the study of Oriental ceramics. The pottery is photographed in the cases as exhibited, so that over four thousand pieces are shown. This involves a great reduction of scale, but such is the clearness of the photogravures, at least of the two specimens before us, that the styles may be readily identified without the use of a glass, while outline keys marked with the Museum numbers and facing each plate facilitate the task of identification. The list evidently fulfils the strictest requirements of modern cataloguing, containing notes on the chief makes and makers, and reproductions of more than fifteen hundred potters' marks. The regular edition will form a large quarto volume of 384 pages in the best style of the Riverside Press. The Museum offers this at twenty dollars, and a limited (50) large-paper edition in two volumes at fifty. Incidentally it may be said that it would be gratifying to have from our own Metropolitan Museum catalogues of like thoroughness and importance.

In the *Harvard Graduates' Magazine* for December, 1900, nothing is perhaps worthy of more serious regard than Professor Hart's discussion of the financial condition of the University. The cost of maintaining the plant tends steadily to a deficit, and it is a question in what way to meet this, by economies or by extra charges. Professor Hart states very fairly the pros and cons of this question, especially as respects the raising of the tuition fee. Every new building bestowed on the University involves a fresh burden on the general fund for care and repairs, and even so curious a benefaction as the college fence now in progress adds its quota to the same burden.

Dr. A. Donaldson Smith's second expedition to Northeastern Africa, described in the *Geographical Journal* for December, puts him in the front rank of living travellers. Not only did he make a route survey of over five hundred miles of the almost unknown region between Lake Rudolf and the Nile, but he brought to the British Museum and the Academy of Natural Sciences of Philadelphia valuable collections including several hundred species of birds, mammalia, plants, reptilia, and batrachia, fishes, butterflies, etc.—a good number of them new to science. He noted a remarkable change in the fauna as soon as the basin of the Nile was entered—"a completely different set of birds," while scarcely any of the mammalia which inhabit the Galla country are to be found there. This apparently includes the elephant, a species so numerous just to the north of the lake that "their stench was most disagreeable." Among the natives of this region he found a tribe of cow worshippers who practise certain rites similar to those of the Hindoos, though they kill with much ceremony and eat their cows. Incidentally Dr. Smith commends the treatment by the Abyssinians of the natives along their southern border after they have been subdued. They give them back "a good proportion of their belongings and very nearly their original self-government, but a moderate tax being imposed." The raids, however, by which they are extending their rule towards the Nile, are terribly destructive. One rich tribe, which he visited in 1895, had been exterminated, and of others then large and flourishing there were only a few remnants.

The scientific progress of Japan is demonstrated afresh by the leading article in *Petermann's Mitteilungen*, number eleven, on the great earthquake in Northern Honshu on August 31, 1896. It is by Dr. N. Yamasaki, and contains the results of his personal examination of the four provinces affected, made immediately afterwards by order of the Government Earthquake Commission. A topographic and geological sketch is followed by numerous details as to the time, the magnetic disturbance, the frequency of the shocks and direction. The ruin, especially evident in the beautifully wooded hill country, was not complete at the time of the writer's visit, for enormous masses of rock were even then continually falling with a noise like distant thunder. Prof. E. Seler summarizes the early historical data relative to the boundary dispute between Costa Rica and Colombia. The accompanying map gives the new boundary as recently determined by arbitration, which divides the disputed territory nearly equally, following the watersheds from Pta. Mona on the east coast to Pta. Burica on the Pacific. The *Anzeiger* contains a sketch of the well-known Chinese traveller Prof. Ferdinand von Richthofen.

A strong and earnest portrait of the late Henry Villard has been included by F. Gutekunst, Philadelphia, in his "imperial-panel" series of photographs of celebrities. All the marks of character are present, and one misses chiefly the geniality of expression which gave its charm to the face of this much lamented philanthropist.

—The Massachusetts Historical Society has made a selection from the Jefferson papers recently given to it by Mr. T. J. Coolidge, and a notable volume is the result. However great may be the difference of opinion upon Jefferson's political system, as a writer he is never dull, and his many interests outside of politics impart to his letters much the same variety as Franklin's possessed. In this new volume of his correspondence, few of the papers were written before 1800, and little reference is made to the stormy period of Cabinet service. Jefferson could not avoid giving a note of triumph when Hamilton published his 'Observations.' Writing to John Taylor, he said: "I understand that, finding the streight between Scylla and Charybdis too narrow for his steerage, he has preferred running plump on one of them. In truth, it seems to work very hard with him; and his willingness to plead guilty as to the adultery seems rather to have strengthened than weakened the suspicions that he was, in truth, guilty of the speculations." This was hardly generous in one who is described by Taylor as "often contemplating in raptures the idea of a patriot king." Very characteristic, too, is his policy in regard to offices, expressed immediately after his accession to the Presidency: "A few removals from office will be indispensable. They will be chiefly for real malconduct, and mostly in the offices connected with the administration of justice. I shall do as little in that way as possible." In this connection should be read the letter of Martha Page (p. 120), which shows how far Jefferson would use public office to assist a friend.

—In his home relations, the correspondence shows Jefferson in a very favorable light. To the members of his family, he wrote freely and frankly, with little of the reserve and suspicion which he showed even to the men who stood close to him—like Madison and Monroe. At such times we get nearer to the real character of the man, untouched by his political dreams and aspirations. On his plantation, never (it is to be judged) in very good order, he was assiduous in experiments, careful of detail, and neglectful of general conditions. "My whole life has been past in occupations which kept me from any minute attention to them, and finds me now with only very general ideas of agriculture, without actual experience." That was his own view of his defects; but a man who would impose an embargo in the vain pursuit of a general benefit, or would undertake the cultivation of cotton in Virginia in 1818—a culture so little known in that State that seed could not be obtained anywhere in it—was certainly wanting in breadth of view, He began to manufacture nails on his farm with slave labor, and prescribes the treatment: "It would destroy their value, in my estimation, to degrade them in their own eyes by the whip. This, however, must not be resorted to but in extremities; as they will be again under my government, I would chuse they should retain the stimulus of character." There is a sarcastic touch of truth in the following sentence, written to a young correspondent: "There is something within us which makes us wish to have things conducted in our own way, and which we generally fancy to be pa-

triotism." Jefferson's views of his contemporaries, when not too strongly colored by his partisanship, are critically keen. From the many, that on Richard Henry Lee may be quoted: "Mr. Lee was considered as an orator and eloquent, but not in that style which had much weight in such an assembly of men as that Congress was. Frothy, flimsy, verbose, with a musical voice and chaste language, he was a good pioneer; but not an efficient reasoner."

—Under the title, 'Lives of Great Italians' (London: Unwin; Boston: L. C. Page & Co.), Mr. Frank Horridge, a writer hitherto unknown to us, presents biographical sketches of Dante, Petrarch, Carmagnola, Machiavelli, Michelangelo Buonarroti, Galileo, Goldoni, Alfieri, Cavour, and Victor Emanuel. These sketches vary as much in merit as in length. That of Michelangelo, for example, covers nearly 120 pages, and gives a fairly comprehensive account of his work, while those of Cavour and Victor Emanuel are short and superficial. In general, his accounts of the older men excel those of the more recent, possibly because it is easier to get material about the former than the latter. Mr. Horridge strikes us as an amateur, who, having been interested in reading about notable personages, feels a desire to communicate his interest, rather than as a thoroughgoing historian, or as a zealot for original investigation. He is fair-minded, and although he possesses no especial distinction of style, he often writes pleasantly. Occasionally, as in his epitome of Dante's works, he puts his material compactly. Since his own opinions lean towards the commonplace, he is more satisfactory when he describes concrete events, or paraphrases Villari and Symonds, than when he generalizes. Nevertheless, he occasionally puts forth a suggestion of his own that deserves consideration, as when he lays stress on Machiavelli's tendency to form ideals. His selection of subjects shows the wide range of Italian genius, but we question whether the space assigned to Carmagnola might not better have been filled by the biography of some really typical Venetian of the first rank—Tommaso Mocenigo, let us say, or that dauntless patriot, Vettor Pisani. To many readers, who have not access through foreign languages to anything better, these biographical sketches will be welcome; it is a pity, therefore, that the proof-reading is throughout bad and the spelling of proper names worse.

—A 'New Velázquez Dictionary'—that is, a thorough revision of the 'Spanish Pronouncing Dictionary' published in 1852, by the late Prof. Mariano Velázquez de la Cadena—is a welcome arrival from the Appleton press. It as yet includes only the first part, Spanish-English, the overhauling and enlargement having been intrusted to Dr. Edward Gray of Berkeley, California, assisted by Señor Juan L. Iribas. Although outnumbering the old Velázquez by only three pages, the new one boasts more than 8,000 added titles, smaller (though perfectly legible) type making greater compression possible. Excision of dead matter has gone hand in hand with the introduction of recent commercial and scientific terms, so that what we have is an effectively modernized dictionary. The rules of written accentuation adopted by the Spanish Academy in 1888 are, of course, observed; in this respect alone a revision would have been, in fact, justified. When we reckon in, besides, greater accuracy of definition and usage, with a considerable enrichment in Spanish idioms, we see how much we have to be grateful for. Take the verb *tomar*, for example. The old Velázquez explained but 23 of its idiomatic uses; the new one gives 42, though still behind the Academy's 60. In the revision we do not find *tomar tabaco*, "to take snuff"; it occurs under *tabaco*, however. This illustrates a certain perplexity of cross-reference. *Tomar las de Villadiego* appears under both key-words; why should not *tomar tabaco?* We suppose the editors would say they must draw the line somewhere. Under *tabaco*, by the way, it would have been useful to include the idiomatic *darle á uno para tabaco*, "to give one a beating." To go back to *tomar*, omission is made of the common phrase *tomar la palabra*. Again we turn to *palabra*, and find the idiom, though here wrongly defined. It does not mean "to speak first," but "to take the floor," simply *ponerse á hablar*, as the Academy defines it. But in any strictures upon *tomar*-idioms, one must always bear in mind the confession of the Academicians themselves: "Difícil sería presentar un catálogo fiel y completo de todas las acepciones del verbo *tomar*." So far as we have been able to judge by tests here and there, the revisers have done their work with sound scholarship and excellent taste. The 'New Velázquez' is happily timed for the new vogue of Spanish.

—Signora Jessie White Mario has made an excellent selection from the writings of Mazzini ('Scritti Scelti di Giuseppe Mazzini,' Florence: Sansoni) for the series of Italian classics of which Professor Carducci is the general editor. Within the compass of 400 pages she has given pieces which represent Mazzini as man of letters, as political agitator, as social philosopher, and as prophet. Here we find such important critical essays as "Byron and Goethe," "Fate as an Element in the Drama," "The Genius of Thomas Carlyle," "The Philosophy of Music," and "On a European Literature"—papers some of which were first printed in English, and all of which justify the belief that, had Mazzini devoted himself wholly to literature, he would have stood among the three or four supreme authors of the century. As it is, even his political pieces have a lasting quality. His letter to De Tocqueville and Falloux, containing his terrific invective against the French Ministry, which had abetted Louis Napoleon in his suppression of the Roman Republic in 1849, is reprinted here, and we doubt whether it can be matched for its mingling of righteous indignation, sarcasm, and scorn. Here, too, are the early letter to Charles Albert and the later one to Victor Emanuel. Besides several extracts from Mazzini's autobiography, there are papers which relate to young Italy, to the beginning of the Sicilian Revolution in 1848, to the Roman question, and to other political events in which Mazzini was involved. His ideals are set forth in the address "To the Youth of Italy," in "Resurrection," and in "Faith and the Future"; while a final series of extracts, dating from 1860 to 1869, embodies his doctrines on Socialism. Nor should we omit to mention that his memorial to Jacopo Ruffini, his martyr friend, and his very early essay on Dante's patriotism are also included in this collection. Signora Mario has provided an introduction of more than sixty pages, in which she surveys rapidly Mazzini's life down to 1847, and prints passages from letters and memoirs, some of which have not hitherto been made public. The briefer notices with which she introduces the selections are also full of important information. No other living person is so well qualified as she to do this work; for she not only knew Mazzini intimately and plotted with him, in the days of conspiracy, but she also knew thoroughly the conditions amid which he lived in England, and the acquaintances and friends with whom he passed more than half his life there. The world has still much to learn from Mazzini; we could wish that the English-speaking part of it might be led to him afresh by so admirable a volume of selections as this.

MORLEY'S OLIVER CROMWELL.

Oliver Cromwell. By the Right Hon. John Morley, M. P. The Century Co. 1900.

Mr. Morley's 'Oliver Cromwell' is not a biography, but an "appreciation," of the Protector. The book has been received with general and well-merited applause; it is the work of a writer who occupies a position which has never been filled by any man since the time of Macaulay. For Mr. Morley in this, at least, resembles the most brilliant and the most popular of English historians, that he unites the character of a man of letters who has taken to the pursuit of literature most seriously with the character of a statesman who has played a leading part in English public life. Mr. Gardiner and Mr. Firth, those "giants of research," to whom Mr. Morley pays a characteristically generous and deserved tribute, possess an intimate, we might almost say a personal, knowledge of the Puritan revolution and its leaders to which Mr. Morley lays no claim; but both of them are students, and have never mixed, except as private citizens, in matters of politics. J. R. Green and Froude equal Mr. Morley in literary talent, but the most ardent admirer cannot read their writings without perceiving that Green and Froude alike lacked the sort of balance and judgment which is gained from the practical experience of public life. Add to all this that Mr. Morley possesses and displays in every page two qualities which are difficult to define, but which, at the present day, are highly appreciated by the class that used to be called intelligent and candid readers, and are, in the current phraseology of to-day, called men of education and culture. The first of these qualities is "style." Mr. Morley, as a man of letters, is, above all things, a stylist. No one can mistake the laborious care of his writing. No one can suppose that he has ever adopted the maxim laid down by Mr. Leslie Stephen, that, "to acquire good style, you should never think of style at all." Not only must Mr. Morley himself, at any rate before he attained his present literary cunning, have thought day and night of style, but the readers of his 'Cromwell' never, we may be sure, have our author's style quite out of their minds; and we may be equally sure that, for the most part, they are filled with admiration for striking phrases which are always sententious and occasionally pregnant. The second quality is a profound belief in the "best thought," as it is called,

of to-day. An example, which makes our meaning clearer than would any attempt at definition, is to be found in Mr. Morley's enthusiasm for the Historic Sense:

"Of the Historic Sense," he writes, "it has been truly said that its rise indicates a revolution as great as any produced by the modern discoveries of physical science. . . . By virtue of that sense, even those who have moved furthest away in belief and faith from the books and the symbols that lighted the inmost soul of Oliver, should still be able to do justice to his free and spacious genius, his high heart, his singleness of mind. . . . Yet Historic Sense forbids us to judge results by motive, or read consequences by the ideals and intentions of the actor who produced them."

In these words we have at once the manner and the thought of our author. We have also the key to Mr. Morley's impressiveness.

Though it is easy to account for and to justify the favorable and deep impression which his book has made upon the public, or rather upon the world of culture, it is a hard matter for critics who are both candid and friendly to answer the question, how far Mr. Morley's estimate of Cromwell really adds to our understanding of the Protector and his age. The true reply is that Mr. Morley, in common with all writers of weight, exhibits in a marked degree the faults which naturally accompany his special merits. No one will fairly estimate the value of our author's work who does not distinctly acknowledge his deficiencies.

Mr. Morley, in the first place, though well known by his lives of Rousseau, Diderot, Voltaire, and Cobden, has not the special gifts of a biographer: he is not a literary painter; he has never given us a portrait of any man. If any writer was ever marked by superabundant individuality, it was Voltaire; yet under Mr. Morley's hands he becomes a sort of abstraction, a representation, as it were, of Free Thought in perpetual conflict with Prejudice. For a true picture of Voltaire you must go to Mr. Parton. Our American writer had not a tithe of Mr. Morley's culture, and was as poor a thinker as Boswell. but the caprice of Nature had invested him with a touch of the Boswellian genius. Mr. Parton often misunderstood French, and certainly did not understand Latin, but he shows us Voltaire, so to speak, in the flesh. Richard Cobden, again, must have been a man of strong personality, yet in the pages of Mr. Morley he becomes the incarnation of Free Trade and of Political Economy. So, to a certain extent, it is with Mr. Morley's Cromwell. Many of his criticisms on the Puritan statesman are sagacious, they are all worth attention; but in no single page does Mr. Morley present us with anything like a picture of his hero. Oddly enough, the man of letters and man of thought is, in our author, always more prominent than the practical statesman; he leaves on one the impression that he has learned more from books than from men.

Then, again, the phrases which arrest the attention of Mr. Morley's readers have imposed a little too much upon their creator. He is apt to give us a striking dictum or quotation where we want a clear explanation.

"Historians," he writes, "may argue for ever about the legalities of what had happened, but the two great actors were under no illusions. The only question was, who should draw his sword first and get home the swiftest thrust. The game was a terrible one with fierce stakes, *My head or thy head;* and Pym and Strafford knew it."

Here we have sentences which the reader will remember, and sentences which mean something, but do not, when carefully weighed, mean very much. Take Mr. Morley's rendering of the same idea applied to the execution of Charles I.:

"The two most sensible things," he writes, "to be said about [it] . . . have often been said before. One is, that the proceeding was an act of war, and was just as defensible and just as assailable, and on the same grounds, as the war itself. The other remark, thought tolerably conclusive alike by Milton and by Voltaire, is that the regicide treated Charles precisely as Charles, if he had won the game, undoubtedly promised himself, with law or without law, that he would treat them. The author of the attempt upon the Five Members in 1642 was not entitled to plead punctilious demurrers to the revolutionary jurisdiction. From the first it had been *My head or thy head*, and Charles had lost."

Here again we have phrases that will stick in the memory, but have we anything like a real solution of a perplexed constitutional and political problem? The plea put forward really condemns the form of a trial. War is one thing, judicial condemnation is another. The attempt to blend the two takes away the justification from each. If Charles was a foe to be shot down, what are we to say of Cromwell's endeavors to come to terms with him? What, again, has become of the Historic Sense which was to forbid us to judge results by motive? From the point of view of English freedom, the execution of Charles I. stands condemned by its consequences. It excited a kind of indignation which made the permanent maintenance of the Commonwealth or the Protectorate impossible; it gave a sort of sanctity to the Stuarts. Neither the vices of Charles II. nor the narrow bigotry of his brother could completely do away with the effect produced by the so-called martyrdom of their father. The removal, moreover, of the King made a restoration possible because men might fairly hope that the return of Charles II. would not involve an attempt to take vengeance on every man involved in the rebellion. It is not often that historical comparisons are worth much, but one at least is worth making. Charles I. was remembered and venerated just because he was put to death. James II. was allowed or prompted to escape to the Continent; exile meant the loss not only of power but of prestige. It may well be doubted whether at the present day one educated Englishman in a hundred knows the date of James's death.

Mr. Morley's confidence, indeed, in the Historic Sense, though held most honestly by himself, and shared by the vast majority of his educated readers, will seem to many critics little better than a delusion, and a delusion which a good deal mars his historical work. Does, after all, this Historic Sense mean more than the combination of the two convictions, first, that research is the basis of historical knowledge, and, secondly, that, in judging the men of another age, we ought not to apply exclusively the standard of our present beliefs and sentiments? These convictions are sound, and have of recent years gained in force, but they have been entertained more or less consciously by every historian from the time of Thucydides downwards. If by Historic Sense, on the other hand, Mr. Morley means some newly acquired power of understanding the sentiments of other ages, we deny its existence. Mr. Morley himself is in intention one of the fairest of men. He tries earnestly to enter into the beliefs and feelings of the Puritans, yet at every turn we see his extreme difficulty in understanding feelings, or prejudices, not only entertained by the Puritans, but cherished, though in slightly different forms, by the Englishmen of to-day. Take, for example, his remark as to Strafford's policy in Ireland: "The English colonist and his ecclesiastical confederate and ally were the enemy, and nobody has ever seen this so effectually as Strafford saw it." Now, it is quite maintainable that, had it been possible for England and Ireland to pursue different paths, and had no Englishman ever settled in Ireland, it would have been better in the long run for both countries; but what it is not possible to maintain is, that any English Government could treat the English colonist as the enemy, and it is hardly credible that Strafford ever meant to embark on so mad a design. No doubt he did mean to govern the country autocratically, and to raise an army which might turn the scale in favor of the crown in the impending conflict between the King and the Parliament. But the conception of statesmanship based upon systematic hostility to the colonists was surely as foreign to the ideas of Strafford as to those of Cromwell.

It is worth dwelling on this point because Mr. Morley, with all his laudable endeavor to do justice to the Puritans and to Cromwell, does not emphasize the one strong point of their Irish policy. That policy ended in failure, and, we conjecture, had hardly a prospect of success, but its critics should remember that it never had a permanent and therefore fair trial. Cromwell and the Puritans generally intended that in Ireland there should be equality among Protestants; they further made Ireland part of the United Commonwealth. The men who succeeded them carried on to the best of their ability the system of penal legislation for the Roman Catholics, but did not insure the equal rights of Protestants. The legislative union had come to an end, and with it the commercial equality which at any rate secured to Ireland great material benefits. Can any one be certain that if the Protestants of Ireland, or, in other words, the English colony, had been contented, half at least of the Irish problem would not have been solved? The plain truth is that this is a point on which Mr. Morley and Mr. Morley's critics ought to speak with equal diffidence. The Historic Sense may do something for us, but it will not make it possible for any Englishman who has taken part on the one side or the other of the home-rule controversy, to treat with judicial impartiality the relations of England and Ireland in the seventeenth century.

We have dealt at some length with the defects of Mr. Morley's 'Cromwell,' just because of their close connection with indubitable merits. The book does not, indeed, explain the paradox of Puritanism, which is nothing else than the strangeness of complete success followed by absolute and in some sense final failure, but it does supply material for thought. It does not give a picture of Cromwell, but it suggests peculiarities in his character which go far to explain his failure in every attempt to construct a system which should outlast his own life. Mr. Morley, for in-

stance, points out, what the admirers of Cromwell are loath to acknowledge, namely, his impatience, which appears oddly to contrast with his persevering tenacity in the pursuit of his main objects. Who can seriously doubt that Mr. Morley is perfectly right in intimating that the dissolution of the Long Parliament was a fatal blunder? For the Rump no one need have much sympathy. Looked at from the most favorable point of view, it was a republican oligarchy which, while professing popular principles, could not and dared not appeal to the people, but the remnant of the Long Parliament held possession of the tradition of legality. Let any one consider for a moment the immense importance of giving to the Constitution as remodelled by the Puritans something like a legal origin. Cromwell's impatience made him throw away the one chance of conciliating that vast body of Englishmen who have always prized legality as the one security either for freedom or for progress. The Rump no doubt was a most irritating body, but then statesmanship is shown by not yielding to irritation. Cromwell himself, we may well believe, hated despotism as much as was possible for a man who was all but compelled to use arbitrary power, but he neither knew how to do without or with a Parliament. "How much safer," argues Mr. Morley, commenting upon a letter of Henry Cromwell's, "to rely upon a Parliament, with all its slovenly, slow, and froward ways, than upon a close junto of military grandees with a standing army at their back. This is what the nation also thought and burned into its memory for a century to come. Here we have the master key to Cromwell's failure as a constructive statesman." And in this Mr. Morley is assuredly right.

Then, again, he recognizes, what admirers of Cromwell have failed to acknowledge, that it was by no means without reason that friends and foes alike found in the Protector a quality which admirers might call policy, but which hostile critics deemed to be cunning. On the singular letter to Hammond, Mr. Morley remarks: "From the point of a modern's carnal reasoning, all this has a thoroughly sophistic flavor," and Mr. Morley, we infer, thinks that, in the seventeenth as in the nineteenth century, sophistic reasonings in which religious sentiment blends with worldly expediency must excite distrust towards the statesman who uses them. One, indeed, of Mr. Morley's strongest points is that, without falling back on the old theory of Cromwell's hypocrisy and craftiness, he obviously allows a good deal more for design and policy than is consistent with the hero-worship of Carlyle, or even with the too extensive and undiscriminating charity of Gardiner. In reference to the self-denying ordinance, he points out, with admirable good sense, the impossibility of believing that the post of lieutenant-general should have been left vacant otherwise than by design, and that every one must have foreseen, and that Cromwell certainly did foresee, that if the war continued he would assuredly fill the vacant place. We should like much to know whether Mr. Morley does not hold, as some of his expressions lead us to infer, that what was true of the post of lieutenant-general was at a later date true of the kingship. Surely Cromwell expected (and no one need blame him, either as a Puritan or as a patriot, for the expectation) that, within a few years, Providence would place the crown upon his head. This expectation sufficiently explains his position at the time of his death. But on this matter, though we think Mr. Morley shares our view, he gives no very distinct utterance. In a passage, however, which furnishes an admirable specimen of his analysis of character, he shows his keen appreciation of the sort of revolutionist who often renders prudent statesmanship almost an impossibility:

"The cry of the political leveller was led by Lilborne, one of the men whom all revolutions are apt to engender—intractable, narrow, dogmatic, pragmatic; clever hands at syllogism, liberal in uncharitable imputation and malicious construction, honest in their rather questionable way, animated by a pharisaic live of self-applause, which is in truth not any more meritorious nor any less unsafe than vain love of the world's applause; in a word, not without sharp insight into theoretic principle, and thinking quite as little of their own ease as of the ease of others, but without a trace of the instinct for government or a grain of practical common sense."

GIBB'S OTTOMAN POETRY.

A History of Ottoman Poetry. By E. J. W. Gibb. Vol. I. London: Luzac & Co. 1900. Pp. xxii, 454.

It is only once in a decade, if even then, that a book of permanent importance on an Oriental subject comes from the pen of an English scholar. The Vallombrosan leaves of the crank, the sciolist, and the apprentice in literature flutter down more thickly from English trees than from any others; it would seem mostly as though the traditions of a great past were forgotten, and the insular fellowship of Foster of the Sinai inscriptions and Jonathan Scott of the 'Arabian Nights' had triumphed over the memories of Pocock and Hyde and Lane. In few other countries has the general level of scholarship been so low, and the superficial dilletante so uplifted his horn against the painful and honest toiler. No one, for example, would ever dream of comparing the average articles in the *Journal* of the Royal Asiatic Society with those in the *Zeitschrift* of the German Oriental Society or in the *Journal Asiatique*. And yet, behind all this, the lettered life flows tranquilly on. In quiet country parsonages or city chambers men spend their ten or twenty years of work on a book, thinking of nothing but how to make their child, often their one child, as beautiful and perfect as may be, and leaving, in the meantime, the stage to whoever may choose to occupy it. The German scholar, on the other hand, passes a public and pugnacious existence in *Zeitschriften* and *Abhandlungen*. His labor and his loss are truly great, but so, too, is his reward; for the ignorant and half-ignorant vanish before him. Lane, during years of toil at his dictionary, wrote only two magazine articles; Fleischer, after his *Baydāwī*, gave his life to ruling, as a kindly Aristarchus, the Arabic studies of all the West.

The book before us is the product of such long and patient toil. Since the death of Sir James Redhouse, Mr. Gibb has represented Turkish studies in England; and, even in Germany, although he has not gone out into the wilderness of the *Zeitschriften*, he is honored as the author of the sketch of Turkish literature in the 'Encyclopædia Britannica,' the only one that yet exists. It is long, too, since he began to publish translations from the Turkish. His 'Ottoman Poems' appeared in 1882, his 'Story of Jewad' in 1864, and his 'Forty Vezirs' in 1886. And all the time he was collecting materials for his great work. The task before him was no light one, and the approach to it had been little smoothed by the preliminary labors of predecessors. He had practically to cover the whole ground himself, and to learn everything at first hand from the Turkish sources. These still remain in great part in manuscript, and, even with the treasures of the British Museum at his service, Mr. Gibb had to rely largely on his own slowly gathered library. To be added to all this is the length of the way over which the historian of Ottoman literature must travel. If its beginning can be dated only with the fall of the Seljuqs in 1300, the end is by no means yet, and only one period and 150 years have been compressed into the present volume. But the very fact that the story is so long and is still going on is what will make, for most, the interest of this literature. The strange fact is, that Turkish, alone among all the Muslim languages, is producing, and evidently will produce, in increasing richness, a poetry that bears the stamp of modernity, even to a tendency towards decadency in our sense.

How striking a phenomenon this is, need hardly be remarked. Persian is still treading in the old paths. Its poets grind the same well-worn ideas, and strive only to prank them out with more and more novel flowers of rhetorical expression, and greater and greater smoothness of melody. Arabic is enjoying a renaissance of a kind, but one more political and educational than literary. The Pan-Islamic movement has seized upon it as a means of union, and seeks in the classic tongue of the people of Muhammad a bond to draw more closely together the multifarious Muslim nations. The study of that language (called fondly "*the* language") by the masses of the people, the printing of books and, above all, of newspapers in it, have made a progress within the last ten years that has struck non-Muslim observers with something akin to consternation. Undoubtedly we can trace here, in part, the fruits of the patient labors of the mission schools in Syria and Egypt. But, equally undoubtedly, the immediate cause of this sudden awakening and curiosity is political. And it, too, has produced little vitally new literature. The grasp of the dead hand of classical form is still stiff, and the translations and adaptations from Molière and La Fontaine by Muhammad Gelāl 'Uthmān have met little response and less imitation among his countrymen in Egypt. Very different is the case in Turkish. In spite of official disapproval, the Sufi and Persianistic manacles of the past have been struck off, and the second (and the truest) great *Blüthe-Zeit* of Turkish literature has begun. European, especially French, influence has carried all before it, and has pointed the way to simplicity and nature. The old metaphysicalities, verbal artificialities, unrealities, have vanished before the laughter of the Parisian stage. Plays, novels, and poems have all, now, the stamp of the West; and if the new development stops at this point, there is danger that it may become as unreal for the great mass of the Turkish people as were the Persianisms of the old régime. But that is probably only the first scum. If the young Turkish writers do not believe in anything, not even in themselves, the mass of the people

still hold by the popular faith; and if their fashion is borrowed from Paris, they have learned through it at least to look upon Nature directly, and to interpret her simply. The perfectness with which they have learned their lesson, and the docility with which they follow their guide, can be paralleled only by the letter-perfectness and docility of their ancestors six hundred years ago. Mr. Gibb has certainly much on his side when he maintains that whole-hearted acceptance of a system, and unswerving loyalty to it when accepted, are the prime characteristics of the Turkish mind.

When the little Tartar clan, headed by Osman and thereafter to bear his name as Ottomans, swooped down upon Anatolia and the slowly dying realm of the West Seljuqs, they brought with them nothing but their own rude ballads and popular songs. What these were we may perhaps form some idea from the ballads of Kurraglu, translated by Chodzko. But the dominant literary influence of the time and the place was Persian, and so, just as those Tartar nomads became Muslims in theology, they also became Persians in literary faith and practice. When, therefore, they set themselves to develop from their chaos of dialects a literary language, Persian was their guide and rule. Persian metres and verse-forms, Persian ideas—and some very bizarre ones—in science, philosophy, and theology, Persian sensations and impressions, even the Persian vocabulary, they took over *en bloc*. During the whole period of the Old School, every Persian word, as Mr. Gibb well puts it, was a possible Turkish word. A more absolute submission, in idea and expression, of one language to another is hardly conceivable. The ideas, too, thus taken over were such as to make this submission still more startling. If we in the West have any thoughts at all about the Turk, we probably regard him as either a ferocious sensualist or a religious soldier of the Cromwellian type. But the literature which he took over from Persia was one long chant of the mystical yearning of the soul for communion with and absorption in God. In its expression it was symbolic and metaphysical to a degree, and is best paralleled by the songs of the Troubadours of Provence and the Cavalier lyrists of the English seventeenth century. In its spirit it was an inextricable and, for us, scarcely intelligible blending of the personalities of the two Rossettis—Dante Gabriel and Christina.

It is the story, then, of this literature which Mr. Gibb has begun to tell, and the present volume shows already and amply the grasp of a master. Of course, there are omissions which we may regret and opinions with which we may disagree. But there can be no question that here is a great book, largely conceived, broadly prepared for, and keenly and appreciatively thought out. The translations, in their quaintness and "preciousness" of phrasing, render the originals with singular felicity. The preliminary exposition of the origin, character, and scope of Ottoman poetry, of the religious tradition and mythology (in a sense) on which it is based, and the philosophy of which it essentially consists, of its forms, prosody, rhetoric, etc., is admirable in every detail. Our only serious quarrel with Mr. Gibb is that he has not done what he did not propose to do—given a ponderous treatise with learned footnotes and long lists of authorities. His book is written, in the first instance, for the scholarly public, not for the inner circle of Orientalists; but there is not an Orientalist alive who could read it through without profit. Still, for us who study the East—and we would entreat Mr. Gibb to listen to this prayer which we address as disciples to a master—there would be much advantage in a full *bibliographie raisonnée* of authorities, both Oriental and foreign. Fuller references in the footnotes would also be of help to the student. As to details: p. 39, note, the Arabic lexicographers (Lane, *Lexicon*, p. 2980 C.) regard *yahmūt* as the more approved form; p. 293, "Night of Power" might be better "Night of Decree"; p. 337, note 3, *istawà* is more exactly "settled Himself"; p. 347, on the fate of Nesímí it may be said that even orthodox Islam has pardoned strangely pantheistic phrases. Thus, al-Ghazzālī, and, still more, al-Qushayrī and ash-Sha'rānī, defended the memory of al-Hallāj and explained away his famous "I am the Truth!" Of much importance and significance for the understanding of Muslim mysticism, and especially of the Hurúfís, is the life of Ibn al-'Arabī, who was a curious combination of Zāhirī in law and pantheistic Sufi in theology. On p. 445 Merx's 'Idee und Grundlinien einer allgemeinen Geschichte der Mystik' might be used with advantage. Merx finds the point of departure for both Muslim and Christian mysticism in the 'Book of Hierotheus,' by Stephen bar Sudaili. This supports Mr. Gibb's contention for the non-Indian origin of Sufiism.

We close with the hope that this work, so excellently begun, may not linger by the way, but may soon reach, in Turkish phrase, the haven of completion.

The Papacy in the Nineteenth Century. By Friedrich Nippold. Translated by Laurence Henry Schwab, Rector of the Church of the Intercession. G. P. Putnam's Sons. 1900.

It is possible, if not probable, that the Episcopal clergyman who has made this laborious translation has endeavored in this way to discharge a debt of gratitude to Professor Nippold for his handsome treatment of the Episcopal Church in America. But the book deserved translation upon other grounds. It is ably and carefully written, but disfigured by a too splenetic manner in some parts, whereby it loses the character of a dispassionate history, and takes on that of an ecclesiastical pamphlet. The general outlines are firmly drawn, and represent the Roman Church, and more especially the Papacy, as profiting by every revolution of the century, but indirectly, by availing itself of the several reactions that have succeeded the several revolutions. This was the method of Pius VII. after the Restoration of 1814, of Gregory XVI. after the Revolution of 1830, of Pius IX. after the Revolution of 1848, and of Pius and Leo XIII. after the downfall of 1870. The criticism is a sharp and generally an effective one on the popes, the Roman Curia, and the Jesuit order. It can hardly be objected to as religiously partisan, for it is almost entirely political. Whatever of infallible direction went along with these adroit manœuvres, they present themselves to the historian as a concatenation of purely political events, differing from others only as involving methods more crafty and unscrupulous than those of governments not pretending to the special guidance of the Holy Spirit. It is as if the wisdom of Machiavelli had been conserved in his own country as nowhere else, and in the papal court with preëminent appreciation. The annals of diplomacy do not present a series of more doubtful practices than those whereby the Roman court has rallied its traditional strength and gone on from victory to victory.

The course of events from the first to the third French Revolution is depicted with clear understanding of its leading traits. Chief among these was the restoration of the Jesuits by Pius VII. Another was the contribution of the Protestant Powers to the welfare of the Papacy. The armies of these Powers made possible the Roman restoration. The tendency of the Papacy to reabsorb those elements which threaten to disengage themselves from it, had never a better illustration that when Leo XII. succeeded Pius VII. in 1823. As Cardinal Annibale, Leo had been inimical to Consalvi, whose influence dominated three successive popes as distinctly as that of Jefferson his own administration and those of Madison and Monroe. There were no flies so circumspect that this diplomatic spider could not involve them in his net. Niebuhr and Bunsen were both victimized by him. Leo XII. became his willing or unwilling servant almost immediately on his accession. If unwillingly, he was the more obsequious. Gregory XVI. bettered the instructions of this astute adviser, whose genius was prophetic of the contemporary boss. Renan's opinion that there have never been worse temporal rulers than the popes received abundant special illustration from the reign of Gregory. He succeeded in making himself well hated by the Roman population, but assembled thirty-one archbishops, bishops, and patriarchs to the baptism of his barber's son, having adopted the father as a favorite, and advanced him to the proudest heights.

Professor Nippold's judgment that the reign of Pius IX. was the most eventful in the whole course of Papal history will hardly be gainsaid. Dogma *quia impossibile* reached its acme in his darling projects of 1854 and 1870, the declarations of the Virgin's immaculate conception and the Pope's infallibility. Beginning as a reform pope, he soon tired of that rôle and placed himself at the head of the European reaction. It is an interesting paradox that this most ignorant of popes was the first to be infallible, but then it must be remembered that his infallibility was not personal but *ex cathedrâ*. The manipulation of the bishops and others who voted the new dogma is convincing that the children of darkness are not always wiser in their generation than the children of light. So, too, is the haste with which the recalcitrants fell into line, like so many opponents of "a nomination not fit to be made" in a political convention. The Council which decreed Infallibility is not reverently handled by Nippold. It was an interesting coincidence that a terrific storm shook the dome of St. Peter's while the Pope was promulgating his *Pastor æternus*, but a much more important one that the next day France declared war on Germany, and consequently soon found her Roman occupation gone. With that went the temporal sovereignty of the Pope, and Rome became the capital of Italy.

But those who expected the political influence of the Pope to perish with his temporal sovereignty were much disappointed. Never was his influence more active or effective than during the decade following Sedan. It was the decade of the "Kulturkampf," a German conflict in name only. Everywhere throughout Europe the Jesuitized papacy was busy making trouble for its enemies and making things pleasant for its friends. Pius was fond of comparing himself with the great Head of the Church, and quoting, "Which of you convinceth me of sin?" as pertinent to his own condition. More apt would have been, "I am not come to bring peace, but a sword." When the Empress Eugénie called the Franco-Prussian "her little war," she did not give her Jesuit advisers the credit they deserved. In the "Kulturkampf," which ended so auspiciously for Leo XIII., Professor Nippold's judgment is "that the German statesman who of all possessed the greatest mind, failed in almost every instance in which he dealt with ecclesiastical questions." "The very qualities which make the statesman who deals with material forces powerful, render him less fit for a correct judgment of things which are not of this world." The context does not suggest that the politico-ecclesiastical failures of Bismarck were less of this world than his politico-military successes. A chapter on "The Peace-Pope, Leo XIII.," is destructive of the myth embodied in that descriptive epithet. He has yielded nothing in secondary matters which did not promise gain in those of more importance. He has never hesitated to stir up international or intestine strife when he might hope to reap a personal advantage.

There are chapters on the working of the infallible papacy, the Oxford Movement, the new papal hierarchy in England, Romanism in America and in the American Latin States. From those on England and America we get an impression of scantier information than was elsewhere at command, and a less vigorous grasp on the material. An American account of the Oxford Movement seems to have been Nippold's principal authority. He exaggerates the part played by Pusey in the earlier stages of the Movement, and relates Manning to it in an unwarranted manner. Moreover, the closing chapters suffer from the fact that they were written some ten years ago.

The Annals of Mont Blanc: A Monograph. By Charles Edward Mathews. Boston: L. C. Page & Co. 1900.

This work was published by Unwin in December, 1898; it comes to us now with the name of a Boston firm on the title-page. Under such circumstances it may seem strange that we should do more than notice its republication in the United States. However, there is some excuse for taking it up in a separate article. We failed to review it on its first appearance, it is an important addition to Alpine literature, and Mr. Whymper's "Lowell Lectures" have, presumably, aroused some interest among Americans in the noble sport of mountaineering. (We may remark, in parenthesis, that the most assiduous Alpinist living is an American by birth, the Rev. W. A. B. Coolidge.)

Mr. Mathews ranks with the early and the eminent climbers. Those who are familiar with the conquest of the Alps in the second half of the last century (that is, from the ascent of the Wetterhorn by Sir Alfred Willis to Sir H. S. King's ascent of the Brenva Péteret) will have met with his name at every stage. In 'Peaks, Passes, and Glaciers,' in the *Alpine Journal*, and in the Badminton volume on 'Mountaineering,' he figures constantly. He was among the founders of the Alpine Club, he has been its President, and, what to many might seem a still greater distinction, he has for thirty-five years had Melchior Anderegg for his guide. Mr. Mathews has not been to the Caucasus, the Himalayas, the Andes, the Selkirks, or the southern island of New Zealand, but he knows many parts of the Alps thoroughly, and, as the historian of Mont Blanc, he can claim the preliminary qualification of having climbed that mountain twelve times, by all the main routes. The photogravure plates for his book have been supplied by Signor Vittorio Sella, who is probably the best of mountain photographers.

Mont Blanc, as a French range and summit, has attracted the attention of M. Charles Durier, the President of the French Alpine Club. His sketch of its history was the first in the field, but Mr. Mathews's 'Annals' is the definitive account for English readers. From the days when Windham and Pococke "discovered" the Chamonix valley and quickened popular interest in it (1741), Englishmen have been foremost in exploring the great chain. Two Englishmen opened the tourist era, Adams Reilly made the first good map of the mountain, Coleridge and Shelley both wrote poems about it, Albert Smith made £30,000 by lecturing about it, and the worst fatality which has occurred on it embraced three Englishmen with their eight guides. Thus Mr. Mathews, like M. Durier, has a national interest in his subject.

The history of Mont Blanc is simply the record of its exploration. Considering that it was called Mont Maudit till about 1750, we need not waste much conjecture upon those who admired it from a distance without taking the trouble to get nearer. Mr. Mathews does not give any space to the annals of Chamonix. The history of that village was written seventy years ago by another Englishman, Mr. Markham Sherwill. Mr. Mathews, after a brief reference to old friends like Gesner, Simler, and Scheuchzer, starts in with Saussure. He examines the early and unsuccessful attempts to reach the summit; then, beginning with the triumph of Balmat and Paccard, he comes down to 1851, telling the story of every authenticated ascent before Albert Smith. His other most important chapters have to do with new routes, fatalities, and those ridiculous persons, the Chamonix guides.

Besides praising Mr. Mathews's careful research and attractive narrative, we can mention only one matter which is here debated at length, and with an exhaustive criticism of the evidence. We refer to the first ascent, and to the case of Paccard versus Balmat, which was rendered famous by Alexandre Dumas. The story told by Balmat to Dumas was that he asked Paccard, a Chamonix doctor, to go with him as a witness. The plan was Balmat's, and his, too, the success; for Paccard, having been left "half-frozen and helpless at the foot of the Calotte," was only dragged by force to the summit after Balmat had first been there. The above story Mr. Mathews dismisses as a piece of Chamonix *blague*, on the authority chiefly of Michel Carrier. His conclusion is that while Balmat discovered the true route, and was the stronger climber, Paccard was a companion and not a dead weight. It follows that he deserves a memorial at Chamonix similar to the medallion which commemorates the exploit of Balmat.

This admirable volume contains a bibliography and a geological chapter by Professor Bonney.

The Women of the Renaissance: A Study of Feminism. By R. de Maulde la Clavière. Translated by G. H. Ely. G. P. Putnam's Sons.

It has been said of the Renaissance that it was great rather by what it aspired to than by what it achieved. It was indeed a time when intellectual curiosity, newly stirred, undauntedly envisaged insoluble problems, and planned impossible reconciliations of gods and men and creeds. It was, above all, the psychological moment for the intellectual and social crank. There is probably no period in the history of human failure in which men and women have struggled more feverishly to impose a lofty meaning on earthly things, to recognize that their souls burned with a sacred flame that must be fed with the best that life could furnish. No wonder that the leaders of the great reaction against materialism who ventured to soar to such heights, usually ended by adding a fresh illustration to the legend of Icarus.

A typical attempt and failure was the feminist movement in France and Italy in the sixteenth century. At this period the influence of women was almost unlimited. There was no discussion of women's rights—they might well be satisfied with their rôle of apostles and leaders in the spheres of art and literature; but they probably derived the keenest enjoyment and sense of power from their peculiar mission to humanize men and cultivate their sensibility. They were learned, in the style of Lady Jane Grey; well read in the Latin classics in their early teens; some even claimed an intimate acquaintance with Plato, and, at any rate, whether they read him or not, it was from Plato that they derived that religion of love and beauty with which they tried to transform and idealize the world. Italy, and especially Florence, furnished the most favorable atmosphere for such a gospel; but even such women as Vittoria Colonna or Tullia d'Aragona, "sweet Italian women, . . . all compact of poetry, archæology, rhetoric, and philosophy — Attic through and through at thirteen years," as M. de Maulde tells us—even such paragons as these are cast into the shade by Margaret of France, commonly called Margaret of Navarre.

The most interesting pages of M. de Maulde's voluminous treatise are devoted to this astonishing woman. For thirty years she presided over the intellectual life of France. "The whole thinking soul of France hung upon her smile; she was the incarnation of Platonism" (p. 170). Plato was her Bible, and she was convinced that of the two loves whose existence she derived from Plato, women alone have the secret of the celestial type. It was from women, therefore, that the gospel of Platonism, the religion of love and beauty,

must proceed. The words in which she expresses her views are an echo of the 'Symposium,' in which a woman figures as a teacher with more than human authority. It is not to be supposed that, in their ardor for winning men's hearts to a love of the Beautiful, such women as Margaret of Navarre were working for their personal happiness. Platonism to them was a means of giving their souls to mankind; Margaret was the pilot of men's souls to the idea of the Beautiful; and in this rather hazardous profession she piloted so well that, as she tells us, "the most daring were reduced to despair, and the most downhearted saw a ray of hope." Platonic love for these ladies "consists precisely in loving up to the very verge of the forbidden." Naturally this led to some inconsistencies of conduct which were easily misunderstood. But, on the whole, the effect of this mission of beauty on the part of women was a wonderful increase in the lightness and gayety of life, and a certain Platonic sentiment of the brotherhood of man.

M. de Maulde's chapter on the "Science of Platonism," as Margaret and other distinguished women conceived it, is the most readable in the book. The author's style does not lend itself to translation. It is lively enough, but too florid for lucidity. "Then Terror spread her vampire wings, and the silent prisons swam with holocausts of blood" (p. 321)—if M. de Maulde had spared us that sort of thing, and had resisted the impulse to moralize on the degeneracies of the present day, his volume might have been reduced by some hundred pages. As a picture of the influence of women on society, the book is decidedly pessimistic. Women, we are told (p. 410), ought not "to do violence to their thought by printing it," and, again (p. 502):

"Let them renounce public life! But let them take complete possession of the home life. Let mannish women, if they must, turn doctors, and womanish women turn priests! Let all be philosophers, comforters, ministers of love, human and divine; let them work through love, and love through love! Let them have what we lack; let them excel us, enlighten us, encourage us! And in our hearts we Latins shall bless them as we bless the sun. Passion is a royal-warrant of life. The moral of our book is that good women should love the beautiful. . . . There is no need to be always a maiden of twelve."

With this lucid and inspiring appeal to the new woman, as envisaged by a Frenchman, ends this clumsy and irritating, though not unreadable, work. To the Anglo-Saxon reader it supplies, too often, an amusing commentary on Mr. Leonard Courtney's recent reference to the "voluble indignation of the baffled male," confronted, in France, with the economic emancipation of woman.

In spite of the total lack of sequence, one can disentangle a few leading ideas from the general chaos. M. de Maulde's work can be recommended to the ordinary reader who knows how to skip. For the student it has little value in its present form, because the bibliography, which is indispensable, and the voluminous foot-notes of the original are, in deference to the French publishers, omitted from the translation. Doubtless, in the French edition both the style and the handling produce a very different effect.

BOOKS OF THE WEEK.

Allen, A. V. G. Life and Letters of Phillips Brooks. 2 vols. E. P. Dutton & Co. $7.50.
Almanach de Gotha. Gotha: J. Perthes; New York: Lemcke & Buechner.
Andrews, Jane. The Stories of My Four Friends. Boston: Ginn & Co.
Bittinger, Lucy F. The Germans in Colonial Times. Philadelphia: J. B. Lippincott Co. $1.50.
Burling, C. O. City Boys in the Country. The Abbey Press.
College Entrance Requirements in English. American Book Co. $1.
Curtis, H. J. Essentials of Practical Bacteriology. Longmans, Green & Co. $2.50.
Field, Eugene. The Tribune Primer. Boston: H. A. Dickerman & Son. 50 cents.
Gavit, Helen E. The Etiquette of Correspondence. A. Wessels Co. $1.25.
Hazell's Annual for 1901. London: Hazell, Watson & Viney.
Hyde, W. D. The School Speaker and Reader. Boston: Ginn & Co.
Ingram, T. D. A Critical Examination of Irish History. 2 vols. Longmans, Green & Co.

Zoethout, W. D. Outlines of Human Physiology. H. Holt & Co.

Henry Holt & Co., 29 W. 23d St., New York. 378 Wabash Av., Chicago.

HAVE JUST PUBLISHED

Schenck & Gürber's Outline of Human Physiology.

Translated by Dr. WILLIAM D. ZOETHOUT. With Preface by Prof. JACQUES LOEB of the University of Chicago. 339 pp. 8vo, $1.75 *net.*

A clear and compact statement of the important facts of the science in the light of the most recent scholarship. While intended primarily for students of medicine, it is well fitted by its breadth of treatment for undergraduate courses in physiology in non-professional colleges, especially when such courses are closely related to work in general biology. The discussion of pure hypotheses and abstruse theories is avoided as far as possible, and the omission of detailed anatomical and histological descriptions reduces the size of the book materially.

Kastner and Atkins's Short History of French Literature.

xvi+312 pp. 12mo. $1.25 *net.*

One of the best-known professors of French in the United States writes: "I have found it too interesting to give it merely a short glance, and have read it with very great pleasure and profit. It is a work of rare excellence, combining condensation and comprehensiveness, and above all preserving a true perspective. In many books of this kind the critical observations of the authors have little or no value, but, in my opinion, the judgments of Messrs. Kastner and Atkins are generally correct and always sincere and suggestive. . . . I call your attention to the admirable treatment of the XVIth Century, the brave and true and well expressed criticism of Hugo, and the sufficiency and good sense of the pages on recent and contemporary writers."

"The most American story I ever read."
—A CORRESPONDENT.

The Darlingtons,

An American Novel,

By ELMORE ELLIOTT PEAKE.

Published (Cloth, 12mo, $1.50) by

McCLURE, PHILLIPS & CO., New York

The Teaching of Mathematics in the Higher Schools of Prussia.

By J. W. A. YOUNG, Ph.D., Assistant Professor of the Pedagogy of Mathematics in the University of Chicago. 12mo, 155 pages, $0.80 *net.* *Just ready.*

GENERAL LITERATURE

BASCOM. Growth of Nationality in the United States
A Social Study. By John Bascom, author of "Sociology," "Comparative Psychology," etc. 12mo, $1.25.

BENJAMIN. The United States Naval Academy
By Park Benjamin, of the Class of 1867. With 70 illustrations. 8vo, 494 pages, $3.50.

CARY. The Rossettis : Dante Gabriel and Christina
By Elisabeth Luther Cary. With cover design by Margaret Armstrong. With 27 illustrations in photogravure and other illustrations. Large 8vo, $3.75.

DRESSER. Education and the Philosophical Ideal
By Horatio W. Dresser. 16mo, $1.25.

Living by the Spirit
Oblong. 24mo (in a slip-box), 75 cents.

Voices of Freedom
and Studies in the Philosophy of Individuality. 12mo, $1.25.

FITZGERALD. Omar Khayyam, His Rubaiyat, His Life, Time, and Works. Translation of Rubaiyat by Edward FitzGerald. With a commentary by H. M. Batson, and a Biographical Introduction by E D. Ross. Half leather, 12mo, $1.50.

HARLAND. Literary Hearthstones
Studies of the Home Life of Certain Writers and Thinkers. By Marion Harland. Fully illustrated, 16mo, each $1.50.

Library of Standard Literature
The volumes are handsomely printed and tastefully bound. They will be issued at the uniform price of $1.75.
Memoirs of My Life and Writings. By Edward Gibbon. Edited by G. Birkbeck Hill, LL.D., D.C.L., Honorary Fellow of Pembroke College, Oxford.
The Early Poems of Lord Tennyson. Edited by John Churton Collins.
The Divine Comedy of Dante Alighieri. The Italian Text. Edited by Paget Toynbee, M.A.
The History of the Life of Thomas Ellwood, Quaker. Edited by C. G. Crump, B A.

LILLY. First Principles in Politics
By William Samuel Lilly, Honorary Fellow of Peterhouse, Cambridge. 8vo, $2 50.

MACAULAY. The Complete Works of Lord Macaulay
Knickerbocker Edition. With introduction by Edward P. Cheyney, A.M., Professor of European History in the University of Pennsylvania. Printed from a new font of clear type, on paper of the best quality, and handsomely bound. 20 vols., 12mo, containing over 300 photogravure and other illustrations. Per set, $30.00.

MALAN. More Famous Homes of Great Britain and their Stories. Edited by A. H. Malan. Among the writers are Lord Sackville, Lady Glamis, Lady Ernestine Edgcumbe, Countess of Pembroke, Lord Savile, and A. H. Malan. With nearly 200 illustrations. Royal 8vo, $7.50. Full morocco, extra, *net* $15.00.

MAULDE. The Women of the Renaissance
A Study of Feminism. By R. de Maulde la Clavière. Translated by George Herbert Ely. With portrait of the author. 8vo, about 500 pages, $3.50.

McKIM. Heredity and Human Progress
By W. Duncan McKim, M.D. 12mo, *net* $1.50.

MUNSON. A Shorter Course in Munson Phonography
Adapted for the Use of Schools and for Self-Instruction. By James E. Munson. $1 25.

POWELL. Historic Towns of the Southern States
Edited by Lyman P. Powell. With introduction by W. P. Trent. Uniform with "Historic Towns of the Middle States." With 175 illustrations. 8vo, $3.50.

REED
Love Letters of a Musician
Later Love Letters of a Musician
2 vols. By Myrtle Reed. 16mo, gilt top, each $1.75. The two volumes as a set, in a box, full flexible crimson morocco, per set $5 00.

ROBINS
Twelve Great Actors **Twelve Great Actresses**
2 vols. By Edward Robins. Containing, together, 23 photogravure and 20 half-tone illustrations. Sold separately, each $2.50. 2 vols. in a box, per set $5.00.

SHAKESPEARE. The Complete Works of William Shakespeare. Knickerbocker Edition. 15 vols. 16mo, cloth, per set, $20.00. Half-vellum, per set, $25.00. Half-calf extra, per set $45.00.

SPOFFORD. A Book for All Readers
Designed as an Aid to the Collection, Use, and Preservation of Books. By A. R. Spofford. *Second Impression.* 12mo, $2 00.

FICTION

ALLEN. Hilda Wade
By Grant Allen, author of "Miss Cayley's Adventures," etc. With 98 illustrations by Gordon Browne. 12mo, $1.50.

LITCHFIELD. The Moving Finger Writes
By Grace Denio Litchfield. 12mo, $1 25.

PHILLPOTTS. Sons of the Morning
By Eden Philpotts, author of "Children of the Mist," etc. With view of Dartmoor. 12mo, $1.50.

TOMPKINS. Talks with Barbara
By Elizabeth Knight Tompkins, author of "Her Majesty," etc. 12mo, $1.50.

RAGOZIN. Salammbô, the Maid of Carthage
By Zenaïde A. Ragozin, author of "Chaldea," "Vedic India," etc. No. 3 in the *Tales of the Heroic Ages.* Fully illustrated. 12mo, $1.50.

FOULKE. Maya:
A Story of Yucatan. By William Dudley Foulke, author of "Slav or Saxon." Illustrated. 12mo, $1.25.

SCIENCE AND ART

Leaders in Science
3—Thomas Henry Huxley. A Sketch of His Life and Work. By P. Chalmers Mitchell, M. A., Oxon. With portraits. Large 12mo, $1.50.

The Science Series
Edited by Prof. J. McKeen Cattell, Columbia University, and F. E. Beddard, F. R. S.
7—A Book of Whales. By F. E. Beddard, F.R S. Illustrated, 8vo, $2.00.
8—Comparative Physiology of the Brain, and Comparative Psychology. By Jacques Loeb, M.D., Professor of Physiology in the University of Chicago. Illustrated, 8vo, $1.75.

BRUNCKEN. North American Forests and Forestry
Their Relations to the National Life of the American People. By Ernest Bruncken, Secretary of the late Forestry Commission of Wisconsin. 8vo, $2.00.

CONN. The Method of Evolution

VII. The Natural History of Analogy.
VIII. The Mind's Eye.
IX. Mental Prepossession and Inertia.
X. A Study of Involuntary Movements.
XI. The Dreams of the Blind.*

(*Helen Keller figures in this chapter.)

From the Providence Journal.

"This collection of essays is a contribution of inestimable value to the literature of mental science. The author takes strong ground against all those delusions which the credulous public, restless and like the old Athenians, is ever ready to accept. His exposure of the 'eternal gullible' is couched in lucid and easy English; while his style is sufficiently witty to make his topic popular with many persons who would probably look askance at a heavier book. He has made a telling plea against superstition in whatever form it presents itself, and one can only wish earnestly that his interesting volume may reach many readers and induce those who are hovering on the borderland of the 'modern occult' to return to the realms of common sense."

Sold by all booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., BOSTON
11 EAST 17TH STREET, NEW YORK

"A Sane Book on Trusts."
—Chicago Eve. Post.

THE TRUSTS

By Hon. WILLIAM MILLER COLLIER.

12mo, 348 pages, Cloth, $1.25; Paper, 50 cts.

"The book is of very great value. Its facts are carefully collected and arranged, and its arguments clear, pointed and convincing. it is without doubt the best analysis of the entire situation that has been made."
—*Chicago Inter Ocean.*

JAMES McCUTCHEON & CO., 14 West 23d Street, N. Y.

Ready January, 1901. 100 copies printed for subscribers only.

B. F. STEVENS'S

Facsimile of the Unpublished

British Head Quarters Coloured Manuscript Map of New York and Environs (1782).

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, 6⅓ inches to a mile, 10 ft. by 4 ft.

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbour, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island, including Brooklyn, the Works on Paulus Hook, and parts of the Jersey Shore. It has a copious Table of References to various Works (British and American), some of them with notes as to the time of their construction or destruction.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

PRICES:
(Which include all charges—except duty, if any—to any address in the United States):
Mounted on linen and folded in book form, with leather slip case..... $30.00 net
24 Sheets unmounted (22 inches by 15 inches) in Portfolio ..... $25.00 net

1800——1900

Century Number of The EVENING POST

THE EVENING POST of Saturday, January 12, 1901, will contain a notable series of articles by eminent writers, who will present a philosophic and historical review of the main aspects of the Nineteenth Century

This issue of THE EVENING POST will, therefore, be a record of the wonderful progress of the world during the last one hundred years. The scope of the enterprise may be judged by the fact that thirty-eight well-known authorities have been engaged to write on as many different subjects.

Among Them Are the Following:

1. The Immutability of the Constitution
   Judge C. C. NOTT
   Of the U. S. Court of Claims
2. Progress of International Law
   Prof. JOHN B. MOORE
   Of Columbia University
3. American Literature Prof. W. P. TRENT
   Of Columbia University
4. English Literature EDMUND GOSSE
5. Printing in the Nineteenth Century
   THEODORE L. DE VINNE
6. Political Status of Women
   Mrs. JULIA WARD HOWE
7. The Century's Great Men in Science
   C. S. PEIRCE
   Scientific Editor of the Century Dictionary
8. Progress of Astronomical Science
   Prof. SIMON NEWCOMB
   U. S. N., late of the U. S. Naval Observatory
9. Psychical Research of the Century
   ANDREW LANG
10. Geographical Conquests of the Century LOUIS HEILPRIN
    Author of the "Historical Reference Book"
11. The U. S. Navy EDGAR S. MACLAY
    Historian of the U. S. Navy
12. Changes in Military Science
    Capt. C. DeW. WILLCOX
    U. S. Army: Instructor at West Point
13. The Gold Standard and Gold Production HORACE WHITE
    Editor of The Evening Post
14. Railway Economy in the Century
    President ARTHUR T. HADLEY
    Of Yale University
15. Development of the Merchant Marine
    EUGENE T. CHAMBERLAIN
    Commissioner of Navigation
16. Progress in Electricity
    Prof. JOHN TROWBRIDGE
    Of Harvard University
17. Development of Steel Manufacture in the United States
    ANDREW CARNEGIE
18. Changes in China and Japan
    W. E. GRIFFIS
    Author of "The Mikado's Empire," etc

In anticipation of an extraordinary demand for this issue of THE EVENING POST, it would be well for those wanting copies to place an order with a newsdealer in advance. (Price as usual, three cents per copy.)

Has Just Been Published

REVISED TO DATE.

It is Sold by Subscription, and Not by Booksellers.

Full particulars of the various improvements and corrections may be obtained only from the publishers

J. B. LIPPINCOTT COMPANY,

PHILADELPHIA.

The Nation.

NEW YORK, THURSDAY, JANUARY 10, 1901.

The Week.

Among the awkward prophecies which are coming home to roost in these first days of the new century, this one by President McKinley's Philippine Commission should not be overlooked: "It is conceded . . . that if election confirms present policy, remnant of insurrection will disappear within sixty days by surrender of leaders and fading out of rank and file." The sixty days were up on Sunday, and a new dispatch from Judge Taft, not for electioneering purposes this time, would seem to be in order. Congress and the Administration are in the throes of raising an army of 60,000 men to deal with a "disappeared" insurrection. Secretary Root, for his part, refuses to take his place among the discredited prophets. He declares now that he never held out a hope of less men being needed in the Philippines after McKinley was reëlected. Perhaps not in so many words; but in his Canton speech of October 24 he spoke of the insurgent activity which had resulted in the killing and wounding of eighty-nine American officers and men within the previous six weeks, and said that Aguinaldo and his men were fighting "without purpose or reason or expectation of benefit, except upon the hopes held out to them by the Kansas City platform, and the belief that it was important to Mr. Bryan's cause that America should seem unsuccessful in the Philippines." What are they fighting for now, Mr. Root? The Kansas City platform is buried, Mr. Bryan's cause is dead, but the Filipinos fight on. What for?

Little attention has been attracted to the new treaty with Spain, now before the Senate, agreeing to buy for $100,000 three or four little islands of the Philippine archipelago which fall just outside the lines drawn in the treaty of Paris. Our Commissioners at Paris were instructed to buy these islands with the rest, and thought they were doing so; but they got mixed in their longitudes and latitudes, so that the new treaty and the extra $100,000 are made necessary to cure their blunder. In these circumstances, we are clear that the Commissioners—Judge Day, Senator Frye, and the others—ought to pay the money out of their own pockets. We know that they were the greatest and wisest diplomats that ever assembled in one place, for several of them have confessed that they were; and they would doubtless be willing to put down a handsome sum to have this strange oversight of theirs kept dark. Or, if necessary, an indemnifying bill could be passed by Congress, as in the case of unfortunate postmasters, blundering collectors of internal revenue, and so on. We must say, however, that Congress is now so mortified over the discovery of the gold brick it has purchased in the Philippines, that it would be more apt to fine and imprison the Commissioners for the islands they did buy, than to indemnify them for those they intended to buy and didn't know how to.

We heartily congratulate Mr. Oscar F. Williams, who was appointed Consul at Singapore on Thursday, on his success in once more landing a fat Government office. We have had deep sympathy for Mr. Williams's quest ever since we learned from his own pen what a truly remarkable man he is. We have also wondered and wondered that Mr. McKinley could for more than two years pay no heed to the great yearning for Mr. Williams's services which must have been felt throughout the State Department from Secretary to office-boy. Writing as United States Consul in Manila, under the early date of August 5, 1898, to the then Secretary of State, Mr. Day, Mr. Williams confides to him the fact that he seeks "appointive favor." "With pride" he recalls to Mr. Day's mind Commodore Dewey's report on April 18, that his assistance was "invaluable." Since that time, Mr. Williams continues, he knows that his "services to our navy, army, citizens, and nation have been much greater than before." Because of "narrow resources," Mr. Williams asks for Mr. Day's "recognition," and thus states his modest desires and his superior qualifications:

> "Could I be appointed general commissioner of customs of the Philippine Islands, lighthouse inspector, or general commissioner of agriculture, I should be honored and pleased . . . Then I was reared a farmer, and my business interests having always been along such lines, I have kept fully abreast with agricultural matters. Am a graduate of Cornell University, and was a teacher, lecturer, and author, and might well serve as Superintendent of Public Instruction. I need your recognition, and hope, by cable or otherwise, to have relief from present anxieties."

How honored Singapore will be at having such an all-around star within its firmament, we cannot begin to estimate. Mr. Williams succeeds Mr. Spencer Pratt, whose sole offence, apparently, was his belief in the wanton injustice of the American attitude towards the Filipinos.

Ex-President Harrison rejoins effectively to the Attorney-General's contention that the Constitution is "misshapen" if it will not allow us to do what we want to in Porto Rico and the Philippines. That depends on who shaped it and what they shaped it for. If they were against absolutism in any form, at home or abroad, and framed our charter of government so that such a thing could not exist under American jurisdiction, then their work was well done, beautifully shaped to its end. Anyhow, it is a strange plea for a lawyer to make, that the Constitution cannot mean so and so because that would limit our powers. To limit and define the powers of Government was one of the great aims of the Constitution. Attorney-General Griggs argued very much as Senator Morgan does in his latest incoherent canal report. Why, he says, if we have to abrogate the Clayton-Bulwer treaty before being able to build a canal, that would mean that one more than one-third of the Senate could defeat the wishes of the American people, and that would be ridiculous. But it is law. Morgan's idea, Griggs's idea, of what would be ridiculous, is not recognized in the books as a touchstone of Constitutional interpretation. The question is not what they think ought to be done, but what the Constitution and the Supreme Court say may be done. It is even possible that the framers of the Constitution would have found a new argument for making that instrument what they did, in the knowledge that a Griggs would arise in the fulness of time to say that it was ludicrous to suppose that an American President could not rule 8,000,000 Asiatics according to his own sweet will.

The Boston *Record*, referring to the appointment of Mr. John Harlan as Attorney-General of Porto Rico, is of the opinion that it was intended to please Senator Mason even more than Justice Harlan of the Supreme Court, the father of the appointee. The respect for Justice Harlan which is felt by all classes of citizens has restrained the press from much comment on this appointment. Criticism does not lie against him in any event, but it does lie against the President, that at a time when a case of immense importance is pending in the Supreme Court, one in which the policy of the Administration is more or less involved, the son of one of the judges is appointed to an important office. The appointee is presumably well qualified for the place, but this is the wrong time to make such a selection. Here, if anywhere, should the President avoid the very appearance of evil. The mere suggestion that the choice was made "even more to please Mason than the Harlans," conveys the censure which is passing *sotto voce* among lawyers wherever two or three are gathered together. Whatever else may be said of the appointment, it was exceedingly ill-timed, and justifies the suspicion of improper motives.

Ex-Gov. Boutwell has been asked by a correspondent in this city his views as to the expediency of starting a new political party based upon Anti-Imperialism, the gold standard, tariff reform and civil-service reform, and opposition to Trusts. His reply is adverse to any such plan, for the reason that he considers the question whether we are to be a free republic or an empire governing distant provinces without representation, the absorbing and vital issue of the present time, and of such vast moment that it cannot be made a part of any collection of issues. He believes also that this issue will create a party for itself, because it is fundamental. In other words, it will draw adherents to itself, and create its own organization, because the principles involved in it are a part of the national life. The other issues will be with us always, and can be taken up after it is decided whether we are to be a republic or an empire. We concur with Gov. Boutwell fully in these views, and we are glad to have so clear an exposition of them as he has given in this letter. Public attention cannot be drawn in any effective way to secondary reforms so long as the underlying principles of the Government are in dispute.

Does anybody remember the noble rage with which the American press denounced Spain, three years ago, for her policy of deporting Cuban leaders? They were taken to Ceuta in Africa, and we called shame upon a cowardly and tyrannical Government that dared not leave a man even in a Cuban prison to infect the air with brave words about liberty and independence. Well, when we vowed to Heaven that no such monstrous policy had ever been heard of, we did not think that we should live to say ditto to it. But even in this sincere flattery of Spanish methods we are now indulging. Gen. MacArthur is to deport Philippine patriots to Guam. Mabini is old and in broken health; but because he will not bend the knee, off he goes. So of Del Pilar and the others. Americans are afraid of them, even in prison. Some one might hear them in their cells whispering about liberty, and that would never do. Yet some men profess to be indignant at Mark Twain for declaring that our flag in the Philippines is "polluted"!

The discussion of the Army Bill now going on in the Senate grows more interesting and suggestive every day. On Friday we got the frank confession from Mr. Teller of Colorado that, although two years ago he had said that there was no danger of Imperialism, he now took that back, and declared that there exists at this moment in the Philippine Islands an Imperial Government without an equal in history, under five men, who are strangers to the country, and unacquainted with its interests. The Colorado Senator went on:

> "The Czar of Russia is an absolute Czar. He has a council of sixty men who sit with him; but these sixty men are Russians. They are people of the country. They have their sympathies and their ambitions for Russia. But these Americans in the Philippine Islands are strangers in the country. Under the law they have a right there; but under God's law, which is higher than that, they have no place there at all."

Mr. Teller added that if he were President, he would apply to the Philippine Islands the same rule of action which was applied to Cuba. Meanwhile, however, he proclaimed his intention to vote to maintain the army under existing conditions as long as our flag flies in the Philippines. He appeared to feel that this was a rather illogical position to occupy, but said that if it was illogical, it was so "because there does not seem any better way out of it." Mr. Hoar sees a better way. He proposes to amend the pending bill by a provision that no further military force shall be used in the Philippines except such as may be necessary to keep order in places now under our peaceable control, and to protect persons or property entitled to such protection until the President shall have proclaimed amnesty for all political offences, shall have sought an armistice with those now in hostility to the United States, shall have invited ten or more of their leaders to come here and state the wishes of the Filipinos to the Executive and Congress, and shall have offered them transportation and safe conduct both ways.

If Secretary Root's letter regarding the proposed veterinary corps (since abandoned) means that he has thrown down the gauntlet to the bureaucrats, that he intends to take the public into his confidence, and let the country know what is the real trouble with the army, he has, in our judgment, adopted the proper course to achieve reform. It is time for some one in authority to speak out vigorously, and whoever does so will be at once supported by the country and the press. The public has too much business sense to approve an organization under which one bureau distributes the food of the soldier, a second his eating utensils, a third his clothing, and a fourth his pay, particularly when it is aware that one set of officers performs most of these duties in the navy. Still less will the public support such a system after reading the figures in Sunday's *Tribune* as to the expansion of these army bureaus. The Quartermaster's Department alone has 4,955 civilian employees, the Ordnance Bureau 3,200 civilian clerks, messengers, etc., and the Subsistence Department 580. Indeed, it would seem as if every ten soldiers required one civilian to help look after them, exclusive of the Engineer Department, most of whose 10,233 employees cannot be credited to the army, but to the purely civilian work of improving rivers and harbors.

To strengthen his hold on public sympathy, Secretary Root should also not fail to prevent such spoils appointments as those just announced of Lieut.-Col. Campbell and of Corporal Steunenberg. The first officer, an editor of an Illinois weekly and a country politician, has been jumped over the heads of sixty-six colonels, volunteer and regular, and given the rank of brigadier-general of volunteers because of his defence of McKinley in the press and on the stump during the last campaign. He is without a proper military record, and has not distinguished himself in the Philippines. Corporal Steunenberg, a brother of the Governor of Idaho, who recently upheld the President's Idaho strike policy, was similarly jumped over the heads of other officers in direct violation of a War Department promise. As long as such favoritism is acquiesced in, the Secretary of War lays himself open to the suspicion of preferring a political to a really military army.

"The Senate Committee on Military Affairs held a meeting to-day, and decided on some further amendments to the Army Bill. None of these changes are of great importance." So read the Washington dispatches of Thursday, which then stated, that the Committee adopted Senator Daniel's amendment for the retirement of Gens. Fitzhugh Lee and James H. Wilson as brigadier-generals in the regular army, and one, the author of which was, wisely enough, not named, for the promotion of Gen. Shafter to the rank of major-general on the retired list. We consider this action of very great importance, because it is another inexcusable raid upon the Treasury in the form of special pension legislation, similar to the indefensible placing of Congressman Boutelle upon the retired list of the navy as a captain for services rendered thirty-five years ago in an inferior rank. Gens. Lee and Wilson have been volunteer generals since 1898, but have not been under fire in that period or rendered any services which could not have been equally well performed by any regular army major or colonel. That they were brilliant cavalry leaders, on opposite sides, from 1861 to 1865, has nothing to do with their present status. As to Gen. Shafter's case, all the promotion within the gift of Congress could not conceal the fact that he wished to retreat several miles in the midst of the fighting at Santiago, and that he was physically and mentally unfitted for the command of an expedition which succeeded because of the bravery of his troops, and the ability of such remarkable subordinates as Lawton, Chaffee, Kent, and others.

The most naïve contention that has been brought out in the discussions on the Grout Oleomargarine Bill, now before Congress, was that put forth by the Dairy Commissioner of Ohio on Friday before the Senate Committee on Agriculture. He said that he had found it almost impossible to prosecute successfully infractions of the Oleomargarine Law in the large cities of Ohio, "owing to the partiality of some people for that product." If this fails to be a conclusive argument for taxing it out of existence, it should at least have the credit of being the frankest statement of the case that has yet been made by the promoters of the bill. The conclusion evidently seemed a little too blunt, for the worthy dairyman from Ohio hastened to add that the cause of this deplorable state of affairs was the influence of oleomargarine dealers with the press and their solicitation of jurymen. It did not seem to occur to him that the cheapness of oleomargarine as compared with butter, and the satisfactory character of the substitute, might have something to do with it!

Current announcements of various groups of railways passing under joint control, through purchase of their shares by syndicated capital, are only a logical continuance of the process begun on a large scale two years ago. The past week's news in this direction has been taken as highly sensational, chiefly because of the very excitable condition of the stock market. But the developments are merely in line with the similar previous operations in the shares of such companies as the Chesapeake and Ohio, the Lake Shore, the Norfolk and Western, and the Long Island. Last week's report of the Interstate Commerce Commission called attention to the fact that between July 1, 1899, and November 1, 1900, one-eighth of this country's entire railway mileage, or 25,311 miles, had passed under the control of other lines.

Gov. Crane of Massachusetts, in his message to the Legislature on Thursday, furnishes another illustration of his quality as a business-like Executive, who indulges in no fireworks, but serves the State by quiet and hard work. Instead of rushing about all over the country while extravagance ran unchecked at home, he has given his time to the commonwealth's business, and among other things has visited the State institutions personally and unannounced. He has discovered that some of these institutions were never required to have their receipts deposited with the Treasurer, and their bills audited by the State Auditor, and he recommends the application of this system to all. He has found that the Legislature of 1884 authorized a topographical survey and map of the State at a cost not to exceed $40,000, but that a Commission is still carrying on the work, which has expended $253,874—and he urges the lawmakers to look into things before appropriating any more money. The system of managing the State prisons seems to him "complicated and unsystematic," with "no direct accountability," and he recommends that the offices of the Commissioner of Prisons and the General Superintendent of Prisons be combined, by transferring the powers of the General Superintendent to the Board of Commissioners, and by authorizing compensation to one member of that Board, who shall be designated as Chairman by the Governor. He has learned that the Metropolitan Water Board and the Metropolitan Sewerage Commission have duties of the same general character, and he points out that "it would be a decided gain in economy of administration if they were controlled by a single board." These are samples of Gov. Crane's excellent suggestions.

According to a detailed exhibit by a financial expert in the *Evening Post* on Thursday, the total increase of cost of five city departments during the past three years has been upwards of $23,000,000 for all boroughs. According to the State census of 1892, the population in the territory now comprised in Greater New York was a little under 3,000,000. By the Federal census of 1900 it was about 3,500,000, a gain of some 500,000 in eight years. It is fair to assume that in the past three years the population may have increased 200,000. Against this we have an increase of expenses in five departments of $23,000,000. These departments are police, fire, schools, health, and building. The largest increase is shown in the school department, where the per-capita cost has risen from $29.10 to $36.04. This increase is due chiefly to the Davis law, passed by the last Legislature, raising the salaries of teachers, and was probably necessary. At all events, Tammany is not chargeable with this nor with any other expenses made mandatory by the Legislature. Nor is Tammany responsible for any increase due to consolidation alone, since that scheme was decreed at Albany. For all the increase ordered, directly or indirectly, by the Legislature the Republican Machine is responsible, even though the Tammany members assisted. Responsibility attaches always and everywhere to the majority party.

While Lord Roberts was landing in England on Wednesday week, entering his Queen's presence with royal honors, and receiving in an earldom and the Star of the Garter the reward of his brilliant service in South Africa, the air was full of disquieting rumors that that service remains incomplete. Another landing was being planned at Cape Town—that of great guns from the fleet to guard against a possible uprising of the Cape Boers. Evidence gathers of the uneasiness of the situation throughout Cape Colony; and whether there is actual danger of a general uprising or not, there is no doubt that the British on the ground fear one, and that the flying columns of the Boer generals are constantly reinforced from British soil. It becomes daily clearer that the war can be fought out only at a desperate cost to the British. Nor is the admiration of the world for their unbeaten enemy a negligible quantity. It may be that the Boers with a fatal heroism will accept nothing less than complete independence, and reject all offers of conciliation less than that. No well-wisher of the British empire can fail to condemn utterly the present policy in South Africa, until conciliation has had its trial. Mr. Chamberlain has promised such a policy. Is he waiting for a graver need before putting it in effect?

With the opening of the new century the provinces of Australia ceased to be separate colonies of the British Empire, and became original States of the Commonwealth of Australia. Confederation was not attained without considerable opposition. The negotiations necessary to bring the colonies themselves into accord extended over eleven years, and there remained the more difficult question of the relations of the proposed commonwealth to the Imperial Government. The final adjustment left to the new colony the largest measure of independence, and the Earl of Hopetoun, who has just been inaugurated with imposing ceremonies as first Governor-General of the commonwealth, will find that his executive functions are almost *nil*. His office is none the less important, for he represents the British idea, often in the past obscured in Australia, but now quickened through the confederation itself and through the South African war. It is no mean state that joins the sisterhood of British relations. With a population already of some three and a half million people and a land of unusual fertility, adaptability to grazing purposes, and mineral resources, Australia has every assurance of great national prosperity. One who has met Australians in travel will not have failed to mark in them a new type of character, something between the English and the American, but perhaps more like the latter. It is this flexibility to new conditions, combined with loyalty to the national tradition, that is admirable in the British colonist. England has learned well the lesson of the American Revolution, and to-day her glory lies far less in the "silent, sullen peoples" she holds subject than in the independent English commonwealths, sisters in power, who are proud to own her mother—the Canadas and Australias.

MR. HILL'S GOLD-STANDARD BILL.

Congressman Hill of Connecticut has introduced a bill to carry out the first section of the Gold-Standard Act, which reads as follows:

"That the dollar, consisting of 25 8-10 grains of gold, nine-tenths fine, as established by section 3511 of the Revised Statutes of the United States, shall be the standard unit of value; and *all* forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity."

Inasmuch as Congress, while laying this mandate upon the Secretary, did not prescribe any method of maintaining the parity of the silver dollar with the standard unit, nor provide any means therefor, Mr. Hill offers a bill which directs the Secretary to exchange gold for legal-tender silver dollars when presented to the Treasury in the sum of five dollars or any multiple thereof, and provides that all laws for the maintenance of the reserve fund in the Treasury relating to United States notes shall be made applicable to the exchange of legal-tender silver dollars. In other words, the powers which the Secretary now holds to replenish the gold reserve in case of need for greenback redemption, shall be extended also to silver redemption. An additional section of the bill provides for coining the silver bullion still remaining in the Treasury into subsidiary coin (halves, quarters, and dimes), instead of silver dollars.

The first thing to be noticed and commended in this bill is its simplicity. It says that the duty imposed upon the Secretary by existing law for maintaining the gold standard shall be executed by redeeming the silver dollars just as the greenbacks are redeemed, and that the means for performing the duty shall be the same in the one case as in the other. The argument for the passage of such a bill is equally simple and straightforward. It runs in this way: "Congress has imposed a duty upon the Secretary without providing means for executing it. It is very important that the parity of the silver dollar with gold should be maintained if ever it be threatened. If parity is threatened, it shall be maintained by the means herein set forth. If it is not threatened, of course the means will not be resorted to."

Logical as this is, and important as it is that the commerce of the country should not be exposed to the hazard of a failure to maintain parity, experience tells us that Congress does not always observe logic or consistency in its legislative action. If such had been its habit, it would not have left the present gap in the law which Mr. Hill now seeks to close. Our monetary legislation of the past thirty years would have been very different from what it is if the dictates of reason had been the governing consideration in regard to it. The question overriding all others in the minds of Congressmen has been, "How shall I vote and act so as to secure a reëlection?" This will be the uppermost consideration when Mr. Hill's measure comes to a vote—if it is acted upon at all in the present Congress, or in whatever Congress it is acted upon.

It is safe to say that there never was a time more favorable than the present, so far as public opinion goes, for passing such a measure. It is evident now that if the Currency Bill of the last session, which contained the substance of Mr. Hill's proposed measure, had been passed by the Senate in the form in which it came from the House, it would have been universally acquiesced in. The Democrats would have made no more opposition to it in the campaign than they did to the bill which actually passed, which was none at all. On the other hand, the Republicans would have been better pleased than they were with the more timid, more complicated, and less effective measure of the Senate. Everybody was under the impression, when Congress adjourned, that it was a bill to establish the gold standard beyond peradventure; and when the fact became manifest some time later that this was not exactly true, but that the parity of the silver dollar was still subject to some contingencies, there was dissatisfaction in the public mind, and some apprehension in business circles. This apprehension will never be wholly removed until some such measure as that of Mr. Hill is passed. It is worth recalling that both the President and the Secretary of the Treasury recommended the curing of this defect in the law at the opening of the present session of Congress.

Mr. Hill was the first to point out the fact that the act of the last session, the so-called Gold-Standard Act, really lessened, instead of increasing, the direct powers of the Secretary of the Treasury to maintain the parity of all kinds of money with gold. Under the laws in operation previously—the laws under which Secretary Carlisle acted—there was no limit to the Secretary's power for that purpose to issue and sell bonds in order to procure coin. He could sell any bonds authorized by law, for such price and on such terms as he deemed advantageous to the public interest. The coin so purchased became a part of the general fund of the Treasury, and could be paid out for any and all liabilities. Under the new law the authority to sell bonds is restricted to a definite purpose (that of redeeming greenbacks), separate divisions are created in the Treasury for separate purposes, and even the authority to use any surplus in the general fund for maintaining parity is taken away. These are by no means alarming features. There is more of good than of evil in them, taken as a whole, but they serve to show that there are still defects in our legislation which should be repaired before any strain comes upon our currency system from over-speculation, bad harvests, political complications, war in Europe, or other casualty. Our money ought to be so good that the thought of its unsoundness shall never enter anybody's mind.

A PHILIPPINE ARMY.

The Senate debate on the Army Bill promises to be rich in revelations and suggestions. Such after-lunch indiscretions as Senator Hawley's mutterings about a threatened war with "some European Power" we may pass by with a shrug, but Senator Sewell, himself a military man, uttered some blunt truths which should arrest the attention of the country. He frankly admitted that we should need in the Philippines 70,000 men, not only this year, but "next year and, perhaps, for several years to come." Thereupon Senator Bacon of Georgia brought forward a most timely and pertinent proposal. It was that the Military Committee prepare a special bill for a special Philippine army. We earnestly hope that he will press his amendment and insist upon its being debated. It is clearly in the interest of the organization of the army itself, and not less evidently is it demanded on the score of fair dealing with the people.

We are now asked to pay the cost of an army of 100,000 men. No one asserts that more than 30,000 are necessary for the United States proper. All our garrisons and coast defences could be amply manned at that figure. It is into the Philippine gulf that we have to pour the 70,000. Then why not be open and businesslike about it and call that force the Philippine army, legislating for it separately? It is not, strictly speaking, the United States army, unless we allow that the tail should wag the dog. From a purely military point of view the United States is but a small appendage of the Philippines. They require, roughly, three soldiers to our one. If three-quarters of the effectives of the army, and more than three-quarters of its annual cost, are chargeable to the Philippines, common sense demands that names shall be equivalent to things, and this force be known explicitly as the Philippine army.

This would only assimilate our methods to those of other nations having subject colonies. England and France and Germany do not lump all military expenses confusingly together in one common bill. France has her "corps d'armée en Algérie," her "division of occupation" in Tunis, and so on. English regiments are supported and known according to their place of service—

Gibraltar, Ceylon, Hong Kong, Bermuda, etc. The fifty-two battalions on service in India are designated as a part of the Indian, not the English, establishment. Emperor William sent to China, not a corps of the German army, but a plainly described "East-Asiatic Corps," and as such the money had to be voted for it by the Reichstag.

Detailed accounts, specific appropriations, are of the essence of republican government. To give the taxpayers a perfect understanding where their money goes in the various branches of the public service, is the first duty of those who bear rule. Of what use is it for Secretary Gage to send in to Congress and give to the country the grand total estimate of the next fiscal year "for the military establishment, $140,000,000"? What we ought to have is an itemized account telling us precisely how much the Philippine army costs us—how much to raise it, how much to send it across the sea, how much to feed it, how much to care for the wounded and fever-smitten in hospital and camp, how much to bring home the bodies of the dead. Of course, the figures for all these things can be laboriously extracted from unread departmental reports. But they should be not only easily accessible, but prominently displayed. They would be if we had a separate Philippine army, with all the items in the appropriation bill providing for it voted independently.

Senator Bacon's suggestion is in the line of scientific method. The first thing that science does when investigating any phenomenon is to isolate it, so far as possible. The chemist, the biologist, go to infinite pains to remove their immediate material of study from every disturbing influence. Divide and conquer, is a scientific as well as military maxim. A substance by itself *in vacuo*, a germ isolated from every species with which it might be confounded, are studied and their secrets torn from them as they never could be if left in confused masses. We need such segregation of our Philippine phenomenon. It is convenient for those who would slur over its peculiarities and difficulties to represent them all as an inherent part of our national life. But this is neither fair nor scientific. Every approach we can make towards getting our Philippine microbe in a pure culture by itself, or on a sterilized slide beneath our microscope, will help us to understand exactly what is the deadly infection we are getting from the President's "gems and glories of the tropic seas." Mr. Bacon's argument that the Philippine army should thus be put in a category by itself, in order that the people may see precisely what it is and costs, is therefore perfectly sound and scientific.

Republicans cannot decently object. They declare that the Philippines are not a part of the United States. They ought, accordingly, to be glad of everything that emphasizes the distinction which is so dear to their hearts when it is a question of giving the Filipinos the benefit of Constitutional guarantees. If the Constitution does not follow the flag, the more foreign we can make the flag appear the better. The cases before the Supreme Court might be in better shape for the Government if the Attorney-General had been able to assure the judges that it was not, narrowly considered, a United States army at all, but a Philippine army, that was carrying the flag to the islands. A jurist, everybody will admit, might well have doubts about the Constitution following a Philippine army. Besides, there may be here just what we need in order to get up a real popular enthusiasm about the Philippine war. Mr. Howells has recently remarked how unaccountably the "lyric cry of the Philippine Purchase" has stuck in the throats of American poets. If we had a distinct Philippine army, with its chasseurs de Luzon and tirailleurs de Mindanao, the silent and apparently shamefaced Muse might find her voice.

GOV. ODELL'S PLEA FOR ECONOMY.

The message which Gov. Odell sent to the Legislature on January 2 is essentially one long plea for economy, and the efficiency which acompanies economy, in the conduct of the State Government. Parts of the document are of the conventional order—discussions, for example, of systems of taxation and of methods of administration, which invite and must receive attention hereafter; but its most significant features are the careful analysis of the wasteful manner in which the business of the commonwealth is now conducted, and the specific recommendation of many ways in which money can be saved.

The first abuse which the Governor strikes at is the extravagant expenditure for the collection of the collateral-inheritance tax—$1,408,643 during the past four years for the collection of $11,765,-211. County Treasurers have been paid more than $69,000 a year, on the average, in fees for merely signing duplicate receipts and transmitting the money to the Comptroller; the appraisement of property has cost more than $92,000 annually; and there have been "very large" legal expenses besides. Mr. Odell holds that one-half of the sum expended would have been ample—in other words, that at least $150,000 per year might be saved.

This is only one illustration of a spirit which generally prevails. The force of employees in the Legislature has been largely increased through "a supplemental list," without any definite limitation as to their number. Under such circumstances "extravagance and abuses are apt to result," and the Governor recommends an amendment to the legislative law that will fix the number and compensation of employees. There has been at the same time a "vast increase" in the expenditures for clerical and other help in the departments, and the Governor asks for a "thorough pruning." It has become too frequently the practice to make appropriations in gross sums, and Mr. Odell recommends that all items of expenditure be made more in detail, "so as to give fuller effect to the veto power of the Executive against unnecessary expenditures."

Abuses which call for correction have grown up under the system of employing special attorneys, instead of having the work performed by the legal department of the State. This has been true particularly of the Lunacy Commission and the Forest Preserve Board, through which "a great amount of money has been expended for such services." Mr. Odell thinks that there are perhaps instances where the services of special attorneys may be justified, but that "in most cases" they are unnecessary and unjustifiable.

The multiplication of expensive commissions is a great evil, which the Governor vigorously attacks. The Board of Mediation and Arbitration, the Bureau of Labor Statistics, and the State Factory Inspector's department cost altogether $172,293 a year. Mr. Odell recommends that the three be consolidated into one Department of Labor, which could do the work of all more efficiently than is now possible, better conserve the interests of labor, and save at least $72,000 annually. There is a Charities Board of twelve members, with a Secretary and other employees, requiring an appropriation of $51,620 last year. The Governor thinks that their duties could be more properly attended to by a single Commissioner, working in connection with certain State officers. Such a change, he says, would reduce expenses about $25,000 a year "without impairing the efficiency of the work." There are eight Prison Commissioners, with an office force, demanding $13,000 last year. Their duties, in Mr. Odell's opinion, could be discharged with equal efficiency by a single Commissioner acting with certain State officers, thereby saving at least $10,000 a year. The Board of Health has three members, and a large office force, costing $42,000 a year. One competent man, the Governor thinks, might easily perform their duties, provided that the supervision of tuberculosis and glanders in cattle were transferred to the Department of Agriculture, where it belongs, with a large reduction of the present expense. The Forest Preserve Board and the Forestry, Fish, and Game Commission duplicate each other's work to a great extent, and each has been conducted extravagantly, the Board having expended over $12,000 for special counsel, and the Commission $82,875 for printing and publishing reports, salaries of Commissioners and employees, and other incidental expenses of maintenance. The Governor

recommends that the two departments be consolidated, by which he estimates that $35,000 might be saved.

Mr. Odell has made the interesting discovery that there is a Superintendent of Weights and Measures, who receives an annual salary of $500 a year, while "apparently he may not perform any duties oftener than once in ten years"; and he recommends the abolishment of this sinecure. He points out that the expenses of printing have increased from $108,435 in 1880 to $583,191 in 1900, and tells the Legislature that "it is your duty to curtail in every way this wasteful extravagance." He urges the abolition of the fee system by which three county officers in New York and as many in Kings receive grossly excessive incomes, reaching as high as $100,000 a year in some cases, and the substitution of salaries. He finds that the Lunacy Commission has been extravagant and wasteful, the cost for buildings and equipments now reaching $909 for each patient, and the bi-monthly meeting of stewards and superintendents at Albany being needless; and he expresses the startling opinion that "with no harm to these institutions a saving of at least three-quarters of a million dollars can be effected in this department."

Gov. Odell has taken a leaf out of the experience of Gov. Tilden. In closing his first message to the New York Legislature, in 1875, the latter made a powerful plea for attention to "the ordinary conduct of Government." By this he meant economy, efficiency, and justice in the administration of the business of the State. With what mastery of facts and methods he followed up this general proposition by exposure and punishment of the canal thieves, everybody remembers. Gov. Odell is, like Tilden, appallingly specific. Every Governor perfunctorily favors economy. Gov. Roosevelt's first message contained a paragraph expressing the usual pious and vague hopes on that subject. But his successor strikes his hand upon the spot, and says, "Thou ailest here, and here." By abolishing this sinecure, by cutting down these swollen fees, by consolidating those departments, by curbing this extravagance and preventing that waste, the quiet business man from Newburgh shows how a saving might easily be effected great enough to pay the interest on the State debt.

It is a refreshing return to right principles. Gov. Odell does not say, what Tiden did, that the preoccupations of war and its *sequelæ* had prevented people from attending to the great and standing problems of government; but it would have been true if he had said it. Gov. Roosevelt's first message began with a glorification of the Spanish war; and it is clear that the main reason why he left to his successor all this work of retrenchment and the application of business methods to the administration of public affairs, is that he was giving more thought to our responsibilities as a world-power than to the (to him) infinitely wearisome details of the business of the State. In his speech before the Hamilton Club of Chicago, on April 10, 1899, Gov. Roosevelt preached the gospel of expansion and adventure as the national cure-all. "We cannot sit huddled within our own borders and avow ourselves merely an assemblage of well-to-do hucksters." If we do, we shall "rot like China." But what is the rottenness of China? It is extravagance, waste, sinecures, cheating, corruption, overtaxation—in other words, exactly the hidden diseases which the scalpel of Governor Odell has laid bare in the government of New York State!

Final judgment upon Roosevelt or upon Odell it is too soon to pronounce. This, however, may confidently be said—that the latter already shows himself nearer the type of Governor which the times demand, and towards which the instincts of the people are evidently turning in this period of our development.

THE REAL DIFFICULTIES IN CHINA.

The daily dispatches from China are obviously little more than daily rumors. It is clear, however, that the Powers are only at the beginning of their troubles. The Joint Note has already become a thing of comparative unimportance, and the question whether the Chinese plenipotentiaries will accept it, or not, has come down to a matter of verbal fencing. "Certainly, we will sign," said Li Hung Chang, in effect, "but we reserve the right to negotiate for better terms." "That will not do," sternly replied the foreign Ambassadors; "the Note represents our irreducible minimum." "Very well, then," sighed the Chinese negotiators, "but you will at least tell us just what that indemnity amounts to which we are to undertake to pay." This was really cruel, for the Powers could not agree among themselves on this point. So they had to ask for more time. Now time is the one thing China has most of, and every day's delay puts her in a better position and the Powers in a worse. Meanwhile, the real difficulties of the situation are thrusting themselves through all this diplomatic by-play.

Foremost among these is the financial and industrial condition of China. It is this which makes the demands and expectations of the Powers little short of preposterous. The indemnities to be exacted of the Chinese Government are too great for her possibly to pay; yet they are mounting every day, for, whatever else the Powers may differ about, they are agreed that the expenses of their military expeditions shall be defrayed by the Chinese themselves. China cannot be so unreasonable as to refuse to pay the cost of the armies which have been looting and burning and killing in her territory. The longer they stay there the bigger the indemnity. China simply cannot pay it.

This the Powers practically admit, but they say, magnanimously, We will lend her the money, and she can give as security railway concessions and other franchises, and we will recoup ourselves out of the commercial exploitation of the Chinese empire. Just here, however, the warnings of Sir Robert Hart, who speaks with expert authority on this subject, come in with solemn pertinence. He denies that there is any such Chinese orange to be squeezed. The similar sanguine expectations of an enormous trade expansion, entertained when the treaties of fifty years ago were negotiated for the sake of securing a great Chinese commerce, have never, says Sir Robert, been realized. The new dreams are destined to like disappointments. "Eagerness to supply does not necessarily mean a corresponding demand." The Chinese people do not require foreign commerce. They have "the best food in the world, rice; and the best clothing, cotton, silk, and fur; and they do not need to buy a penny's worth elsewhere." Undoubtedly there are great natural resources in China undeveloped; but the only increase in trade which can come from opening them up will be necessarily slight and slow, new tastes and wants and new purchasing power having to be created before new merchandise can be sold. The Powers that are ready to put millions into China are likely, therefore, to have to wait a long time before they get them out again.

Another great difficulty in dealing with China in the way proposed lies in the nature of the Chinese Government. It has long been a kind of go-as-you-please affair. Each of the eighteen provinces has been a little kingdom by itself, its viceroy being practically supreme in his own sphere, and the Central Government interfering as little as possible. It is this state of the case which makes a treaty with the Mantchu Government so precarious a support throughout what Gibbon called "the vast equality of China." The Pekin Government perhaps does not want to enforce it; perhaps cannot. Indeed, Chinese statesmen have been known in the past to regard treaties primarily as a kind of toy with which to amuse, or a sop with which to placate, foreigners. M. Desjardins cites in the last *Revue des Deux Mondes* the report of a Chinese General to the Emperor in 1841, in which he said, referring to a treaty which he had negotiated, that he had "thought it well to yield momentarily, and to promise the barbarians what they demanded," always having it in mind to seize the ceded territory again at a favorable opportunity. The Marquis Tsing defended in the *Asiatic Quarterly*,

a dozen years ago, the Chinese practice of disregarding treaty obligations, because, as he said with much force, "China had signed them with a knife at her throat, and without knowing to what she was binding herself." All this aside, the practical autonomy of the separate provinces will make it very difficult to enforce guarantees agreed upon at Pekin. The United States will be in no condition to complain. We cannot maintain the treaty rights of Chinese in our territory. We express sorrow and pay an indemnity when Chinese subjects are killed; and China will do as much as that.

The upshot of all is an obvious recurrence of late to the plan of parting Chinese territory among the Powers. Russia's separate agreement with China, which practically puts Mantchuria under a Russian protectorate, is a sign of the new drift of policy. Of course, the Russian authorities protest their innocence. They are simply carrying out and safeguarding their contract of 1896 for the construction of the Mantchurian railroad. But the net result is clear. A Russian "political resident" at Mukden is to have "general control" of this Chinese dependency three times the size of Great Britain. Mantchuria is practically Russian territory from now on. It would seem as if this Russian action furnished exactly the case contemplated in the third article of the Anglo-German agreement—that is, the use by another Power of "the complications in China in order to obtain, under any form whatever, territorial advantages." In such an event, Germany and Great Britain were to "come to a preliminary understanding as to the steps to be taken for the protection of their own interests in China." But then, such "protection" may simply mean that Germany and England will feel free to cancel their agreement not to take any Chinese territory themselves. This would be in line with the growing impression in Berlin that Count Waldersee will not be allowed to come home without some new German provinces as trophies, and with the confidence of English army officers that the year 1901 is to see a great British expedition up the Yang-Tse.

HUXLEY'S BIOGRAPHY.

A year ago, in talking with Henry James of the flood of biographies which the century had produced in England, and of the wonderful addition to English literature which they had made, he remarked to me that he had recently spoken of the same thing to a French friend, who concurred in his expression of surprise at the absence of anything of the same kind in France, but thought that this great lacune in French prose was due to the fact that the private lives of very few French literary or artistic men would bear description. This is a somewhat lamentable confession, but I suppose it is true. I think that the finest contribution that England has made to the stream of literature in this century consists in the biographies which have poured from her press. This work of biography is partly political, partly ecclesiastical, partly scientific, but it always does honor to the country, and to the profession to which the subject belonged. The Oxford movement alone, in the thirties, has produced a batch of books which no "gentleman's library should be without," and of which every Englishman may well be proud. To begin with, take Burke, and Pitt and Johnson and Chatham, then Wellington and Peel and Cobden, then Palmerston and Macaulay and Tennyson; and, among the scientific men, Lyell, and Darwin and Huxley. To be the contemporary or countryman of these is certainly, as Cowper says, "fame enough for any private man." I do not think it is going too far to say that whatever success England has achieved during the past century has been largely due to the frequency with which these biographies have been placed before the youth of the nation. Our poet Longfellow has said no truer, as well as finer, thing than that

> "We can make our lives sublime,
> And departing leave behind us
> Footprints on the sands of time."

I have frequently ventured on the proposition, in these columns, that our youth owe more of their education to the lives which they read, and the examples in our schoolhouses which they witness, than to the instruction which they receive, even when "the flag" is flying from the roof. It is the man whom the boy is taught to admire in his earlier years who largely determines his future.

I have just been reading one of the most instructive and brilliant of English lives, that of Professor Huxley. He began life in a way in which most Americans love to think they began it themselves —that is, as "a poor boy." There was procured for him, with the usual difficulty, the post of assistant surgeon in the navy, a place in which he passed four or five years of obscure drudgery without really gaining for himself a secure foothold on the official ladder. When he left the navy and wished to marry, he had to pass through the usual process of knocking at many doors, in many parts of the world, without meeting with any satisfactory response. But as soon as he had definitely chosen science as his province, and determined that truth alone should be his pursuit, his rise was rapid.

I am not competent to estimate properly the value of his scientific work, but the world has placed him in the front rank. I am competent, however, to estimate his character, which has, from his first year to his last, excited my unmixed admiration. Darwin's appearance on the scene in England, with his doctrine of evolution, was really not unlike the appearance of Erasmus at Oxford, 400 years ago, with "the new learning." But Darwin would have made poor progress, save for the aid of Huxley. Darwin had wonderful scientific sagacity, and promulgated his new gospel with a winning modesty, but it was too much modesty for the world in which it appeared. It was a world brought up under the influence of the clergy, in literal acceptance of the Biblical theories of the creation and the growth of man and his world. The Church and the upper classes in England were dead-set against Darwin's theories. The idea that man was evolved from some sort of monkey was enough to discredit them. All "the best people," to use the *Tribune's* phrase, believed that man had been created in the Garden of Eden, 6,000 years ago, and woman out of one of Adam's ribs, and not only this, but that it was impious to doubt it—an opinion that still lingers. These beliefs, although slightly disturbed by Sir Charles Lyell, still held their ground firmly at the time of the British Association meeting at Oxford in 1860.

I do not believe that there was any country in the world in which the union between Church and State was then so strong. The social as well as the religious prejudices of the country were with the Church, not simply as a religious institution, but as property, which, to an Englishman, is a very sacred thing. Until very lately the "squarson," as he was called, otherwise the minister who preached in the church and at the same time owned the parish, was a very familiar figure in English life. Thus men who attacked the Church's doctrine arrayed against themselves almost the whole of English society. Consequently, when a man as popular and of as much charm as the Bishop of Oxford led his forces in defence of orthodox views of man's creation, it required great courage to attack him. That courage Darwin had not probably, but Huxley was there, and listened to the Bishop's absurd ridicule of the theory that man was descended from a monkey with the same joy of battle which Cromwell felt in seeing the Scots descend from the heights above Dunbar.

Huxley's reply to the Bishop, sternly rebuking him for attacking with flippancy a great master of a science of which he was profoundly ignorant, was one of the most striking incidents of the century, and one of the most far-reaching in its effects. It not only bowled the Bishop over and destroyed his influence, but it raised Darwinism, at one stroke, to a height at which no parson could assail it without rendering himself a little ridiculous. It placed Huxley, too, at once in the front rank not only of scientific men, but of controversialists, and revealed to the world the fact that he was the foremost of English dialecticians. The rest of his career was a series of unbroken triumphs, in which his virtues as a man were no less fully displayed than his keenness and vigor and sagacity as a philosopher. His career was cut short; he fell a victim at last, as so many other eminent men have done, to his eagerness for work. There has been rarely a better illustration of a man's physical ruin through the ardor of his own temperament.

Huxley remained, during the rest of his life, noted for his antagonism to the old orthodox interpretation of Scripture. In fact, he was, for a time, the *bête-noire* of parsons, but they gradually became converted, or at least accustomed, to his views. The last time I saw him was the year before his death, in the dining-room of the Athenæum Club, surrounded by a considerable number of ecclesiastical dignitaries, who were just about to lunch. On the strength of my slight acquaintance with him in New York, I asked him to lunch at the same table with me, and jokingly expressed my wonder at his willingness to venture into a retreat in which he was so completely surrounded by "clerks in holy orders." He smilingly repudiated the thought that there was any danger in the situation, and de-

clared that he lived on the best of terms with them, as long as they let him alone.

He was really, though very fond of dialectics, no stirrer-up of strife. It was not possible to do as much as he did to shake established religious beliefs without exciting a good deal of religious controversy, which he never shirked. His two principal antagonists in this field were the late Duke of Argyll and Mr. Gladstone—Mr. Gladstone, because, though a past-master in politics and political economy, he was never able to divest himself of an interest in theology, though for theological controversy he was not thoroughly equipped; and the Duke of Argyll, because he had an extraordinary conceit of his own omniscience. Huxley never avoided these frays, but he never sought them, although minds like Gladstone's, through their want of logical training, excited his ire. His own intellectual organ was most powerful, and was equal to any kind of work, from comforting the poor to speculating on the origin of species. He is an immense loss to England, as well as to science, but he has found in his son a rare piece of good fortune, a biographer worthy of him. E. L. G.

THE AMERICAN HISTORICAL ASSOCIATION.

DETROIT, December 30, 1900.

The meeting of the American Historical Association at Detroit, December 27-29, though shadowed by the absence of the President of the Association, Dr. Edward Eggleston, on account of sickness, and by the lamented death of Professor Moses Coit Tyler, a founder and one of the most distinguished members of the organization, was nevertheless, in some respects, one of the most interesting and important yet held. Of those who went to Detroit, a larger proportion than usual were, of course, from the States of the Middle West, but the attendance of Eastern members was gratifying evidence that the plan of holding sessions in different parts of the country has not yet worked a corresponding division in the ranks of those attending. The representation from the South continues small, and there are still a good many teachers and writers of history elsewhere who fail to attend; but the Association unquestionably tends to bring together, more and more, quite the larger part of the historical group in the United States and Canada. The sessions of Friday were held at Ann Arbor, with the University of Michigan as host; and both at Ann Arbor and at Detroit there was the accustomed provision of social functions, and the same generous hospitality which has long greeted the Association wherever it has gone.

With the rapidly expanding activities of the Association, and the increasing importance of its business side, it has been feared by some that its functions as a learned body might decline. So far as the composition of the attendance goes, it does not appear that this has yet taken place, or that the papers presented, though not seldom touching closely upon present problems, have lost anything in seriousness and scholarly importance. Of the papers read at Detroit, two stand out as especially notable. In a paper on "The Legend of Marcus Whitman," Prof. E. G. Bourne of Yale pretty effectually demolished (it is to be hoped, once for all) the time-honored story of the supreme political significance of Whitman's famous ride. The topic was not, of course, new. Hubert Bancroft and others have been sceptical about the matter, and one investigator, at least, has had to suffer somewhat of social persecution in consequence of unbelief. It was reserved for Professor Bourne to show, by detailed and indubitable proofs, the utter untrustworthiness of the story, and to put in its true light the significance of the struggle for Oregon. Whitman's journey to Washington, thrilling as it was, was without bearing on the political situation, and was made in the interest of his missionary work, and not, as the legend has had it, to rouse the American people to a sense of their danger from British aggression. With the Whitman legend goes also the companion notion that Oregon was in serious danger. The whole story is one of the most remarkable pieces of myth-making in our history. Incidentally, the arraignment of writers, some of them historians of note, who have repeated the story without troubling themselves to investigate it, and even, in some instances, with pretty certain proof that it was without foundation, forms a rather depressing commentary on the dangers of historical narration, even in our own day.

The paper by Professor Dunning of Columbia, on "The Breakdown of Reconstruction," raised questions of a different sort. Professor Dunning reviewed with great clearness the Constitutional expedients lately resorted to in the Southern States to get rid of the negro vote, and contrasted the present situation—with its practical disfranchisement of a large proportion of the blacks—with the results which the friends of reconstruction professed to anticipate. In Professor Dunning's opinion, the present policy of discrimination seemed to indicate that, while the reappearance of the objectionable incidents of slavery was not to be apprehended, the advent of a period in which the two races, though legally equal, must nevertheless live on terms of distinct inequality, was clearly indicated. The discussion of the paper brought out a spirited defence of the abolition spirit from Professor Hart of Harvard, to whom the conclusion of Professor Dunning's legal survey seemed indefensible, and some interesting statements from Mr. Percy N. Booth of Louisville, Ky., on the changing aspect of the negro problem in the border States. It is gratifying to note, in this connection, the appointment by the American Economic Association, which also met at Detroit, of a special committee to study the negro question.

Of the other papers and addresses, those most worthy of special mention were "The Date of the Ignatian Epistles," by Prof. F. A. Christie of the Meadville Theological School; "The Origin of the Apostles' Creed," by Professor McGiffert; "The Turning-Points in the History of British Administration in India," by Prof. H. Morse Stephens; and "Party Struggles in Missouri, 1861-1865," by Prof. S. B. Harding of Indiana University.

The most important matter of business before the Association was the question of approving the suggestion of a coöperative history of America, to be prepared under the direction of a committee, and published with the official endorsement of the Association. The proposition, after long and careful discussion, had commended itself to the Council, and was submitted to the Association with their favorable recommendation. After earnest debate, it was voted to lay the matter over until the next meeting, at which time the Council are asked to report more fully their views as to the way in which the proposed work should be carried out. The suggestion of the Council, of serious importance in itself, served to emphasize sharply a point which has for some time been growing in prominence—that, namely, of the relation between the Association and the national Government, from which it holds its charter, and the extent of its obligation to refrain from the treatment of subjects having for the present generation the possibility of personal or political controversy. While such work as the publication of the Calhoun letters, edited by Professor Jameson for the Historical Manuscripts Commission, and the efforts of the Public Archives Commission to enlist the United States and the several States in the care of their records, has much political significance, it was thought by some that the preparation of a narrative history whose judgments on men and events would have the official approval of the Association, was a different sort of thing from the publication of documents and monographs, and something to be entered upon only after careful deliberation. The matter will undoubtedly be threshed out at the Washington meeting, a year hence.

Changes in official personnel were more than ordinarily numerous this year. Continued ill health made it necessary for Prof. Herbert B. Adams to resign the secretaryship of the Association, an office which he has filled from the beginning with devotion and success. In future, the Association will have two secretaries, Mr. A. Howard Clark of the Smithsonian Institution and Professor Haskins of the University of Wisconsin. Mr. R. G. Thwaites was compelled by other duties to relinquish the chairmanship of the Historical Manuscripts Commission, though retaining his membership upon it, and his place as chairman was filled by the appointment of Prof. Herbert L. Osgood of Columbia. Mr. David J. Hill, Assistant Secretary of State, was added to the Public Archives Commission. The new President of the Association is Charles Francis Adams; and the new Vice-Presidents—prospective Presidents by custom—Prof. H. B. Adams and Capt. Mahan.

The announcement of the death of Prof. Moses Coit Tyler was made to the Association by President Angell, during the session at Ann Arbor. The announcement was not unexpected, as news of Professor Tyler's serious illness had greeted the members upon their arrival at Detroit, and cast a gloom over the meeting from the beginning. A charter member of the Association, and one of the two or three who had most to do with bringing it into existence, he gave to it freely of his counsel, was at his death its First Vice-President, and would have been its next President had he lived. Uniting, in singular perfectness, the qualities of sound scholarship, keen and delicate critical judgment, and a pure and lovable character, the charm of his gracious presence endeared him to all who knew him, and to none more than to his colleagues and friends in the American Historical Association, with whom he had so long regularly met. The Association placed upon its records resolutions expressive of regret at his death and appreciation of his services, but no formal action was required either to appraise his worth or to insure the grateful perpetuation of his memory.

THE AMERICAN ECONOMIC ASSOCIATION.

DETROIT, December 31, 1900.

Detroit's reputation as the "Convention City" was in no wise lessened last week when the American Historical and the American Economic Associations, after a year of separation, again met in joint session in that place. All of the many details, both business and social, in the arrangements for the meetings had been carefully planned, and were admirably executed. The attendance was large, with a noticeable preponderance of Western over Eastern representation. Besides the problem of distance which rapid transportation has not wholly solved, the time of year in which the meetings are held serves to diminish the numbers present. Yet, after considerable discussion, both associations have decided to meet at the same time in 1901, as it seems impossible to find any other date when an attendance so nearly representative can be secured. It is to be hoped that the movement towards the establishment of a uniform convention week may in the near future be productive of results.

The meetings of the Economic Association were again, as they have been for many years, devoted almost exclusively to practical questions, only one paper, of thirty minutes' length, being concerned with economic theory. The first session of this, the thirteenth annual meeting, on Thursday morning, December 27, was occupied with the consideration of the taxation of quasi-public corporations. Dr. Frederic C. Howe of Cleveland opened the discussion with a searching analysis of State laws and Supreme Court decisions relating to the taxation of this form of corporations. The search revealed no fundamental plan or principle in the laws of States and localities, but rather a decided confusion, arising from the restrictions of courts and the conflicts of jurisdiction in matters of interstate traffic. The tendency in recent years has been away from the taxation of gross earnings, and back to the earlier plan of taxation of property; but instead of basing valuation upon inventory, it has been found more equitable to derive it from stocks and bonds. This plan has the advantages of being approved by the United States courts, of treating the corporations as entities, and of adopting for the valuation of corporations the estimate of the commercial world by adding to the market value of stocks the par value of bonds.

Mr. Frederick N. Judson followed with an able paper, which possessed added interest by reason of the fact that it combined the results of his researches as a student with his practical experience in corporation law. After noting that the Supreme Court has established through decisions the rule that the value of a railroad in the State for taxation means the part within the State of the value of the entire road, and that, as a means of determining this State value, the mileage apportionment rule has been approved, he discussed the theoretical and practical difficulties that inhere in the taxes on gross earnings and on value, and advocated a tax on net earnings, or the establishment of a definite standard of taxable value by the capitalization of the net revenues under the mileage rule. This should be the sole corporation tax, and foreign bondholders as well as stockholders should be exempt from taxation. The evils of a lowered national conscience under the present system more than offset any gain in revenue secured. The discussion brought clearly into view the close relationship between the taxing question and the more fundamental one of corporation control, and likewise the fact, adduced by Professor Seligman, that reform must be sought in a complete divorce of State and local assessments, and that, in the nature of the case, a reform cannot be accomplished piecemeal, but, to be successful, must be comprehensive. In the papers read and the subsequent discussion, the legal element predominated over the professorial, which may in part account for the practical trend of the discussion; but it was noticeable that, in general, lawyers and economists were in agreement as to ways and means, and that the most radical suggestion made at all, that quasi-public corporations should be relieved from taxation, on the ground that, inasmuch as the State can control their rates of charge, any tax imposed would be either unjust or absurd, was offered by a practising lawyer of Chicago.

The Thursday evening session was given up to the annual addresses to the two associations. President Ely of the Economic Association presented a scholarly paper upon the subject, "Competition, its Nature, its Permanency, and its Beneficence." He exhibited the sharp contrast in the utterances of popular economic literature on the subject of competition—views so contradictory as to admit apparently of no reconciliation—and urged a more exact definition of terms, which might possibly bring the disputants to an agreement. It must be recognized that the struggle of conflicting interests has certain limits fixed by the social order. The doctrine of evolution, when applied to man, materially modifies our conception of this economic struggle. "Primitive competition includes a narrow circle of association, and, beyond that, slaughter for economic advantage. With social evolution, slaughter gradually recedes into the background and falls below competition into the region of crime," and since the beginning of the present century the elevation of the plane of competition has kept pace with the rapidity of social evolution. Growing association among men has enlarged the competitive group, and its enlargement has been attended by increased generosity, benevolence, altruism. Competition comes increasingly to mean worthy struggle, and one of the tests to be applied to proposed measures of social betterment is whether it strengthens the individual and the group competitively. Competition is to be regarded, then, as a permanent social feature. Combination can be permitted only so long as it does not destroy the effectiveness of this permanent principle. If monopoly ensues, competition must be restored, and when this is not possible, the ends of competition must be secured by a social control. "If these methods of social control in some cases mean public ownership and management of industries, a place must be opened for the competitive principle in the terms of admission to public employment." Two somewhat antagonistic lines of evolution appear in the consideration of this problem; the first, one of the most powerful movements of the century, is that which looks toward real equality of opportunity in economic competition; the other is found in the construction of the economic-juridical institutions of society, such as private property, inheritance of property, and vested interests. The first must not go so far as to undermine the second. "In the mutual adjustments of these two lines of evolution, . . . we have given us one of the weightiest and at the same time most delicate tasks of the twentieth century."

On Friday the two associations were taken by special train to Ann Arbor as the guests of the University of Michigan. The joint session in the morning was devoted to the History and Problems of Colonization, and the uniformly high character of the papers, together with the nature of the problems discussed, made this doubtless the most interesting session of the week. The keynote of the morning's discussion was to be found in the insistence upon the idea that a colonial administrative policy, to be successful, must be based upon thorough study of the natives themselves, and upon the experience of other nations in colonial government, and not upon an exaggerated idea of the importance of the religion, customs, and laws of the home country. This was evident in the paper of Professor Reinsch of the University of Wisconsin, entitled "British and French Experiments with Representative Government in the West Indies." A detailed study of experiments in Martinique compelled the conclusion that France had failed because of that same policy of assimilation which had caused Spain's downfall. France is at present recognizing these earlier mistakes, and coming to appreciate the efficacy of a colonial policy such as England has adopted, which interferes but little with native customs, and intrusts the administration to officials familiar with local conditions. This position was emphasized by Professor Stephens of Cornell University, who followed with a delightful portrayal of British administration in India. Such mistakes as have been made there, he said, have been due to a want of understanding and appreciation of the native peoples. Again, Professor Finley of Princeton University, who presented the results of a personal visit in a paper on "Our Porto Rican Policy," insisted that the relations between the tropics and civilization must be expressed by the residence of a few white men to guide and encourage. His picture of the island politically and economically was most deplorable. The difficulties of securing a revenue can hardly be overestimated, and the island certainly needed, he insisted, the temporary relief afforded by the Dingley tariff. Neither complete independence nor early admission to Statehood is to be thought of. The islanders do not want the first, and are not ready for the second. They should be organized into a Territory. In the discussion that followed, Professor Hull of Cornell University gave the results of a statistical investigation into the revenues and expenditures of Porto Rico as the result of its possession by the United States. The conclusion was plain that, after the expiration of the tariff law, the revenues of the island will not be sufficient for its maintenance, which calls for a speedy and serious consideration of the taxing problem. Professor Hollander, now Treasurer of Porto Rico, was unable to be at the meeting and present his paper upon "The Finances of Porto Rico." His handling of the difficult questions intrusted to him in that island has aroused wide interest and admira-

tion, and his unavoidable absence was deeply regretted.

Commercial education occupied the Friday afternoon session. Professor James's paper on "The Relation of the Universities to Commercial Education" traced in an admirable manner the progress made in this direction, and advocated a three or four years' undergraduate course in the colleges and universities to meet the need. Professor Keasbey of Bryn Mawr, in a paper on "The Teaching of Economic Geography," presented from a theoretical standpoint the mutual dependence of economics and geography, and gave commercial geography a fundamental place in a scientific course in commercial education. Professor Haskins of New York University presented "The Science of Accounts in Collegiate Commercial Education," according accountancy a high place in secondary, post-graduate, and professional commercial education. The spirited discussion which ensued, led by Professors Dixon of Dartmouth and Scott of Wisconsin, confined itself to the place of commercial education in a college or university course, and gave expression to widely divergent views. It was argued on the one hand that such a course should be supplementary to that of the college, and be placed on the same basis as training for the recognized professions; on the other hand, that it should parallel and in large part supersede the college course, the time not being ripe for a more advanced curriculum. The afternoon's deliberations made clear the increasing need for such training and the growing interest in this form of education on the part of the business community.

The closing session on Saturday morning gave opportunity for the only paper of a theoretical character presented. "The Next Decade in Economic Theory," by Professor Fetter of Leland Stanford Junior University, essayed to forecast from present tendencies and current theories the direction of further development in the abstracter branch of economics. Basing his position upon the marginal-utility theory of value, the writer contended that the cost-of-production theory is discredited, that the labor theory of value must be thrown aside and the traditional division of the factors of production abandoned as illogical, and that our doctrines of rent and interest and our concept of capital must be reëxamined and restated. The discussion showed a disinclination to follow the utility principle so far; in fact, a distinct reaction against this new development in economics was evident in the remarks of some of the participants, and a decided leaning towards Ricardian ideas interpreted in the light of later developments.

The excellent policy adopted by the Association of furthering investigation through committees was again justified in the conclusions presented by the Committee on Uniform Municipal Accounts and Statistics, which reported through its Chairman, Mr. M. N. Baker of the *Engineering News*. American municipal accounting is at present in a most unsatisfactory condition, and questions of public policy relating to municipalities can never be thoroughly studied until uniformity in reports has been secured. The Committee urged the coöperation of the various economic, sanitary, and engineering societies for the accomplishment of this result, to be followed by steps that will lead to the adoption of the scheme by the municipalities themselves. They urged the publication of a yearly comparative summary of municipal statistics, the continuation of the work of this character now conducted by the United States Department of Labor, and the preparation by the present Census Office of an exhibit showing the nature and extent of municipal activities. The Committee was continued.

The most serious criticism that can be passed upon the sessions as a whole is that, because of the number of papers presented, so little time was or could be given to discussion. It is hoped that this difficulty has been removed by the action of the Council, which provided that hereafter there shall be fewer papers on the programme, that they shall be printed in advance and read at the sessions only in abstract, and that the meetings shall be devoted largely to discussion. Prof. Richard T. Ely was re-elected President, and Prof. Charles H. Hull of Cornell University, Secretary.

CAMILLE DESMOULINS.

PARIS, December 19, 1900.

M. G. Lenotre has devoted himself to the study of what he calls "Paris révolutionnaire," or Paris in the Revolutionary period. His new volume, 'Vieilles Maisons, Vieux Papiers,' possesses real interest. The subjects treated in it are very varied. The principal chapters are devoted to Camille Desmoulins and his wife, and to the sister of Robespierre. Camille Desmoulins was born at Guise, a pretty and sleepy old place, situated near the forest of Guise, which belonged to the Princes of Condé. This forest, by the way, which was left by the last Prince of Condé to the Duke d'Aumale together with all the Condé estates, was left by the Duke d'Aumale to the Duke de Chartres during his lifetime and after him to the Duke de Chartres's second son, who has assumed the name of Duke de Guise. The father of Camille Desmoulins was an honorable and modest man, who filled the office of lieutenant-general, civil, criminal, and of police, in the bailiwick of Vermandois. He was poor and had five children. Camille was born on the 2d of March, 1760, and was educated at the Collège Louis le Grand in Paris, where he was a bursar. Since the suppression of the order of the Jesuits, the college has been in the hands of the University. The education was purely classical, and the boys heard more about the heroes of Plutarch than about the kings of France. They lived, so to speak, in Sparta, in Athens, and in Rome.

"Who could fix," writes M. Lenotre, "the degree of responsibility which, in the psychology of the men of the Revolution, is attachable to the inconsiderate admiration of antiquity? Legislators nourished on Livy and Tacitus passed judgment not on Louis XVI., but on Tarquin. What they thought worthy of imitation was the savage virtues of Brutus and Cato: human life could count for little in the eyes of those classicists accustomed to pagan hecatombs. Charlotte Corday herself would invoke the name of Cinna, and when Deputy Javogues, a member of the Convention, walked stark naked in the streets of Feurs, he took himself for an ancient."

Young Desmoulins became one of these Romans, and did not conceal his contempt for Guise and the simple ways of its inhabitants; he would live there no longer, and remained in Paris, where he was enrolled in 1784 on the list of lawyers. From 1784 to 1789 he was almost in distress, having no relations, no protectors; he was reduced to the necessity of copying legal documents for the *procureurs*, a precarious and very ill-paid work.

The Hôtel de Pologne, where he had a small room, was next to the house of a rich bourgeois, M. Duplessis, who had a pretty daughter. Desmoulins noticed her and admired her. Himself very poor and very plain, he could not hope to marry her till the Revolution made a great change in his life. From the first day, he threw himself into the new current; when the States-General were convoked, he went to Guise and succeeded in getting himself named one of the three hundred electors of the bailiwick of Vermandois, but not in being elected a Deputy. He returned to Paris furious against the inhabitants of Guise, "who are at the antipodes of philosophy and patriotism." "One of my comrades [of Louis le Grand]," he writes to his father, "has been more fortunate than I. I mean Robespierre, Deputy from Arras." In Paris, managing to become one of the followers of Mirabeau, he lives in his house at Versailles, dines with all his friends, with his mistress.

In a single day he rose from obscurity to popularity. It was on the day when, finding himself in the Garden of the Palais Royal, he stood on a table and distributed the green leaves of the trees of the garden as cockades to the enthusiastic populace. From his table he announces to a surging multitude the dismissal of Necker, declaims against the Court, and takes from his pocket a pistol, with which he threatens imaginary spies. He does not lose a moment, but writes pamphlets, and among them the 'Discours de la Lanterne aux Parisiens,' in which he attacks the priests, the nobility, everybody. His glory has not made him richer. He humbly asks his father to send him five louis, and complains of his booksellers. His father criticises his son's pamphlets severely, but sends him some money, with which he founds a paper, *Révolutions de France et de Brabant*. In a literary sense, this paper, which immediately became famous, is a model of irony, of wit, of eloquence, of originality. "Its unforgiving irony," M. Lenotre says with truth, "spares nothing; it is destructive and merciless. . . . After Camille, the Terror may come. He has in advance laughed so much at the victims that they will no longer inspire pity."

The terrible pamphleteer succeeded in becoming intimate with the Duplessis family. Duplessis was the son of a workman, but had made a little fortune. His daughter Lucile was very pretty, as is manifest from an engraving in M. Lenotre's book, from a picture by Bailly, which is at the Musée Carnavalet. She was moved by Desmoulins's passion and consented to become his wife. She had a dowry of 100,000 francs, which was quite a fortune at the time. Desmoulins, who had always led a Bohemian life, took a third-story apartment on the Place de l'Odéon, at the corner of the Rue Crébillon. On the day of their marriage Lucile was proud of seeing round her Pétion, the Mayor of Paris; Mercier, author of the 'Tableau de Paris,' and Robespierre. The Duplessis had a little country house at Bourg-la-Reine, near Paris, and the journalist and his wife divider their time between the country and the capital. The year 1791 was a long honeymoon. Camille, who had been such a merci-

less journalist, was so much softened by the new conditions of his life that he ceased to publish his paper. Since he was in easy circumstances, he considered the Revolution ended. A child was born at the close of 1791, and Desmoulins resolved to reënter the bar; but, when the Republic was proclaimed, Danton asked him to become the Secretary-General of the Ministry of Justice. "When he entered, with Lucile on his arm, the stately hôtel of the Place Vendôme, his unexpected piece of good fortune revived in him the Camille of the old days. He exults. 'Here I am,' he writes to his father, 'living in the palace of the Maupeoux and the Lamoignons.'"

He was led by his new position to excuse the September massacres, ordered by Danton, to vote for the execution of the King, and to take his place among the adversaries of the Girondists. He began to feel repentant, however, when the condemnation of the Girondists was pronounced and they were sent to the guillotine. "It is I," exclaimed he, "who killed them; I shall never forgive myself for it." Camille Desmoulins was to be himself one of the victims of that Revolution of which it has been said that, like Saturn, it devoured its own children. He showed his usual ardor in his attacks on the Terrorists, especially on Robespierre, whom he denounced in his new paper, the *Vieux Cordelier*. Lucile encouraged him in his efforts. He was breakfasting one day with a friend, who told him he was endangering his life. Lucile said, "Let him; let him fulfil his mission; he will save his country." And Camille, taking his wife and his young child in his arms, added philosophically, "Edamus et bibamus, cras enim moriemur." Lucile was alarmed, however; she wrote to Fréron, who was before Toulon, besieged by the French troops: "Come back, Fréron, and quickly. Bring with you all the friends you can find; we need them. . . . I have ceased to laugh, I don't touch my piano any more. Come back, come back!"

On the 20th of March, 1794, Camille received the news of the death of his mother. He was weeping; Lucile, overpowered with fatigue, was sleeping near the cradle of her child. Suddenly the steps of a patrol are heard in the street. Camille opens the window and sees the soldiers. He screams, "They have come to arrest me." His wife wakes up; Camille opens the door himself to the soldiers of the Revolutionary committee. He is arrested and conducted to the prison of the Luxembourg. We have still the letters which he wrote to his wife while there; they are full of passion. In his despair, he writes:

"Live for our child; tell him, when he can understand it, that I would have loved him much. . . . I believe, notwithstanding all, that there is a God. My blood will efface my faults, my human weakness; and what there was of good in me, my virtues, my love of liberty, God will recompense. . . . I feel my life ebbing away. I see you still, Lucile; my hands, already tied, embrace you, and my head, separated from my body, still opens on you its dying eyes."

On the 5th of April, 1794, Camille died, amidst the applause of the populace of which he had once been the ideal. His unmerciful enemies did not spare Lucile; she was beheaded a week after him, and showed great courage on the scaffold. Camille's father died soon afterwards of grief at Guise. Duplessis, Lucile's father, survived her not long. Old Madame Duplessis undertook the education of the young Horace. All we know about him is that, in 1817, he left France for Hayti, where he died in 1825, leaving two daughters, named one Camille, the other Lucile. They both married and became widows. "They were," says M. Lenotre, "still alive a few years ago, and both were in a state of poverty. An attempt was made to interest the Government and the Chambers in their fate, but it was fruitless, and we believe that one of them is now dead."

A marble tablet commemorative of Camille Desmoulins and his wife has been placed on the house in the Rue Crébillon, above the Café Voltaire. M. Lenotre, who is very exact and the most diligent student of "old houses," explains at length that this memorial was wrongly placed by the Commission of Paris Inscriptions. It ought really to be placed at the opposite corner of the Place de l'Odéon, on the Rue Crébillon. His chief authority is M. Sardou, who had once received the confidences of M. Lenoir, an old Parisian, who, crossing one day with Sardou the Place de l'Odéon, when Sardou was still a very young man, showed him the windows of the third story of the house which stands at the angle of the Place de l'Odéon and of the Rue Crébillon. "Look," said the old man to Sardou; "there dwelt Camille Desmoulins."

Correspondence.

RECIPROCITY AND THE BRITISH NORTH AMERICAN FISHERIES.

To the Editor of The Nation:

Sir: A humorous American has declared that it would pay the United States to pension off every blessed New England fisherman with a thousand dollars a year so that the people of America might eat cheap fish. Absurd as the idea seems at first sight, it is not only true, but absolute sound common sense. The deep-sea fisheries of the republic have for years past been a decaying industry. At one time the fishing vessels were manned by native Americans, but to-day the motley crowd that sail in the bankers are chiefly provincials—Nova Scotians, Cape Breton men, Newfoundlanders—Portuguese, Swedes, and Norwegians. The genuine New Englander does not care for this dangerous and disagreeable business; he relegates it to his colonial poor brother and the foreigner. All political economists are agreed that the most obnoxious form of protection is a prohibitory tax on the common food of the people. Cheap sea fish is one of the largest ingredients in the dietary of the working population of Europe, and especially of England; without it they could hardly exist. In America your vast population, your toiling millions in towns, in factories, and on farms, are actually deprived of this great food supply of cheap fish in order that a few hundred Americans and a promiscuous crowd of foreign fishermen may earn high wages, and a ring of fish-dealers gain big profits.

Every one knows that the great deep-sea fisheries of this continent, the home of the cod, herring, halibut, mackerel, and lobster, lie in our northern British waters; why should not we, out of our superfluity from this great harvest of the ocean, supply your great population with cheap fish just as you supply Europe with cheap breadstuffs? Why should so obvious a case of natural demand and supply of necessary food be stopped and completely dammed up by an artificial barrier? In the olden time the argument used for the protection of the American fishermen was national defence, supplying the navy with seamen; to-day the most rabid New England protectionist—even Senator Frye—would not dare to explode this rusty old weapon in the controversy. It is well known that, in your late war with Spain, your naval officers were able to show that no body of men throughout the United States furnished fewer recruits for the American men-of-war than the down-East fishermen.

Lest there should be any doubt about the correctness of my statements, let me give a few facts and figures. In proportion to her population, the deep-sea fisheries of the United States are of very small importance. England, with little more than half your population, besides a large export, consumes fish every year valued at twenty-five millions at the landing, equal to double that amount by retail. Besides this, in a good year, Scotland exported 1,700,000 barrels of herring, worth another twelve millions. Now, at the highest estimate, the deep-sea fishery of the republic outside of oysters does not exceed ten to twelve millions; in the same proportion as British consumption, it should be fifty millions. The main cause of this difference is the scarcity and dearness of sea fish. In England three herrings can be bought for five cents; every one knows that a single herring cannot be purchased in the States for the price of three in Europe. All common fish except oysters are notoriously dear with you—two and three times the price for which they can be obtained in England or Canada. Let free trade in fish be once established, and this anomalous state of affairs would disappear in a short time. Newfoundland alone, out of its inexhaustible fisheries, could supply the States with seven or eight million dollars' worth of cod, herring, lobsters, and salmon.

All who have studied the question of free trade between the two countries are aware that America will reap the larger benefit out of the arrangement. You have long been clamoring for reciprocity with South America, but, as has been recently shown, Pennsylvania alone does more business with the British colonies than the whole American trade with the Southern republics. I notice that the return of Mr. Bond (of the Blaine Bond Treaty) with an overwhelming majority in Newfoundland, and the prospect of a reciprocity treaty with the colony, has already caused a flutter in Gloucester, and the cry has gone forth that their great national industry is about to be destroyed. No one will be deceived by such palpable misrepresentation. Experience under the former reciprocity treaty shows that no such dire result will ensue; they lived and prospered then, as they will still continue to exist under a new arrangement for free trade. At the present time American fishing-vesels frequenting Newfoundland waters bear a heavy burden—over $6,000 was collected from the few schooners visiting our shore this year for licenses alone. Every small vessel of 80 or 90 tons pays in light dues, licenses, bait, etc., at least $300; under reciprocity, the bulk of this charge would be taken off, and they would enjoy besides

the inestimable privilege of fishing in the colonial grounds from which they are now excluded.

A reciprocity treaty between the two countries, to be thoroughly beneficial to both, should be for a fixed period of not less than ten or twelve years. Its full advantages will not come at once. It takes time to bring trade into new channels. The barriers of protection are so strong, so firmly rooted in America, that it will be hard to break them down; only time and the obvious benefits of mutual free intercourse between the neighboring friendly countries will eventually bring about the desired change.

D. W. PROWSE.

ST. JOHNS, NEWFOUNDLAND, December 23, 1900.

WARFARE IN SOUTH AFRICA.

TO THE EDITOR OF THE NATION:

SIR: Farm-burning, not having proved a sedative in the case of such people as the Boers, has apparently been discontinued, and the clamor for the military murder of Boers taken in arms, raised by the extreme Jingoes in England, has died away. But Mr. Dudgeon must not think that facts can be erased from the record.

I cited a proclamation of Lord Roberts condemning to be burned a number of farms, not for "concealing ammunition or used as defences wherefrom to fire," but because they were in the neighborhood of railways which had been raided by the enemy, and it was presumed, surely with palpable injustice, that the occupants had connived at the raids.

Here is another proclamation:

NOTICE.

The town of Ventersburg has been cleared of supplies and partially burnt, and the farms in the vicinity destroyed, on account of the frequent attacks on the railway line in the neighborhood. The Boer women and children who are left behind should apply to the Boer commandants for food, who will supply them unless they wish to see them starve. No supplies will be sent from the railway to the town.

[Sgd.] BRUCE HAMILTON,
Major-General.

November 1, 1900.

An Englishman thoroughly well informed and attached to British connections, writing from the Cape, says of the Orange Free State:

"That community two years ago was a model state, liberal, free from corruption, spending large sums on education, in every way an example. It is now a desert; some of the men killed, some in military prisons, the rest waging a desperate and (to our eyes) a hopeless war against overwhelming forces. The homesteads on a large scale have been harried and burned, the women turned out to shift for themselves, herded together in camps or deported with their children."

Are Americans disposed to make themselves by their approbation moral accomplices in this work of ruin? EQUITY.

Notes.

Persons of Devonshire extraction or connections now in the British Colonies or in the United States are requested to forward to the President-elect of the Devonshire Association for 1901 any particulars they can give of the emigration of their family and its subsequent history, with names and addresses of its living members. All such persons will be made welcome to membership in the Association at the three-days meeting in Exeter next August. The President is Sir Roper Lethbridge, and his address, The Manor House, Exbourne, R. S. O., Devon, Eng.

The Rowfant Club, Cleveland, intends to reprint in a limited edition the Boston *Dial* of 1840-44, giving an exact facsimile of the sixteen numbers even to errata sheets, and a supplementary number descriptive of the publication, with names of the contributors and an index. The first number will appear in March.

The *Tägliche Rundschau* of Berlin reports that, through the intervention of Prof. Ernst Elster, Dr. Hans Meyer, chief of the Bibliographical Institute of Leipzig, secured for that library, from the estate of Heinrich Heine, a large mass of valuable literary remains, fully 1,500 pages, in the handwriting of the poet himself. In these papers are found the originals of a number of Heine's leading works. Especially valuable, however, as supplying new data and details for the poet's career, is a series of more than 1,000 lettters, addressed to him by prominent contemporaries, such as Laube, Varnhagen, Rahel, Robert Schumann, Meyerbeer, Hiller, Lewald, Count Auersperg, and the members of his own family. In a new critical edition now in preparation of the works of Heine, the editor, Professor Elster, proposes to make good use of these finds.

The Hinrichs'sche Buchhandlung, Leipzig, purposes carrying forward the enterprise of the Russell 'Collective German Publishers' Catalogue' (two series, cloth-bound, in twenty-eight volumes), containing the individual catalogues of the German publishers alphabetically arranged by cities, together with those of firms outside of Germany connected with the German trade. This enterprise involved a loss of about $75,000. Starting with the year 1893, where Russell's collection stops, the above firm will proceed in five-year periods, if the trade and libraries of the world are disposed to support it. For the present, absolute subscriptions are not requested, but only an expression of the likelihood of subscribing. The price will be very moderate, 30 pfennigs per sheet of sixteen pages, of a size probably somewhat larger than Russell's. The competence of the Leipzig firm is unquestionable. The American agents are Lemcke & Buechner, No. 812 Broadway.

Henry Holt & Co. are soon to publish in ornamental form 'Familiar Quotations from the Divine Comedy of Dante Alighieri,' edited by R. J. Cross, with English translations, notes, and the parallel Italian text; 'Hypnotism and Suggestion in Therapeutics,' by Dr. R. Osgood Mason; and 'Puritan and Anglican,' by Edward Dowden.

'The North Americans of Yesterday,' by Frederick Dillenbaugh, will shortly be issued by G. P. Putnam's Sons.

E. P. Dutton & Co. announce for speedy publication a Life of Lord Monboddo, intimating that thereby hangs a tale.

The Marchesa Burlamacchi's 'Luca della Robbia,' in "Great Masters in Painting and Sculpture" (London: George Bell & Sons; New York: Macmillan), has much less of either biography or criticism than other volumes of the series. It is rather in the nature of a *catalogue raisonné* of the known and attributed works of the master. The lack of biography is to be accounted for by the lack of known facts about the life of Della Robbia, while the lack of general criticism is partly supplied by a supplementary chapter on "Luca's Work and Position in Italian Art," by the editor of the series, G. C. Williamson. To most people the main interest of the book will be found in the forty-one illustrations. Luca's work, especially in the majolicas, "comes well" in half-tone reproduction, and these plates convey much of the charm of the originals.

Sadakichi Hartmann's 'Shakespeare in Art' (Boston: L. C. Page & Co.) is not a book to be taken seriously, although the author says he has been all his life "somewhat of an art critic, and thoroughly acquainted with the subject." He claims for it "nothing but the merits of compilation," but its merits even as compilation are of the slenderest, and it is only unintentionally that it is amusing. It is so when Ford Madox Brown is called "the Pre-raphaelite painter whom Ruskin has lauded to the skies"—Brown, whom Ruskin systematically ignored!—and when the reader is somewhat unnecessarily assured that "Daniel Huntington, in his 'Henry VIII. and *Catherine Parr*,' " "had no idea of illustrating Shakspere." Even the illustrations are uninteresting; though this may be because so few good artists have illustrated Shakspere, or because the few good things are copyrighted.

'A Captive of War,' by Solon Hyde, hospital steward of the Seventeenth Ohio Volunteer Infantry (McClure, Phillips & Co.), seems a belated record of those melancholy experiences in Confederate prisons, during the civil war, which for many years were so numerous and so calculated to excite bitterness in those who had similarly suffered, and anger in those who were accused of complicity in the systematic abuse of Union captives. Mr. Hyde was taken prisoner during the battle of Chickamauga in September, 1863, and in the succeeding eighteen months saw the inside of prisons at Richmond, Danville, Andersonville, and Salisbury. His testimony concerning the brutality of their administration is that of former stories; but on account of his quasi-medical office he often obtained relief from the miseries which befell the private soldier, and under these easier circumstances saw a good deal of the more attractive side of Southern character. He had a rather amusing experience in the early part of 1865, when he was being escorted from Andersonville to some place less exposed to the visitations of the Northern troops. Sherman was on the war-path in South Carolina, and prison-keepers had little rest for their souls in the security of their captive charges. At each circuit away from the Union march this wandering prison-guard was menaced anew by Sherman, and at last was fain to let the prisoners shift for themselves within the Union lines.

We are indebted to the Norwegian Minister of Public Instruction for a copy of an official work on Norway, ordered two years ago by the Storthing to be prepared in connection with the Paris Exhibition, and published simultaneously in French and in English. It is a beautiful volume in royal octavo ('Norway,' London: Sampson Low, Marston

& Co.), in which there is a concise and orderly description of the country, beginning with its geographical situation, topography, geology, climate, etc., and tracing the history of the people, their Constitution (given in full at the end), institutions, army and navy, industries, commerce, communication, language, literature, and art. Many of these sections, in addition to bibliographies, are very beautifully and somewhat freely illustrated, and the compilation does infinite credit to the intelligence and taste of the Government office in charge of its production. We gladly place it, as suggested, on our shelves for reference, and give notice that it is procurable through the trade (in England, for six shillings).

Of a different order, but still notable, is a companion work, in small quarto, 'International Exposition, Paris, 1900; Official Catalogue [of the] Exhibition of the German Empire' (Berlin: J. R. Stargardt). It is in English, but printed in the German character, with rubricated running-titles, head and tail-pieces, and other colored ornamentation, both novel and effective. What corresponds most nearly to the Norwegian book is a preface, by Ernst von Halle, on the German Empire and its Inhabitants at the End of the Nineteenth Century, in fifty-eight pages. The catalogue proper begins with the German House, and first of all with its collection of Frederick the Great. Statistics accompany all the descriptive matter preceding each list of exhibitors, and lend a permanent value to this presentation. There is an index to the exhibitors.

By the publication of 'Die Apokryphen und Pseudepigraphen des Alten Testament,' the editor, Professor Kautzsch of Halle, and his colaborers, together with the publisher, Mohr of Tübingen and Leipzig, have made accessible to the students of history, literature, and theology a mass of important material hitherto comparatively unknown to all except specialists. Even few of these could have complete control of the field, as so many of the originals occur in different Oriental languages. This collection of books contains not only the official Apocrypha of the Old Testament found in the Greek and Alexandrian canon (though not in the Palestinian or Hebrew), as also in some modern versions, notably Luther's, but also the whole mass of Apocalypses and Pseudepigrapha that flourished so prolifically in the inter-Testament period among the Jews. For the first time we have in translations, together with introductions and valuable notes, a literature formerly regarded merely in the light of curiosities, but now as sources of historical and literary study of prime value. This version, together with its literary additions, is sold in two volumes at 25 marks; but also the text itself has been issued, together with Weizsäcker's classical version of the New Testament now in the ninth edition, and the Kautzsch version of the Old Testament, originally issued in 1894, in a massive volume of 1534 quarto pages, at 12 marks. Within the covers of one book, therefore, is thus comprised a scholarly and modern translation of the entire body of Jewish religious literature from its beginning to the close of the New Testament period. It is the only work of the kind in existence.

The United States Department of Agriculture publishes in one of its series a very partisan and, it may be added, untrustworthy account of the sheep and wool industry of this country, prepared by J. R. Dodge, at one time in charge of the statistical division of the Department, and now described as a special agent. His is all that a public document should not be. Its high praises of the tariff and its framers are out of place. Even the Department offers a half-apology for printing the essay and giving it official endorsement.

A predominant note of the Consular Reports for December is the threatened industrial crisis in Europe. The wave of prosperity, which has steadily risen since 1895, has taken a turn and begun to recede. There are ominous indications in France, Scotland, Austria-Hungary, and Germany especially, where at the same time that continued overproduction has made stoppages of factories the order of the day, fuel and provisions have greatly advanced in price. This increase in the cost of food gives peculiar interest to the present controversy as to the working of the law passed four years ago, through Agrarian influence, forbidding "dealing in futures in grain and mill products or stocks of mining and manufacturing establishments on the exchange." The supporters of the measure claim "that it has given Germany an autonomous home market, dominated by their own grades and qualities of grain and controlled by German conditions of supply and demand, independent of the markets at Odessa, Antwerp, Liverpool, or Chicago; and that it has stimulated and elevated the morals of trade." On the other hand, "the commercial and industrial classes of business men in this part of Germany," writes Consul-General Mason of Berlin, "including also many of the more intelligent agriculturists, seem convinced that the whole effect of the law has been abortive, and not only of no practical advantage, but a positive injury to the interests of German agriculture"—a conviction in which the Government seems to share. The readiness of Japan to follow Western methods receives a new illustration in the recent establishment of a Museum of Commerce at Bangkok, in which it is proposed to display a sample of every commercial product of Japan.

It is just thirty years since Sir Robert Hart suggested the use of the medical staff of the Imperial Maritime Customs in China for the half-yearly Medical Reports which have appeared regularly ever since, even while the promoter himself was besieged in Pekin. We have more than once called attention to the incidental sociological interest and value of these reports, and these qualities are manifested anew in the 59th issue (II., Special Series No. 2) for March 31, 1900, published at Shanghai. Thus, Dr. W. H. Parks says "the fashionable disease of Soochow is gastralgia," "mostly confined to ladies of the upper classes," on account of their indolent and aimless lives, with a fit of anger as a frequent inciting cause. Great is the outcry and pother and the demand on the servants for relief. In these Dr. Parks says he has sometimes thought he could detect symptoms of pride at "serving a mistress who could get up such a disease and cause such a stir in a little world." The disease is largely responsible for opium-smoking among women, who contract the habit after the attack has been alleviated. Opium Dr. Osman F. Hall of Chungking reckons among "the five great curses of the women of China," along with slavery, tuberculosis, rickets, and bound feet; and he illustrates all these in a portrait group of three women. Dr. H. M. McCandliss, of Hoihow and Kiungchow, tells of an old woman, ill with plague, whose house was burnt above her head, together with the coffin already provided for her. "She did not grieve over the burns . . . ; but, oh! that coffin which was burned, and where could she get another?"

Art collectors and custodians of museums will be greatly interested in a new weekly, *Monatsberichte über Kunstwissenschaft und Kunsthandel*, of which R. Freiherr von Seydlitz is editor-in-chief, and Hugo Helbing of Munich the publisher. Each number contains brief articles by leading European art critics, on an average five full-page heliogravures or autotypes, a number of illustrations, and very full bibliographies and reports on art collections, schools, exhibitions, etc. There is, besides, a supplement, the 'Folia Helbingiana,' or monthly illustrated catalogue of rare publications and objects of art of every description offered for sale by the firm of Hugo Helbing.

A late issue of the *Archäologischer Anzeiger*, No. 3, 1900, presents an interesting partial programme of the work of the German Archæological Institutes at Rome and Athens for the current year. The public meetings of these institutes began, as usual, with the observance of the birthday of Winckelmann on December 7. Professor Petersen began early in December to lecture in Rome on the most important monuments and museum treasures in and about the city. Professor Hülsen of Rome gives two courses—one on the topography of the ancient city, and another on Latin inscriptions. In Athens, Professor Dörpfeld is lecturing on the buildings and topography of the city, of Piræus and of Eleusis. After the end of this course, in April, occurs his "Studienreise" to the Peloponnese, Ithaca, and Delphi, to be followed in May by another to the islands of the Ægean Sea and to Troy.

The excellent method by which Europeans show their respect and love for their scholars has again been exemplified in the case of August Mau, the well-known authority on Pompeii, whose latest book on that subject was not long ago published in an English translation. His sixtieth birthday was celebrated by his friends in Rome on the 15th of October. One of the features was a gift of 5,600 francs, to which scholars and friends in all parts of Europe and America contributed. This amount was given outright, with only the suggestion that it might be used for the production of copies of Pompeian wall-paintings.

The recent Congress of Archæologists held in Kiev decided to petition the Government to reorganize thoroughly the whole archive system in Russia, and to establish a series of central archives under the control of the Ministry of Education. For the first year, 1901, the sum of 14,000 rubles has been asked, and two central archives are to be established, one at Kiev and the other at Wilna.

The Countess of Linden, whose work on the causes of coloration in animals is well known, and who is assistant professor in the Zoölogical Institute of the University of Bonn, has just been awarded the prize (1,200 francs) of "Gama Machado," and thus becomes Lauréate de l'Institut de France

(Paris). The Countess, who is German, and has never been in France, wrote her work in French, her subject being the colors of the wings of butterflies; her competitors were all men, and one of them, a professor at Marseilles, was already laureate. We may also mention here that Miss Lily Martin has received an appointment as assistant in the laboratory at Clark University.

—The name of Father Marquette has just gone the round of the newspapers, owing to the alleged discovery at Frankfort, Mich., of his grave, with remains which seem to include a rosary and cross. Through the courtesy of Mr. Reuben G. Thwaites, we bring to public notice another revelation concerning the celebrated missionary and explorer—a man whose heroism was only less remarkable than his goodness of heart. A fuller statement of the facts in question will be found among the notes to vol. lxxi. of the 'Jesuit Relations,' an instalment of that great work which is still forthcoming. Until recently it was believed that no portrait of Marquette had been preserved. The faces of Le Jeune, Jogues, and Gabriel Lalemant are known from contemporary engravings, while Brébeuf and several other martyrs stand out plainly in the plate delineating the tortures which is given by Creuxius in his 'Historia Canadensis' (Cramoisy, 1664). Marquette, however, was not made the subject of an engraving or woodcut, and accordingly he does not appear in the gallery of oil portraits executed in recent years by Mr. D. G. M'Nab, from seventeenth-century data. Jacques Viger, the first Mayor of Montreal, made extensive investigations about Marquette, but apparently found no clue to a portrait, and in 1846 Father Félix Martin learned that the Marquette family at Laon could give no information whatever regarding one. It remained for Mr. M'Nab to stumble across something which may prove to be an authentic likeness.

—Four winters ago, while walking along Little St. James Street, in Montreal, "I overtook," he says, "two French boys drawing a hand-cart loaded with rubbish and scraps of broken boards, on top of which was thrown an old panel, the shape of which attracted my attention. Picking it up, I inquired as to where they had found it. 'Oh, all of this wood is from an old house.'" They would tell him nothing further, but sold the panel for a little silver. Mr. M'Nab neglected his purchase till the autumn of 1899, when he began removing the dirt with which the picture was encrusted. He found at the bottom of much varnish an excellent portrait, though somewhat cracked. "The face," he says, "is a wonderful fine example of modelling and coloring, and could be mistaken for a work of Rembrandt, were it not for the signature, 'R. Roos, 1669,' above which are two lines which I take to be as explanatory of the model; though cracks and dirt have defaced most of the words, save 'Marquette de la Confrérie de Jésus,' which is quite legible. On the back of the panel . . . there has been carved 'Pere Marquette,' strong and deep, but this carving evidently is not by a contemporary." Father Arthur Jones, the archivist of St. Mary's College, Montreal, is disposed to accept the portrait, and he has been in correspondence with Father Hamy of Boulogne-sur-Mer, the best living authority on whatever relates to Marquette. Father Hamy, having seen a photoprint and considered the evidence, writes: "I congratulate you on having found the likeness. You will now be glad to hear that there is every likelihood of its proving authentic." On the strength of these opinions, Mr. Thwaites will give a halftone engraving of the panel in the last volume of his series. He concludes: "Every admirer of one of the most lovable characters in the history of American explorations will hope that it will eventually be found that the noble physiognomy here depicted was that of the saintly Marquette."

—The announcement by the Delegates of the Clarendon Press of a new photographic facsimile of Shakspere's First Folio (1623) is welcome news indeed, for the Staunton facsimile, a reproduction wonderfully successful for its time (it was published in the years 1864 and 1865), is now so expensive that good copies command prices in the neighborhood of fifty dollars, and are difficult to obtain even at that figure. This, the best of the facsimiles, is practically, therefore, beyond the reach of the private student. The so-called Halliwell-Phillipps facsimile (1876) is unsatisfactory on account of its many imperfections, due to the reduced size of the text, to say nothing of the painful effect which the reading of it has upon the eyesight. The Booth typographical facsimile, though marvellously correct for a representation in single types, lacks the interest which a photographic reproduction naturally has. Other facsimiles that have been made from time to time are quite untrustworthy. A legible, faithful, and generally accessible *ipsissima-litera* facsimile of the First Folio is therefore badly needed, and the Clarendon Press, in undertaking to supply this want, is adding another to the long list of indebtednesses which English scholarship owes to Oxford. Mr. Sidney Lee—and there could not be a more competent editor for the task—is to have the work in charge. The Press Delegates promise the book for the autumn of this year. They will reproduce the Chatsworth copy belonging to the Duke of Devonshire, which has been deposited in the Bodleian Library for the purpose. It is to be hoped that, besides the bibliographical introduction by Mr. Lee, they will add to the book a collation of the facsimile with the original, showing the various trivial discrepancies between the two which will inevitably arise through imperfections in photographic plates. Such notes will add greatly to the value of their work. Mr. Lee asks that those who are fortunate enough to own copies of the First Folio communicate with him (in care of the Clarendon Press, Oxford), so that he may obtain full bibliographical details for his introduction. He ought thus to be able to give a reasonably complete table of the variations which are to be found in the several copies of the 1623 Folio.

—The *Atlantic* for January has a melancholy article by Elizabeth Bisland on "The Time-Spirit of the Twentieth Century." It contrasts the buoyancy, hope, and enthusiasm of a hundred years since with the cold-blooded pessimism or materialism of to-day, and inquires what the future can have in store for us. "Will the wage-earners shear the bourgeoisie, as we shore the nobles a century ago? Or will Liberty sell herself to authority, for protection from the dry hopelessness of socialism or the turmoil of anarchy? Or will the new generation evolve some thought undreamed of, some new and happier guess at the great central truth which for ever allures and for ever eludes our grasp?" *Quien sabe?* Science has no answers to these questions as yet. Reflective readers who seek relief in another train of thought may turn to an optimistic economical article by Charles A. Conant, on "The Growth of Public Expenditures." Mr. Conant thinks that recent history "illustrates the benefits which may come to the community from a well-directed use of a part of its new wealth in the extension of state functions." A hundred years ago there was no wealth to spare; now, with the multiplication of man's power through steam and electricity, there is a vast surplus fund, constantly growing, likely to be increased hereafter through the resources of chemistry; and this fund can therefore be applied with safety to sanitation, education, and local public works. Consequently, we need not be depressed if we see our taxes constantly growing; we can afford it. Unfortunately for the argument, most of the surplus does not go for sanitation, or water-works, or good roads, but for pure waste in war. What we need to consider is, not the great surplus which is at our disposal for purposes of taxation, but how it is spent, especially as thousands of millions of it were mortgaged by generations now dead for wars long since waged. But let no one call us a pessimistic generation so long as we produce economists who undertake the task of making us happy over our taxes, and the splendid opportunity there is for an extension of "state functions." R. Van Bergen contributes a paper on "The Empress Dowager," which throws a reflected light on the Chinese question. In the Middle Kingdom "no law, however sacred it may be, is considered inviolable." Jurists will be interested in the account given of the process by which Tsai-tien was adopted as heir of Hsien Fêng, by the latter's "posthumous act."

—Another cheerful economist is Mr. Carroll D. Wright, the Commissioner of Labor, who contributes to the *Century* an article on "What the Government Costs." He shows, among other things, that while population since 1791 has increased from about 4,000,000 to about 76,000,000, expenditure per capita has increased only from 49 cents to $6.39, while wealth has increased "fast enough to warrant any augmentation in expenditures." Surely this overlooks the fact that part of the expenditure is caused by a debt of $1,000,000,000, which represents mainly absolute destruction of property. Mr. Wright lays down, as the foundation of what he has to say, the proposition that because a private person with an increasing income generally increases his expenditures in proportion to it, a Government is warranted in doing the same. But if the Government has a large debt and does this, the debt will obviously never be paid off at all. Besides this, private business is mainly the business of production; Government expenditures, except in the case of public works, produce little or nothing, but are taxes taken out of production, and therefore a constant burden. The fact is, that all our buoyant, happy economists are laboring to prove what nobody disputes—that we are a rich people. What they say throws no light on the real ques-

tions which confront the country: Shall we pay off our debt? Shall we rob Peter to pay Paul $140,000,000 a year for pensions? Is it prudent to keep a continuous war going at the rate of $100,000,000 a year? What have economists to say about militarism? An economist who passes all these questions smiling by and spends his time blowing the trumpet for more taxes, is a curious product of this curious age. Jacob A. Riis has an entertaining illustrated article on "Hamlet's Castle," and Cecil E. Payen contributes an account of the siege of the legations ("Besieged in Peking"), with pictures from photographs by the author. This, like everything else of the sort, has been anticipated by the daily press, but it contains one or two lifelike touches. The following is given as a specimen of Chinese cruelty, but it also illustrates something else, apparently not perceived at all by the writer. One of the coolies within the besieged precincts beats his wife and baby unmercifully. To make an example of him, the man is placed in front of the bell-tower, with a board round his neck bearing the inscription "Wife-Beater." The result is that the punishment falls upon his wife and mother, who go about crying and begging that his family may not be disgraced in this way, while the culprit sits in the pillory with a "forced grin" on his face. He does not know for what he is punished, as every man in China has the right to beat his wife, and "wife-beater" is no term of opprobrium at all. "Running the Cañons of the Rio Grande," by Robert T. Hill of the United States Geological Survey (with illustrations chiefly by Thomas Moran, from photographs), should not be overlooked.

—*Scribner's* has an article by Thomas F. Millard called "A Comparison of the Armies in China." He confirms the accounts given by other writers of the superiority of the Japanese troops. In the beginning it was discovered that the War Office at Tokio possessed "the only complete and correct military maps of the theatre of war." As a result, the allied commanders had to go constantly to the Japanese intelligence staff for instruction and advice. Again, on the march to Pekin, "their field telegraph alone prevented the allied army from losing communication with its base." The other attempts at this service were failures. Further, the work of the Japanese field medical corps was a revelation, and comparable only with the British-Indian field service. During engagements the Japanese wounded "received much prompter attention than those of other nationalities," and, in a sweltering climate, ice was successfully carried all the way to the capital. It is, however, in their commissariat and army transport that the Japanese really bear away the palm. "There can be no doubt that, in the operations in China, the Japanese forces have moved with greater readiness and rapidity, with less fatigue to the troops, have been better supplied, and have, consequently, invariably entered engagements in better physical condition, and with a larger percentage of battalions present for duty, than any of their allies." This superiority in transport hinges on the vital principle of marching "light." The Japanese soldier (and the same thing is said to be true of his British-Indian confrère) carries nothing on the march except his rifle, ammunition, and water-bottle, and all his supplies are packed in such a way as to make transportation easy. The American soldier, who is at the other extreme, marches under an enormous load. After the allied forces entered Pekin, one-third of Gen. Chaffee's total force is said to have been in hospital, against 5 per cent. of the Japanese. Mr. Brownell's article on Auguste Rodin will interest many readers. It is accompanied by numerous illustrations from photographs of sculptures by Rodin—among them, one of the extraordinary Balzac of which every one has heard. Mr. Brownell may be regarded as an authorized "interpreter" of Rodin to the American public, and what he says is persuasive, though whether all the illustrations reinforce what he says may be a question. We make out that, as a theorist about his art, Rodin is occasionally guilty of extravagance, not to say affectation; curiously enough, the rabble see this sometimes in his sculpture.

—*Harper's* opens with the first instalment of Woodrow Wilson's "Colonies and Nation"—a "Short History of the People of the United States," copiously illustrated by well-known draughtsmen, and reinforced by reproductions of autograph signatures, maps, portraits, documents, relics, etc. Otherwise, poetry and fiction make up most of the number. Mr. Poultney Bigelow contributes an article called "My Japan," giving an account of a recent second visit to that country after an interval of twenty-odd years. He finds that the Japanese have changed their costume, but not their nature. They are still charming, still feudal, still non-European, so far as art, music, and the drama go, still thought (*i. e.*, the mercantile class as compared with the corresponding class in China) by the English to be "unreliable in business matters." This is accounted for, according to Mr. Bigelow, by the fact that, "in Japan, trade is left to those whose sordid qualities place them out of sympathy with the great bulk of the natives." Japanese female morals are defended, and we are told that in reality society is as decent in Japan as in England or the United States. The ladies of Japan, it seems, enjoy more freedom than any others in the East because they are more to be trusted. Kotaka (Mr. Bigelow's host) allows his guest to escort Mrs. Kotaka to a musical matinée in Uyeno Park, much as it might be to Carnegie Hall or Sanders Theatre, Cambridge, Mass. Mr. Howells puts Mr. Curtis's old "Easy Chair" in repair, and makes it talk with him on the subject of manners. We have not bad manners, so much as "no manners"; but "if we ever take thought of behavior, we shall have the best manners in the world, probably." This is what was said in Chicago of culture, and is believed by many to be true of the art of government, and other branches. But, as the Chair says, "we must not wait too long." Mr. Howells's pleasant irony leaves the matter intentionally where he found it. If we might venture a suggestion of our own, it would be that the decline in manners is directly due to the tariff. The tariff, as it has risen, has produced a privileged class of *nouveaux riches*. Now privileged classes, in countries managed by Teuton or Anglo-Saxon, always have haughty, arrogant, domineering manners; and the "lower classes" (this being a country in which socially the principle of equality is immensely valuable to them) ape the "hustle and shove" of the newly enriched. That is the way in which they "get even." The constant desire to show how rich and powerful you are, on one side, and to "get even" on the other, is fatal to polite breeding. The Bosses, and apostles of Protection typify the manners of privilege; the noisy "travelling man," the other side. Next to Protection, as a cause of decadence in manners, might be put, of course, "Patriotism." All good manners are quiet; but no one can be a real patriot without being noisy. There is room in Mr. Howells's philosophy of the subject for these thoughts also.

LANG'S CHARLES EDWARD.

Prince Charles Edward. By Andrew Lang. London: Goupil & Co.; New York: Charles Scribner's Sons. 1900.

It is doubtless the confession of a weakness to praise the mechanical features of a book before noticing its contents, but the print and illustrations of Mr. Lang's book on the Pretender are so conspicuously splendid that they deserve prominent mention. The volume belongs to a series which already contains lives of Mary Stuart, Queen Elizabeth, Charles I., Oliver Cromwell, and Queen Victoria. We may infer that the artistic motive was the strongest in the minds of Goupil & Co., because they are distinctively "art publishers" and do not deal with purely historical literature. However, they had the good judgment to secure students of note for their biographers, and the result is sound learning embellished by faithful and sumptuous illustration. In one unavoidable respect the volume on Charles Edward is inferior to that on Charles I., not because the reproductions are less good, but because the later Stuarts had no Vandyck for court painter. Largillière, Gennari, Blanchet, and the other painters represented here by full-page photogravures are not eminent, though some of their portraits are skilful and pleasing. On the other hand, we must exempt from any possible breath of disparagement Hogarth's portrait of Lord Lovat counting the clans. In type it is even more unpleasant than Sargent's "Asher Wertheimer," but it is equally enthralling, and it remains the greatest legacy of the Forty-five to art.

Passing to the text, we must also make a general statement before we come to detail. Mr. Lang writes the best life of Charles Edward which has appeared, and the most coherent account of the last Jacobite rising, considered not merely in its relations to the Pretender, but in its bearing upon the clans and the political circumstances of the time. An accomplished man of letters like Mr. Lang, who has been tested in many fields, can present anything attractively, even though his information be somewhat scant. But Mr. Lang knows the Forty-five even better, perhaps, than he does his Homer, and he secures his decisive effect by weaving minute and intricate data into a smooth and well-modelled work. Every Scottish lad grows up in an atmosphere of hero-worship for the Highlanders who charged at Prestonpans, at Falkirk, and at Culloden. The children of Inverness still pay their compliments to the "spitting-stone" whence Cumberland watched "the whip of the whirlwind," as Camerons, Stewarts, Mackintoshes, Frazers, and MacLeans plunged forward to die for a vanquished

cause. Mr. Lang, who was once an Edinburgh schoolboy, retains the generous admirations of his youth. It is not unknown that he wears a miniature of Charles Edward for his scarf-pin, and calls the Forty-five the most gallant enterprise of the eighteenth century. But his enthusiasm has been duly chastened by historical research, and he describes the pitiable side of Charles Edward's character with the fulness which the truth requires.

When Dr. Johnson visited Flora Macdonald at Kingsburgh, and was given the bed in which Charles Edward had slept twenty-seven years previously, he pencilled upon a slip of paper, "Quantum cedat virtutibus aurum." Mr. Boswell did not understand the meaning of these words when his immortal work was first printed, but, before a second edition appeared, an "ingenious friend" suggested that they might have some connection with the £30,000 reward. Here we get to the true romance of the Forty-five. Charles Edward was indeed brave when, after fretting for years over the delays of the French Government, he said that he would go to the Highlands and raise the clans alone. He was sober and even melancholy during his brief hour of triumph. He was constant and cheerful when chased through the heather by Cumberland's soldiers and by Lord Macaulay's great grandfather, the Rev. Aulay Macaulay, Minister of Harris. Yet his is not the great glory of the forlorn hope. That belongs to chiefs like Lochiel and Cluny Macpherson; to vassals like the boatmen who rowed the Prince across Loch Nevis, and the eight honest men who dwelt in the cave of Coiraghoth; to women like Lady Margaret Macdonald and the more celebrated Flora. For five months and three days Charles Edward wandered through the Highlands, a fugitive whose captor would have received the largest reward ever offered in Great Britain for such a service to the crown. None of his own betrayed him, or could have been induced to betray him. "Quantum cedat virtutibus aurum."

Mr. Lang's interest in Charles Edward springs from a sense of the loyalty which he inspired. "I am unable to find in Prince Charles the splendid figure that bewitches our fancy in our childhood." The Prince is honored not because he loved much, but because he was much loved. Mr. Lang reveres the emotion which is still felt when "the band plays 'Will ye no come back again?' in assemblies of the Kirk at Holyrood." The volume contains passages which may almost seem to be marked by antiquarian detail, but beneath is this underlying motive: "He failed utterly, failed before God and man and his own soul, but, if he failed greatly, he has greatly endeavored. Charles is loved for his forlorn hope, for his desperate resolve, for the reckless daring, the winning charm that once were his; for bright hair, and brown eyes; above all, as the centre and inspirer of old chivalrous loyalty, as one who would have brought back a lost age, an impossible realm of dreams."

Mr. Lang's principal sources of information (apart from what has been printed) are the documents contained in the Stuart Papers at Windsor. On Cardinal York's death the archives of James III. and his sons passed through some strange experiences, but were finally made over to the Prince Regent. Since then they have remained at Windsor, with the exception of some letters relating to Charles Edward, Mme. d'Albany, and Alfieri which are now in the British Museum. No editor has yet been found who would undertake the work of publishing these Papers, though as early as the date of their purchase Lockhart was mentioned for the task. The only progress which has been made towards rendering them available is represented by a single volume edited by Dr. Glover, and containing manuscripts of the years 1717-1730. More than one historian has had access to the Stuart Papers, but Mr. Lang uses them more freely than his predecessors have done. Among the results of his fresh research is the establishment of several new facts in the life of Charles Edward between his return to France after Culloden and the death of James III. It is an obscure period in his career, and one which is not fully cleared up even yet. As might be expected, Mr. Lang supplements and corrects Mr. Ewald's 'Life and Times of Prince Charles Stuart' (London, 1883) at many points. In fact, he is always glad to display Mr. Ewald's shortcomings—*e. g.*, his failure to use the unpublished part of the Stuart Papers, his statement (p. 9) that a certain published letter had not been published, and (pp. 233-234) his confusion between Miss Walkinshaw and Mme. de Talmond on the strength of a misunderstood statement of Walton's. But there are writers on the Forty-five whose command of the subject is such that it is not shaken or questioned in the present work. Thus, the chapter "In the Heather" is very much indebted to Mr. W. B. Blaikie's 'Itinerary of Prince Charles Edward Stuart' which was published by the Scottish History Society in 1897 as a supplement to 'The Lyon in Mourning.'

In estimating the nature of Mr. Lang's book we must keep close to the central figure, for this is a true biography and not the story of one short episode in a long life. The Forty-five stands boldly in the foreground, but what comes before it is more than a prologue, while what follows it is more than an epilogue. Mr. Lang exclaims that he is called both a Jacobite and a Whig, and he will certainly please no blind partisan by his treatment of Charles Edward. The Jacobite will not find the praise he gives James III. and Cardinal York a sufficient compensation for his account of Charles Edward's weaknesses in later life. The Whig will not forgive his extreme interest in the fortunes of the House of Stuart. But he writes neither to appease those among the Scotch who are up in arms over 'Pickle the Spy,' nor to gratify the Nonconformists who see in the last Jacobite rising only the wiles of the Pope. Probably the thought of offending the Whigs has disturbed him little, but a Scotchman needs some fortitude to tell his countrymen the foibles of their Prince as these would be related by a German historian who had mastered the subject.

Charles Edward was a spirited boy, with a marked fondness for field sports and an equally strong prejudice against regular studies. Mr. Lang calls him the worst speller of the century, and even in an age when the forms of words were still rather fluid, his vagaries with the pen must have appeared shocking. Yet at the age of fourteen he fought with the Duke of Liria and the Spaniards against the Imperialists at Gaeta, and "entered a position whence the besieging generals had retired under fire of artillery." He had from the first the physical vigor which surprised his companions in the flight from Culloden, when he proved that he could walk farther and drink more whiskey than the Highlanders themselves. He particularly loved shooting. "He had spirit, personal courage, and, when he chose, an accomplished address and distinguished manners."

The qualities which Charles Edward brought with him to Scotland were not of a kind to help him in detaching Whig noblemen from the Hanoverian interest, but they awakened enthusiasm among the loyal Jacobites, and were solid enough to secure respect for their owner throughout the whole campaign. He had Danton's audacity, and was ever for action when a question arose between it and delay. On the eve of Prestonpans he drew his sword and said: "Gentlemen, I have flung away the scabbard; with God's assistance I don't doubt of making you a free and happy people." At Derby he would have pushed forward contrary to the advice of Lord George Murray and the chiefs. After the retreat, he would have given final battle on the southern fringe of the Highlands, instead of falling back to Inverness. Moreover, while he was dashing, and favored the boldest measures, he was not corrupted by the brief success which brought him power and adulation. He was temperate and gave no ground for scandal. Both in youth and when striking for his Cause, he was attractive, though never a genius. It was forced inaction which corrupted him. Said Lucius Cary, Lord Falkland: "I pity unlearned gentlemen in a rainy day." If not by want of learning, Prince Charles was demoralized by lack of application and of useful employment in the rainy days and years which followed Culloden.

"Hope and Despair" is the title which Mr. Lang places at the head of his chapter on Charles Edward's life during the next twenty years after his return from Scotland. The Prince was always plotting and always wandering; now contented with a Scottish mistress, now trying to get a German wife; now taking money which came from the coffers of the Holy See, and now professing a willingness to abjure Romanism if only he could become King of England thereby. It is a sad record of intrigue, disappointment, and moral decadence. The virtues which were eminent at the short-lived court of Holyrood no less than in the field, were rapidly lost, and Charles declined to a state of soul which is revealed in his latest portrait—that by Pompeo Batoni. His marriage to Louise of Stolberg did not lead to regeneration, and his wife's misconduct with Alfieri was the last disgrace of his sad life. Even Voltaire was moved to see a fatality in the misfortunes of the Stuarts, and the last drop was added by the Italian tragedian. Mr. Lang says wittily: "A young poet lover of another gentleman's wife is very well. But when the lover has perpetually a horticultural eye on the cultivation of his talents and fame through the assistance of his passion, then one can only be sorry for the woman whom he finds serviceable in a poetical way." *A fortiori* one must be sorry for the husband, especially if he be a ruined and neglected prince.

Such was Charles Edward, but who were his supporters? We shall say nothing about the Jacobite discords and jealousies which made the vagrant courts of James III. and Charles III. uncomfortable places of

residence, nor about the villanies of the Forty-five. Murray of Broughton and Simon Fraser, besides the traitors of minor note, may be dismissed without regret. So, too, may the nobles of England, who looked upon Prince Charles and George II. in much the same way that Bryan and McKinley were regarded by thousands of voters in our late elections. Neither was desired, but one must be chosen. The English peerage stood by the Hanoverians, mainly because they typified act of Parliament rather than divine right. The staunch and sincere followers of Prince Charles were the chiefs who felt that a Prince of the blood royal had the same right to their allegiance which they had to the allegiance of their own clansmen and vassals. As for the latter, a sentence from Wade's Report on the Highlands, 1724, portrays the general state of mind: "They think it a most Sublime Virtue to pay a Servile and Abject Obedience to the Commands of their Chieftains, altho' in opposition to their [Hanoverian] Sovereign and the Laws of the Kingdom."

We hope that the text of this book may be printed less expensively, even at a sacrifice of all the illustrations. In such an event an index should be furnished, for a large amount of detail is given, and there is no analytical table of contents. The only fault which we can find with Mr. Lang relates to the form of proper names, both European and Scottish. He has not always taken care to correct mistakes of spelling which occur in his sources.

SMITH'S TROUBADOURS AT HOME.

The Troubadours at Home; Their Lives and Personalities, their Songs and their World. By Justin H. Smith, Professor of Modern History in Dartmouth College. Two volumes, with 178 illustrations. G. P. Putnam's Sons.

Among the few cheerful episodes that find a place in the conventional accounts of the Middle Ages, the most cheerful and attractive is that of the life in southern France immediately before the tragedy of the Albigensian crusade, which finds its fullest expression in the songs of the troubadours. Perhaps the shocking end of the brief comedy has served to enhance somewhat its fascination. However that may be, the general interest and importance of the theme have long invited a more adequate popular treatment than those that have hitherto been at the disposal of the general reader. There are a score of technical periodicals devoted exclusively, or largely, to Romance philology; these, together with the numerous monographs constantly appearing in this field, have accumulated in the last twenty years a mass of information with which very few persons can possibly acquaint themselves. Prof. Justin Smith's purpose of giving the public at large the chief results of all this special investigation with which he has patiently familarized himself, will be heartily appreciated by all who are interested in the history of literature or the course of European culture.

The fragmentary character of the information that has come down to us in regard to the lives of the troubadours, and the danger that their most spirited productions may appear dull and pointless when judged apart from their music and the circumstances of their audience and surroundings, has led Mr. Smith to give a somewhat singular form to his work. *Revista* and *Zeitschrift* formed a necessary beginning, but they are warmed by no Provençal sun. After the days in the library the second step was to travel over the ground—

> "to prepare a real stage-setting; another was to reconstruct the personalities of the troubadours according to their poems, environments, and what we know of their lives, as, indeed, one could not help doing when treading the ground they trod, with the mind full of their sayings and doings; a fourth was to translate specimens of their poetry in the original forms, with some authentic illustrations of their music; and the last was to combine this material with pictures, incidents of travel, and descriptions of existing things so as to induce if possible a sense of actuality."

The author meets the possible imputation that he is verging upon historical fiction by assuring the reader that his object is solely to state and illustrate fact. "I beg leave to assure the reader, too, that I have used imagination only to combine facts, or, where knowledge ends, to supplement without falsifying it. Further, I have scrupulously indicated in the text itself or in the notes all that I have invented." Indeed, the first thing that we come upon is a very effective pledge of sincerity, a bibliography, including the names of thirty-one periodicals and over four hundred writers, from Vincent of Beauvais to Gaston Paris. At the end of each volume are nearly a hundred pages of notes in fine print, and the work closes with a synoptical table and a good index intended to permit a systematic grouping of the scattered information in the text. In short, the author has done his best, by acquainting himself with the most unimpeachable sources of information in the recent French, German, and Italian scientific literature, to prepare himself—as few writers who feel moved to appeal to the general public have the patience or training to do—to furnish a correct although readable account of the troubadours and the general culture which they represent. Mr. Smith is gifted, moreover, with a good, clear style, abundant resources, and a light touch.

He travels from place to place with his kodak slung over his shoulder and the old verses running in his head. He starts at Aix, which, since it offered practically nothing to suggest any particular troubadour, appeared a good place to make a few general reflections upon the tribe as a whole. But why seek an explanation for them in that sturdy old illusion, so often left by scholars for dead, of the fatal year 1000? Mr. Smith even enhances the legend (for which there is absolutely no contemporaneous authority), by the quaint conceit that after trembling humanity—whom all the chronicles show us as busily preoccupied with marrying and giving in marriage as usual—had seen the fatal year go by, they concluded that the destruction of the world was reserved for the millennium from the Lord's death, "and another whole generation shuddered under the black shadow of doom and damnation." This illustrates one weakness of Mr. Smith's work. His very considerable knowledge of the literature of the troubadours, and unusually keen comprehension of their life and ambitions, are unsupplemented by the necessary acquaintance with all those social, political, and intellectual elements that are conveniently, if somewhat vaguely, summed up in the words "Mediæval Church." He deals with this institution and its influences in that spirit of covert, although, doubtless, quite unconscious, hostility traditional among Protestant writers. There is no indication in his long list of books that he has more than glanced at the history of the most powerful factor in mediæval culture. Had he reckoned with Mr. Lea's works, for example, he would hardly have extolled the Albigensian creed so unconditionally, nor would he have said that Dominic invented the Inquisition. The statements are misleading, too, that both of the mendicant orders were "discountenanced by the Pope till he dared resist no longer," and that the Albigensians were in certain points clearly the forerunners of Luther.

From Aix we are conducted to Carpentras; are told how it looks to-day, and something of Gui de Cavaillon and Raimbaut de Vaqueiras. At Monferrat we are reintroduced to Raimbaut, and have an opportunity to learn more of him. At Montpellier we meet Pière de Corbiac; at Marseilles, Pière Vidal. Thence to Foix, and then, with some intervening stops, to Albi, where we review the terrible episode with which its people were associated—ending at Poitiers, with the last of the troubadours, Guiraut Riquier. All the way the reader—at least he who possesses *une âme sensible*—feels hurried, and is confused by a series of impressions as little rationally sequent as those received from the windows of an express-train. He is taught his history by innuendo, his biography by anecdote, and his literary criticism as surreptitiously as may be, for fear that he may otherwise be bored.

There are lucid moments when the author forgets to distract, and shows only his most amiable characteristics. At Anduze we come upon the trail of Ugo de Saint-Cire:

> "Ugo seems to have been something of an exquisite. To borrow yesterday's argot of the Paris drawing-rooms, he was cut out for a 'zebra,' the ornamental fetch-and-carry of an elegant mondaine. He delighted to vow, protest, and implore. He would talk of kissing his inamorata's feet; declare the little purse that she made him worth a star or two; and beg a million pardons when he cared not a straw for one. He always wore a compliment in his right eye and an impertinence in his left, and could say either in such a way as to make it seem the other. An interesting cough, an elegant headache, a charming languor, and a seductive melancholy were also in his baggage. . . . As a lady's man, he was aptly contrived; lively, companionable, sentimental, never in love, but always able to appear so, as the biography states; always ready with a song, fully stocked with gossip, glad to be petted, and mightily happy to be ordered about on dainty errands. With men, however, it was different. His patrons—bold, vigorous barons—quickly discovered two vices in his making up: he was expensive, and he was lazy; and from these vices grew, I take it, his two unfortunate broils. The story of each is expounded in a *tenso*. First, it was the Count of Rodes."

Had the author frankly given up the hope of beguiling that class of readers who are to be caught only by the chatty journalistic bait, and, by omitting his *impressions de voyage*, which are generally quite unrelated to his real theme, confined himself to his vivacious accounts of the individual singers and his clever versions of their songs, and occasionally given us admirable passages like the following, his two volumes would have become one, and formed a very important and permanent contri-

bution to the popular literature of the subject:

"It was precisely in the land of the troubadours and keeping time by the music of their songs that a gay, brilliant, and polished society was first developed in the modern world. Partly by instinct, partly by feeling, and partly by taking thought, a code of ideas and a system of conduct were elaborated, to break and put in training the rude ways and ungoverned passions of the feudal world. The starting-point was the love for women, as we have already discovered. As a result of love came that *joi* of which we already know, a gladness and lightness of heart that illuminated and vivified the inner world like another sun, and prompted to all noble, beautiful, and self-denying acts. *Joi* led especially to the boundless generosity that frequently almost ruined wealthy nobles, and even made robbers of them sometimes. Along with such qualities went naturally a passionate fondness for social pleasure, witty conversation, and gallantry. All these together were summed up in the word *joven*, that youngness or young-heartedness which has adready been mentioned more than once; while feebleness of spirit and meanness of life were signified by the contrary word, oldness. Over all this were thrown bonds of self-control and moderation, expressed by another word always on the lips, *mesura*, measure, which endeavored to bring even the virtues into æsthetic form. The precious fruit of so much striving was known as *cortesia*, courtliness, the perfect bearing and conduct of a finished gentleman, according to the code of chivalry and poetry . . . These were the principles that guided the court of Béziers. But we must not go to the other extreme and take the people too seriously. In a very real sense they were, by Anglo-Saxon standards, only grown-up children. Indeed, they were almost literally such. As we learn from the poem of 'Flamenca,' love began to claim a girl at thirteen, at fifteen she was marriageable, at sixteen she was aging."

It is to be regretted that one who was so well prepared, by study, natural insight and humor, and command of an easy and flexible style, should not have had more confidence than he has shown in the readers to whom his book should appeal. Had he counted upon even very mediocre powers of concentration and attention, he would not have fallen into a habit of sprightly discursiveness which sometimes suggests a scholarly Miss Bates.

WALLACE'S STUDIES.

Studies, Scientific and Social. By Alfred Russel Wallace. Macmillan. 1900. 2 vols. 8vo, pp. 541 and 543. With 114 illustrations.

Fifty-two essays, one for every card in the pack, in the four suits of geology, evolutionary biology, anthropology, and sociology, written in Wallace's clear, flowing style, and with all his argumentative force and ingenuity, full of information upon all sorts of matters of curiosity, afford nothing more interesting among all these than their portraiture of the writer himself. Not quite a typical man of science is Wallace; not a man who observes and studies only because he is eager to learn, because he is conscious that his actual conceptions and theories are inadequate, and he feels a need of being set right; nor yet one of those men who are so dominated by a sense of the tremendous importance of a truth in their possession that they are borne on to propagate it by all means that God and nature have put into their hands—no matter what, so long as it be effective. He is rather a man conscious of superior powers of sound and solid reasoning, which enable him to find paths to great truths that other men could not, and also to put the truth before his fellows with a demonstrative evidence that another man could not bring out; and along with this there is a moral sense, childlike in its candor, manly in its vigor, which will not allow him to approve anything illogical or wrong, though it be upon his own side of a question which stirs the depths of his moral nature. One cannot help entertaining a great esteem for him, even when he is most in earnest and at his *isms*.

A poor reviewer needs to summon all his professional omniscience to comment upon fifty-two discussions with such a range as these; but he can plead the stern exigencies of space as a reason for only noticing a few of them. The seventh essay gives a remarkably luminous and distinct popular account of the different families of monkeys. The reader is disposed to wonder what set Alfred Russel Wallace writing such indisputable matter; but he finds out what it was when, the description being done, in reviewing the order, he pronounces monkeys to be rather low down in the scale of quadrupedal life, both physically and mentally. He still acknowledges that man is the crown of the animal kingdom in both respects. One of these days, perhaps, there will come a writer of opinions less humdrum than those of Dr. Wallace, and less in awe of the learned and official world—for why is not this as supposable as a fourth dimension of space?—who will argue, like a new Bernard Mandeville, that man is but a degenerate monkey, with a paranoiac talent for self-satisfaction, no matter what scrapes he may get himself into, calling them "civilization," and who, in place of the unerring instincts of other races, has an unhappy faculty for occupying himself with words and abstractions, and for going wrong in a hundred ways before he is driven, willy-nilly, into the right one. Dr. Wallace would condemn such an extravagant paradoxer. If a man must indulge in paradox, let him do so in moderation.

Somewhat like the monkey essay in method is the first one in the book, which sketches, not without artistic skill, the Yellowstone Park, the somewhat differently wonderful Grose valley in New South Wales, and other inaccessible valleys, the text being helped by excellent photographs (all the illustrations in the book, by the way, are choice); but all this is but a prelude to an argument that these wells, as they might be called, with their lofty vertical sides, have been worn out by running water.

The anthropological essays relate mainly to the Australians and to the Polynesians; though there is interesting information about the Malays, the Papuans of New Guinea, the Veddahs of Ceylon, the Ainos of Japan, and the Khmers of Cambodia, ancient and modern. The admirable portraits here are, of themselves, mines of instruction. The Australian physiognomies, with their large, round heads, broad and good foreheads, beetling brows, shapely ears, good muscular development, and full beards, would be remarkably European in the impression they make, were it not for their wide mouths, thick lips, and great gobs of noses. The only Aino face here shown has a still better forehead, an excellent nose, not a bad mouth, and might perfectly well pass for a modern Greek of superior intelligence. The Veddahs are naked and completely savage huntsmen, looked upon by the other inhabitants of Ceylon as little higher than wild beasts; yet their faces betoken tremendous intensity and no little subtlety of intellect, refinement of judgment, humanity of feeling, observation, power of will, along with utter absence of civilized discipline. When Wallace pronounces these three races to belong to the same fundamental division of the human race as ourselves, the feeling their portraits excite assents to it. With the sculptured heads of the ruins in Cambodia, it is different. This civilization is not very ancient. It was in all its grandeur only about six centuries ago; and the most ancient work goes back only to 250 B. C. But the faces recall the theory of M. de la Couperie that Chinese civilization was derived, probably indirectly, from Babylonia, about 2300 B. C., and was brought by a tribe which slowly migrated from Western Asia, perhaps Bactria or Chorasmia. For, along with Mongol eyes, we see high foreheads, strong jaws, somewhat Assyrian mouths, and remarkably fine, large noses, of a peculiar character. The two untrustworthy drawings of modern Khmers look European enough, but do not in any respect resemble the ancient sculptures, except in their general intelligence.

In regard to the Polynesians, whom Wallace also believes belong to the Caucasian stock (for he takes it for granted that there is such a stock), it can be only a piece of self-complacency for us to deem them like ourselves, since they are far superior physically, as well as in the sentiments which their portraits bespeak; nor do they strike us as intellectually much below us. Their inferiority, if they have any, shows itself here only in possibly defective energy. Wallace combats the theory, founded on their traditions and language, that they came from Malaysia, and certainly shows that, physically and morally, they are the very antipodes of the Malays, while the Malay words in their languages belong to too modern a dialect of Malay to prove anything. But he quite fails to notice that there are other resemblances between the languages of a deeper character, such as the prevalence of disyllabic roots in both, the use of intensive reduplications (*bertanistanisan* is "wept greatly" in Sumatran, *kaukauwa* is "strong" in Fijian), the running of words together into a peculiar kind of compounds (like *vakayinokaukauwataka*, "to cause the body to be strong," in Fijian; *ikinapapaghampas*, "a reason for submitting to severe beating," in the intermediate Tagala language; and in the Malay languages, though the compounds are not so extraordinary, they are formed in the same way, as *mendupa*, "to fumigate with incense," in Sumatran, *itel*, "seen by him" in Dyak), and the use of a particle to introduce statements of fact. It is surprising, too, that Wallace, with his eye for spying out arguments, should not have seen that the late introduction of words from Malaysia, but not from further north in Asia, goes towards showing that the original migration most likely took the same course.

The general reader will be glad to learn from these volumes what an old Darwinian, a Darwinian before Darwin's hypothesis was known, thinks now of that question, and of Neo-Darwinianism, and of the last utterances of Romanes. He will learn, to begin with, what, of course, is common knowledge with the biologists, that variation in reproduction is far commoner and far greater than it was supposed to be when Darwin wrote—so much so that adaptations might be effected, if need be, like lightning (geological lightning, we mean), or, say, in a few

centuries; and that the real reason why it is the insensible, and not the large, variations that are efficient in natural selection is, that the changes in the environment are so slow that, a species having been already adapted to one state of its environment, any variation not quite minute would render it less fitted for continuance than none at all. He will also observe that the author draws a strong line between the acceptability of natural selection as the only cause of the differentiation between allied species, which he holds to be as good as proved, and the acceptability of it as the cause of the differentiation between families and higher classes, which he thinks extremely doubtful. He is decidedly disposed to accept the doctrines (or some of the doctrines) of Weismann, although he sometimes slips back into modes of thought which we venture to think inconsistent with those doctrines. Thus he says:

"We may, I think, say that variation is an ultimate fact of nature, and needs no other explanation than a reference to general principles which indicate that it cannot fail to exist. Does any one ask for a reason why no two gravel-stones, or beach-pebbles, or even grains of sand, are absolutely identical in size, shape, surface, color, and composition? When we trace back the complex series of causes and forces that have led to the production of these objects, do we not see that their absolute identity would be more remarkable than their diversity? So, when we consider how infinitely more complex have been the forces that have produced each individual animal or plant, and when we know that no two animals can possibly have been subject to identical conditions throughout the entire course of their development, we see that the perfect identity in the result would be opposed to everything we know of natural agencies."

But if he refers to vicissitudes in the life of the individual animal in question, they have no bearing on variation at birth; while if he refers to vicissitudes of his parents' lives, Weismann often speaks as if such circumstances could have no effect upon the germ-plasm, and often makes the offspring a mathematically exact resultant of the germ-plasms of its parents, in so far as they enter into it, and quite independent of aught else. Wallace, however, does not go so far as positively to deny the transmission of acquired characters; he only maintains that there is no real evidence of such a thing. If there should ultimately turn out to be such evidence, the theory of germ-plasm would, apparently, collapse at once; and Wallace seems to admit that the Darwinian theory must stand or fall with germ-plasm.

We do not mean to discuss Mr. Wallace's socialistic doctrines. We only note that he holds, at once, strongly to the freedom of the individual and to socialistic arrangements, such as the state owning all the land, issuing paper money, etc.

Cathedrals of France; Popular Studies of the Most Interesting French Cathedrals. By Epiphanius Wilson, M.A. (Eremita Peregrinus), Author of 'Dante Interpreted,' etc. With over two hundred illustrations. New York: The Churchman Company. 1900. Pp. 208.

This is a reprint from the *Churchman* of a series of articles. The illustrations are half-tone prints made from photographs, which are for the most part familiar to the collectors of such material; but it need hardly be said that those collectors are few, and the contents of their portfolios unknown except to themselves and their coworkers. It is to be regretted that a serious attempt could not have been made to illustrate each important building completely; or, if that is too great a demand, to illustrate each in such a way that its abundance should make up for the necessary shortcomings in another case. Thus, one does not find in any part of this volume, or in all its parts taken together, an adequate rendering of the great feature, the crowning glory, of the French Gothic churches, their chevet, or rounded east end. This magnificence is hinted at in the little picture on page 137, giving the south flank and east end of Bourges, and again in the view of the north flank and east end of Notre Dame at Paris; and the way in which the architectural effect in question is produced is explained by the picture on page 122 of the flying buttresses of Notre Dame. Still, the criticism must stand. If, indeed, the photograph, on page 85, of the east end of Le Mans Cathedral were a better picture, if it were not so insignificant in its effect of light and shade, it might be thought that even that unusual composition, that even that apse of altogether exceptional design, would suffice, so great is its splendor, to remove the imputation. One would still find himself wishing for an adequate picture of the east end of Bourges, and a picture such as is not allowed us at all of the chevet of Rheims.

So likewise with the sculpture of the cathedrals. It would have been possible to give a far more ample representation of that mass of associated fine art which constitutes the portal of a great thirteenth-century church. Six photographs are devoted to the Cathedral of Bordeaux without representation of any one of the beautiful towers which adorn and accompany it. Nine photographs are devoted to the strange fortified church at Albi, but none to that marvellous south porch, that jewel of the transition from florid Gothic into Renaissance, which is one of the chief glories of the South. Nine photographs are devoted to Chartres, yet there is nothing to explain to the student the plan and disposition of either the north or the south porch, both together the chief glories even of this church, so rich in art of many kinds.

The above shortcomings are pointed out that the book may be rightly understood rather than by way of blame. There are here so many pictures with that evident truthfulness which fairly well-reproduced photographs give, that the reader might suppose that nothing else was to be desired. Two hundred illustrations devoted to thirty-three cathedrals would seem on hasty thought all that could be asked for, and it is to correct that error, which is so easy to fall into, that these remarks are made. The difficulty of getting together a sufficient number of rightly chosen photographs of these buildings is greater than one would suppose. No one who has not tried to purchase such photographs, let us say in Paris, can form any idea of how reluctant are the dealers, how slow in their response to the fitful demand, how determined they are to compel the buying public to be satisfied with two or three photographs of that which requires three hundred to do it justice. One building, say the Cathedral of Rheims, has been adequately rendered because an enthusiastic photographer was on the spot ready to take advantage of opportunities. Another, say the Cathedral of Rouen, was, a few years ago, not to be had at all in photography except in the half-dozen views of the outside from popular points of view which were for sale in the stationery shops and book shops of Rouen and Paris. Photographs of Meaux are not to be had in the great centres, and no one seems ever to have heard of Laon until you reach a point not farther distant than say Soissons in the same region of France. Nothing but the placing of orders on the spot with photographers in the city, or in the immediate neighborhood of the city, in which the cathedral stands would have produced a better show of photographs than are given here; and so the shortcoming and the adequate explanation of its cause should always go together. This is the more to be urged because there are some photographs in this book which are really surprising—some which even the experienced student of such things wonders at and asks himself whence they came.

The text is marred by that hasty acceptance of some general propositions which is common in popular presentations of subjects as remote as this of Gothic architecture, and which is so very much to be regretted. "There is a sameness about Bourges, Chartres, Rheims, and Tours which shows that they were all inspired by Amiens, the first and most complete example of thirteenth-century churches" (p. 102). "The first aim of the Gothic architect was to secure altitude" (Introduction). "The great aim of the French architect was to secure height in the interior of his church—towers and spires of height greatly disproportionate to the height of the roof-ridge are more characteristic of English and of Spanish than of French churches" (pp. 113-114). Such dicta are misleading, and all the more so because they are so far akin to verity, they have so much approach to the true explanation, that they are "taking" and please persons who are on the lookout for fresh ideas about architecture. And the worst of it is that it takes so much hair-splitting to point out the essential error contained in such a statement as that the Gothic architects were in search of great height. Yet there is in this text, together with very much accurate and suggestive description, a certain amount of unusually clear insight. Thus, the author expresses his view that the west front of Notre Dame is not adequately Gothic; he thinks "that the Roman, or rather the Græco-Roman, spirit rather than the Gothic spirit prevailed in this matchless composition." And one is reminded in reading this of a curious discussion that took place not long ago in the columns of a Boston journal of architecture, a discussion as to the relative value of certain façades, and which resulted in the choice of the west front of Notre Dame as one of them. That any part of a Gothic church should be called a façade, and that with some show of reason, is certainly a criticism on the west front of Notre Dame which is worthy to rank with that of our present author as in a sense descriptive. It is not to the west front of Notre Dame that one should go to study Gothic art of the prime.

The attention given by the author to the domed and other round-arched churches of the centre and the southwest is very agreeable to see and will be useful. The views within and without of Angoulême Cathedral are most attractive, and the examination

given in photograph and in text to St. Front of Périgueux is not diminished by the fact that the unhappy church has been remade in our own time. In the spirit of optimism which the bookmaker of the present day cannot help believing is necessary to his proper acceptance as a serious writer, an attempt is made to apologize for the villanous restoration carried out under the direction of the architect Abbadie (not Abardie as the name is printed here, p. 17); but this attempt loses its power for mischief when it is followed by the entirely correct statement that "these restorations have been very much resented by archæologists." Undoubtedly so! One should read the account of that expedition of certain English architects to the "domed churches of the Charante" to see how delicately they put it to the bishop when he asked them how they liked the restoration. Said one of the architects to the bishop, "We are glad we had seen the church before the restorations were begun."

Dictionary of the Bible; Dealing with its Language, Literature, and Contents. Edited by the Rev. J. Hastings. Vol. III. Kir-Pleiades. Charles Scribner's Sons. 1900. Pp. xvi, 896.

This third volume follows the methods and ideals of its predecessors. It endeavors to meet the needs of two circles, the readers of the English Bible and the students of the original. It therefore starts with the English version and passes from it back to the originals when that seems necessary. Thus, a prominent feature is the series of articles by the general editor on archaic, anomalous, or in any way difficult English words used in the Authorized or Revised Versions. These treat the old version as an English classic, illustrating and explaining its language at considerable length; for example, the article on *make* runs to nearly three columns, and that upon *of* runs to four. Yet, in spite of the excellence of the treatment, it may be a question whether too much space has not been given to consideration of the literary form of a version, and to explanations which have no historical or theological bearing. In strange contrast, only some two and a half columns are given to Micah; and this is only one example of a disproportion that is frequent. Another outstanding feature is the space given to Biblical theology. There are excellent articles on Law in the Old Testament and the New, by Driver and Denney respectively. It may be worth noticing that that by Driver is one of the few cases of a long article written by a scholar of the first rank. König, Nowack, Nestle, Swete, for example, are represented by comparatively minor contributions, and the longer articles have generally fallen to younger and less prominent men. Yet if this renders them of less authoritative weight, it also guards against the introduction of novel views into a book which should represent clearly settled results. The chances are that a younger man will compile rather than present a pet hypothesis of his own. Other theological articles of weight are on the Lord's Supper (Plummer), Mediator (Adeney), Miracle (J. H. Bernard), Mystery (A. Stewart), and Philosophy (T. B. Kilpatrick). There is also much theological matter scattered through the other articles, and on this very account the edifying remarks which some contributors think it necessary to make, do not stand out so curiously as in 'Cheyne.' Still, the reflection on p. 431 that we can see a testimony to the spiritual mission of the Jews in their never having enjoyed the constitutional privilege of coining money in silver or gold, has ludicrous aspects. The profane might contend that the Jewish state was never anything but a two-penny half-penny affair at the best and did not get beyond a copper basis.

Among the articles of importance may be mentioned Language of the Old Testament and Apocrypha (D. S. Margoliouth; interesting and most characteristically eccentric), Language of the New Testament and Maranatha (J. H. Thayer; excellent), Latin Versions (H. A. Kennedy; very full and valuable), Magic (Whitehouse), Marriage (W. P. Paterson), Medicine and separate medical articles (A. Macalister), Natural History and many separate articles on the same topic (G. E. Post; generally inadequate and unsatisfactory), New Testament Canon (V. H. Stanton), Old Testament Canon (Woods), Palestine (Conder), Paul (G. G. Findley), Peter and his Epistles (F. H. Chase; very accurate and satisfactory). Egyptian subjects are handled by F. L. Griffith and W. M. Müller, and the geography of Asia Minor by W. M. Ramsay. Apocalyptic and apocryphal studies are dealt with very fully and thoroughly by Burkitt, Charles and James, the little group of English scholars who have already done so much in that direction. Similar praise for exceptional scholarship and detailed carefulness must be given to the articles on versions. In fact, the less vital, theologically, the subject, the more thorough seems to be the treatment.

The book, in short, will be used with advantage by all non-professional students of the Bible. Nor can the professional student afford to disregard it. He will consult it often without learning anything, but it will be impossible for him to tell when it may have an article of primary importance. The contributors seem to have been left to give pretty much what they chose, and as much as they chose, and the quality and length of their contributions have varied with their individual learning and zeal, not always according to the importance of their subjects. If Dr. Cheyne is inclined to edit too vigorously, the opposite is true of Dr. Hastings.

A Treatise on Zoölogy. By E. Ray Lankester. Part II. The Porifera and Cœlentera. By E. A. Minchin, G. Herbert Fowler, and Gilbert C. Bourne. The Macmillan Company. 1900. 8vo, pp. x, 414. Illustrated.

This volume forms Part II. of the series of which Part III., including the Echinoderma, has already been noticed in this journal. It includes those groups, popularly known as sponges, jelly-fish, and corals, preceded by a chapter (by the editor) on the cœlomic theory, or the distinctions drawn from embryologic data between the Protozoa and Metazoa. The sponges, as a subdivision of the latter, are contrasted with the rest of the animal kingdom under the name of Parazoa. The several later chapters of the work are devoted to the sponges; the hydroids (which are here definitely separated from the Scyphomedusæ, though the latter are not combined with the Anthozoa); the true jelly-fish; the corals, seafans, and actinians; and the ctenophores, a group of jellylike pelagic animals among which the brilliantly phosphorescent Beroë and Venus-girdle find a place.

This treatise, being intended for the professional zoölogist, is excessively technical, and in examining the present instalment the reader is struck by the flood of technical terms for every imaginable part and function of every organ and combination. It amounts in practice to a special language, entirely incomprehensible to any but the most narrow specialist. To a certain extent such a nomenclature is necessary and helpful to the student; whether the line of what is desirable has been passed or not, the usage of specialists in time to come is the sole means of determining. To the naturalist not a specialist in these groups, it seems as if overdone. Apart from this, however, the several writers are to be congratulated on the clearness with which they have discussed difficult and complex questions, and the impartiality with which they have presented the views of zoölogists not in accord in the interpretation of recondite phenomena. It is probable, as the series advances toward the higher groups, that the use of technicalities will be less profuse and the different sections more available for the use of the average teacher. Possibly the future may bring a genius who will interpret to the non-specialist in comprehensible language the essentials here imbedded like coral polyps in their cells. If not, it is to be feared that zoölogy will become more and more the heritage of the few, barred from the inquiring student by an impenetrable screen of more or less barbarous Græco-Latin neologisms.

The manner in which the work is printed and illustrated calls for the highest praise; the figures, largely original, are of the most satisfactory clearness.

BOOKS OF THE WEEK.

ENGLAND.

A Valuable Collection of Penn Papers and Documents.

Messrs. SOTHEBY, WILKINSON & HODGE will sell by Auction at their House, No. 13 Wellington Street, Strand, London, England, early in February:

A valuable collection of Autograph Letters, Documents, &c., in the autograph of and addressed to William Penn (the Founder of Pennsylvania), the property of Lady Sudeley, who inherited them from her uncle, to whom they were bequeathed by Lady Sudeley's cousin, Mr. Granville Penn, great-grandson of William Penn, including:

(A) "My Last Will and Testament made and writt in my own hand this twentyth day of ye 8th month ye year 1705 in ye 60 years of my age." This extremely interesting Document covers 4 pp. 4to, and is signed "Wm. Penn." A Codicil is added, covering 3 pp. 4to, dated 8th of 8th, 1706, and also dated at the end, 21st the sixth month, 1707, signed "Wm. Penn," and witnessed by Tho. Cuppage and Cha. Willcocks. The whole of the Will and Codicil is in the handwriting of Wm. Penn, except the signatures of the witnesses. A valuable and most interesting document.

(B) Copy of William Penn's Patent of the Grant of Pennsylvania, dated 4 March, 1680.

(C) "The Case of Wm. Penn," an unsigned Document, giving particulars of the reason that caused him to give Pennsylvania over to the English Government, &c.

(D) Copy of Letter to Archbishop Tillotson from William Penn, entirely in his autograph and signed "Wm. Penn," 3 pp. folio, dated 30 Aug., 1691.

(E) Minutes of Council at the Committee of Trade and Plantations at the Council Chamber at Whitehall, dated Aug. 3, 1694, in reference to the rights of Wm. Penn to Pennsylvania, &c. Covers 8½ pages folio.

(F) Certificate of the Birth of John Penn, in the autograph of William Penn, dated Philadelphia, 4th 12 month, 1699, and signed by the witnesses present at the birth.

(G) Wm. Penn, A.L. 12 pp. 4to, to Lord Romney dated Pennsylvania, 6 7th month, 1701, extremely interesting letter.

(H) Penn (Mrs. William) A. L. s. 1½ pp. 4to, 13 Nov. 1718, to her son William, in reference to her late husband Wm. Penn.

(I) Penn (William) Copy of Document relating to various Grants to William Penn, &c., &c.

(J) Buckingham (George Villiers Duke of) A. L. s. 2 pp. 4to, June 16, 1678, to the Lord Treasurer, in reference to Wm. Penn.

(K) Penn (William) Small Manuscript in his Autograph covering 138 pp. 12mo, being "My Irish Journal farthest from London on ye 15 of ye 7th Month, 1669," giving very interesting details of his Life, &c., in Ireland.

(L) Penn (Admiral Sir William), father of Wm. Penn, two A.L.s. 2 pp. 4to, dated Oct. 12 and 22, 1667, to his son William Penn.

(M) Elizabeth (Princess of the Rhine) two A.L.s., 4/14 Sep. 1677 and 29 Oct. 1677, to Wm. Penn, on most interesting subjects.

(N) Penn Family. Various copies of Letters, &c., of William Penn, and copies of Letters addressed to him, Pedigrees, Portraits, &c., &c., relating to Wm. Penn and his descendants.

(O) A Miniature in water-colours of Sir William Penn, after Sir Peter Lely, in morocco case; and Two Engravings from the original. 3.

"WANTED—A Philanthropist to give a copy to every English speaking parent."

"A NOTABLE CONTRIBUTION TO HISTORICAL LITERATURE"

A Century of American Diplomacy

Being a Brief Review of the Foreign Relations of the United States, 1776-1876. By JOHN W. FOSTER, former Secretary of State for the United States. 8vo, $3.50.

New York Tribune

"Ex-Secretary Foster's book comes with special appropriateness at this time. . . . His narrative is succinct and clear; he has extracted the vital points, the dramatic incidents, from the mass of detail in which the doings of diplomatists are wrapped; he has furthermore presented them in a way to show the organic continuity of this important phase of our history. There is no portion of that history that reflects greater credit on the Nation than its diplomatic achievements. It is a record of the work of able men, placed often in positions of grave disadvantage. From the earliest days there has been a singularly high level of statesmanship in the diplomatic service of the United States."

Providence Journal

"American diplomacy between the war of 1812 and the civil war is little understood, and the portion of Mr. Foster's book which deals with this period is particularly valuable and interesting. The author draws upon a vast mass of state papers, as well as upon the political memoirs of the time, and the thoroughness of his investigations is apparent throughout. John Quincy Adams, Clay, Webster, Calhoun, Buchanan, Marcy and Everett were among the Secretaries of State of this period."

Boston Daily Advertiser

"Never before has American history been presented in so authoritative and yet interesting fashion from the diplomatic standpoint."

Ready January, 1901. 100 copies printed for subscribers only.

B. F. STEVENS'S

Facsimile of the Unpublished

British Head Quarters Coloured Manuscript Map of New York and Environs (1782).

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, 6½ inches to a mile, 10 ft. by 4 ft.

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbour, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island, including Brooklyn, the Works on Paulus Hook, and parts of the Jersey Shore. It has a copious Table of References to various Works (British and American), some of them with notes as to the time of their construction or destruction.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

PRICES:
(Which include all charges—except duty, if any—to any address in the United States):
Mounted on linen and folded in book form, with leather slip case..... $30.00 net
24 Sheets unmounted (22 inches by 15 inches) in Portfolio ..... $25.00 net

VOL. LXXII—NO. 1855. THURSDAY, JANUARY 17, 1901. PRICE TEN CENTS.

D. Appleton & Company's

MIDWINTER PUBLICATIONS.

Ready January 18.

Mrs. Clyde:

THE STORY OF A SOCIAL CAREER.

By JULIEN GORDON, author of "A Puritan Pagan." One vol., 12mo, 363 pp., cloth, $1.50.

The Social Career is real history; it is a faithful portrayal of life in Boston, New York and Rome. Dinner-table discussion will assuredly turn on the question: Who was Mrs. Clyde?

History of Chinese Literature.

By HERBERT A. GILES, M.A., LL.D. (Aberd.), Professor of Chinese in the University of Cambridge. One vol., 12mo, 557 pp., index, cloth, $1.50.

"Few recent histories of literature are more pregnant with new and interesting material than this. There is nothing like it in any library, and one may say with assurance that there is not a dull page in it."—Advance notice in BOSTON TRANSCRIPT.

The tenth volume in the Literatures of the World Series.

New Velazquez Dictionary.

PART I: SPANISH-ENGLISH.

Revised and enlarged by EDWARD GRAY, A.B., M.D., F.R.M.S., and JUAN L. IRIBAS, A.B., LL.D. One vol, 8vo, 701 pp, cloth, $3.50.

"It should take its deserved place as THE Spanish Dictionary!"—THE OUTLOOK.

A Text-Book of Geology

By ALBERT PERRY BRIGHAM, A.M., F.G.S.A., Professor of Geology in Colgate University. One vol., 12mo, 484 pp., 295 photogravure and other illustrations, index, cloth, $1 40.

A new volume in Appletons' XXth Century Text Books.

A remarkably clear and attractive style, a logical sequence of arrangement, and a marvellous application of photography to illustration bring this text-book into the plane of literature.

A Hero in Homespun.

A TALE OF THE LOYAL SOUTH.

Vol. 295 in Appleton's Town and Country Library. Paper, 50 cents; cloth, $1.00.

By WILLIAM E. BARTON, author of "Pine Knot," etc.

"Vigorous, spirited, truthful, absorbing."—NEW YORK CRITIC.

"A thoroughly interesting, red blooded, virile story. . . . A historical document of the very greatest value."—THE BOOKMAN.

The Most Charming Love Story of the Year
SEVENTIETH THOUSAND.

The Cardinal's Snuff-Box
By HENRY HARLAND, author of "Comedies and Errors," "Grey Roses," etc.
Crown, 8vo. Cloth, $1.50.
The North American—"This charming love story."
New York Tribune—"So captivating, so good, that we want it to be perfect. . . . It is a book to enjoy and to praise."
Boston Herald—"One of the most refreshing love stories of modern fiction."
JOHN LANE, 251 5th Ave., New York

THE MACMILLAN COMPANY'S NEW BOOKS

PUBLISHED THIS DAY:

WHAT HE WAS, WHAT HE IS, AND WHAT HE MAY BECOME

THE AMERICAN NEGRO

A CRITICAL AND PRACTICAL DISCUSSION

By the Hon. WILLIAM HANNIBAL THOMAS Cloth, 8vo, **$2.00**

Notable for Its Completeness. No such detailed information as to the mental and physical characteristics, qualifications, and capacities, past, present, and future, of the American Negro has ever been given.

Valuable as a Sociological Study; it is clearly and logically arranged, a record of thorough investigation and exhaustive knowledge of the subject, written and prepared throughout in a scholarly way.

The author is qualified as few men are to write on such a subject by thorough training and long and active association with both white and colored citizens. He was a legislator in South Carolina during Reconstruction.

He practically and forcibly indicates how the mental, moral, social, industrial, and political elevation of the Freedman may be rationally achieved.

JUST READY.

ETHICS, Descriptive and Explanatory

By SIDNEY E. MEZES, Ph.D., University of Texas.
Crown 8vo. *Ready this week*

A text-book for colleges and universities, which aims to give as objective a treatment of morality as text-books on the natural sciences do of their subjects.

THE MEN WHO MADE THE NATION

AN OUTLINE OF UNITED STATES HISTORY FROM 1760 TO 1865.

By EDWIN ERLE SPARKS, Ph.D., University of Chicago. Illustrated from Contemporary Prints, Cartoons, Documents, etc., and from Photographs of Places, etc., of Historical Interest. Cloth, cr. 8vo, **$2.00**

Philosophy and history treated by modern methods so that the subject in each case is given as objective a form, is made as clear and definite as the objects of modern sciences are made through the laboratory system of study. In the history, a free use is made of references to the original sources—with illustrations.

AMERICAN HISTORY TOLD BY CONTEMPORARIES

A New Volume — By Professor ALBERT BUSHNELL HART of Harvard University. — *Ready next week*

Vol. III. National Expansion, 1783-1845

From the formation and development of the Federal Constitution to the beginnings of the slavery contest.

Vol. I. Era of Colonization (1493-1689) **$2.00**

TO FOLLOW

Vol. IV. Welding the Nation (1845 —)

Vol. II. Building of the Republic (1689-1783) **$2.00**

"We do not hesitate to commend the undertaking as likely to prove of indispensable usefulness."—*The Nation.*

NEW EDITIONS.

ELIZABETH and her GERMAN GARDEN

A NEW EDITION OF THIS MOST POPULAR BOOK

issued for many a year—yet it is not a story—simply the fragrance of all outdoors, mingled with glimpses into the most intimate home life of a German family of rank. Cloth, 8vo, **$1.75**

THE APRIL BABY'S BOOK OF TUNES

AND HOW THEY CAME TO BE WRITTEN

By the Author of "Elizabeth and Her German Garden," etc. Brimful of that quaint charm with which she always writes of her three babies. Cloth, sq. 16mo, **$1.50** *net.*

ELIZABETH and her GERMAN GARDEN and THE SOLITARY SUMMER

The set in a neat box, both illustrated. Cloth, 8vo, **$5.00**; each, sold separately, illustrated, **$2.50.**

THE MOST RECENT NEW BOOKS.

A TREASURY OF IRISH POETRY

IN THE ENGLISH TONGUE

Edited by the Rev. STOPFORD A. BROOKE and T. W. ROLLESTON, with an Introduction by the former. Cloth, 12mo, **$1.75**

WHO'S WHO? 1901

AN ANNUAL BIOGRAPHICAL DICTIONARY

Edited by DOUGLAS SLADEN. In the 53d year of its Issue. With many tables and lists of various kinds and great value. Cloth, **$1.75**

THE BEST NEW NOVELS.

IN THE PALACE OF THE KING

A Love Story of Old Madrid

By F. MARION CRAWFORD, author of "Saracinesca," etc. Cloth, 12mo, **$1.50**

THE LIFE AND DEATH OF RICHARD YEA-AND-NAY

By MAURICE HEWLETT, author of "The Forest Lovers." Cloth, **$1.50**

"A great feat."—FREDERIC HARRISON.

WHO GOES THERE?

THE STORY OF A SPY IN THE CIVIL WAR. By B. K. BENSON. Cloth, **$1.50**

All have a basis in history, yet they are as different in style and construction as the times they describe, and each is the very best of its kind—the reconstruction of brilliant court scenes, the marvellous portraiture of King Richard, and the best story of the civil war written for years.

THE MACMILLAN COMPANY, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, JANUARY 17, 1901.

The Week.

The opening of the new century imposed upon the Supreme Court of the United States the decision of the most important question which it has had to settle during the one hundred and twelve years of its existence—the question whether, under the Federal Constitution, the Government at Washington may exercise arbitrary control over millions of people living on the other side of the globe. The debate upon this issue closed on Friday with the powerful argument of ex-Secretary Carlisle against the contention of the Administration—an argument which, in the opinion of that able Republican lawyer, Congressman Littlefield of Maine, "completely riddled the Government's case." The Supreme Court is always deliberate in its methods, and a number of weeks must elapse before it can be expected to decide so grave a question. It is well for supporters of the policy of conquest to understand that the opposition to Imperialism will be prosecuted with undiminished vigor if the Supreme Court shall rule that the Government at Washington may constitutionally exercise arbitrary power over the Porto Ricans and the Filipinos. Ex-President Harrison, and Senator Hoar, and Representative McCall, and the Rev. Dr. Cuyler, and the host of people—Republicans, as well as Democrats and Independents—for whom they speak, will still protest against the policy of conquest, and will still agitate for a return to the traditions of the republic. It is another "irrepressible conflict" which is now in progress.

Cubans have double reason to take fresh courage from the decision of the Supreme Court ordering the immediate extradition of Neely, to be tried in Havana for crimes which he is alleged to have committed there. In the first place, their own courts will now get a hand on the Americans whose rascality in the Cuban Post-office has been roundly asserted and apparently proved by American inspectors. The whole scandal will be aired, and if, as Rathbone has declared, some American politicians will get hurt in the process, so much the better. People in this country will see with peculiar satisfaction the imposition of the heaviest penalty known to the law upon any Americans caught stealing in Cuba. More than this, Cubans have cause to be thankful that the Supreme Court of the United States has taken occasion solemnly to remind the President and the country of our duty to withdraw from Cuba. The decision recounts the declaration of our purpose to the world not to exercise "sovereignty, jurisdiction, or control over Cuba," and says that we simply hold the island "in trust for the inhabitants of Cuba, to whom it rightfully belongs, and to whose exclusive control it will be surrendered." The Administration has never said as much as this. But the Supreme Court knows the obligation of a sacred promise, even if other branches of the Government would like to forget it. Lest the President forget, the Supreme Court reminds him that he is to get out of Cuba bag and baggage.

Favored by both the living ex-Presidents, sustained openly in the Senate by learning and eloquence and force of character, battled for with legal acumen and wealth of judicial argument before the Supreme Court, Anti-Imperialism is daily finding new spokesmen in the American press, and has had what is, perhaps, its culminating public expression, so far, in the adoption by the Missouri House of Representatives (by a vote of 74 to 47) of the following resolution:

> "Whereas, The sympathies of the American people go out to all nations and all peoples struggling for liberty; therefore, be it
>
> "Resolved, That the House of Representatives of the Forty-first General Assembly of Missouri extend sympathy to the people of the Philippine Archipelago, in their heroic struggle for freedom."

The *Tribune* magnanimously says that it does not suppose the Government at Washington will "care" to take notice of this treason. We also presume so; likewise that it will not dare to. Why go to Missouri to make treason odious when Washington itself is full of it—if this be treason? The Government would have to begin with Senator Hoar, who has repeatedly "extended" his sympathy to the Filipinos, and publicly hoped that they might win their independence. His trial for treason ought to precede, by a few days at least, his assured and unanimous reëlection by the Republican Legislature of Massachusetts. But we do not think that the President, or even his erstwhile furibund Postmaster-General, is eager to get after traitors just now. If they are wanted, all that is necessary is to say *Circumspice*, for the woods are full of them.

The New York *Times* of Monday asks, "What Are We Doing in the Philippines?" The *Times* has been from the first a champion of the Expansion policy, and a defender of the Administration in its efforts to carry out that policy. But it at last sees and admits that the nation will not much longer endure a continuance of the present state of things. A fortnight ago the *Times* declared that "the American people are plainly tired of this Philippine war." Now it says not only that "the situation is extremely unsatisfactory," but that even "faithful friends and supporters of the Government have not been accorded that candid and respectful treatment to which they are entitled." The opponents of Imperialism have long insisted that the Administration was treating the people like children, who must never complain of anything that their wise teacher in the White House might do. Now this organ of Expansion indignantly protests that "they are not children, and no one has the right to tell them to be good and keep quiet until their teachers get ready to talk with them." It was only a question of time when even such newspapers as tried to defend the policy of the Administration in the Philippines would feel constrained to talk in this strain. Only a man ignorant of the American people could have supposed that this nation would permanently sustain the Government at Washington in maintaining a large army to enforce a Spanish policy on the other side of the globe, and in pursuing Spanish methods of concealment and disingenuousness regarding its course.

Senator Teller has again performed a very valuable public service in the Senate, by fixing squarely upon the President's shoulders the responsibility for the saloons which flourish in Manila. He stated without contradiction that the good Mr. McKinley could close these places up as soon as a cablegram could reach Gen. MacArthur. Worse still, Mr. Lodge added the faithful wound of a friend by deprecating the establishment of the American barroom in the wake of the army. Gen. Ludlow had closed up all such places in Havana, and Mr. Lodge did not see why they should not be similarly abolished in Manila. Senator Teller but told the truth when he said that the United States was cursing the Filipinos with a curse "as vicious and vile as any the Spanish ever placed upon them," and he quoted President Schurman in support of his statement. He might also have shown his fellow-Senators the full-page advertisement of the Los Angeles Brewing Company, which lies before us, and which contains the picture of three cars loaded with 36,000 bottles of Los Angeles beer about to be started for Manila. Senator Teller might well have asked whether there was any connection between such evidence as this of our growing Philippine trade and the continuance of the saloon in Manila. On this point the Republican party will be put to the test when Mr. Lodge introduces his amendment to

prohibit the importation of distilled liquors, in the hope of thus ending the "incalculable harm" already done in the Philippines by the American civilizers. Is it not time for our religious President to be heard in his own defence on this subject, and to inform the country why he does not use the power for sobriety and morality which even his subservient Senators admit lies in his hands?

The decision of the Senate last week that there shall be no further sale of intoxicating liquors on Government reservations will not meet with the approval of a majority of army officers, who undoubtedly favor the retention of the canteen. On the other hand, there is nothing in the action of either Senate or House which prevents the retention of the desirable social features of the "post exchange" that have done so much to keep the soldier out of worse places, and to make him contented with his service. Defenders of the institution will be quick to say that a temperance canteen cannot be made to succeed, even with a co-operative store feature, but this remains to be proved. Much will depend upon the character of the support given to it by the War Department and by commanding officers of posts. It would seem to be the duty of those instrumental in bringing about the abolition of liquor sales to devote some of their time now to the maintenance and improvement of the institution, since its failure would be sure to injure their cause seriously. The decision of Congress, in the face of the warm advocacy of the canteen by a great number of influential newspapers throughout the country, simply applies to the army a principle upon which the great railroads are run. Not one of these would think of supplying liquor to the men in its employ; indeed, they demand of them unvarying temperance.

By the close vote of 24 to 22, the Senate on Friday agreed to another amendment to the Army Bill which is solely in the interest of the Congressional spoilsmen. Under this clause a volunteer officer without experience before 1898 may be appointed to a captaincy in the line over the heads of first and second lieutenants of years of service, many of whom are graduates of West Point. It is true that this provision is to some extent nullified by the requirement that volunteers so promoted shall first be examined. But even if only a few are fitted for the duties of a company commander, the gross and flagrant injustice of their advancement, to the detriment of the regular officers, calls for earnest protest. For instance, in the cavalry, the senior first lieutenants have been in the army since 1882, while no volunteer served before April, 1898. To overslaugh these trained officers in this manner would be to destroy all their ambition and zeal, or at least so much of it as has not already been killed by Corbinism and politics. It would, moreover, be a hard blow at the discipline and efficiency of the army, since men so advanced would be without the respect of their inferiors in rank.

The functions of the Senate as a part of the treaty-making power, coupled with the lack of responsibility of individual members, have finally produced a deadlock in the Government which would be ludicrous if it were not dangerous and harassing. There are twenty treaties "hung up" in that body which have been negotiated by the Department of State in pursuance of the Dingley Tariff Act, and upon which it is impossible to get a vote. Most of them are important to the commercial community, but, whether important or not, it is due to foreign governments, no less than to the Executive branch of our own, that action should be taken on them. The delay that has already taken place is almost an indignity toward the Executive, which ought to arouse strong public resentment, and would do so if the President would show a little resentment himself. Section 4 of the Dingley Act authorized the negotiation of commercial treaties for the promotion of foreign trade by the reduction of duties on specified articles of import, or by the transfer of such articles from the dutiable list to the free list, in return for similar concessions and reductions by foreign countries; such treaties to remain in force not exceeding five years from the time of their ratification. This act was passed July 24, 1897. It was in the nature of a mandate upon the Executive, and the Secretary of State accordingly established a bureau to do the necessary work, and placed at the head of it Hon. John A. Kasson, a distinguished ex-member of Congress and a diplomatist of tact and experience.

After prolonged labor, in which the Secretary himself took the active personal interest due to the gravity of the business in hand, some twenty treaties were negotiated and sent to the Senate. These included conventions with France, Germany, Portugal, the Argentine Republic, Bermuda, Barbados, British Guiana, Jamaica, and Trinidad. And what has been the result? Absolutely nothing, or rather worse than nothing. The treaty with France has been held up because some little interest in Massachusetts engaged in the manufacture of imitation jewelry is opposed to one clause, and the knit-goods people of some other State or States, who have a protective duty of 60 per cent. ad valorem, besides an additional protection calculated on the weight of the goods imported, object to some little reduction of these exorbitant duties. So they request Senators Lodge and Platt (of New York) to reject the treaty, or at all events to amend it in the particular in which they are concerned. Senators Lodge and Platt "tip the wink" to the Committee on Finance, and the Committee put the treaty in a pigeonhole and wait to see what will happen. Somebody in some State objects to some clause in each of the other treaties, and thus a combine is formed against all of them. The conspirators may think that they are hurting the feelings of the Secretary of State, or of the President, or both, although why they should wish to do so is a mystery. What they are really doing at this session is to advertise to the world that the United States is a country with which it is impossible either to enter into treaty stipulations, or to preserve inviolate those already entered into.

Senator William E. Chandler's defeat brings to an end a career which has been variegated beyond the usual lot of even an American politician. His conspicuous talent was for intrigue and management behind the party screen; and when this failed him, his waspish faculty of irritating his enemies and annoying his friends, together with his unhappy instinct for getting on the wrong side of most public questions, proved his undoing. His fall is due in part, no doubt, to his persistent clinging to "bimetallism"—we mean of the sacrosanct, superstitious kind—and his inability to see that it had become a political body of death. In the course of his vain contest for reëlection, he published some correspondence he had had with President McKinley, by which he tried to prove that he was no more of a bimetallist than that great authority on finance. This was easy work, of course; but what Mr. Chandler failed to see was that he must be as ready as Mr. McKinley to alter his opinions on demand, if he would be the successful opportunist in politics. His successor is said to be a man of ability and character. Certainly, it was high time that New Hampshire had a worthier representative in the Senate than she has sent there for the past dozen years. Blair, Chandler, Gallinger—Judge Burnham has his foils provided in advance.

The House of Representatives is to be increased by nearly thirty members. It is so hard for the politicians of any State to see offices abolished by a reduction in the number of Representatives, and so pleasant to think of having even more Congressional seats in the future than in the past, that a combination was readily formed to swell the number of members. By 1910 the question will assume a new shape. The present apportionment will use up all the room that is available in the chamber with a desk for every member, and a choice will then have to be

made between limiting the size of the body or getting rid of the desks and adopting the system of having seats only, in which case there might be hundreds more of Representatives than now. All idea of attempting to reduce the representation of some Southern States because they have virtually disfranchised the negroes was abandoned before the final vote on the bill was taken. Mr. Crumpacker of Indiana, the special champion of this scheme, tried to have the bill recommitted with instructions for the Committee on the Census to investigate this matter, and, if it should find that any State had denied the right of suffrage to any citizens, to report a measure reducing its representation in proportion; but it was rejected, in a body with a Republican majority of thirty-seven, by a vote of 94 yeas to 136 nays. Two motives conspired to bring about this result—one, the feeling of most Republican leaders, from President McKinley down, that it would be "bad politics" to open this question, and the other the apparent impossibility of ever working it out on an intelligible and impartial basis.

The Missouri River Commission has a personnel of 286, maintained in the interest of a quite insignificant river traffic. In the year 1899 the freight carried below Sioux City amounted to only 263,114 tons; above that point, to 23,041. From this amount, in considering the work of the Commission, should be deducted 216,417 tons of sand and building materials carried an average distance of less than two miles. That is, this expensive organization superintends the costly work of river improvement for an annual river freightage of 46,667 tons other than the local traffic already mentioned. The total tonnage of the Missouri is approximately that of Raccoon Creek, New Jersey, or Bayou Teche in Louisiana, which important waterways have had respectively $3,000 and $81,000 devoted by Congress to their improvement, while $10,902,560 has been sunk in the Missouri. It appeared as well from the report of the River and Harbor Committee that the greater part of the annual appropriations had been diverted from its proper purpose of improving the channel to the protection of private property on the banks of the river. This spendthrift amphibian policy should be stopped. When it is remembered that the Mississippi River Commission has only 272 employees, against the 286 of the Missouri River Commission, it becomes clear that here is a case for vigorous retrenchment. Congress should support the River and Harbor Committee's recommendation, and repeal the act creating this superfluous commission.

There has been a general feeling that drunkenness was on the decrease. The annual report of the State Commission of Prisons warrants no such optimistic conclusion. During the year ending October 1 last, the commitments to penitentiaries, jails, and workhouses for this cause reached the enormous total of 32,859, about one-third of the total commitments for all causes. In this reckoning, no account is made of the cases punished only by fine in the police courts. Adding these, it is estimated that fully half the total number of convictions for the past year were for intoxication. It is not easy to find the cause of this alarming showing. There has certainly been no manifest inclination on the part of the police to treat this offence more strictly than before, while conditions of general prosperity such as the State has enjoyed are supposed to be favorable to temperate living. Whatever the cause, a practical suggestion of the Commissioners of Prisons deserves the prompt attention of the Legislature, that New York adopt the "Probation Law," which has worked successfully, first in Massachusetts and then in Vermont and Minnesota. By it a first offender is released, under parole, and put in the charge of a probationary officer for a definite period. If at the end of this period the report is favorable, the offender is released; if unfavorable, the suspended sentence is imposed. The effect of this policy has been excellent.

M. Waldeck-Rousseau has weathered the first obstacle to his movement against the religious associations with surprising ease. It was certain that the Radicals would bring the Pope's recent letter to Cardinal Richard before the Chamber of Deputies, and use it to harass the Administration. On Monday this attempt was made, but it failed signally. The Socialist Deputy who laid before the Chamber the Pope's letter protesting against the expropriation of the holdings of certain religious orders, tried to show that the letter constituted an unwarrantable interference in the internal affairs of France. M. Waldeck-Rousseau replied that the Pope had the right of expressing himself in a matter concerning the religious orders under his control, but that France also had rights assured by the Concordat, that he did not regard the Pope's letter as an interference or a threat, but that, when the law concerning the religious orders was passed upon, no interference on the part of the Pope would be tolerated. The Chamber confirmed this policy of conciliation towards the Vatican, but of independent action for France, by a vote of 429 to 95, a surprising majority, which included the Catholic "Centre." The incident speaks anew for the political astuteness of the Premier. To hold one's self free to move against certain Catholic orders, without seeming to oppose Catholicism *per se*—that is no mean achievement.

What the "Christian" invasion of China has meant to the inhabitants of that country who lived along the line of march, is strikingly brought out in a letter from a distinguished American officer to the Countess Cesaresco, printed in the London *Times*. Arriving late, after giving up an important post at home, this soldier found the cities and villages between Tientsin and Pekin "all looted, silent, and empty as the ruins of Nineveh and Babylon"; "not a native in a region lately teeming with human life." Looting, murder, and outrage—this was the story on every side, and the whole campaign was to this witness discreditable to the "superior race," and very demoralizing to all who took part. "It is amazing how quickly the instincts of tyranny, the worst characteristics of the slave-driver, are developed in the average man who finds his fellow-men under his unchecked control." In this sentence this officer has put his finger upon the main reason why no man is good enough to rule another against his will, as Lincoln put it. When he is transferred to the Philippines, if he has not already been, he will recognize the same attitude on the part of the invaders towards the invaded, and in it will doubtless find the real reason why our "higher civilization" offers no attractions to the Filipinos. After such treatment of the Chinese by the disciples of the Prince of Peace, as is reported from all sides, we do not see how any missionary could have the heart to attempt to make further conversions to Christianity.

That the attempt to raise a colonial police force for service in South Africa has failed signally, only shows that England must settle her most ungrateful task alone. As the plan for a colonial police was broadened, the actual enlistments singularly decreased. From an attempt to raise the whole force of 12,000 on the ground, the field of enlistment was widened to the empire, with such ill success that the plan has been given over, and the place of this mounted police force must be taken by regular soldiers recruited chiefly in Great Britain. The failure of this plan of "policing" an enemy in arms and strong enough to take the offensive was to have been expected, but it is significant as well of the withdrawal of colonial support. The glamour of the march to Pretoria has gone, and the brutal realities of a prolonged guerrilla warfare, emphasized just now by the report of a savage outrage by De Wet, are not of a sort to invite enlistment on romantic grounds. It is probable that, as doubt of the righteousness of this war appears increasingly in England, the colonies, too, are giving the mother country only a reluctant moral support. We trust to see the policy of conciliation tried quickly by England, and that not merely as an easy way of getting out of a bad box.

THE FILIPINO PETITION.

The *Evening Post* printed in full on Monday the remarkable document, signed by two thousand native residents of Manila—lawyers, bankers, professional men—which was read in the United States Senate on Thursday. Senator Teller and Senator Hoar had inspected the original manuscript, and vouched for the genuineness of the signatures. As for the terms of the petition itself, their force, their pathos, their burning patriotism can be appreciated only by one who reads the whole from beginning to end. The Senate has thus far refused to print this extraordinary appeal: all the more reason for the press to spread before the people a document which is, in many respects, the most significant of all the publications bearing on our Philippine misery and shame. The translation from the Spanish is obviously unhappy in places, and a tropical exuberance of language will here and there strike a phlegmatic Northerner as extravagant; but the main thing is the national sentiment which the petition sets forth with great and moving power. Every American should consider it his first duty at least to read it.

These leading representatives of the Filipino race, not in arms against the United States, be it remembered, come to the Congress of the United States and respectfully show that Americans have been deceived respecting conditions in the Philippines, past and present. A whole series of official fictions is, in fact, swept away by the assertions of these men who know. It would be unkind, perhaps, to go back to poor Gen. Otis, who had peace and plenty officially established in the archipelago so many months ago; but both Philippine Commissions, and the President who took their word for it, are left in a very awkward position by the authentic testimony of those in possession of the facts. All the old flattering unctions about the mass of the people, as distinguished from ladrones—especially all the "men of intelligence and property"—being anxious to submit to the authority of the United States, except where "coerced by armed bands of Tagalogs"; Judge Taft's assertion last August that the "majority of the people" were "friendly," "longed for peace," and were "willing to accept government under the United States," must now be set down under the head of things which we should like to believe, and would believe if the evidence were not the other way. These Filipino petitioners assert and prove that national independence has been their aim since 1894; that Aguinaldo is "the idol of the people, . . . because he understands the aspirations of the country." They affirm that, from the very first days of the revolution, "the peaceful people . . . have liberally supported in private the national soldiers," and will do so "as long as the war lasts." "All the islands of the archipelago," they declare, "are supporting the arms of the revolution," as also that the promulgation of the Philippine republic "has been celebrated with the greatest enthusiasm in all the forests, mountains, barrios, towns, and cities of the archipelago."

The petitioners take up temperately the various proposed makeshifts short of independence, and show how impossible each is, because it neither fits the facts nor satisfies the indestructible aspirations of the Filipino race. Annexation as an American State is inadmissible, on account of distance, diversity of race, and, above all, unwillingness of the people to be annexed. Autonomy under American rule, such as Canada enjoys under British rule, would not meet the case. "If the natives, who know the wants, customs, and aspirations of the people, are not fit to govern them, would the Americans, who have had but little to do with the Filipinos, be more capable of governing them?" This question has its sufficient commentary in the daily dispatches from Manila telling of Judge Taft's vain efforts to persuade the natives that he knows better than they do what kind of schools they desire.

Throughout the entire petition there breathes an unconquerable will. The appeal is drawn with the dignity and ability which Senator Hoar has well said characterize all the documents published in the name of the Philippine republic. There is no denunciation of the United States. No word of blame or hate is uttered against our army. But in all there is evident the proud, tenacious spirit that will never submit or surrender, and that, even if shackled by superior force, would simply bide its time and wait for a new opportunity to strike for freedom, dearer to it than life. The whole shows in the most conclusive way the insensate folly of our Government in persisting in a course which everybody can now see to have been a huge mistake from its inception. A fire was lighted in the Philippines, and our remedy was to stop up the chimney! We and the Filipinos are alike choking in the resultant smoke. How long will the Administration—how long will Congress—wait before seeing that the only recourse is to clear out the chimney?

GOVERNMENTAL REWARDS AND PUNISHMENTS.

Mr. Walter Wellman, whose sources of information are excellent, affirms, in a Washington dispatch to the Chicago *Times-Herald*, that Western Republican Senators are much stirred up over what appears to be an official persecution of ex-President Harrison. His son, Col. Russell Harrison, was summarily discharged from the army, and has been unable to find out why. The War Department, indeed, intimated that there was no further need of such services as he had been rendering in the department of the Inspector-General in Porto Rico. However, his post was soon taken by another, a first lieutenant being jumped over the heads of his seniors, made a major, and sent to fill the vacancy. The fact that this first lieutenant is named McKenna, and that he is to go to Porto Rico in company with that other recent appointee who is also a son of a justice of the Supreme Court, has aroused in Washington a great deal of what is elegantly called "comment."

Another vicarious punishment of Gen. Harrison is seen by abnormally suspicious persons in the recent order detailing Paymaster Halford to service in the Philippines. This officer will be remembered as Mr. Harrison's private secretary in the White House, and the prompt seizing of the opportunity to jump him, not to promotion, but to the Philippines, is maliciously remarked upon in the Senate lobbies. Other strange instances of dispensing Government rewards and punishments have appeared from time to time in the public press. The case of Lieut.-Col. Campbell, advanced over the heads of sixty-six colonels, to be made brigadier-general, has attracted some notice. It was discovered that he had served in the Philippine campaign, but also that he had taken part in the much more arduous Illinois campaign; and the inference was drawn that his new rank had come to him as a reward for conspicuous bravery on the stump.

In making these appointments and removals we conceive that the President is but trying to give his Administration a truly moral flavor. The old divines used to speak of "The Moral Ruler of the Universe," who saw to it that punishment followed vice and reward crowned virtue. Mr. McKinley probably feels that he is the moral ruler of the United States, and that all the favors he has to distribute should illustrate the great laws of morality. What can be more important, for example, than right opinions? And what better way is there of fostering correct notions of the Constitution than by showing that those who hold perverse Constitutional views invariably suffer in consequence? It is in this light that the mortifications of ex-President Harrison are to be considered. His conception of the Constitution is "all wrong," and how demoralizing it would be if ingenuous youth were to see his son holding office. As it is, the most simple-minded can see that a man who differs with the true patriotic idea of our power and duty in the Philippines, is certain to come to a bad end. All this talk of the President's persecuting those who oppose him seems to us to fail miserably to rise to

the lofty plane which Mr. McKinley occupies in this matter. He bestows his official rewards and punishments with the majestic gesture of a Bossuet, saying, "Be instructed now, ye nations!"

But while we thus appreciate the President's attitude, we cannot wholly praise it. To try to be an earthly providence in the use of patronage seems to us to be a mistake in this Christian dispensation. To the heathen mind, even to the Old Testament, the wicked flourishing like a green bay tree was a horrible sight, and the good man unrewarded raised awful doubts concerning the moral government of the world. An evil disease must immediately develop in the bones of the ungodly, while the faithful servant of the Almighty must have prosperous flocks and herds, and be promoted and petted, or else the Job queries would be raised. But the New Testament changed all that. Its blessing, as Bacon said, is adversity, as against the prosperity of the Old Testament. Christianity teaches that we are to wait till the next world for a final righting of the wrongs of this one. It is at the Judgment Day that men's wrong judicial notions are to be punished; and then, too, the due rewards of valor on the stump will be assigned. We cannot but think, therefore, that the President is ill-advised in attempting to set up a perfect system of moral rewards and punishments, by the use of offices, in this imperfect world.

It is only, in fact, in a Bowery theatre that we ever see virtue so thoroughly triumphant as Mr. McKinley would like to make it appear in his Administration. On the stage which the populace frequents the purest morality of this sort is displayed. The villain is punished not only horribly, but instantly; and the oppressed heroine comes immediately into possession of diamond rings and rich food in full view of the audience. But that is scarcely real life. Only by primitive instincts can it be thought a satisfactory picture of the thing that is. Hence the skepticism in Washington when the President essays such melodrama on the national stage. Senators know that, in fact, virtue is not always rewarded, and sin punished, so promptly and impartially as the President's friends would like to make out. Other motives will be imagined; and, to give as little cause of railing as possible, it would seem that Mr. McKinley ought not, just at present, to make any more such appointments as those recent ones of his which have led to so much thrusting of tongues in cheeks.

THE PASSING OF BRYAN.

The action of the Illinois Democratic State Committee in electing a prominent Gold Democrat as its Chairman, by a large majority, is a sign of the times which no shrewd politician can misunderstand. Illinois is bound, during the next decade, to be still more clearly the fighting-ground in national contests than it has become during the past ten years. It was the swinging over of that State to Democracy in 1892 which indicated the strength of the ground-swell in favor of Cleveland, as it was its large majority against Bryanism in 1896 and again in 1900 which showed that this brand of so-called Democracy would not be accepted by the nation. The choice of a Gold Democrat as the manager of his party in this pivotal State was rendered the more significant by the fact that it immediately followed the most earnest protests against such action by Bryan himself. In a speech at Omaha on Monday week, and in another at Chicago the next day, Bryan had insisted that the organization should stick to the principles which it had represented in the last two campaigns, and should allow no share in reorganization to men who had not been faithful to those principles. This meant, of course, that a silver man, who believed in following the lead of Bryan, was the only sort of person who should be considered for the Illinois Chairmanship.

What the success of ex-Mayor Hopkins of Chicago in Illinois means is that the politicians in the Democratic party are sick of Bryan. The organization of the party in many other States is sure to pass soon into the hands of those who do not believe in the Nebraskan. Four years ago Bryan had control of the machinery. The Gold Democrats, and the elements of conservatism which they represented, had been driven out of the party during the campaign of 1896, and the newcomers who had succeeded to the management were bent in 1897 upon keeping them out. It thus became a simple matter in 1900 to elect delegates to the St. Louis Convention who favored nominating Bryan the second time. But during the campaign of last summer and fall a great many of the Democrats who had been out in the cold for four years, got back into the fold. They nominally accepted Bryanism, and thereby made themselves regulars, entitled in future to as much influence in committees, caucuses, and conventions as they could secure. It is notorious that a large proportion of the politicians who pursued this course put no heart into their support of Bryan last year. They did not want to see him elected. Indeed, they desired that his defeat should be more overwhelming than it had been the first time. While they professed to support the ticket, they did not work for it, and it is an open secret that many of them did not vote for it. They were Democrats again in 1900, not because they wanted the candidate of their party to win then, but simply because they wanted to be in a position to name a different candidate in 1904. Bryan may say, as he did at Omaha, that he "would rather continue to lose than surrender any of the principles for which we have fought," but there are precious few politicians in his party who agree with him. Nine out of ten have got tired of losing—and this is true not only of the former Gold Democrats who came back into the organization last year, but also of such Silver Democrats as have any sense.

Bryan thus has the politicians against him. Men have been nominated for the Presidency who encountered such opposition, notably Cleveland in 1892. But it is always essential that such a man shall have, as Cleveland then had, the confidence of the people. If he has a firm hold upon the respect and affection of the masses, he may triumph over the politicians. Here is Bryan's fatal weakness. After his defeat in 1896, there seemed a sincerity and earnestness in the man which made many people feel that he was a leader to be trusted. His very fidelity to free coinage inspired faith in his character among the masses who had followed him. The campaign of 1900 lost Bryan this confidence of the people. He insisted that the St. Louis Convention should reaffirm the financial plank of the Chicago platform, and then he did his best to keep free silver out of the campaign. Instead of appearing the plain, blunt, courageous man who was never afraid to speak his mind, he evaded the very issue which had brought him to the front in national politics, and was disingenuous when he was compelled, much against his will, to say something about silver. This alone would have been bad enough, but it was aggravated by the equally bad showing which he made on the issue that he tried to push ahead of the financial one. He had himself secured the ratification of the treaty of peace when Senator Hoar, Senator Hale, and other Republican opponents of Imperialism were doing their best to defeat it, and then he attempted a national campaign against the treaty and the policy upon which it had been based. It was impossible that a man with such a record should command the confidence of the people, and the election showed that he was weaker among the masses in 1900 than he had been in 1896. This weakness was especially marked where he was best known—in his own State, and in other commonwealths near Nebraska—as these comparisons show:

	McKinley.		Bryan.	
	1896.	1900.	1896.	1900.
Nebraska	103,064	121,835	115,999	113,613
Kansas	159,541	185,952	171,180	162,605
Iowa	289,293	307,778	223,741	209,266
Missouri	304,940	313,733	363,652	351,913
South Dakota	41,042	54,530	41,225	39,554
Colorado	26,271	93,067	161,269	122,733

Foreseeing, apparently, the action which the Illinois Democratic State Committee was to take on January 9, and recognizing its significance, Bryan, in his speech of the previous evening, took occasion to announce that he did

not expect to be a candidate again. He shows unexpected sense in thus accepting the inevitable. He may still have notoriety, and he may earn a good income by utilizing that notoriety in lecturing or in running a newspaper, but he has lost his hold upon both the politicians and the people, and there is little likelihood that he can regain it—especially upon former grounds.

THE POLICE BILL.

The measure for the reorganization of the Police Department of New York city upon which the Republican managers have agreed was introduced in the Legislature on January 9. The party majority in each branch is so large that it can easily put through any bill upon which that majority is united, and there are no signs of Republican dissent from any features of the pending measure. Moreover, it is plain that there will be no Democratic opposition of any consequence.

The fundamental principle is the single-headed Police Commission, and it is a great gain that both political organizations have at last come to accept what independent students of municipal problems long ago concluded was essential to good government. Brooklyn adopted this plan twenty years ago, and followed it until that city became a part of Greater New York, and it worked so well that the argument from experience for its extension to a larger field was irresistible when the new charter was framed. But the Republican politicians were not then ready to surrender what they considered the partisan advantages to be gained for their organization from maintaining a "bi-partisan" board, to be constituted virtually by Croker and Platt. The consequences have been so irredeemably bad that nobody is longer willing to raise his voice in favor of divided responsibility, with the evils that have followed in its train.

Instead of four Commissioners, nominally representing the two party organizations, who appoint and remove the Chief of Police—if they can agree to do either—there is to be a single Commissioner, in whom shall be vested all the powers, duties, and functions of the present Chief, and who shall appoint, and may remove, two Deputy Commissioners. In other words, this Commissioner-Chief is to be the absolute controller of the Police Department, and it will be what he shall make it. There will be one man whom the three and a half millions of people in this city can always hold personally responsible for anything wrong in its conduct.

The Commissioner is to be appointed by the Mayor for a term of five years, so that the first incumbent of the new position will be named by Mr. Van Wyck, probably early in February, 1901, for the period running to February, 1906—unless sooner removed. But Mayor Van Wyck may remove his own appointee at any time up to the end of his term, in December, 1901, and his successor may exercise the same power at any time during the following four years—supposing that the Chief Magistrate's term remains the same as now. Here we have the right principle as to the Mayor's power over all of his appointees applied to the most important of them—that he may remove an official at any moment during his whole term, instead of only during the first six months, as now. It is another great gain to get the dominant party committed to this principle as to the Police Commissioner. It ought to assure the ratification by the Legislature, later in the session, of the Charter Revision Commission's recommendation that the Mayor shall be given the power of summary removal of all appointees throughout his term.

The one defect of the proposed law is the bringing in of the State Executive. It is provided that, "during his term of office, the said Commissioner may, *whenever in the judgment of the Mayor of said city or the Governor* the public interests shall so require, be removed from office *by either*"; and that a successor may be removed in the same way. Moreover, this power of removal is to be as summary for the Governor as for the Mayor. The Constitution provides that a sheriff, county clerk, district attorney, or county register may be removed by the Governor, after the Executive has given such officer a copy of the charges against him and an opportunity of being heard in his own defence; and the city Charter provides that the Mayor of New York city may be removed by the Governor in the same manner as these county officials, except that the Governor may suspend an accused Mayor for thirty days, pending an investigation of the charges. The proposed law would enable the Governor to remove a Police Commissioner, who had been appointed by the Mayor, without either charges or an inquiry.

This is a grave mistake. It violates the principle of home rule, which would hold the Mayor responsible for the bad as well as the good exercise of his power over the Commissioner. It would make the Executive a possible factor in the administration of the city government to a degree which might be embarrassing and injurious. On the other hand, it is hard to see how any public advantage could result from the exercise of this Executive power in an emergency—which has been the chief plea made for the innovation. Suppose that the Commissioner were an official with a bad record, whom the Mayor would not remove, and the Governor should remove him. The Mayor could instantly appoint another Commissioner whose character would promise equally bad behavior, but the Governor could not remove the new official without giving him a chance to make a record—so that the situation would not be at all improved by the interference of the State Executive.

It is probably a safe guess that the reservation of the right of removal to the Governor represents not so much the desire of Mr. Odell to possess and exercise this power, as a concession on his part to the Republican organization of this fragment of the schemes, first for a State Constabulary, and then for a Metropolitan Police Commission constituted by the Governor, which he forced it successively to abandon. We do not suppose that there is any great risk of the present Executive's misusing this power. Nevertheless, it is wrong that the Governor should be vested with such absolute authority over a subordinate of the Mayor, and it is a great pity that a measure otherwise so good should have this grave defect.

THE INFLUENCE OF EXAMPLE.

I see there is a great rising against Croker, but the question is, Is it reaching the Croker classes? That is to say, Is it diminishing the affection and admiration with which these classes regard him? We must remember that they are, in the main, composed of people who either do not know how to read or write, except a very little, or who read only Croker papers, and who experience no social influences except what they receive in the barroom. If these people are to be influenced at all, it has to be done by example. In other words, we must get them to do things, or refrain from doing things, by doing them or refraining from doing them ourselves—we who may be called "the educated," or, as the French call us, "*les classes dirigeantes.*" When I arrived from Europe, about a year ago, I found the city filled with wild excitement over the passage through the streets of a huge procession in honor of Admiral Dewey—the greatest collection of people, it was said, ever seen in New York. It was composed of all classes of citizens, and Croker and his Tammany creatures figured prominently in it. Was there any attempt made then to discriminate against Croker on any grounds whatever? None at all. In fact, such a suggestion is calculated to make the New Yorker smile. Croker was just as conspicuous, and apparently as much revered, as the celebrated Roosevelt or any civic dignitary. We have for fifteen years, newspapers and all, been placing Platt in the same category as Croker, for the same reasons, but has anything been done about it? On the contrary, we have loaded him with honors.

Twenty years ago, if I had been asked whether the Tammany boys would allow their chief to go to the detested England every summer and hob-nob with the Prince of Wales, I should have answered unhesitatingly, that the thing was impossible, that it would ruin him even if he went one summer. But Croker has done this very thing for several summers without the slightest injury to his reputation or to his influence. On the contrary, his followers escort him to the steamer with yells of rejoicing, and fill his stateroom with fruit and flowers and bottles of champagne. In fact,

it has become almost an article in the Democratic creed that a boss is as much entitled to do his racing every summer in England as a king is to his palace.

Nor is this belief apparently confined to the humble and illiterate men who worship Croker in New York; it is shared by their Anglo-Saxon brethren beyond the seas. In 1898 I was passing the summer in the country near London, and felt that I ought, as "a good American," to attend the Fourth of July banquet. I found there from six to eight hundred Americans, either business residents there or passing travellers. There were a few Englishmen as guests—Mr. Bryce, for instance, Lord Kimberley, and Professor Jebb, all of whom made civil speeches. After them, about a dozen Americans spoke, nearly all of whom addressed themselves directly to Croker, who sat in a conspicuous place in the middle of the room. They addressed him in terms of humorous flattery; in fact, they left nothing unsaid or undone to give the Englishmen present the impression that he was our foremost man, and that we were proud of him, and he naturally listened with a smile of satisfaction.

I am putting together these things from my own experience that fairly explain the apathy upon which Bishop Potter commented the other evening at the City Club dinner. Tom Platt, who is now the senior Senator from this State, has for twenty years, to my knowledge, had the reputation of being as bad as Croker, seeking the same ends in the same way, yet he was elected Senator by a Legislature which gave his opponent, Mr. Choate, only seven votes, out of 149 members who attended the party caucus. The truth is that it is impossible to set up two codes of morality, one for the nation and one for the city. The revered McKinley is doing just the same thing in the Philippines as Croker is doing in the city—that is, seizing what does not belong to him, without any other authority in law or morals than that he would like to have it; and this with the approbation of a large number of our best citizens. The excuse which some of them make for this is that we are "in for it now"—that is, that having begun to pillage our neighbor, and to kill him when he resists, we are bound, for some mysterious reason, to keep doing it until we have murdered the inhabitants of twelve hundred islands. If I find a Christian man following the business of keeping a gambling-house or a brothel, or following any other disgraceful occupation, why should I have to tell him what else he is to do? Is it not plain that his sole duty is to "get out," even if many people make fun of him for so doing? And remember that most of Croker's constituents know nothing of these things, except what they hear from district leaders, who put their own construction on them.

We thus see that in our efforts at city reform, instead of being stimulated by example, we are seriously impeded. Bishop Potter very justly complains of the apathy of those who listened to his appeal at St. Paul's, a few weeks ago, but have we not displayed the same apathy with regard to Platt? Did we not, years ago, through a committee of our best citizens, find him guilty of the grossest frauds in regard to the enrolment and conduct of the Republican organization? Did we not then forget all about it in two years, and some of us accept office at his hands?

I think that these crises which we are having give us a lesson in the art of influencing the humbler classes which should do us good, for they are voters like ourselves, and share the government. If we choose to rob and murder for gain in one quarter of the globe, we must allow them to have a little vice and plunder in another quarter. If we insist that they should mend their ways in the city, we must mend our ways elsewhere. E. L. G.

THE AMERICAN DIALECT SOCIETY.

PHILADELPHIA, January 10, 1901.

The annual meeting of the Dialect Society in connection with the recent Congress of Philological Associations at Philadelphia was, as usual, mainly a business meeting. The Society has never provided a session for the reading of papers, on several accounts. In the first place, most of its members are also members of the Modern Language Association, and there is scarcely time in the busy holiday season for two meetings. Still, hereafter, through the courtesy of the latter Association, the Dialect Society is to have on the annual programme one paper devoted especially to its work. This will serve to bring its labors to the attention of new members, and of those who have not contributed the mite of a membership fee to its important investigations. But the main reason why the Dialect Society has not cared to arrange for a meeting devoted to the reading of papers is, that its most important work consists in collecting material which does not easily lend itself to presentation in this form. Collections of dialect words, or the localization of dialect material, while often possessing individual instances of great interest, cannot be presented in this form even before a body of scholars. The Society therefore prefers to continue its investigations without further publicity than can be given to its modest publication, *Dialect Notes*, and its still more modest meeting in connection with the Modern Language Association. In this respect, it may be said, the American Society is but following in the steps of its English predecessor, which labored, almost in secret, for years before the results of its labors could be gathered into those bulky volumes of the English Dialect Dictionary which, under the able editorship of Prof. Joseph Wright, represent the ripest English scholarship.

Yet, while emphasizing the quiet investigations of the Dialect Society, mention must be made of its one paper on the general programme at Philadelphia. It must have seemed odd to many, and little less than ludicrous to some, that a paper with the title "Calling the Cows" should have been given a place on the only programme representing the whole Congress. Yet no one heard Prof. Hempl's presentation, I venture, who did not feel that the Dialect Society is not merely playing with "Americanisms," but is investigating striking and interesting problems in a serious manner. Prof. Hempl showed, in his admirably clear and methodical way, that, on the basis of the calls to cows alone, certain great dialect divisions of all the country east of the Mississippi, at least, could be clearly marked out. He emphasized, also in a manner wholly in keeping with fundamental principles of the great progress in linguistic science in the last quarter-century, the importance of studying linguistic problems through the changes in English as spoken in America today and since the colonial period. No one could have better spoken a serious word for our Society, a word which may well be heeded by the occasional scoffer, and by the individual, far more common, who treats dialect study with indifference.

The annual meeting transacted some business of general importance. District secretaries were appointed for each State, so far as that was possible at this time, to push dialect investigations more vigorously, and especially the great work of localizing the dialect material already in existence. This is for the special purpose of preparing it for a place in such an American Dialect Dictionary as the Society hopefully looks forward to publishing at some time in the not too distant future. The list of these secretaries is too long to publish here, but it will be given in the next number of *Dialect Notes*, or at any time by the secretary.

Some idea of the Society's use of membership fees is suggested by a very good report from the retiring treasurer, Prof. R. W. Deering of Western Reserve University. With the small membership fee of one dollar a year, the Society has printed one volume of *Dialect Notes* and about one-third of another. The first volume, of nearly five hundred pages, is largely made up of closely printed word-lists, so that it represents a compact mass of dialect material, including references to some three thousand words and phrases. The Society has never paid a dollar for the services of any officer, and, considering the extent of its collections, a comparatively small amount for clerical services of any sort. The printing of *Dialect Notes* is most economical, so that almost every cent paid in since the founding of the Society has been returned to the members in printed articles and word-lists.

From reports presented by the secretary the more serious purposes of the American Dialect Society may be briefly outlined. It has followed from the beginning, so far as limited resources would allow, the aims of the most scholarly work in Germany and England. In the former country has been emphasized the study of pronunciation and grammatical forms in somewhat isolated communities, or "speech islands," as they may be called. Of such study, however, there has been far too little in America, as every member of the Society knows. It is especially desirable that there should be close and methodical investigation of this sort for several such communities in New England, in the more northern parts of the North Central States, in the extreme South, and in the middle region bordering Mason and Dixon's line. Naturally such studies can be made only by students of special training, as, those pursuing graduate courses in English, and teachers who have completed such study. But by some such, each year, the investigation of spoken English on the side of phonology and inflectional forms should be carried on and published so as to form the basis for an exact knowledge of spoken English in the larger divisions of the country. Communities of special isolation for a considerable period of time are especially important for this work. Only a few weeks before his death, the late Prof. Moses Coit Tyler suggested to the Society the study of the common speech of such a community as that of Block Island on the Rhode Island coast, and many similar communities might be suggested as likely to give highly important results.

On the other hand, the Dialect Society has strongly emphasized from the first the sort of work which has been carried on with such considerable success in England, the study of the broadening and varying vocabulary of English in our own country. This has been done in three special divisions of the investigation. First is the gathering of words or meanings of words not yet recorded in the dictionaries. This is a slow process. To the uninitiated it often seems of little profit. But such picking here and there as a few have done systematically has resulted in bringing together considerable and important results. Let me illustrate. The modern English word *furrow* is from an oblique case-form (OE. *furwe*), from which alone the second syllable could have sprung. The older nominative form, *fur* (OE. *furh*), with the same meaning, does not exist in standard English. Yet a casual conversation one day in a college town showed that it was known by university instructors reared in such distant sections of the continent as Nova Scotia and western Pennsylvania. Such development and long continuance of double forms of the same Old English word are interesting to the student of language, and it would be still more interesting to know how widely the unusual form is current in America. Or, take another example. A word *binocle* or *binnacle* was reported to the local circle of the Dialect Society at Ithaca, N. Y., some years ago. At that time the only meaning which could be determined from the one reporting was a 'mill-race' or 'mill-pond.' More recently, Professor Fitch of Hamilton College has shown that the word is found in various parts of New York State; that it is used by Burroughs in his 'Pepacton,' though the author did not know the word and professed ignorance of its spelling, and that it is probably a Dutch word, *binnekill*, which has entirely escaped the dictionaries of all kinds.

Now, such raking of the substratum of colloquial language, while often turning up nothing but slang, is sure to bring to the surface many a term of real value to the history of language, and a much larger number of meanings which have hitherto escaped the lexicographer. Yet it is not, I hasten to say, merely to increase the number of words in our dictionaries that the American Dialect Society is working. The new dictionaries, it is true, have been quick to annex such of our collections as they could make available. But the Dialect Society aims at a different purpose from that which any dictionary of standard English can accomplish. It proposes to learn the history and localize the usage of every word not strictly a part of the standard language, and present the results in a systematic body of information for the scholar and the special student, as well as for the general reader.

A second division of the study of the vocabulary is carried on by a special committee of the Dialect Society, that to supervise the reading of American books. It is proposed to read, or have read, all strictly American books printed since colonial times. This work was first started by a letter to the *Nation* of March 18, 1897. Many readers, not members of the Society, at once offered themselves, and, while some have not been fully able to carry out their good intentions, much material has been sent in. One local circle is now busy with the works of Cotton Mather, and has already sent in several hundred cards. Others are laboring in other fields, and a still larger number is much needed. Teachers in secondary schools, as well as colleges, and people of leisure everywhere, are especially able to help in this undertaking.

A third division of the labor upon the vocabulary relates to the localization of usage. There are numerous dictionaries of "Americanisms" at present. These collections are interesting and often valuable, but they do not exhibit the essential element of all dialect study of vocabulary, the localization of words and meanings. While they sometimes give general indications of locality, as Eastern or Western or Southern, they make no attempt at a systematic presentation of usage in particular localities. There are also many words in our dictionaries which are marked as local or American in usage and which have no place in our best literature, or in standard language at all. Finally, the great English Dialect Dictionary contains hundreds of words which are also used in America, though no consistent attempt is made, or could be made at present, to indicate that fact. The American Society proposes to learn the localities in which all such words are used in America, and finally present the results in methodical form for reference. In this great work of localization of usage, any and all can help who will seriously undertake it. When this is done effectually, the dictionaries of so-called "Americanisms" can give place to an American Dialect Dictionary which shall be an authoritative guide to usage and an honor to American scholarship.

At present the Society needs two things: first, more workers in the various fields indicated above; second, an increased membership, both of active workers and of many more who will encourage its purposes by contributing the small annual fee, or the somewhat larger sum for life-membership in the Society. These two things were strongly urged at the recent meeting, and it is in the hope of reaching many who would be glad to express interest in one or both ways that this report is printed. Any officer of the Society will give further information, or requests may be sent to the Secretary, Prof. O. F. Emerson, Western Reserve University, Cleveland, Ohio.

N. M.

THE OIL-FIELDS OF BAKU.

BAKU, October 12, 1900.

On approaching the Caspian Sea from any direction, the extent and importance of the oil production of Baku are pressed upon the attention. At Tashkend, 1,200 miles across the deserts to the east, Caspian crude petroleum is the fuel used in the locomotives, while, far beyond that limit, camels and carts are loaded with the refined product for consumption in the more distant interior. All along this railroad of Central Asia, tank-cars for the transportation of oil make up a large part of the freight trains; while west of the Caspian the railroads to the Black Sea are fairly blocked with these unsightly vehicles. All the steamers on the Volga use the oil for fuel, and are busily engaged, while navigation lasts, in distributing it to the towns of central Russia. Indeed, the transportation of the petroleum product at Baku is an enormous problem. It is 560 miles to Batum, the nearest port for distribution on the Black Sea, and an elevation of more than 2,600 feet has to be surmounted to reach it. Up to the present time the Russians have not ventured to build a pipe line for pumping the oil that distance. They have depended entirely on a single railroad and on the Caspian steamers for the distribution of the enormous product. They have however, just completed a pipe line, 143 miles long, down the west slope of the divide between the two seas, from Mikhailova to Batum. But the oil is still all transported from Baku, more than 400 miles, in tank-cars.

As only about twenty-five million gallons a month has been delivered by this railroad, much of the product is shipped by a longer route, going by tank-steamers to Petrovsk, a port north of the Caucasus Mountains, and thence by rail around to Novorossisk, on the Black Sea, near the outlet of the Sea of Azoff. But as only ten million gallons a month are delivered by this route, the export of petroleum in 1899 was practically limited to 35,000,000 gallons per month. The actual exportation last year was from Batum 370,000,000 and from Novorossisk 51,000,000 gallons. Of this, 16,000,000 gallons went to Austria, 21 to Belgium, 28 to China, 30 to France, 30 to Germany, 48 to India, 12 to Italy, 5 to Japan, 9 to Java, 60 to the Suez Canal (in bulk), 20 to Turkey, and 85 to Great Britain. The total product of the Baku oil-fields in 1899 was 63,000,000 barrels, as against 49,000,000 barrels in America. In 1890 Baku produced only 38 per cent. of the oil in the world, and in 1899 57 per cent. To one familiar with the oil-producing fields of Pennsylvania and Ohio, the small extent of this immensely productive area at Batum is astounding. There the productive centres are scattered over a good many thousand square miles; but here the production is mainly limited to three centres of a few square miles each. During the last twelve years a single twenty-acre lot has yielded 35,000,000 barrels of oil, and is still producing at the rate of 12,000 barrels per day. In 1898 13,000,000 barrels came from flowing wells.

The two main productive centres are within a few miles of Baku. The largest of these, about six miles to the north, covering an area of only seven square miles, has 8 flowing and 951 other productive wells. The total number at the close of 1899 was 1,028, with 598 more drilling. This concentration of the wells gives them a unique interest. The first view of the field makes the impression of a compact pine forest. This concentration, also, greatly facilitates the disposition of the crude oil. The refineries are all within a few miles, forming a strange city by themselves on the outer edge of Baku along the shore of the Caspian. There are hundreds of immense tanks in a bunch to hold the product, with pipes running along and across the streets in every direction. As there is considerable leakage from these, the streets literally flow with oil; and women and children come with rags to sop it up from the gutters, and with pails to carry it home or to market for sale. Only when the leaks are exceptionally large do the companies think it worth while to save this waste for themselves.

The Baku wells range from 500 to 1,500 feet in depth, averaging less than 1,000 feet.

The geological formations through which they extend are much more recent than those penetrated by the wells in America, and much less compact. This gives rise to great difficulty in securing the production. So much sand works into the wells through the loose formation that it is impossible to use pumps to bring the oil to the surface. Resort, therefore, is had to a process of boiling. The wells are now frequently so large as to be tubed with 16-inch pipe. Down this pipe a boiler of nearly that diameter and forty feet long is dropped, attached to a wire cable. A boiler of that size brings up two barrels at a run, but the looseness of the rock renders it impossible in many of the wells to shut off the water, so that the extraction of the oil is much impeded on that account. Often when one boiler full of oil has been brought to the surface, two or three more runs must be made to clear the well of salt water which has filtered in while the oil was accumulating. Every imaginable device has been resorted to to remedy this evil, but without success. Liquid cement has been poured in to fill the cavity outside the tube, and then allowed to harden into a stratum impervious to water. But, as the oil-bearing stratum must be left open, the water eventually reaches it, and the two substances find their way together to the common receptacle.

This looseness of the superincumbent rocky strata leads to some interesting results which are different from those in America. Here, oftentimes, when a highly compressed reservoir is penetrated by the drill, there is nothing to prevent the escaping gas from tearing away the sides of the well and projecting the fragments into the air, like boulders from a volcano. When, therefore, the reservoir has been once reached by the drill, the workmen flee for their lives, while the gas and oil and stones spout up high in the air, battering to pieces the derrick, and overflowing the surrounding area with the oily mixture. The oil flows off in such a stream that dams of considerable dimensions are required to enclose the precious fluid, and huge pits are dug in which to store it. To learn all the particulars about this remarkable field, one should consult the sixteen annual reports of Mr. Chambers, the excellent American Consul at Batum.

Like the oil-fields of America, those in Baku are really no new discovery, except in their extent. Long ago the crude Pennsylvania petroleum was sold all over the United States in small bottles for 25 cents, labelled Seneca Oil (from the name of the creek where it was chiefly obtained), and recommended as a cure for sprains and bruises and rheumatism. So abundant was this oil on some of the small streams in western Pennsylvania that it is said that when boys had been swimming in them their bodies were so slippery on coming out that it was impossible to keep their clothes on.

The Baku fields, however, have been known for thousands of years. There is here an ancient temple where Parsee priests kept a flame of natural gas burning from earliest times as a token of the special favor in which they were held by the Deity. Here pilgrim bands of fire-worshippers continue to resort, as the Moslems do to Mecca. But the fires in this temple are no longer kept living, except to gratify the curiosity of foreign travellers, for they are now completely outshone by the innumerable flames kept up for commercial rather than religious purposes. So great are these commercial interests that they have given an immense permanent increase to the wealth of the Russian possessions in the Caucasus, and have invested the Caspian Sea with an interest which it never had before. It is now one of the most important channels of internal commerce in the world.

G. Frederick Wright.

AT THE BERLIN THEATRE.

TOLSTOY'S "THE POWER OF DARKNESS" AND BJÖRNSON'S "BEYOND OUR STRENGTH."

New York, January, 1901.

A rapid journey through some of the capitals of Europe—Florence, Venice, Vienna, Berlin, London—leaves one with the impression that it is to the German Empire that one must look for the promised land of modern dramatic production. This is perhaps not surprising when one remembers that the newer German literature worthy of the name has blossomed, with Hauptmann, Sudermann, and a score of minor authors, mainly in the field of the drama, and in so doing has but continued the tradition of Schiller and Goethe. But it is not merely for the native authors that the Germans find a place upon their boards; the dramatic writers of other lands, from Tolstoy and Björnson to the creators of "Die Dame von Maxim's" and "Die Schoene von New York," are also represented upon their stage. During a week's stay in Berlin I was privileged to see Tolstoy's "The Power of Darkness," Björnson's "Beyond Our Strength" (first part), Sudermann's latest play, "Johannisfeuer," Otto Hartleben's very successful officers' caste tragedy "Rose-Monday," and the "Oresteia" of Æschylus rendered in German blank-verse; while, had it been physically possible to be in more than one theatre on the same night, I might have included in my programme performances of Goethe's "Faust" (First and Second Parts), Lessing's "Nathan the Wise," Shakspere's "Winter's Tale," and, on the boards of the "Secession" Society, one-act pieces by Maeterlinck and the rising Russian author Anton Tcheckoff! Of a stage offering at one and the same time such variety as this, it is fair to speak as an intellectual institution, and this can scarcely be said of any other stage with which I am at present acquainted. An occasional play that appeals to the intellect is indeed to be seen upon the boards of our own and the English theatre, but if you will take the trouble to run your eye over the play-bills of the New York or London theatres and compare it with the one presented above, you will be driven to confess that the difference is one of kind rather than of degree.

To refer to only two of these plays which are so very unlikely ever to find their way to a New York theatre, let us begin with Tolstoy's peasant tragedy, "The Power of Darkness." I had read it many years ago and had been thrilled by the horror of it. Later I had read of its production for a performance or two at Antoine's Théâtre Libre in Paris. In availing myself of the sudden opportunity to see it performed upon the stage of the Deutsches Theater I had no time to remind myself, by referring to the book, of the argument of the play, and, beyond a general remembrance of the impression of horror conveyed by its reading, I had forgotten the exact nature of the events to be represented and the moral (for, of course, with Tolstoy, especially when dealing with the peasantry, there would be a moral) to be conveyed. It was, therefore, with the shock of a revelation that this drama of peasant lust, avarice, debauchery, and crime, with its culminating scene of self-denunciation and remorse, was unrolled, with an effect of absolute illusion, before my eyes. One saw, from its beginning, the descent into crime of the easy-going and apparently worthless farm-hand Nikita, inspired by the evil counsels of two terrible women, his mother and wife. One assisted with the young maiden, still innocent of wrong, and the old farm-hand, Nikita's "help," naturally honest, but fearful of interfering with those upon whom his livelihood depends, at that fearful scene when, without in the night, in the neighboring cellar, Akulina's child is being buried alive—when the terrifying and the tell-tale sounds enter the common living-room where the old man and the young girl are at rest, and the latter, unable to struggle longer with the nameless terror with which the unknown doings of the night have inspired her, climbs for protection to the side of the old serving-man in his bed over the oven. One was present, finally, on the wedding-day of Akulina, when Nikita, overcome by remorse, and encouraged by the exhortations of his venerable father, confesses publicly and in turn before each one he has wronged, and is led away by an officer of the law to suffer the consequence of his ill-deeds. Set beside these scenes, the death of Agamemnon in the Greek tragedy left one cold—was it because of the classic accompaniment of chorus and blank verse, or because Agamemnon, after all, was only a King, and it is for the simple woes of common men that we of modern days reserve our sympathies? Certain it is that Tolstoy's picture of the darkness of ignorance and its engendering sin stirs the imagination of the modern observer even more powerfully than does the fateful tragedy, dark with the doom of a kingly race, of the old Greek poet. The reason is, perhaps, that the work of the Russian writer appeals more directly to that wider social consciousness which is a distinguishing development of modern times.

Finely imagined, if not realistically studied, are some of the peasant types which Tolstoy has selected to illustrate his theme—imagined, to the point of divination, they must have been by the actors, even if familiar in actual life to the author. First among them stands Akim, Nikita's father, a peasant of the old type, God-fearing, simplicity-loving, who applies to the doctrine of interest the principles of brotherly helpfulness, deducing therefrom the condemnation of all interest as usury, even as did the early Church. The dialogue between him and the old servitor, Mitritch, upon this subject is an admirable example of Tolstoyan dialectic. Akim it is who, in most respects, stands for the ideal of primitive virtue that commands Tolstoy's allegiance—an ideal, by the way, that he has several times found realized among his peasantry; but the master's firm grasp of human nature, backed by that marvellous instinct for the real that characterizes all his work, has seen to it that Akim is no colorless type, but a real specimen of the Russian peasant as he may be found to-day. So with the two women Matrona and Anisia, they are no mere mon-

sters of iniquity—it is because they are so human that they are also so terrifying. Peter, the rich peasant who has to see his life and goods wasted because he possesses a false wife, and Nikita, the weak tool of designing women, are both strongly individualized characters in whose lives, if the element of fatalism plays so large a rôle, it is partially attributable to that national instinct for submission which is capable, in its place, of such surprising spiritual results. In the hands of the German actors all of these characters had ample justice done them, and this without any endeavor at the substitution of an alien peasant dialect for the original text. The actors all spoke pure German, but with a certain slowness and hesitation of utterance that admirably suggested a mental backwardness upon the part of the individuals represented.

There is a contrast of ideals involved in the passage from Tolstoy to the Norwegian poet, Björnstjerne Björnson. It is not merely that individuality asserts a higher right in the religion of the latter, but the idea of struggle which is the very life-breath of the civilization of the West comes here to fulfilment in a manner unrealized in the philosophy of Tolstoy. "Weakness," says Björnson, discussing this philosophy in one of his minor stories, "is boundless; strength sets bounds and keeps them"—and he applies this dictum to the religions of the East, with their doctrines of universal sympathy, of passive endurance, and finds them essentially unsuited to the peoples of the West. How far this may be just as a criticism of Tolstoy must not at present concern us—it serves to point out a difference; we are in another moral atmosphere. It is very stimulating, this atmosphere—fresh with the resin of the pines and the salt of the breezes on the rocky Norwegian coast. In this play, "Beyond our Strength," Björnson has taken us to the extreme northern limit of his beloved "dome-capped land," and here we are subjected to influences that seem akin to the vast phenomena of nature in those parts—influences that surpass human knowledge or power, and are a new manifestation of the antique spirit of Northern mysticism.

A pastor in these parts has effected wonderful cures among the poor of his congregation, and his fame has spread as a worker of miracles. No vulgar exploiter of the popular persuasion concerning him, he is himself deeply permeated with the belief that he is invested at times with supernatural powers as a direct answer to his prayers. Unfortunately, these prayers have hitherto been unavailing to restore to health his own wife, who is a helpless invalid. To reinforce his own prayers, he has summoned home his son and daughter, who had previously been sent to town to pursue their studies; they are to form with him about the bedside of the mother "a chain of prayer." But the children, it seems, have lost their father's faith during their sojourn in the town, and the father must abandon his plan. Then it appears to him that the children's infidelity has been laid upon him as a punishment for lacking faith in his own unaided powers of prayer and supplication, and he announces that he will go into the church and remain there in solitary prayer and praise until his wife, after having first slept, shall rise from her bed and come forth to meet him. He has scarcely begun his solitary orison when sleep, in fact, descends upon the eyelids of the weary woman, and she continues sleeping, despite the descent of an avalanche, which deflects from its course in time to spare the church.

Word, meanwhile, has been spread abroad of the "miracle" of the avalanche, of the pastor's presence in the church, and the meaning of it, and a crowd, reinforced by a party of religious excursionists on their way to a meeting in the neighborhood, are encamped about the church to await the issue of the pastor's prayers. Among the excursionists, a party of clergymen have been drawn, much against their will, to assist at the demonstration; and in a scene in which the author displays a very considerable and not wholly to be expected sense of humor, they debate upon the proper attitude to be assumed in the face of events of so unusual a character. One among them, however, by the eloquence of his fanaticism, has succeeded in bringing the rest to the necessary pitch of enthusiasm at the right moment, when the pastor, walking into his house from the church, is met by his wife, who has risen from her bed of suffering and come forth to meet him. They embrace, and the prayer seems answered—when suddenly she collapses and expires in his arms. The pastor, as soon as he has had time to realize what has happened, lifting his eyes upward, makes an agonized inquiry: "That was not, however, the intention?" Then, as a doubt seizes him, he whispers, "Or . . . or . . .?" and falls dead beside the body of his wife. He has died of the doubt.

Such is the mere thread of external events upon which the play is strung; could an American audience be brought to listen to such an argument? Abstractly the reply would be a confident negative, but, fresh from an experience of the fastening power of its performance, I am disposed to a faith that the play would interest an audience less serious than the German or Scandinavian. And yet it is not even in the events just described that its main interest lies. Events of all kinds are forgotten in the fascination of the human problem presented in the characters of the man, his wife, and their two children. Pastor Sang is a man who lives by his faith in the supernatural, which once assailed by a doubt, the very breath of his being is destroyed. His wife does not share his transcendent faith, but, putting it to one side as a thing to which she does not wish to come too near, she lives for her love of the man. The son, a pure enthusiast, resembles his father, despite the fact that he has got rid of the paternal religion; the daughter resembles the mother. The history of this son and daughter is told in a second part of the play, which, when I was in Berlin, was still in the hands of the censor. Taken as a whole, the play is a striking plea for the *human* side of life, to which are opposed the superhuman strivings that place their entire reliance upon forces "beyond our strength," and, as a criticism, is quite as applicable to certain classes of social enthusiasts as to those who are more narrowly described as religious. It is interesting to find Björnson, who must rank, on the whole, as an individualist, turning against the excesses of individualism, and preaching a doctrine that involves, for its successful application, not a little of that spirit of resignation which Tolstoy has discovered among his peasants. J. K. P.

Correspondence.

THE HEALTH OF PROFESSOR JAMES.

To the Editor of The Nation:

Sir: During the last few weeks alarming rumors in regard to the mental state of Prof. William James and his relations to Harvard University have found their way into the newspapers. The deep interest which the public naturally takes in the fate of the great psychologist justifies me, as chairman of the department of Philosophy in Harvard, in asking your permission to make a few statements in the matter.

That particular form of newspaper dispatch which has gone into the world as an interview with "a friend of the family," makes announcements of which the following gives the essence: "The family of the scientist has been requested by the Harvard authorities to keep him in semi-seclusion and away from Harvard." "There are grave fears for the entire mental health of Professor James." "The university authorities feel that his sensational pronouncement in favor of a spiritualistic medium must be ascribed to a doubtful mental condition." And, finally, as proofs, it asserts "the fact that a new man has been elected lecturer in psychology, Professor James's specialty, in the department of philosophy at Harvard," and that Professor Royce of Harvard has been called to give the Gifford lectures in Edinburgh which Professor James had promised.

The truth is, that Professor James, who is at present travelling in Italy, is ill—but not alarmingly—with heart trouble, and that he has taken leave of absence for last year and this, partly to improve his health, partly to write the Gifford lectures. In both respects the year has been successful; six of the Edinburgh lectures have been written, and his health is decidedly improving. In a letter to me of December 9, from Rome, he says: "I am vastly better in all respects than I was a year ago."

There was never at any period of his illness, for any one in the narrower circle of his friends, or in the wider circle of the University, the slightest idea that his mental health was weakened, or that any psychical disturbances entered into the case. The writing of six psychological lectures during this period speaks more clearly than anything, and in the letter mentioned he devotes four of the eight pages to a masterly discussion of a recent large volume of philosophy, the study of which he had just finished. The Harvard authorities never had the wish to keep him "away from Harvard," but merely the most earnest desire that he should return from his trip abroad next summer to his inspiring Harvard work; they hope, of course, at the same time, that he, as a convalescent, will reduce his work to a very limited amount to save his physical energies; but the idea that his mental energies have suffered has never entered into their discussions.

While the "friend" is in these respects wrongly informed, his statements become inexcusable in his allusions to mental disturbances as the source of Professor James's well-known interest in psychical research,

an interest which dates back more than ten years. Moreover, as the "friend" claims that this interpretation is the view of the Harvard authorities, his statement is not merely a distortion of the facts concerning Professor James, but an unworthy insinuation against the motives of those Harvard men who differ from Professor James in matters of spiritualism. Professor James has described the development of his views in the matter, all his arguments and conclusions, in such brilliant and clean-cut philosophical papers that only a disingenuous person could make light of his ideas by stamping them as products of a disturbed mind. As no Harvard man in recent years has publicly opposed his views on psychical research more sharply than I have done, I may be allowed to say personally that I had in these discussions with my friend James one feeling above all, that I had never disagreed with a finer or more open mind.

The "friend" claims further that Professor Royce's giving of Gifford lectures in Scotland is a proof of Professor James's breakdown. The fact is that Professor James's appointment is for Edinburgh, while Professor Royce gave his lectures in Aberdeen. The two invitations had nothing to do with each other. And, as the final proof, is given "the fact" that a new man has been called to Harvard for the psychological lectures. The fact which I know is, that all the psychological lectures being given this year in Harvard are given by Dr. MacDougall, who has been instructor of psychology here for three years, and by myself, in my sixth year as professor of psychology. A new man has not been called either for this or for the next year. The only psychological course which needs an instructor is the course in the psychology of religion, which has become vacant by the death of Dean Everett, and it is the earnest wish of the Harvard department that Professor James will step in and give this course through the next year.

HUGO MÜNSTERBERG.

HARVARD UNIVERSITY, January 8, 1901.

EXAMINATION PAPERS ON MR. LANG.

TO THE EDITOR OF THE NATION:

SIR: I see that Mr. Andrew Lang has been making out and publishing some very amusing burlesque examination papers on current English fiction by way of gently satisfying the worthy folk who take this fiction seriously and study it. I wonder if Mr. Lang's heart would not be softened if he knew that over here in America many young readers reverence even undeceased English essayists sufficiently to undergo examination in their writings. I beg to append a set of questions on Mr. Lang's own works that was lately proposed to a private club of young people who had for several months been conning Mr. Lang's essays and verses. The members of this club were very ardent admirers of Mr. Lang—who, indeed, is not?—and Mr. Lang, would, I am sure, have greatly enjoyed their enthusiastic familiarity with his writings.—Yours very truly,

LEWIS E. GATES.

CAMBRIDGE, MASS., January 11, 1901.

(1.) Name Mr. Lang's works chronologically, alphabetically. Name them in the order of least importance; also, in the order of least resistance. What year did Mr. Lang signalize by the greatest number of publications? Which years since 1877 have been "the flashes of silence"?

(2.) Explain why Mr. Lang is not a dilettante.

(3.) Enumerate some of the more important subjects on which Mr. Lang has not written delightfully.

(4.) Account for the fact that Mr. Lang's essays all have the air of seeming to say something worth while.

(5.) Compare Mr. Lang with Samuel Johnson, treating each as the typical critic of his age. Who is Mr. Lang's Boswell?

(6.) Name some of Mr. Lang's best-known friends; and trace out as thoroughly as you can the influence of his friendships on his literary judgments.

(7.) Account for what seems so extraordinary—considering the land of his birth—Mr. Lang's averseness to treating of "love" (or of any other subject) *"in the aibstract."*

(8.) Expound Mr. Lang's indebtedness to German scholarship, particularly in his treatment of the history of religions. Aim at terseness, and kindly limit yourself to ten minutes.

(9.) Quote Mr. Lang's "Rhymes Made in a Dream," and point out wherein they fall below any other poem of his that you happen to recall.

(10.) Sum up in three words Mr. Lang's philosophy of art.

(11.) Suppose that a young lady anxious to "embrace literature as a career" were to ask for a model of literary style; should you recommend Mr. Lang or Vernon Lee? Justify your choice on both moral and artistic grounds.

Notes.

The Macmillan Co.'s spring list of announcements includes the first volume of Russell Sturgis's 'Dictionary of Architecture and Building,' A-E; 'Early Christian Art and Archæology,' by Walter Lowrie, D.D.; 'German Book-plates,' from the German of Count zu Leiningen-Westerburg; 'The Stage in America, 1897-1900,' by Norman Hapgood; "Representative English Comedies," a series of five volumes, edited by Prof. Charles Mills Gayley of the University of California; 'Shakspere, Artist and Man,' by Prof. L. A. Sherman of the University of Nebraska; 'The Beginnings of Poetry,' by Prof. Francis B. Gummere of Haverford; 'Chaucer's Prologue, the Knight's Tale, and the Nonnes Preeste's Tale,' edited by Prof. Mark H. Liddell; 'More Letters of Edward FitzGerald,' edited by W. Aldis Wright; 'Highways and By-Ways of East Anglia,' by Wm. A. Dutt, illustrated by Joseph Pennell; 'A Guide to Jerusalem,' by A. Reynolds Ball; 'The Land of the Moors,' by Budgett Meakin; 'Japanese Plays and Playfellows,' by Osman Edwards, with twelve colored plates by Japanese artists; 'Introduction to the Industrial and Social History of England,' by Prof. Edward P. Cheney of the University of Pennsylvania; 'Words and their Ways in English Speech,' by Profs. J. B. Greenough and G. L. Kittredge of Harvard; the fourth volume of the 'Letters of Cicero,' translated by E. S. Shuckburgh; 'A History of Rome for High Schools and Academies,' by George Willis Botsford of Harvard; the first volume of Lord Acton's 'General History of Modern Times'; the third volume of Edward McCrady's 'History of South Carolina,' for the Revolutionary period, 1775-1780; 'Reconstruction in Mississippi,' by James Wilford Garner of Columbia; 'American Municipal Progress,' by Prof. Charles Zueblin; 'Custom and Competition,' by Prof. Richard T. Ely; 'The Writings of King Alfred,' by Frederic Harrison; 'Democracy and Social Ethics,' by Jane Addams; 'Colonial Government,' by Prof. Paul S. Reinsch; Prof. J. Mark Baldwin's 'Dictionary of Philosophy and Psychology,' in three volumes; 'The Limits of Evolution, and Other Essays,' by Prof. G. H. Howison; 'The Principles of Vegetable-Gardening,' by Prof. L. H. Bailey; 'The Flowers and Ferns in their Haunts,' by Mrs. Mabel Osgood Wright; 'The Garden of a Commuter's Wife'; and 'The Roentgen Rays in Medicine and Surgery,' by Francis H. Williams, M.D. From the enumerated works of fiction we can select only 'The Crisis,' a tale of the civil war, in sequence to 'Richard Carvel,' by Winston Churchill.

Thomas Y. Crowell & Co. announce 'Hero Patriots of the Nineteenth Century,' by Edgar Sanderson, with portraits, and 'The Virgin Saints and Martyrs,' by S. Baring-Gould.

In addition to their forthcoming edition of George Sand, George Barrie & Son, Philadelphia, will issue Balzac in French, in a style conformable to their English edition, and at the same price.

A pretty and attractive reprint of the second edition of John Hill Burton's 'Book Hunter' has been made by J. B. Lippincott Company, Philadelphia. The paper is somewhat thin, but the typography is generous and clear. On p. 152, in the note from Elia, an intrusive space has made three words (and nonsense) of Lamb's two: *"biblia a biblia [abiblia]."*

Cyrus Townsend Brady writes, and McClure, Phillips & Co. publish, a book entitled 'American Fights and Fighters,' being stories of the wars of the United States from that of the Revolution to that of 1812. Mr. Brady, in thus employing the leisure afforded him by the duties of a country parish, does not seem to have added much to our knowledge of American history, but it may be hoped, though probably with less confidence than that displayed by the author, that these stories may "encourage men to consecrate themselves, with the devotion of their forefathers, to the civic battles for freedom and honor which are still to be waged." These civic battles are always with us, and recruits for these wars are always wanted. A compilation like the one about which we are writing seems to date back to the days of Headley and Lossing, and shows evidence in more than one place of hasty writing. Charleston, for instance, is not the most important city of the South at the present time, and Paul Jones did not say about Pearson, or Pearson about Jones, what the author states in his article on the fight of the *Bon Homme Richard.*

'The Life of Grant,' by Owen Wister, in DeWolfe Howe's tiny "Beacon Biographies" (Boston: Small, Maynard & Co.), is noticeable for literary quality in its presentation of the essentials. Mr. Wister properly finds room for Grant's retrospective condemnation, in his Memoirs, of the Mexican war, of which he held the Southern rebellion "largely the outgrowth," adding: "Nations, like individuals, are punished for their transgressions." Should Gen. MacArthur survive his service in the Philippines, he may leave a like censure for posterity to read in the day of judgment.

In view of the latest reports from South Africa, recipes for cooking the Boer hare after it is caught seem a little premature. Nevertheless, 'The Settlement after the War in South Africa,' by M. J. Farrelly (Macmillan), may presently have value as a careful statement of the conditions under which Great Britain must endeavor to establish its rule. According to this writer, whose English bias is not so strong as to blind him to obvious difficulties, the whole of South Africa should be made a crown colony, with the expectation that a few years' experience of the blessings of British rule will transform the rebellious Dutch into loyal citizens of the Empire. It may be conceded that such a consummation is to be desired; but when we consider what progress the Prussians have made in winning the affections of their subjects in Alsace, we can hardly believe that the Boers of this generation will kiss the rod with much sincerity.

In his 'Fact and Fable in Psychology' (Houghton, Mifflin & Co.) Professor Jastrow has reprinted a number of essays which have appeared in various magazines and are directed against the popular interest in "unorthodox" psychological phenomena and explanations, from "Christian Science" to "Psychical Research." Naturally, the tone is severely professorial, involving the proper reprehension of the superstition to which human nature is still prone, and exhibiting the usual jealousy of amateur efforts in subjects with which the academic psychologist is too often either unable or unwilling to grapple. A good deal of instruction may certainly be derived from this, as from many similar publications on these subjects, but on the whole it is to be feared that Professor Jastrow's volume overshoots its mark, both in its polemic against the views he dislikes, and in its presentation of the scientific attitude. A really and impartially critical psychology will, no doubt, find many interesting displays of human weakness in the history of superstition, but it will scarcely find that these displays, together with the monopoly of error, have been exclusively confined to any one party to the controversy (compare, *e. g.*, the history of hypnotism); nor will it be so determined to ignore the common origin of science and superstition, and the fact that the superstition of to-day is but the science of yesterday, or perhaps, sometimes, of to-morrow. Again, even in popular discussion, it seems a perilous policy to attack exclusively the weakest side of an opponent's case and to say nothing about the strongest, while an ounce of concrete refutation in detail outweighs many pounds of abstract generalities. It is the prevalence of the latter in Professor Jastrow's book, due, doubtless, to its essentially second-hand character, which constitutes its inferiority when compared with the work of (*e. g.*) Dr. Lehmann (written from a similar standpoint in a more judicial temper), Dr. Hodgson, or Mr. Podmore.

Prof. F. D. Allen's 'Medea' of Euripides has appeared in a new edition, revised by Prof. Clifford H. Moore of Harvard University (Boston: Ginn & Co.). Although it has been an eminently satisfactory textbook since its publication in 1876, it is now much improved, being nearly ideal for the use of freshmen, for whose needs it is especially designed. The introduction has been in part rewritten, the orthography brought up to date, and some illustrations from ancient art added. In the text, some MS. readings have been restored, and conjectures of Dr. Wecklein have been introduced in two places (vv. 1255, 1256). In the notes, at the foot of each page, there is one commendable innovation—the translation into English of the more difficult Greek parallel passages. The editor thinks that this is the only way to make younger students use such passages. Would that other editors would take this common-sense view of the matter.

Prof. Edward Capps's 'Homer to Theocritus: An Outline History of Classical Greek Literature, with Selected Translations' (Cleveland: Chautauqua Press), is an attempt to encourage the study of Greek literature through the standard English versions. The student's illegitimate use of translations, to avoid any great mental effort on his part, and the endeavors of certain publishers to place in his hands translations whose only merit is that they make a certain sort of classical study easy, have put English versions under the ban to some extent. There are, however, legitimate uses of such literary works as the translations of Browning, FitzGerald, Calverley, Lang, Palmer, and many others, and it is the duty of the Hellenist to avail himself of them. Professor Capps shows how this may be done in literature study. He has inserted in his text, which is a clear exposition of the development of Greek literature, a selection from the best and most accessible English translations. We are glad to say that he announces for the near future an enlarged edition, containing at least three more chapters and more extended quotations.

Mr. L. C. Syms, in 'Selected Letters of Voltaire Edited for School Use' (American Book Co.), annotates seventy-four examples of this author's epistolary style, with a vocabulary. It is a good service from any point of view, and we need not quarrel with the editor for omitting what he calls reflections of Voltaire's "sectarian and anti-Christian" spirit, though these passages are quite likely to have been, on the contrary, anti-sectarian. The matter of consequence is to encourage the study of biography through letters, which reveal character as no other documents, even when the product of a mind as little scrupulous of the truth as was the inventor of a text from Habakkuk. A companion volume from Rousseau should be next in order.

The last two volumes of the series entitled "Pages Choisies" (Paris: Armand Colin) are devoted to Daudet and Bourget; the extracts, as usual, representing every variety in the respective authors' work. It is inevitable that readers should miss some favorites in collections of this nature; for instance, Daudet's "Le Siège de Berlin" and Bourget's beautiful story of "Antigone." Daudet's charming introduction, too, to the "Lettres de mon Moulin" seems an almost unpardonable omission. The introductions, by M. Gustave Toudouze, are sufficiently accurate and comprehensive for their purpose, but might well have been written in more popular style and with closer view to the understanding of youth. It seems a somewhat fantastic stretch of critical imagination to draw a symbolical parallel between the late Alphonse Daudet and Michelangelo's statue of Lorenzo de' Medici. One need hardly add that Bourget's characteristic subtlety in analyzing delicate moral situations is not represented here.

The "Annual List" of new and important books added to the Boston Public Library during the past year is interesting as showing the present trend of thought and investigation. The leading subject (so far as numbers is concerned) of the twenty-three into which it is divided is Social Science; Fiction and Religion being relegated to the fifth and sixth places. It should be added, however, that a considerable number of the titles in some of the subjects are not of books, but of brief pamphlets. In the January Bulletin is the first part of an interesting journal of a survey, in 1791, for a canal across Cape Cod, by James Winthrop.

Amid the usual large amount of valuable information contained in volume i. of the Report of the Commissioner of Education for 1898-99, there are about ten pages on educational conditions in the Philippines. The Commissioner has incorporated in his introduction a statement, "especially interesting on account of its source," by Agoncillo, first published in the New York *Journal* of February 3, 1899, and describing the educational advantages the Filipinos possessed before the American occupation; these, as is well known, were considerable. Professor Blumentritt, the German ethnologist, to whom reference has been made for a similar purpose in these columns, is also quoted in the report, to show that the diffusion of elementary education among the Filipinos, before the "occupation," was more general than is the case in many parts of Europe. One paragraph of that portion of the report which deals, very briefly, with the schools of Manila since their reopening under American rule, is worth reproducing. A newspaper correspondent "was unpleasantly impressed with the manifestation of civility of the Tagal children in school, who all rose when the superintendent entered their room on making his visit. This act the correspondent appeared to regard as a relic of tyranny, and he looked forward to the speedy banishment of 'urbanidad' (politeness) from the school under the Americans, who, he was proud to think, were too free and independent to show such manifestations of 'servility.'" The correspondent would, perhaps, be interested to learn that the custom of having the pupils rise from their seats when the inspector or some strange visitor enters the schoolroom, is a prevailing one in France, Italy, and Germany, also.

Prof. Ludwig Stein of Bern contributes to the *Rundschau* for December a stimulating essay on "Pestalozzi als Völkererzieher," in which he shows that the Swiss schoolteacher was not merely a reformer in elementary education, but also an inspirer in the field of social pedagogy. Pestalozzi's educational principles have become commonplace through numberless publications and a well-nigh universal practical application; but his importance as educator of men and of nations has not yet been sufficiently recognized. The writer gives an outline of his socio-pedagogical ideas. Though many of these, too, have already been accepted and put in practice during the century just closed, others are still to be investigated and defined, for Pestalozzi, with prophetic insight, has touched upon and taken sides in nearly all the socio-political questions which agitate our own time, and it is Professor Stein's belief that he may render to the twentieth century as valuable services as "Völkererzieher" as he has rendered as "Kindererzieher" to the nineteenth century.

Our readers have already been furnished with grounds for admiring the late Professor Henry Sidgwick, and we need but mention the fact that his Cambridge associates have agreed that some memorial of him shall be established at the University. Americans at large (and they are now appealed to, to aid in the foundation) cannot be influenced by experience of the remarkable personality of Sidgwick, or by his singular services in drawing Oxford and Cambridge together; but his indispensable part in promoting, and wisely conducting, and most generously endowing the university education of women will touch some minds in this country in a way to bear fruit to the memorial. It is a rich revelation, not only of Sidgwick's character, but of the nature of university life in England—without a parallel in any other part of the learned world—to read the report of the proceedings at Cambridge on November 26, 1900, to consider the memorial. Such testimony and such addresses can seldom be heard on like occasions outside of England. The form contemplated is the development of a library of books on Moral Science initiated by Prof. Sidgwick for women's use as well as men's; a studentship in philosophy, for either sex; a lectureship in Moral Science, to bear his name. But something else may be decided on. Prof. J. Mark Baldwin of Princeton has consented to serve on the committee to raise funds in this country, and contributions may be sent direct to him.

—A correspondent, of French extraction, writes to us:

"In 'E. L. G.'s' most interesting article in your last issue on the biography of Huxley, he takes occasion to remark, with hypothetical explanation, on the comparative paucity of biographical literature in French. On the other hand, no literature is more abundant in admirable memoirs. But, as an offset to the Huxley, the last 'Vie de Pasteur' might well be adduced. I have, however, an impression that few 'Anglo-Saxons' fully grasp the extreme reticence shown by average Frenchmen and Frenchwomen concerning everything of an intimate (even though unobjectionable) character relating to private and family life. Among my own French relations I have observed it again and again, though I need hardly say that our terms of mutual friendship and affection are constant and close, despite the distance that separates us. The publication of the Browning love-letters was considered almost universally in France as an act of unpardonable indecorum on the part of a son. As to the alleged difficulty of writing frankly concerning lives of eminent Frenchmen in letters or art, would this apply to Michelet, Henri Martin, Mignet, Guizot, Leconte de Lisle, Jules Simon, Léon Say, Renan, Taine, Paul Delaroche, Delacroix, or Ingres? And yet I doubt whether one could find an adequate biography of any one of them."

—We are in receipt of a pleasant letter from M. Frédéric Masson touching our Paris correspondent's recent criticism upon the order of his numerous Napoleonic studies. M. Masson affirms that he has "un plan d'ensemble," but it is so vast that he has misgivings as to his living long enough to complete it. He hopes at least to mark out and to lay the foundations. His scheme embraces the exhibition of Napoleon's youth and intellectual development; his natural and passional sentiments; his environment; his political, literary, scientific, artistic, and religious ideas. M. Masson is done only with the first section—youth; four other volumes have been occupied with the passional sentiments, and a fifth remains; four likewise with the natural, and three if not four remain to be written. Environment has had one of six contemplated. Seven will be needed for "ideas," and this portion is wholly untouched. The total footing is twenty-eight volumes. M. Masson has never had the courage to be so frank with his countrymen. "S'il arrive que l'on trouve cette confession dans 'The Nation,' tant pis pour moi."

—Attention was called in these columns some time ago to an article by R. M. Meyer in the *Deutsche Rundschau* for August, entitled 'Die Weltliteratur und die Gegenwart.' Limiting the term "Weltliteratur" to whatever has found universal acceptance among the various nations of Europe and America, Meyer attempted to discover the ten or twelve great writers to whose work such a term might seem appropriate. The unsatisfactory character of this attempt, and the mistaken conception of the term "Weltliteratur" which it implies, have been recently pointed out at some length by a competent authority on questions of comparative literature, Dr. Louis P. Betz of Zurich, in the Munich *Beilage zur Allgemeinen Zeitung* of November 10 and 12. Taking as his text the three or four passages in which the term is employed by Goethe, Dr. Betz has indicated the only proper method by which a comparative study of European literature can be attempted. This method does not centre in the selection of universal writers; but, regarding Europe as being, in Arnold's phrase, one great confederation, for intellectual and spiritual purposes, it studies the influence of one component part of this confederation upon another, and traces the great forces that have been operative more or less in all the literatures. Such an interpretation of "Weltliteratur" increases the number of writers who may be regarded as deserving of more than national attention. Hoffmann's influence on Poe and Hawthorne, for example, gives that author an international interest, and Poe himself becomes a factor in general European culture through his influence on Baudelaire and other French writers. This was pointed out with great detail by Dr. Betz some time ago in the *Neue Züricher Zeitung*, in a series of articles entitled "Edgar Allan Poe und Charles Baudelaire: Ein Phänomen der Weltliteratur," which, when amplified and corrected, certainly deserves publication in book form.

—The publication in the official Berlin *Reichsanzeiger* of the full text of the Emperor's school-reform project shows that the scope of the proposed innovations covers the whole field of secondary education, and directs in detail the lines along which the changes are to be made. The document has the form of instructions addressed to the new Cultus Minister of Prussia, Dr. Studt, with the statement that these reforms are to be the realization of the ideas developed at the Educational Congress called together by his Majesty in 1892, on which occasion he declared that it should be the purpose of the educators of the country to make their pupils "not good Greeks and Romans, but good Germans." The Emperor himself has divided this manifesto into five heads, the most important of which is the first, in which he declares that henceforth the preparatory work done at the classical Gymnasium, the Latin and semi-scientific Realgymnasium, and the totally non-classical and scientific Oberrealschulen, shall have equal educational values in admitting graduates to the privileges of the universities and their degrees. This breaks entirely with German educational traditions, and puts the scientific course on an equality with the classical. Some of the details in these instructions are not without pedagogical interest. The Emperor directs that more attention be paid to geography, and more to the English language and less to French; that, in the Greek, useless drill in forms be abandoned, and the æsthetic side of this language and its literature cultivated, as also the connection between Greek civilization and modern culture; that in modern languages the ideal be the actual use of the languages; that in history the Germany of the nineteenth century be more closely studied; that in natural sciences, especially chemistry and physics, the applied features be made more prominent; that in drawing due attention be paid to the practical application of this art in the study of the sciences; that the final examinations, having disappointed the hopes originally entertained, be abolished as soon as possible. The Emperor closes his instructions to his Minister with the hope that reforms along these lines will reconcile the existing antagonism between friends of the humanistic and those of the realistic schools, between the advocates of the classical tongues and those of the sciences. Quite naturally this manifesto is intended only for Prussian schools, but, if introduced there, other schools will, no doubt, follow suit.

—Students of dramatic origins will find material for suggestive comparisons in the Biblical plays devised or adapted by the priests in Mexico for the purpose of impressing the Scripture story upon their native congregations. Two of these have recently been printed by D. Francisco del Paso y Troncoso, the director of the Mexican National Museum, in the original Nahuatl, with a literal Spanish rendering. They are intended to form part of a volume, with the sub-title "El Teatro," in a "Biblioteca Nahuatl" which Sr. del Paso y Troncoso has undertaken to edit. The two pieces already issued represent the sacrifice of Isaac and the adoration of the Magi. Both are copied from a transcript dated 1760, but the originals go back in one case to 1687 or earlier, and the other in all probability to the preceding century. There is a contemporary account of a performance of the Adoration in the town of Tlaxomulco, in Jalisco, in the year 1587. This representation, which was reported in detail by the Commissary-General of the Franciscan Order who witnessed it, was somewhat different from the one whose text is now printed, although the general plot and character of the two were clearly identical. The Twelfth Night play was as much a feature in the life of the Mexican natives under their Spanish pastors as it was in that of their old-world contemporaries. One of the actors at Tlaxomulco had played his part on each recurring day of the Epiphany for thirty years. As early as 1540, Motolinia, the most reliable of contemporary historians, speaks of this as an established annual function, and describes the way in which the aboriginal "stage hands" worked the apparatus of the guiding star across the village housetops to the

church tower, beneath which lay the babe in his manger.

—In China, eighteen centuries ago, the learned lady Tsao wrote a book of etiquette and conduct for women and girls. Her little manual has ever since been the vademecum of the maidens and wives of the Middle Kingdom which gave letters, art, and civilization to the eastern half of Asia. It it still a standard work. Now translated by Mrs. S. L. Baldwin into English (New York: Eaton & Mains), with preface, sketch of the author and appropriate illustrations by a Chinese artist in Brooklyn, the little work reaches us bound in the joy-suggesting color of scarlet, and decorated in gold and green with stamp of coins and bamboo. It is sent forth, perhaps, as a covert retort to the spoilers of Peking. The translator has done her work well, not at all idealizing the text, yet hardly improving it by inserting within brackets occasional explanations or notes. These call attention to tooth-brushes and other evidences of civilization twenty centuries ago, point a temperance moral, or adorn the old tale of "the turnpike road to a man's heart, through his mouth." How to serve the afternoon tea, arrange the dining-room table, make the bed for the mother-in-law, sip the wine at the marriage ceremony, to eat and to drink, and "the refilling your cup with wine steadily refuse," to work and act in the garden and the kitchen, to make salutation, to practise hospitality, to instruct children and to secure gentleness, harmony, and virtue in the home—are the standard themes set forth in language which, in the original, is music to the Chinese ear. Of necessity the book reminds us of and challenges comparison with the 'Onna Dai Gaku,' or Woman's Great Learning, which is the standard work in Japan, though in age but as a mushroom. The latter work, unlike the Chinese, is replete with æsthetic hints and suggestions for making the home not only full of sweetness and light, but also beautiful to the eye, and delightful to that cultivated taste which regards, with tenderness and delight, nature as well as literature and ethics.

—Mr. Clutton-Brock's 'Eton' (London: George Bell & Sons; New York: Macmillan) is a more modest and, at the same time, a more workmanlike performance than Mr. Cust's 'History' of the same foundation, reviewed in these columns some months ago. The series to which it belongs—the "Handbooks to the Great Public Schools"—aims mainly at giving an account of the present condition of the several institutions, and reduces the historical narrative to a small compass. Mr. Clutton-Brock's abstract of Maxwell Lyte's standard treatise is pretty well done, though it might have been wished that he had not assigned Chillingworth's celebrated work, 'The Religion of Protestants,' to John Hales (p. 53). A reference to Ducange would at once have explained "the curious title of Conducts" still given to the chaplains (p. 65). But the author is more at home in the etiquette, customs, and slang, the studies and the games, of the Eton of to-day. The chapter on "School Work" will, perhaps, be found the most interesting to American readers; the two timetables on pp. 195-6 and the list of lessons for the week on p. 197 are valuable "documents." The reader will learn with some surprise that "nearly all boys, except those in the army class, have to produce copies of Latin verses every week" (p. 186). Those who are interested in the boarding-schools now springing up in America, more or less on the English model, and are curious to know how the standard for the upper forms in England is kept so much above that required for entrance to the universities, may be advised to read the account here given of the "Collegers," and of their relations with the "Oppidans." The "Collegers," it may be explained, are the holders of scholarships exempting their fortunate possessors from all but a comparatively small part of the cost of education and board. Mr. Clutton-Brock assures the anxious parent that he "need not *nowadays* be deterred from sending his son to 'college' by the fear that he will find himself in a position of inferiority in the school"—a phrase which suggests that this was not always the case. His further assurance that the parent of a colleger need not "fear that his son, by associating with the sons of the rich, will learn expensive habits," is one which would be even more necessary in America, if an attempt were made to follow the English example and introduce a leaven of "scholars" into the new foundations.

HUXLEY.

Life and Letters of Thomas Henry Huxley. By his Son, Leonard Huxley. In 2 volumes. D. Appleton & Co. 1900.

Thomas Henry Huxley: A Sketch of his Life and Work. By P. Chalmers Mitchell, M.A. (Oxon.). G. P. Putnam's Sons. 1900.

That Mr. Mitchell's book should appear almost simultaneously with the 'Life and Letters' is, perhaps, unfortunate for him and for his publishers, but not so for the general reader, who could not do better than to read the smaller by way of preparation for the larger book. It will furnish him with an iron thread on which to string the letters, with a general conception into which the particulars of the biography will fit with mutual illumination. It is exceedingly well done. Mr. Mitchell has a fine gift for exposition, and he brings out the character of Huxley's successive positions and discoveries with great clearness. The "Huxley and Darwin" chapter develops with much precision the nature of Huxley's unconscious anticipations of the 'Origin,' and the relation of both men to the general theory of evolution, of which Huxley was more convinced than of natural selection as a special form of it. His insistence was uniform that natural selection was an hypothesis lacking the necessary confirmation which he believed might be obtained for it by a sufficiently careful and persistent experiment in artificial breeding. Huxley's advocacy of Darwin has a noble chapter to itself, and there are others explaining his own work on vertebrate anatomy, man and the apes, scientific education, and so on. His anti-materialism and anti-supernaturalism are explained with equal sympathy, his "Ethics of the Cosmos" with some hesitation. Every aspect of Huxley's life, except the purely personal, gets its proportionate treatment, and, whether as an introduction to the 'Life and Letters,' or as an exclusive study for those who must deny themselves the major book, it can hardly be commended in excess of its distinguished worth.

But this lofty praise of Mr. Mitchell's book derogates nothing from the importance of Mr. Leonard Huxley's. This is strongest where Mr. Mitchell's book is weakest—in the presentation of Huxley's character and personality. Mr. Huxley's own writing is thoroughly good, and his apprehension of his father's scientific work is clear, but he leaves him for the most part to expound it in his letters, and these have too much the character of a commentary on what is supposed to be already known, to be enlightening to the less perfectly informed. What we do get at every stage is the reaction of Huxley's mind upon his work and its effect on others, with a good deal of its tentative process in advance of its deliberate expression. The structure of the book is chronological, the forty-nine chapters having no other title respectively than that of the year or years they represent. A topical arrangement would perhaps have been impossible. But where there is continual transition from one subject to another, it is often difficult to make out the lines of dominant interest in a particular period. In a few instances the letters relating to some special interest or episode are massed in a chapter by themselves, and the general correspondence is afterwards given in one or more chapters. This, too, is somewhat confusing, but it is, nevertheless, an acceptable device, especially in the chapters giving an account of Huxley's relation to the 'Origin of Species.' There are lacunæ in the correspondence as in the geological record as by Huxley apprehended. Where we expect much we sometimes get little. There is, for instance, hardly a word about Darwin's 'Descent of Man,' and there is even less about Tyndall's famous Belfast address, except in advance of its delivery.

The early chapters do not add much to the autobiographical account of Huxley's youth and lack of early training contained in his collected writings. Further on we are startled with the terrible frankness of a letter about the "confusions of his wasted youth," from which he was saved by Thomas Carlyle, congenial work, and his love for the lady who became his wife. There is a recurrent note of resentment where his father is spoken of. How distinctly the boy was father of the man is shown by a journal which he kept in 1840 and for a few years after. That year we find him quoting Novalis, "Philosophy can bake no bread, but it can prove for us God, freedom, and immortality," and deciding for the knowledge that can bake our bread. Thus early did he come to the conclusion which he elaborated in his 'Hume' and elsewhere—that we are equally uncertain as to the ultimate character of matter and soul. Deep ponderings these for a boy of fifteen, and conclusive of the absurdity of the notion that his ultimate metaphysical studies were those of an amateur, caught up as a handy weapon in a special fight. The metaphysical questions, the ultimate problems of philosophy, were always fundamental to his thought. Quite as absurd is the notion that Huxley, equally with Darwin, suffered a scientific atrophy of his æsthetic life. As represented by these pages his intellectual breadth was a conspicuous trait. He is on the best of terms with Homer and Dante and Shakspere and Goethe and many lesser poets, and never at a loss for an apt quotation from them, to say nothing of his full acquaintance with the noblest piece of English literature extant, the King James version of the Hebrew and Christian Scriptures. His early knowledge of East End conditions was prophetic of his

later interest in the London poor and his endeavors to alleviate their intellectual misery.

The closeness of his early application to his studies is certified by the nickname which his fellow-students gave his window, "The Sign of the Head and Microscope." His first visit to Faraday was intended to engage his interest in a scheme of perpetual motion which Huxley had, as he thought, discovered. Faraday suffered his foolishness patiently, if not gladly. It is interesting that Huxley, Darwin, and Hooker, three noble friends, each took a long ocean voyage as their best early course in science. Huxley's position on the *Rattlesnake* was that of assistant surgeon, but he went far beyond the official naturalist of the expedition in his scientific researches, which, though not confined to the medusæ, were preëminently concerned with them. His best discovery, however, was that of the lady at Sydney whom he married after an engagement that put the affection of the lovers to the sorest proof. It was of eight years' duration, during five of which they had no meeting, and letters back and forth were months upon the way. When at length Miss Heathorn came to England, she was so sick that Huxley thought that death would cheat him of his bride. After the long waiting, one is disappointed to meet her so seldom in the letters; but this defect is remedied as they go on, and our assurance is complete that here was a marriage of true minds. Nowhere is Huxley more engaging than in his relations with his family, his happy comradeship with his children. Hardly less beautiful are his relations with Darwin, Spencer, Hooker, Tyndall, and other friends. He was not much affected by those odiums from which the scientific mind has suffered hardly less than the theological. His relations with Owen were a conspicuous exception to this rule. Even then it was Owen's treatment of Darwin, which he thought cowardly and insincere, and not any injustice to himself, that put an edge upon his steel.

We get an acute impression of the pains of Huxley's life from 1850 to 1854. These were years of baffled and impatient struggle, often tending to despair and the resolve to give up science altogether for some employment that would enable him to marry and make both ends meet. One incident of the waiting-time was his luckless application for a professorship in Toronto, Canada, for which Tyndall also applied, without success. When the tide turned, it did so with a will. It brought first a permanent lectureship in the School of Mines in Jermyn Street, London, and within a month a place on the Geological Survey, which doubled his income, making it, with what he could pick up in various ways, £600 a year. The sudden death of his friend Forbes, who had made the position for him in Jermyn Street, brought him the offer of the Edinburgh lectureship, which Forbes had held with a salary of £1,000 a year, but he preferred to stay in London because of its better opportunities for research. In November, 1854, he writes:

"There is always a Cape Horn in one's life that one weathers or wrecks one's self on. Thank God, I think I may say I have weathered mine—not without a good deal of damage to spars and rigging though, for it blew deuced hard on the other side."

Heretofore Huxley's work had been mainly morphological. After 1854, palæontology engrossed him more and more, at first with many backward looks to his first love, to which he was resolved that he would some day return, but this he never did to an exclusive or even a preëminent degree. But for this change in the direction of his work he could not have taken the part he did in the controversy that was precipitated by the publication of Darwin's 'Origin' in November, 1859. In the meantime, his most daring venture was his lecture of 1858 "On the Theory of the Vertebrate Skull," a direct challenge to Owen, who had too incontinently fallen in with the views of Oken and Goethe. The chapters that report his relation to Darwin's epoch-making book are the most dramatic in this biography, but their edge is not so keen as it would be if Huxley's account of the matter in the Darwin 'Life and Letters' were not already classical, together with his address, "The Coming of Age of the 'Origin of Species,'" and others tending to the same effect. Moreover, we have had various accounts of the Oxford meeting of the British Association at which Huxley made his great retort on Bishop Wilberforce, who, in a brilliant speech, for which he had been primed by Owen, inquired whether Huxley's grandfather or grandmother was an ape. Huxley answered:

"If there were an ancestor whom I should feel shame in recalling, it would be a *man*—a man of restless, versatile intellect, who, not content with an equivocal success in his own sphere of activity, plunges into scientific questions with which he has no real acquaintance, only to obscure them by an aimless rhetoric, and distract the attention of his hearers from the real point at issue by eloquent digressions and skilled appeals to religious prejudice."

This is Prof. J. R. Green's recollection of Huxley's words, but Huxley was sure that he did not use the word "equivocal," and others have insisted that the entire passage has too much of Green's diffuseness and too little of Huxley's incisiveness. It will be remembered that Huxley's review of Darwin in the *Times* was the cap-sheaf of Darwin's satisfaction in the opinions of his most valued friends. Huxley's 'Man's Place in Nature' received a strong impulse from his work as Darwin's chief defender, though the book had close relations with his studies in vertebrate anatomy before 1860. The ten following years were the great decade of his life. At no other time did he advance with such a joyous swing as during this period, though already there were penalties to pay for overwork; and dyspepsia, originating in the poisoning contracted from a juvenile dissection, was a danger that was never far away.

With passionate enjoyment of his work came great private sorrow, when, in 1860, his first-born son, called Noel, because born at Christmas time, was suddenly taken from him. One of the longest, and certainly one of the most impressive and pathetic letters here given, is that which he wrote to Charles Kingsley, replying to one in which Kingsley pressed on him the usual consolation, but with an accent of personal sympathy and affection that went straight to Huxley's heart. If one would know the innermost Huxley, he should read this letter, though he read nothing else. The absolute sincerity with himself and others shines here with a clarity unequalled in a book which is everywhere an illustration of this quality. Like George Eliot, he disdains all "opium," and will not consider his wish to believe anything as any reason why he should believe it. He says:

"My business is to teach my aspirations to conform themselves to fact, not to make facts harmonize with my aspirations. Science seems to me to teach in the highest and strongest manner the great truth which is embodied in the Christian conception of entire surrender to the will of God. Sit down before fact as a little child, be prepared to give up every preconceived notion, follow humbly wherever and to whatever abysses nature leads, or you shall learn nothing. I have only begun to learn content and peace of mind since I have resolved, at all risks, to do this."

The letter goes on to denounce both the doctrine of future rewards and punishments, while pleading that "we still have judgment here," and the doctrine commended to him by the priest officiating at his boy's funeral, "If there be no future life, let us eat, drink, and be merry."

It is impossible within the limits of a brief review to touch one in ten of the matters that engrossed Huxley's interest and enthusiasm in these busy and eventful years. In 1866 we find him with Mill, and Lyell, and Spencer, on the right side of the business *in re* Gov. Eyre; in 1867, entering on that long course of lectures to workingmen which was so congenial to his disposition and so helpful to those whom he addressed. It was not a workingman whom he once singled out as specially attentive, and who afterward wished to put one question, "Was the cerebellum inside or outside the skull?" The *Bathybius* trouble began in 1867, and returned to plague the inventor until in 1879 he "ate the leek," man-fashion, at a meeting of the British Association, confessing his mistake, but at the same time insisting that he had never built *Bathybius* into the general structure of his evolutionary doctrine. The letters to Spencer are many, and he describes himself as this philosopher's devil's advocate. "There is no telling how many brilliant speculations I have been the means of choking off in an embryonic state." In 1870 he was already on the first two of ten Royal Commissions, a waste of power to a pecuniary end which he tried to justify by the incidental public benefit and scientific observation. The Metaphysical Society had been instituted the previous year, but other biographies have anticipated this, even as to those particulars which concern Huxley in the most special manner; such, for example, as his retort on Dr. Ward, who professed his inability to withhold the expression of his horror when such sentiments as Huxley's were advanced. To which Huxley: "I must in fairness say that it will be very difficult for me to conceal my feeling as to the intellectual degradation which would come of the general acceptance of such views as Dr. Ward holds."

His voluntary election to the new London School Board in 1870 marked a tendency to steadily increasing engrossment in official work, while he was fondly cherishing the hope of more time for original research. His visit to America was in 1876. "His reception may be said to emphasize his definite establishment in the first rank of English thinkers." It will be remembered that during his visit here a prophecy which he had made about the horse's genealogy, as shown by the development of his ancestral toes, was strikingly confirmed.

Sailing up New York harbor, he said, "If I were not a man, I should like to be a tug"; and high pressure was the habit of

his life until the machinery broke down. This happened in 1871, and again in 1884. From both catastrophes he rallied, but each time, and especially after the second, with much abatement of his normal strength. The shadows of sickness and despondency lie heavy upon many pages of Mr. Huxley's second volume, and the question intrudes itself whether a more exigent standard of selection would not have been better. But this volume abounds in interesting matter; notably in that touching Huxley's battle with Gladstone and the Clericals upon Biblical and theological questions. A deeper interest in politics and a lively part in its discussion were characteristic of these later years. One may, perhaps, justly doubt whether hypochondriacal dyspepsia did not give some color to his opinions on the Irish question, and to such views as those of his Romanes Lecture, about which there are important letters. In conclusion, there are chapters on the man's personal habits, traits, and manners that make a natural climax to the favorable impression of his character which the book conveys in all its parts. The sum of the whole matter is that, ardent as was his passion for the discovery of scientific truth, even more ardent was his passion for men's saving knowledge of it, and for their deliverance from all ignorance and superstition, and the evils which they carry in their train. Among those who love their fellow-men, Huxley's name deserves a lofty place. He said that he would rather be remembered as "a man who did his best to help the people" than in any other way. The philanthropist in him eclipsed the man of science. Taking our leave of him, may we not say, as he said of another, "For such a man there can be no fear in facing the great unknown. His life has been one long experience of the substantial justice of the laws by which this world is governed, and he will calmly trust to them still as he lays his head down for his long sleep"?

SOURCE-BOOKS.

Source-Book of English History: Leading Documents, together with illustrative material from contemporary writers, and a bibliography of sources. By Guy Carleton Lee, Ph.D. Henry Holt & Co. 1900. Pp. xvii, 609.

Source-Book of English History for the use of Schools and Readers. By Elizabeth Kimball Kendall, M.A. Macmillan. 1900. Pp. xvi., 483.

The compilation of "source-books" of one sort or another is now going on so rapidly, and the use of "sources" even in elementary historical instruction is being so generally approved, that it behooves teachers and students, as well as reviewers, to subject each new applicant for favor to more than ordinarily careful examination. We take it that a book of this description, prepared primarily for the use of other than mature scholars, ought to comply with two requirements. In the first place, the collection ought to show clearly what the compiler means by "sources"; whether, that is, he has in mind the primary records, statutory or otherwise, out of which narrative history is mainly constructed, or the illustrative material useful in the way of collateral comment and enlightenment. In the second place, the text of the selections should be accurately reproduced, omissions and condensations carefully indicated, and alterations, if any, made in accordance with principles reasonably justified and consistently followed. A book that cannot bear scrutiny at these two points cannot, we think, be regarded as a wholly creditable addition to working historical material.

The 225 selections in Dr. Lee's substantial volume cover the whole field of English history, from the first mention of the country, by Herodotus, to the London Convention of 1884 between Great Britain and the South African Republic. In point of proportion, the space is fairly well distributed among the different periods, although more than two-thirds of it is allotted to the period preceding 1689. The editor states that the scope of the collection "is such as to make it available for use with any text-book upon English History." We do not think it quite clear, however, for what class of students the book is designed. A valuable introductory bibliography enumerates the most important collections of sources, but a glance shows that the profitable use of most of them is beyond the powers of any but mature workers. On the other hand, an examination of the selections themselves does not confirm the first impression made by the bibliography. Dr. Lee tells us in his preface that he has differed from Bishop Stubbs in including material not strictly documentary, and from Professor Hart in including material that *is* documentary. We are bound to say that the result of this attempt to keep a middle course is a collection which is neither the one thing nor the other. It has too few documents to satisfy those who would value a collection of matter of that sort, and too little illustrative material—"sources," be it observed, in a very different sense from documents—to be of much service in that direction. In other words, Dr. Lee has fallen into the very error which ought by all means to be avoided in the compilation of source manuals—that, namely, of jumbling together a lot of important matter, all of it, no doubt, interesting and worth while, but exhibiting the widest variation in appropriateness and usefulness.

Selection, in works of this character, is so much an affair of individual judgment, and is often influenced so much by a teacher's accustomed way of presenting a subject to his class, that a compiler is entitled to a large measure of liberty. An examination of Dr. Lee's selections, however, shows some unexpected omissions, particularly in the later period. There are no treaties save the Transvaal conventions, and no acts relating to America. In the last century we miss such important pieces as the Schism Act, the Septennial Act, the Place Bill, and Pitt's India Bill; and there is nothing about the Hastings trial save a letter from Hastings to Sir John Shore. In the present century, there is no documentary material on the Reform bills, or the civil service, or Ireland, or education, or municipal government, or half-a-dozen other matters which have been prominently before the mind of England in the past hundred years. The thoroughness with which Stubbs, Prothero, and Gardiner have gleaned in their respective fields may excuse a later worker from duplicating their labors, but the time would seem to have passed for such a scanty treatment of the eighteenth and nineteenth centuries as Dr. Lee has given us.

It would be gratifying to be able to say that, although Dr. Lee's method of selection could not be endorsed, his reproduction of texts showed commendable accuracy and care. Unfortunately, however, even this meed of praise must be withheld. In his preface, Dr. Lee informs us that, "believing that documents are most useful in their most readable form," he has, "in most cases," modernized spelling, punctuation, and capitalization, but has "preserved the original style when necessary to bring out the full effect of the selections"; that he has preferred "the most approved editions" or "official editions"; and that in deciding upon translations, he has "selected and edited those which in [his] opinion most faithfully present the meaning of the best manuscripts." The "editing" of a text already published in a variorum critical edition is, at best, delicate business, and Dr. Lee's pages show many striking illustrations of what such a course may lead to.

A number of Dr. Lee's documents are labelled as "edited" from the well-known *Statutes of the Realm.* What the "editing" consists in, and the kind of text produced by it, can best be seen by putting a few passages side by side. The citations from the *Statutes* are, of course, from the English version, with modernized capitalization.

LEE.	STATUTES OF THE REALM.
Edward . . . to all those that shall hear or see these present letters. . . .	Edward . . . to all those that these present letters shall hear or see. . . .
And we will that if any judgment be given from henceforth, contrary to the points of the charter aforesaid, by the justices or by any other of our officials that hold pleas before them, it shall be undone and holden for naught. —*Confirmation of the Charters*, p 184.	And we will . . . by the justices, or by any other our ministers that hold plea before them against the points of the charters (etc.).
No tallage or aid shall be imposed or levied. . . .	No tallage or aid shall be [taken] or levied. . . .
Also we will and grant . . . that all clerks and laymen, of our realm, shall have all their laws . . . as freely.—*De Tallagio non Concedendo*, p. 186.	We will and grant. . . . that all clerks and laymen of our land shall have [all] their laws . . . as largely. . . .

The sixth section of this document, as given by Dr. Lee, follows neither the Latin nor the English version of the *Statutes of the Realm*, but seems to partake somewhat of both.

LEE.	STATUTES OF THE REALM
. . . and afterwards religious men have notwithstanding entered	and notwithstanding such religious men have entered. . . .
. . . earls [barons], ... and other our lieges.	. . . earls [barons], and other our subjects . . .
. . . the immediate chief lord. . . . —*Statutum de Religiosis*, p. 188.	. . . the chief lord immediate. . . .
. . . to the intent that as well clerks as laymen might be admitted in such monasteries and religious houses, . . .	. . . to the intent that clerks and laymen might be admitted in such monasteries, priories, and religious houses . . .
. . . whereby it happens that numbers of . . .	. . . and thereby the number of . . .
. . . and alms are withdrawn from the poor, ... —*Statutum de Asportatis Religiosorum*, p. 190	. . . and alms [being not given to] the poor. . . . *Variant:* are withheld from, etc.

In the *Statutes of the Realm*, further, this statute bears the title *Statutum Carlioli*, the title chosen by Dr. Lee being there ascribed to "old printed copies."

It would be tedious, however, though not difficult, to multiply such illustrations. As compared with the texts cited as authorities,

a word-for-word comparison of a number of Dr. Lee's extracts shows scores of additions, omissions, substitutions, alterations, and transpositions, not to mention a number of obvious misprints. If this sort of thing is "editing," we can but think it editing of an extraordinary sort, and far removed from the kind of work which careful scholars recognize as legitimate.

Of errors of another sort, too, some of them apparently attributable to haste, Dr. Lee's book shows a good many. The ascriptions of authorship prefixed to the several selections do not always agree with the sources indicated at the end. The prefatory notes, nowhere very substantial, are sometimes trivial, as where we read (p. 141) that "this document is of sufficient importance to warrant its introduction into this book of sources," and that (p. 169) "every paragraph [of Magna Charta] is of importance to the student—though much might be of little interest to the casual reader—and in a source-book none of it can properly be omitted." The *Statutes of the Realm*, already enough sinned against in the mutilation of its texts, is cited as the authority at the beginning of No. 208, instead of the collection of Evans, and at the beginning of No. 215, instead of the *Annual Register*. The series of "Translations and Reprints" issued by the University of Pennsylvania has been frequently drawn upon, but without indicating the number in the series. The translation of Magna Charta (No. 80), credited to Professor Cheney (*sic*), makes no reference to previous publication. The four selections joined under No. 81 are credited to the "Lords' Report on the Dignity of a Peer," translated by Professor Cheyney; they are taken, however, except the first, from No. 6 of the "Translations and Reprints," where they are credited to Stubbs, who cites the "Lords' Report" as his source. The three documents given under the head of "England and the Transvaal"—the Sand River Convention, the Convention of Pretoria, and the Convention of London—are said to be, in each case, "from a copy of the original document." Surely, Dr. Lee might have taken the trouble to give us something of more value than that. And why quote the act establishing the colony of New South Wales from Barton's 'History,' and the India proclamation of 1858 from Nolan's 'History of India'?

We have dwelt at length upon the shortcomings of Dr. Lee's manual, because of a conviction that a book which professes to furnish students with material for an introductory study of sources should itself be of sound method and unimpeachable accuracy. There was certainly need of such a work as the announcement of Dr. Lee's volume would lead one to expect, and the need is still so great as to give to the book, doubtless, notwithstanding its defects, considerable usefulness; but in its present shape it can, we think, have only qualified claims to the confidence of scholars.

Miss Kendall's 'Source-Book' is less ambitious than Dr. Lee's work, and in agreeable contrast to it in the care and accuracy which it everywhere exhibits. In its general plan it suggests Prof. Hart's volume with a similar title, and, like that, offers a selection of illustrative material adapted to the needs and powers of young students. As a whole, the choice has been judicious and the limited range well kept. There are useful references to collateral authorities, well-digested marginal notes, and helpful explanations of unfamiliar words and allusions. Mechanically, Miss Kendall's book is of the "handy" shape which invites use. Altogether, it is a welcome addition to the list of source manuals for secondary schools, and one which teachers of elementary English history can hardly get along without.

The Gospel of Wealth, and Other Timely Essays. By Andrew Carnegie. The Century Co. 1900.

For most of us, Mr. Carnegie's gospel has the attraction of requiring no self-denial. All the sacrifices are to be made by the millionaires, while the rest of the world gets the benefit of them. Yet, as it is more blessed to give than to receive, mankind in general has less to hope for in this gospel than the few rich men who can actively apply it. To accept gifts tends to debase character rather than to elevate it. Even when the gifts are made to a community, there is danger of diminishing public spirit. People learn to think that one thing and another ought to be done for them by their wealthy fellow-citizens, and even the feeling of gratitude becomes attenuated. For if it is the duty of the millionaire to share his fortune with his neighbors, what thank shall he have? No one can expect other people to be grateful because he does what he ought to do. Nevertheless, the question, wherewithal shall the millionaire cleanse his ways, remains to be answered. Somehow he must, living or dead, part with his money, and Mr. Carnegie's suggestions are practical enough. It is not easy to argue with the possessor of so many millions; but some expository comment may be offered.

Mr. Carnegie's philosophy is perfectly simple, and it is stated clearly and forcibly. He holds, first, that the present competitive system, which necessarily creates millionaires, or allows men to get rich, is essential to progress, and should not be altered. Secondly, rich men should not leave their fortunes to their children, because their children will be demoralized by having money to spend which they have not earned. Thirdly, rich men should not indulge in luxury. Fourthly, they should dispose of their fortunes while living, or the Government should confiscate them at their death. Fifthly, the only practical way of disposing of them is to found libraries and other public institutions, requiring the public to contribute to their support.

Evidently, this system assumes that millionaires are sinners above other men. The number of persons who have wealth sufficient to maintain their children in idleness is very large, and such persons are able to indulge in many luxuries. We cannot concede that the children of millionaires will go straight to perdition if they inherit their parents' wealth, while those who get but a hundred thousand shall be immune. Every one familiar with the life of the common people knows that an inheritance of a very few thousand dollars may demoralize a young man, and this principle has been illustrated on a prodigious scale in our pension largesses. On the other hand, virtue among the children of millionaires is not quite so rare as Mr. Carnegie intimates. Instances are known where inherited wealth has been wisely administered by men of respectable and even irreproachable habits. Mr. Carnegie's dictum, "I would as soon leave to my son a curse as the almighty dollar," is too sweeping. Millions of people who are not millionaires desire to give their children the advantages of wealth, and this desire is one of the greatest incentives to exertion and to accumulation. Provided they educate their children wisely, it is impossible to maintain that the gift of these advantages is necessarily injurious.

On this point Mr. Carnegie and Mr. Gladstone had some debate; the latter contending that "the hereditary transmission of wealth and position, in conjunction with the calls of occupation and of responsibility, is a good and not an evil thing." Of course, this is nothing but the old conflict between the ideals of democracy and aristocracy, and we need not restate it. Very possibly, Mr. Carnegie's doctrine, that poverty urges men to struggle to escape from it, if applied in practice, would stimulate material progress. Whether the life of men, as a whole, would be higher and better, if every one had to work for his living, is certainly an open question. At all events, the increase of wealth has always hitherto been accompanied by the development of an aristocracy. Probably we shall see the experiment of confiscating large fortunes at the death of their owners tried on an increasing scale, together with progressive taxes on incomes. Yet the results of such experiments, however gratifying to the envious, may diminish the earnings of the poor as well as the profits of the rich.

What Mr. Carnegie has to say about the relations between workmen and their masters is sensible and practical. He favors the "sliding-scale" of wages and the gradual reduction of the hours of labor. As to "Trusts," we observe that his views require some revision. He favors partnerships rather than corporations; but, since he wrote, his firm has become a stock company. His sentiments concerning our new colonial policy, and about Imperialism generally, are well known. They are humane and enlightened; nor do we believe that his perception of the financial folly of the armed exploitation of weak nations by strong ones influences him more than his feeling that such a policy is fundamentally unjust. Whether we accept Mr. Carnegie's gospel or not, we must concede that it is not an ignoble one, and that he proves his faith by his works.

The Monitor and the Navy under Steam. By Frank M. Bennett, Lieutenant United States Navy. Houghton, Mifflin & Co.

This work is principally devoted to the development of the United States Navy, so far as ship construction is concerned, since the introduction of steam, and especially treats of the *Monitor* and the many changes in vessels of our own and other navies since the famous fight at Hampton Roads between the *Monitor* and *Merrimac*. It closes with a brief account of the Spanish-American war.

The review of the history of steam navigation with which the book opens is of interest, and combines conciseness with accuracy. A clear description of the development of the *Monitor* and *Merrimac* follows, and an account of their construction and early trials and difficulties will be found to be full of detail and of historical value. Mr. Bennett's training as a former engineer officer of the Navy makes him particularly competent to deal with this subject. In the questions concerning the attack of

the monitors upon Fort Sumter and Charleston harbor, however, it is not singular to find him leaning towards the side of Chief-Engineer Stimers rather than towards the naval commander-in-chief of the operations at that place. A more extensive and thorough study of this question would, we feel convinced, lead him to moderate his opinions as to the competency of the monitors of that day or the present day to operate successfully against fortifications of the time. The opinion of Chief-Engineer Stimers that the obstructions at Charleston, as well as all of the existing forts and batteries, could be readily passed by the monitors was not borne out by the succeeding events of the war, and even Ericsson himself, hot-headed advocate as he was, did not claim that the forts could be taken by the monitors.

When our author leaves the field of engineering and ship construction and gets within the realms of international law, he is at once beyond his depth. The Confederate privateers performed little service in commerce-destroying during the civil war, while the Confederate cruisers, whose efforts were so far-reaching, would not have been affected by any adhesion on our part to the Declaration of Paris, as the writer states on page 185. In his description of the fight between the *Alabama* and the *Kearsarge*, he again errs in stating that the *Deerhound* did not violate any rule of neutrality in taking Semmes and the other survivors of the *Alabama* to a place of safety beyond the reach of the *Kearsarge*. The *Deerhound*, on account of the few boats left intact on board the *Kearsarge*, was properly requested to assist in saving the shipwrecked men of the *Alabama;* but she departed from her neutral position when, after doing so, and without communicating with Winslow, she took his lawful prisoners to a neutral port and a place of freedom. It would not have been wise, under the existing conditions of international affairs, for the *Kearsarge* to have fired upon the *Deerhound* and compelled her return, but it would have been legitimate and within her belligerent rights. On the other hand, the letter of Secretary Welles to Capt. Winslow, quoted by the author, does no credit to Mr. Welles as the head of a department of state, contending as he did that the crew were not entitled to be paroled. They were of the same status as their brethren in the army of the Confederate States.

A succinct account is given of the development of the battle-ship from the *Monitor* in our own and other navies, showing the absurdity of the controversy of monitors vs. battle-ships. One was but the germ of the other, the latter being developed for sea conditions and outside coast and harbor defence. The monitor aids in the retention of the possession of the inside anchorage and harbor, while the battle-ship secures its use as a port to the commerce of the world.

The sketch of the Spanish-American war is reasonably full and accurate. The author, like all thinking and unprejudiced men in or out of the naval service, appreciates the value of the services of Admiral Sampson. It is hoped that the day of the unreasoning and unthinking is passing away, and that the well-earned rank of vice-admiral will be bestowed upon the rear-admiral before it becomes an impossibility. The monitors delayed the passage of Admiral Sampson to Porto Rico and prevented his return to the Windward Passage and Cuba in time to meet Cervera south of Cuba. If the delay had been a little longer, Cervera's squadron would have been found in San Juan, a harbor in which it would have been peculiarly exposed to destruction by the naval fire alone. Its uselessness as a naval station would have been so thoroughly demonstrated that no lay or professional voice would have been raised, as at the present time, advocating the expenditure of money and labor in this port, so inadequate to the needs of the times.

Daniel O'Connell and the Revival of National Life in Ireland. By Robert Dunlop, M.A. ["Heroes of the Nations."] G. P. Putnam's Sons. 1900. Pp. xv. 393. Portraits and illustrations.

Familiar as we were with the history of Daniel O'Connell's career, the appellation "hero" did not strike us as particularly appropriate. Webster, however, fully justifies it. O'Connell certainly comes under the description:

"A man of distinguished valor, intrepidity, or enterprise in danger; a prominent or central personage in any remarkable action or event; hence, a great, illustrious, or extraordinary man."

His life carries with it the history of Ireland during his time. We have of late years devoted as much of our space to Irish affairs as, compared to the general interests of the world, they deserve. Our notice of this book shall therefore be brief. It supplies a long-felt want, is admirably written, and, as an expansion of the life of O'Connell contributed by the author to the 'Dictionary of National Biography,' tends to increase our already favorable estimate of that work. The space (319 out of 382 pages —there is an index) devoted to O'Connell's pre-Repeal days is perhaps unduly great, yet they were the days of his greatest achievement. He is most loved by the Irish people for his later, though unsuccessful, efforts in the Repeal cause. Mr. Dunlop leans to delineation of the better side of his character. From Swift's time, and excluding the brief period during which Ireland had a parliament of her own, only through rough vigorous natures placing themselves outside general polite society, free from British opinion, sacrificing much of the sweetness of life and ordinary ambitions, has it been possible to attain effective reforms for Ireland. O'Connell was one such. Is it specially to please some readers that our author writes, near the close—

"England has never yielded one iota to terrorism, and if concession after concession has marked the progress of the fifty years that have elapsed since O'Connell's death, it is not to the advocates of physical force, but to those who, in season and out of season, had preached and practised O'Connell's doctrine of Constitutional agitation, that the thanks are due"?

Do we not read (at page 224) concerning the accomplishment of emancipation—

"Coming, however, as it did, not as a free gift, but as the price paid to prevent a civil war, it failed to kindle the smallest spark of national gratitude. Twist the matter as one may, it is clear that England's necessity, and not England's justice, was responsible for the concession"?

After all, though few writers sufficiently emphasize the fact, the granting of the franchise to Catholic Ireland by the Irish Parliament in 1793 was a greater concession than that of the right to appointments and to represent coreligionists by the British Parliament in 1829. The one was accomplished within a brief period by reason and good feeling; the other only by veiled rebellion. The lessons of O'Connell's career have never been lost on Ireland. Among the many admirable illustrations in the volume is one of Kilmainham Jail, where, in 1813, Mr. Magee, one of the precursors of the emancipation struggle, was confined. Perhaps not many readers will remember that the railings shown in front of the prison were added seventy years later to render more sure the detention of Mr. Parnell and the others through whose exertions land reform essential to the life of the country was secured. O'Connell's steadfastness in opposition to Southern slavery, so strikingly contrasting with the attitude of certain of a later school of Irish politicians, will always be remembered to his honor.

The Siege in Peking. By W. A. P. Martin. Fleming H. Revell Co.

After fifty years of life in China, thirty of which had been spent in teaching international law, Dr. W. A. P. Martin, from thinking that Peking was "the safest place in the world," was called to the new experience of a siege. After a hasty hurricane of reform, followed by the terrible reaction of two years ago, the one enterprise of the Imperial University—probably because proposed by Li Hung Chang—was saved from the wreck, and began its hopeful life under Dr. Martin's presidency. Not until the drawing of the cordon around the besieged legations did the author realize the gravity of the situation. During the leaguer he was made inspector of passes at the chief gate. Though in age over three-score years and ten, he took his part and "bore his burdens" like a younger man. From his high point of vantage he could see pretty much everything that was going on within the legation "compound." With him as companion was another man of age and dignity, Sir Robert Hart, who had spent forty years of his life in organizing the Chinese customs service, having raised the revenue from three to thirty millions of taels.

In this report of an eye-witness, which he has dictated with all possible rapidity to his stenographer—a fact which may explain if not excuse a certain lack of judicial coolness and dignity, the presence of which is so manifest in the author's earlier and more scholarly book on 'The Chinese'—Dr. Martin contrasts the eight banners of the Mantchus with the eight banners of the allies. He considers that three motives combined to bring about the recent upheaval in China. These were political jealousy, religious antagonism, and industrial competition. The Tartars are themselves an alien race, and have always shown themselves suspicious of everything tending to augment the prestige of foreigners in China. The fetish-superstition of the Boxers and their agglomeration of the three systems of Buddha, Confucius, and Lao-Tsze were united in fanatical war against Western religion. When a secret society was transformed into a political party, the first objects singled out for destruction were the products of foreign machinery. Years ago Dr. Martin wrote

in his book on the Chinese that the Mantchus had shown themselves to be "the most improvable race in Asia"; yet though they conquered the Middle Kingdom by force, they have become more Chinese than the Chinese themselves. For, while the Chinese have shown themselves accessible to new ideas, the Mantchus, having espoused the civilization of China, have distinctly refused to exchange it for that of the West. Nevertheless, despite the shocking reversion to barbarism which marks the close of their history, "no native dynasty ever governed the country with more wisdom." Dr. Martin believes that the Chinese can be easily governed by the foreign Powers. "Patient, industrious, and unwarlike, they were made to be ruled by others." As a matter of fact, they have actually been under the sway of different hordes of Tartars "for seven centuries out of the last fifteen."

In his sketch of the Emperor and the reform party, Dr. Martin shows that the scheme for the making of a New China was derived remotely from America, but mediately from Japan, as Kang Yu Wei, the Canton doctor, friend of the Emperor and himself leader, confessed. He insisted upon copying as far as possible the example of Japan. This radical programme was, however, blotted out in the blood of its advocates by the *coup d'état* by which the Emperor was retired and humbled, and the Empress Dowager began to take "her ride on a tiger." Dr. Martin pricks the bubble of romance, originating about five years ago in a New York Sunday paper, which made the Empress Dowager in origin a Canton slave girl, whereas she is of gentle birth and her family is well known in Peking. Using the discredited Emperor as her helpless tool, this woman selected the son of Prince Tuan, a boy, fourteen years of age, whom she intended to place on the throne as soon as the young Emperor was compelled to abdicate. Prince Tuan, the father of the boy, thus raised to sudden prominence and importance, being in the confidence of the Dowager, began at once to play that bloody rôle which the Tai Wen Kun, a person of exactly the same rank and in the same situation, had already played in Korea. A bitter hater of the aliens and all their works, he had but to point out that the repeated foreign aggressions on Chinese territory gave the Empress her opportunity. She had resolved to enter upon war should any further encroachments be made, when, just at this point, the "Boxer" agitation came into view as a heaven-sent auxiliary. The war-cry of these would-be purifiers of the land of the sages was exactly like that of the foreigner-haters in old Japan of the sixties—"Uphold the dynasty and destroy the barbarian." During the first ten days of the siege, the "Boxers" were the assailants. In the second stage, after the attack on the Taku forts by the aliens, the soldiers of the Government came prominently forward and the "Boxers" almost disappeared. The legation guards, numbering less than 500, saved the situation. The Government brought the Mantchu Guard, of probably 50,000 men, against the "legationers," but it seems almost certain that there was some power checking the besiegers, for they never seemed to put forth their full strength. Dr. Martin gives a vivid picture in detail of the siege, showing especially the wonderful work done by Professor Gamewell.

In his chapter on Reconstruction, the author is of the same mind with Europeans. He suggests that while the United States is supposed to indulge in territorial aggrandizement less than any other nation, the island of Hainan, half as large as Sicily, would make a good stepping-stone between Hong Kong and the Philippines. "We should then have a tangible ground towards demanding to be heard on all questions relating to the future of China. . . . This is demanded by our natural growth. Without it our growing commerce and our magnificent railway and mining enterprises in the interior will be insecure." He thinks that the recently published views of Sir Robert Hart are a little too pessimistic. He takes a more hopeful view, believing that though the Powers have undertaken a task not unlike that of Rome, had she resolved to rebuild the city of Pompeii, the situation, though not cheering, is far from hopeless. Some reproductions of photographs recently taken enliven the work.

BOOKS OF THE WEEK.

Abbott, E. A. Clue: A Guide through Greek to Hebrew Scripture. London: Adam & Charles Black; New York: Macmillan. $2.60.

BERGEN'S FOUNDATIONS of BOTANY

By JOSEPH Y. BERGEN

Instructor in Biology in the English High School, Boston, and author of "Elements of Botany."

For introduction, $1.50

JUST ISSUED

ANOTHER notable book by Mr. Bergen, whose "*Elements of Botany*" has come to be the *most widely used* recent text-book on the subject in higher schools and academies. It is not intended to take the place of the *Elements*, but to offer a more extended and comprehensive course for schools that wish to devote an entire year to the subject. The flora includes *seven hundred* species. The descriptions are written in the very simplest language consistent with accuracy, and technical terms are omitted in every case where ordinary language is sufficiently concise and accurate to answer the purpose.

GINN & COMPANY Publishers

Boston New York Chicago San Francisco Atlanta Dallas Columbus London

William Lloyd Garrison, 1805-1879.

The Story of his Life, told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net*.

This important work (originally published by the Century Company) has been reduced in price from $12.00 to $8.00, a remarkably low sum for what is unquestionably one of the handsomest products of the American press.

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

Back Numbers of the Nation.

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 174 Fulton St., or H. Williams, 25 East Tenth St., New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

A Literary History of America

By BARRETT WENDELL

"Enough has been said to show how fruitful a formula has been applied by Professor Wendell to the analysis of our literary past. It remains to add that he has produced incomparably the best history of American literature thus far written by anybody, a history that is searching in its method and profound in its judgments, on the one hand, and, on the other, singularly attractive in the manner of its presentation."—*The Dial.*

Military Reminiscences of the Civil War

By JACOB DOLSON COX

Formerly Major-General, 23d Army Corps

The *N. Y. Evening Post* considers Gen. Cox "easily the highest authority with reference to the events and the strategy of the Civil War. He maintained to the end the vigor of thought and expression which marked his prime. His fairness was remarkable for a nature so hearty as to be almost fervid." (*2 vols., 8vo, $6.00 net.*).

Italian Cities

By E. H. and E. W. BLASHFIELD

Ravenna,
Siena,
Florence,
Assisi,
Mantua,
Perugia,
Parma
and
Rome

"The subjects treated are handled with historical knowledge, with a keenly critical appreciation of art, with delight in nature, and, above all, with an instinct for that subtle, indefinable quality which we recognize in everything that concerns the Peninsula as simply 'the charm of Italy.' The style of the authors is clear and pleasant."—New York *Tribune.* (*2 vols., 12mo, $4.00.*)

CHARLES SCRIBNER'S SONS, NEW YORK

The Living Church.

"The Living Church," published in Milwaukee, is the only one of the general weekly papers of the Protestant Episcopal Church in this Country which stands for the Catholic position. The controversies now going on in the Church should be studied by every Churchman. Only by reading

The Living Church

regularly can one arrive at any intelligent conclusion.

New Subscribers sending their names direct to this office, for one year, with $2.00 during January, will be furnished with back numbers from November 17th (the issue containing the supplement with the beautiful half-tone picture of the Bishops vested in Cope and Mitre, at Fond du Lac) and subsequent issues as far as possible, so long as the remaining numbers last, without extra charge. This will give the whole of the controversy which has so stirred up the American Church. Subscription price $2.00 per year in advance ($1.50 to the clergy).

B. F. STEVENS'S

Facsimile of the Unpublished

British Head Quarters Coloured Manuscript Map of New York and Environs (1782).

Reproduced from the Original Drawing in the War Office, London.

2¼ sheets. Scale, 6½ inches to a mile, 10 ft. by 4 ft.

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbour, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island, including Brooklyn, the Works on Paulus Hook, and parts of the Jersey Shore. It has a copious Table of References to various Works (British and American), some of them with notes as to the time of their construction or destruction.

A few extra copies of sheet 8 have been printed, so that it can be sent as a specimen on application from intending subscribers.

Three Great Works of Reference

PUBLISHED BY THE MACMILLAN COMPANY

Dictionary of Architecture and Building

By RUSSELL STURGIS, Past President of the Architectural League of New York, author of "European Architecture," etc.

Vol. I. A—E.
Ready next week.
Price of set, cloth, **$20.**
in half morocco, **$30.**
To be completed in three volumes.

Over eighty of the widest international reputation as writers on architecture, art and archæology contribute to this first volume of the great work, which will at once stand as **one of the most important of modern works of reference, indispensable to any working architect,** which offers the last word on every important related topic—for example, selected at random, Acoustics, the Arch, its varieties, nature, and use, the Architect, his training, his position the nature of his duties and functions. Byzantine Architecture, Color in Architecture, Design, Electrical Appliances, Estimating, Etruscan Architecture, etc., etc., with such cross references as materially increase its convenience, and with a superb series of illustrations.

AUTHORITATIVE in origin, ILLUSTRATED most copiously; COMPLETE and in every way a PRACTICAL aid.

"Essentially American—wholly alive . . . of inestimable value."—Chicago Tribune.

Cyclopedia of American Horticulture

By Prof. L. H. BAILEY, Assisted by WILHELM MILLER and Many Expert Cultivators and Botanists. To be complete in Four Vols. Superbly illustrated.

Volume III. *Will be ready early in February.*
Cloth, Royal 8vo.
Volumes I. and II.
Each **$5.00** *net.*

"The information given is precisely what the horticulturist and general reader is desirous of knowing. . . . The publishers are to be congratulated upon the production of such an eminently practical work."—*Scientific American.*

"In range, treatment, and editing, the Cyclopedia appears to be **emphatically useful; . . . a work worthy of ranking by the side of the Century Dictionary.**"—*The Nation.*

"**It will probably never be superseded.** Recognizing its importance, **the publishers have given it faultless form.** The typography leaves nothing to be desired, the paper is calculated to stand wear and tear, and the book is at once handsomely and substantially bound."—*New York Daily Tribune.*

DIRECTIONS FOR THE CULTIVATION OF HORTICULTURAL CROPS, AND ORIGINAL DESCRIPTIONS OF ALL THE SPECIES OF FRUITS, VEGETABLES, FLOWERS, and ORNAMENTAL PLANTS IN THE MARKET IN THE UNITED STATES AND CANADA.

"Whether for learner or expert, there is no dictionary that offers such an immense array of information . . . a unique work."
—The Churchman.

Encyclopædia Biblica

A CRITICAL DICTIONARY OF THE LITERARY, POLITICAL AND RELIGIOUS HISTORY, OF THE ARCHÆOLOGY, GEOGRAPHY, AND THE NATURAL HISTORY OF THE BIBLE

Edited by **The Rev. T. K. CHEYNE, LL.D.,** *Canon of Rochester,* and **J. SUTHERLAND BLACK, LL.D.,** *Formerly Assist. Editor of the "Encyclopædia Britannica,"* and assisted by many contributors in Great Britain, Europe and America.

Volume II., E—K.
Early in February.

Volume I., A—D.
Super-royal octavo.
In Cloth, **$5.00** *net.*
Full Leather, **$7.50** *net.*

"And this initial volume is convincing testimony that they will do the work well and thoroughly. Of the fifty-three contributors to it there are few who are not widely known in the world of Biblical scholarship, and there is not one who is not an authority on the special topic which he discusses." —*The New York Tribune.*

"Laymen as well as professional scholars will find **it of valuable interest and use.**"
—*Chicago Evening Post.*

Comprehensive, yet concise; the latest views of leading scholars. With illustrations, maps, etc., etc.

Each is sold only on Subscription for the Complete Work. Address

ENGLAND.

Messrs. SOTHEBY, WILKINSON & HODGE, 13 Wellington Street, Strand, London, W. C., England, are instructed by the owner to sell by private treaty a well-known collection of Byron Relics and Byroniana. The collection includes most of the items of great interest and importance that have been procurable at Sales by Auction and privately during the last twenty years. It comprises personal relics, jewellery, miniatures, documents, and autograph and other letters, including:

The silver sword, in highly decorated scabbard, presented to Lord Byron in recognition of his services to the Greek nation, with dedication in Greek.—A small travelling case of knife, fork, spoon, etc., in leather case, with initial B and coronet.—A pair of small pistols, marked B and coronet.—A gold seal with musical box, engraved with arms of Lord Byron.—A gold bracelet containing miniature of Lord Byron, also a lock of his hair, together with other locks of Sophia Maria Byron, Francis Leigh, and Sir Peter Parker, Bart.—An ivory spill holder on stand, engraved "To my dear son, George Gordon Byron, 1795."—A large travelling flask, silver mounted, engraved arms, initial and coronet of Lord Byron, carried by him at the time of his death, when it passed into the possession of his cousin, Captain Hay. It was formerly the property of Lord Byron's sister, Mrs. Leigh.—A silver travelling inkstand, initial B and coronet, constantly used by Lord Byron.—A miniature, unmounted, in leather case, of Lord Byron's mother.—A carved horn snuffbox, with miniature of Lord Byron at the age of seven.—Lord Byron's marriage certificate.—A miniature of Allegra, supposed daughter of Lord Byron, with hair at back.—Portrait of "Ada," by Millard, signed and dated 1829, in pencil and water colours.—The marriage settlement by Lord Byron, executed by him, dated 30th December, 1814.—A letter from Mrs. Byron to John Hanson, dated October 30th, 1803, complaining that she cannot get Lord Byron to go back to Harrow, that he is in love with Miss Chavorth.—A letter from Augusta Byron (Lord Byron's sister) to Mr. Hanson, dated November 18th, 1804, as to what had best be done for the benefit of Lord Byron, and deploring the influence of Mrs. Byron.—A letter from Lady Holland to Mr. Hayward, dated September 28th, 1869, having reference to the Leigh and Byron scandal.—A letter from Pandra to Dimitri with reference to the sword presented to Lord Byron, mentioned above. —And many other items of value and importance, but too numerous to mention in an advertisement.

A rough list of the contents of the collection may be seen, and full particulars as to viewing and price may be obtained of **Messrs. SOTHEBY, WILKINSON & HODGE.**

The Most Charming Love Story of the Year

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, New York.

AMERICA: PICTURESQUE AND DESCRIPTIVE

By Joel Cook, Author of "England: Picturesque and Descriptive," etc. Illustrated with Seventy-five Photogravures from Original Negatives.

3 volumes, crown 8vo, cloth, full gilt, gilt top, with cloth jackets and in a cloth box, list price..... $7.50

"America: Picturesque and Descriptive" presents in an interesting form such a knowledge as the busy reader would be pleased to have in one comprehensive view of the history, geography, picturesque attractions, productions, peculiarities, and salient features of this great country, not only as a work of reference and a work of art, but as a book of readable interest as well. Especial care has been taken with the photogravures that illustrate it, and it is a sumptuous work of art as well as an entertaining and valuable work in the letter-press.

PALESTINE: THE HOLY LAND

By John Fulton, D. D.

Crown 8vo, cloth, gilt, gilt top, with 30 full-page photogravures and maps, list price.....$3.00

In our regular **PHOTOGRAVURE SERIES.** uniform with Cook's "America," "England," etc. It will fill a want that has long existed for a readable and compact as well as comprehensive volume upon the Holy Land. Dr. Fulton's reputation as a Biblical scholar insures the value of the book, and his terse and attractive writing makes a very readable book.

IN THE PALE

Stories and Legends of the Russian Jews. By HENRY ILIOWIZI. Illustrated.

12mo, cloth, list price.....$1.25.

THE WEIRD ORIENT

By Henry Iliowizi, Author of "In the Pale." Illustrated with a photogravure and half-tones.

12mo, decorative cloth, list price..... $1.50

These are Eastern tales, gathered by the author during a lengthy residence in the Orient, and contain some new and striking legends that have never before found their way into print. Among them is a curious and very ancient version of the legend of the Wandering Jew, that will be entirely new to the reader, although some slight allusions to it are to be found in the Koran.

"The tales have all that fascination that Eastern literature has upon the Western mind, and those readers who have forgotten their realistic surroundings in the 'Arabian Nights' will be glad to meet with this book." *Literary World* (London).

RICHARD HENRY STODDARD says: "Readers are not likely to require any guarantee of their authenticity, which is unmistakable, they reveal such knowledge of early Jewish and Moslem traditions and superstitions."

"An exceedingly brilliant book."—*N. O. Picayune.* "Interesting, poetical and fascinating."—*Boston Globe.* "The book is well illustrated. The legends are in themselves of unusual interest, and are set in beautiful language."—*Evening Telegraph*, Philadelphia.

FAITHS OF FAMOUS MEN

By John Kenyon Kilbourn, D.D.

Large crown, 8vo, cloth, gilt top, list price.....$2.00

This important work comprises, in their own words, the religious views of the most distinguished scientists, statesmen, philosophers, rulers, authors, generals, business men, liberal thinkers, leaders of religious denominations, etc., etc. These have been taken from published works, from letters, and in some few instances—as with ex-President Cleveland, who personally wrote what he wished included; or the Rev. Dr. Storrs, who, before his death, selected what he wished to represent him—the selections have been made by the writers themselves.

HENRY T. COATES & CO., Publishers, Philadelphia

LONGMANS, GREEN, & CO.'S LIST.

THE ATHENIAN DRAMA

A SERIES OF VERSE TRANSLATIONS FROM THE GREEK DRAMATIC POETS, WITH COMMENTARIES AND EXPLANATORY ESSAYS, FOR ENGLISH READERS

Edited by GEORGE C. W. WARR, M.A.

I. **THE ORESTEIA OF ÆSCHYLUS.** Translated and explained by GEORGE C. W. WARR, M.A., Ex-Fellow of Trinity College, Cambridge, Professor of Classical Literature in King's College, London.

Illustrated by 13 plates, in photogravure and half-tone, from antique sculpture and painting. 276 pages, cloth, gilt top, $2.00.

*** Other volumes are in preparation. A descriptive circular of the Series, with a specimen page, will be mailed to any address upon request.*

". . . In our opinion Professor Warr's version is unique in this, that it will give to the reader who knows no Greek at least some sense of what Æschylus is like. . . . As to the accuracy of the translation, Professor Warr's reputation stands too high to need vouchers. But in passages he is more than accurate; he is illuminating. . . . The introduction, brief as it is, will be of value alike to scholars and to laymen for the study of the great trilogy in which the *Agamemnon*, great as it is, makes only the superb prologue."—*The Spectator.*

SURVEYS, HISTORIC AND ECONOMIC:

Essays and Reviews. By W. J. ASHLEY, M.A., Professor of Economic History in Harvard University, Author of "English Economic History and Theory." With an Analytical Table of Contents. 8vo, pp xxvii.-476, $3.00.

"All the essays are distinguished by that lightness of touch which is always characteristic of Professor Ashley's treatment of economic subjects, and which makes his writings invariably readable. At the same time the volume shows singular learning, while each essay is a piece of sound, conscientious work."—*Scotsman.*

"A more interesting and charmingly written collection of essays and reviews on economical, and what may be called historico-economic subjects. The style in which Professor Ashley conveys his views constitutes one of the attractions of the volume."—*Westminster Review.*

"The first volume of this pretentious, unique, and important work is before us, and the impression one receives in examining this initial number is that the work when completed will be one of the most valuable publications of its nature that has been attempted in many years, completely covering, as it does, the whole range of medicine and surgery."—*Journal of American Medical Association, Chicago.*

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 24, 1901.

The Week.

The passage of the Army Bill by the Senate on Friday probably insures its signature within a few days, and gives the War Department the forces it has asked for, more than a week after the date set by Secretary Root as the last one after which its provisions could be carried out before June 30. It is admitted that the volunteers cannot be brought home in time to be mustered out before July 1, and that several regiments will have to be disbanded in Manila if the existing army law is to be complied with. As a matter of fact, the War Department is face to face with the most difficult administrative problem since the organization of the volunteer armies in 1898, and the limited time for its solution only complicates matters. Only one of the twenty-six regiments to be brought back from the Philippines has thus far sailed from Manila, and the second is not to leave before January 25. After 9,000 men have been sent home, there are to be no further embarkations at Manila until the arrival of the first of the new regiments from home, which cannot be before April 1. We have already pointed out the fact that these new regiments of regulars will not be troops in the real sense, but merely undisciplined mobs of recruits. Under these circumstances, Gen. MacArthur is hardly to be congratulated on the prospects for an efficient garrison during the next year.

It is reassuring to learn from Gen. MacArthur's dispatch of Saturday that there is no excessive drunkenness among his troops, and that they are efficiently carrying out their odious task of imposing a hated government upon an unwilling people. At the same time it would have been an unheard-of thing in military annals had Gen. MacArthur replied to Gen. Corbin's inquiry: "The army which I have the honor to command and for which I am responsible to the President, is wasted by drunkenness and disease, is badly disciplined, and quite inefficient." Without meaning to reflect in any way upon Gen. MacArthur, or to challenge his statement, it is none the less a fact that no officer has yet commanded an army who would be willing to give it a bad reputation in response to an inquiry from the War Department. Gen. MacArthur's reference to the effect of drunkenness in Manila, and to the condition of his army, does not answer Senator Teller's charge that the Americans are "cursing the Filipinos with the curse of intoxication," but rather goes to confirm it, since he points out that a single drunken soldier is very noticeable in Manila, and particularly among civilians. Why? Because until the arrival of the American soldiers drunkenness was absolutely unknown to the natives. As to the houses of prostitution, Gen. MacArthur's reply is a plain quibble. They are not "licensed, protected, or encouraged," he says. But he does not deny that they exist with the knowledge of himself or of his officers, and that they are inspected by his medical officers. He could not deny this, because of the printed testimony in the shape of medical certificates with official signatures, in the possession of the *New Voice* and to be found elsewhere. From a trustworthy American who has seen one of these Government resorts in Sulu, we learn that it was set up by the local commanding officer with such absolute secrecy that almost every officer, except one or two in the department, could swear to total ignorance in the matter. Least of all would Gen. MacArthur know anything about this far-off institution.

The Filipino petition received swift confirmation in the extraordinary letter from Manila which the *Evening Post* printed on January 16. It gave, from a source of unquestionable authenticity and authority, the real army view of the situation in the Philippines. This is, in a word, that the islands are as far as possible from being conquered or submissive; that every Filipino hates the Americans more bitterly than he ever did the Spaniards; that all the people sympathize with the insurrection; that at least 100,000 men will be needed to complete the conquest, which is to be wrought out by making of the archipelago a hell, ruthlessly killing every man, woman, and child who refuses to accept our rule. The very cold-bloodedness with which this atrocious policy was mapped out by the *Evening Post's* correspondent witnesses to the fact that it comes from a man who is in touch with war as a trade. If the army is to do the work, put it in a position to make a complete butchery and call it peace. That is the upshot of the letter. That, we believe, is what the highest military authority in the Philippines is telling the President of the United States. The policy of extermination is clearly upon us.

Senator Spooner made an interesting and important suggestion during the debate on the Army Bill—that the time has not yet arrived for Congress to legislate upon the Philippine question, that he did "not think we shall be ready until we have sent a joint committee of Congress to investigate the situation of the people in the islands," and that he has undertaken to frame a resolution providing for such a committee, which he hopes to see passed before the end of the present session. The chief significance of this is the concession, by one of the most prominent supporters of the Administration, that light is needed upon the problem, and that the Republican party cannot afford to confront the long Congressional recess from March to December without doing something that at least promises to illuminate the situation. This is very different from the old assumption that the state of things in the Philippines was perfectly well understood in Washington, and that all our Government had to do was to put down a little insurrection on the part of a fraction of a single tribe. The idea of sending a Congressional committee of investigation to the Philippines is an excellent one, provided that fair-minded men are sent, and that they go to the bottom of the question. The country never profited much from the trip of Senator Beveridge, and it will do little good to send over politicians who are committed to holding the islands permanently, and who would bring back only such arguments in support of that policy as they could pick up in Manila. What is needed is a thorough inquiry by men like Mr. Spooner, who, it will be remembered, in a speech last May, held out "self-government *or independence*" as the future for the natives, and who has never abandoned the idea that the United States may ultimately withdraw from the islands.

Arkansas imitates Missouri in the passage by the lower house of its Legislature of a resolution expressing sympathy with the Filipinos in "their heroic struggle for freedom." Why not? Americans have always sympathized with people fighting for liberty. Resolutions of the most ardent nature have been passed by our municipal and State bodies, and by the national Congress itself, for the purpose of giving aid and comfort to Greeks and Hungarians, South Americans and Irishmen, Cubans and Boers. Why should we draw the line at Filipinos if their cause is as good? The fact that our Government is the one which is denying them self-government has nothing to do with the principles of the case. Liberty is liberty, and oppression is oppression; we are bound to sympathize with the one and condemn the other, without fear or favor. Of course, in sympathizing with the Filipinos we tacitly express our determination to do all that we can to make our Government alter its policy towards them. Expressing sympathy is one effective way of bringing about such

an alteration. The fact that State Legislatures are now passing such resolves, and that Senators are using greater and greater plainness of speech at Washington, is a sign of veering public sentiment, and an augury, in so far, of a change of policy by the Administration.

It is undoubtedly a legitimate *tu quoque* to thrust now in ex-President Harrison's face, as is being done with so much glee, his own treaty of Hawaiian annexation. In that he was clearly proposing to do on a small scale what he now condemns when attempted on a large scale. But we presume that Gen. Harrison will say, as he did to the alarmed beet-sugar grower who wrote that his business would be ruined unless there were a duty on Porto Rican sugar, that all these personal considerations "seem to me to be irrelevant in a Constitutional discussion." If he and Senator Hoar have now seen whereto the Hawaiian beginnings have grown, and have changed their minds on the whole subject of a colonial policy, their credit is the greater for frankly avowing it. At any rate, it is their present arguments, not their past actions, that must now be considered. We feel the freer to say this since our feet were never for a moment taken in the Hawaiian snare. We condemned President Harrison's annexation treaty, as not only concocted with indecent haste, but as in its terms inconsistent with either "democracy, self-government, or home rule."

Ex-President Cleveland has followed ex-President Harrison in addressing a solemn warning to his countrymen against departing from the ancient landmarks of the republic, and especially against indulging in the spirit of conquest and aggression. Nothing could be more impressive than his speech at the dinner of the Holland Society. Some of his words were esteemed by his hearers too pessimistic, and were received with expressions of dissent, although the speech as a whole was vigorously applauded. He said, among other things: "Our country will never be the same again; for weal or woe we have already irrevocably passed beyond the old lines." But he added immediately, "the country will in some sort be saved." The question how it should be saved he did not discuss, except that it must be by means of the conservative spirit which we have inherited from our ancestors on the other side of the water. To these admonitions we give our hearty adhesion, though one might say Mr. Cleveland, when he sent his Venezuela message to Congress, came somewhat short of the spirit of conservatism which he now so highly values. But he has rendered greater services to the country than any other President since Lincoln, and it is to be hoped that he may live long to speak words of wisdom to his countrymen like those which fell from his lips at the Holland dinner.

Quay's triumphant return to the Senate is the renewal of Pennsylvania's disgrace. Fraud and perjury are written all over his reëlection. Seven Republican members of the Pennsylvania House voted for Quay, although they had given a signed pledge never to vote for him, and despite the fact that they owed their own election to that pledge. But for the treachery of these men, Quay could not have succeeded. So far as the voters of Pennsylvania were concerned, they had pronounced against Quay. In spite of the awful drag of Bryanism, they had elected a Legislature containing a clear and pledged anti-Quay majority. By what forbidden arts this majority was turned into a minority, ask common rumor at Harrisburg. One thing is evident, Quay's victory is the victory of what are euphemistically called "the commercial elements" of Pennsylvania. By this phrase is meant the large corporate interests that habitually buy legislation at Harrisburg and Washington. Quay is their adroit and useful tool, and to Quay, therefore, they supply the sinews of war. A man who can spend $200,000, as he did a few years ago, in a mere contest over a party State chairmanship, is a formidable opponent in these days of what ex-President Harrison describes as a "commercial carnival" in politics. Let it be borne in mind, then, that the real authors of Pennsylvania's disgrace, of Philadelphia's shame, are the social respectabilities, the whited sepulchres, who in secret strike hands with Quay and put more money in his purse in order that he may so manipulate legislation as to put more money in *their* purse. The transaction we are witnessing is really very simple. Pennsylvania corporations have hired a lobbyist and sent him to Washington. It is true they call him a United States Senator, and pretend that he gets his commission from the Legislature; but the whole thing is merely a financial investment.

To turn from Pennsylvania to Massachusetts is to turn from the money view of politics to the intellectual and moral. Senator Hoar's reëlection, by the vote of every member of his own party in the Legislature, and of several Democrats who delighted to honor him, shows what courage and character can yet do. He had boldly antagonized Republican policy and a Republican President when he found them in opposition to the fundamental principles of liberty and justice, but such had been the disinterestedness of his attitude, such the intrepidity of his utterance, so noble his scorn for the baser arts of the mere time-server, that the heart of Massachusetts, as of the nation, could not but go out to the gray and eloquent old man. "Represent us while you live, and let your memory honor us when you are gone," is what the people of Massachusetts, irrespective of party, have said to Senator Hoar. We are sure that he will receive his new commission as a fresh command to battle for the victims of our oppression, and that he will continue to show himself head and shoulders above his colleagues in the Senate, not only in intellect and lofty speech, but in that burning love of freedom and self-government of which he, as a type of an elder day, is so well fitted to renew the vision in an age gone blind with greed.

In removing Col. Burt from the Civil-Service Commission, and substituting a man who has never shown any interest in the merit system, Gov. Odell has made a mistake so inexcusable that the attempted defences only aggravate the outrage. We are told that the Governor removed Col. Burt, first of all, because he considered him too old to serve longer. But the sufficient answer to this is found in the accompanying statement of what is the simple truth, that he has done most of the work; as it was well put by a correspondent, he has directed the affairs of the Commission with little hindrance from the other two members. This is precisely what was to be expected and desired from a board of three men when one of them had for thirty years studied theoretically and applied practically the system which they were to administer, while the others were new to the task. It is further explained that Gov. Odell came to the conclusion that Col. Burt was "too much of a theorist and too little of a practical worker." The truth is that it is the practical side of his work which has been most conspicuous, and never more so than since the new Civil-Service Law, passed in the first year of Roosevelt's Administration, went into effect. Everything indicates that Gov. Odell removed Col. Burt because he wanted the representative of the Democratic party to be a man who takes the machine view of the civil service.

Three bills have been introduced in the Assembly, which have the Governor's support, to change the tax laws of the State. They are, first, a bill taxing corporations generally at the rate of 1¼ per cent. annually on the maximum of capital stock employed; second, a bill taxing insurance companies of all kinds 1 per cent. on all capital, surplus, or reserve fund, in addition to the tax now imposed of five-tenths of 1 per cent. on the gross amounts of premiums; and third, a bill taxing savings banks 1 per cent. on their surplus. It is believed that the three bills, if enacted, would add $5,700,000 to the State revenue. Two other measures are in contemplation, one to tax trust companies 1 per cent. on their surplus, and the other to

tax banks other than savings banks at the same rate on their surplus. It is said that if these five bills are passed, and if the Governor's recommendations for reducing expenses are carried out, the State will have sufficient revenue to dispense with the general property tax, which is mostly a tax on real estate, and can adopt the rule of local option. This means that the counties will no longer be required to contribute a lump sum to the State, as fixed by the Board of Equalization, but that each county can adopt such system as it chooses to raise its local revenue, provided the same is not in conflict with the laws of the State. This is the desideratum to which all reform in State taxation now tends.

The investigation into the practice of hazing at West Point which has been going on for some weeks, first by a board of army officers, and then by a committee of Congress, has reached a most satisfactory conclusion. Just as the second body of investigators were closing their work on Saturday evening, the chairman of the House Committee was handed this document, which the Superintendent of the Academy had received from the Presidents of the four classes, signing for their respective classes:

"Having been cognizant of the manner in which the system of hazing as practised at the Military Academy is regarded by the people of the United States, we, the cadets of the United States Military Academy, while maintaining that we have pursued our system from the best motives, yet, realizing that the deliberate judgment of the people should, in a country like ours, be above all other considerations, do now reaffirm our former action abolishing the exercising of fourth-class men, and do further agree to discontinue hazing, the requiring of fourth-class men to eat anything against their desire, and the practice of 'calling out' fourth-class men by class action, and that we will not devise other similar practices to replace those abandoned."

The best thing about this action is the ready yielding to public sentiment. One great trouble about West Point has been that its graduates, scattered as they have been for the most part over the country, and few of them gathered in any one place, have not been able to bring criticism to bear upon the Academy as the graduates of an ordinary college could do. Nothing has done more to end hazing in civil institutions than the fact that the students were made to understand that former students condemned it and thought that it hurt the standing of their alma mater. As a Government institution, however, West Point is peculiarly amenable to the public sentiment of the country, and that sentiment has found clear and emphatic expression during the past month. It is the simple truth that "the deliberate judgment of the people should, in a country like ours, be above all other considerations," and it is highly creditable to the cadets that they frankly admit this and act upon it.

The circumstances of the Leavenworth (Kan.) lynching last week are most disheartening. The scene was a large city of the "free-soil" State. The sheriff, intimidated by the mob, actually brought the prisoner from the comparative safety of a country penitentiary to a city jail, having previously refused to avail himself of a military force urged upon him by the Governor. The lynching itself was of the most brutal sort. Five thousand maddened people watched the scene, and children fought for the charred fragments of the wretched victim—as "souvenirs." The city of Leavenworth can no more be the same after such an outbreak than can a man who has once "seen red" and killed his fellow. This whole lynching business is, in fact, not to be weighed by a few miserable lives blotted out, but by the accompanying brutalization of a people. The spread of lynching—a few weeks ago in Colorado, now in John Brown's State—shows how little competent it is for the North longer to take the pharisaical attitude toward the South in this matter. The single gleam of consolation is the conduct of Gov. Stanley, who, after his efforts to prevent the lynching were frustrated by the pusillanimity, or worse, of the local sheriff, took the most vigorous measures to secure the arrest of the lynchers.

"I believe in the wisdom and justice of the merit system." Such is the emphatic declaration of the new Governor of Indiana, and it is the more significant because Mr. Durbin has always been a practical politician, and describes himself as "a partisan of somewhat inflexible temperament." Nevertheless, so successful has proved the experiment of conducting the State's correctional and charitable institutions on a non-partisan basis during the past six years that Gov. Durbin has "become convinced of the practical utility of the methods now employed," and announces that he "can never assent to the endorsement of any proposition purposing a backward step" in this regard. Nor does he stop here. "I am frank to say further," he adds, "that politics should be eliminated from the public schools, and that the merit system should be made legally applicable there." There could hardly be a stronger tribute to the value of the merit system than so thorough-going a committal to it on the part of a practical politician such as the new Governor of Indiana has always been.

It is gratifying to see that the English press is coming to take a more favorable view than heretofore of the Senate amendments to the Hay-Pauncefote treaty. The truth is that it was the form rather than the substance of the amendments that produced a bad impression on the other side of the water. If, after the treaty had been signed, the proposal had been made by us to substitute it for the Clayton-Bulwer treaty instead of making it additional or supplementary thereto, it is more than probable that the British Government would have given its assent. The present difficulty lies in the method which the Senate adopted of getting rid of the old treaty—a method savoring of force rather than of persuasion and negotiation. This is a misfortune, but it is due to the constitution of the treaty-making power, which, on our side, calls for the coöperation of a large body of men no one of whom is charged with any special responsibility. We must not be surprised if people on the other side of the water take offence at the abrupt method which we have employed in this instance. Nor must we be impatient if time is needed to wear away the bad impression that has been produced in British official circles. It remains true, nevertheless, that the great principle for which England has contended from the beginning—that the canal, by whomsoever constructed and owned, should be open to the ships of all nations on equal terms—is preserved, and that no fortifications can be erected commanding the line of the canal or its entrances. Having secured the adoption of this principle on the eve of operations for building the Nicaragua canal or acquiring that of Panama, it would be a regrettable error of judgment if the whole question were again left at sixes and sevens by the failure of the present treaty.

The programme of the first Ministry of the new Australian Commonwealth, as outlined by Premier Barton, presented several features of interest. He urged that the first Parliament be not convened in either of the provincial capitals, showing the fear of sectional influence which drove our own Government from New York and Philadelphia to an unpromising swamp by the Potomac. It was to be expected that the policy of the new federation should be strongly protectionist, but it will bring disappointment to England that Premier Barton was noticeably cold on the question of a British preferential duty, hinting that some similar concession would be expected from the mother country. It was in line, too, with the traditional policy of the Australian colonies that the revenues of the central Government should be raised by indirect, those of the State Governments by direct taxation. More or less Socialistic tendencies appear in the proposal that the Commonwealth buy and operate all the railways and legislate for arbitration and conciliation of labor disputes. Finally the Premier promises a bill for the establishment of womanhood suffrage. This ambitious and often radical programme quite confirms the general feeling that the Australasian colonies of Great Britain are coming to be the experiment stations of modern political and social theory.

THE QUEEN'S REIGN.

In Greville's Memoirs—the publication of which gave as much offence at Court as did Thackeray's lectures on "The Four Georges"—it was written at the time of the accession of Princess Victoria that "nature has done little for her, but fortune much." This probably referred to the simple matter of personal beauty, in any case less necessary for a Queen than for a mere woman. If Greville's remark showed that he thought lightly of the Queen's mental parts, it would be fair to set over against it Tennyson's opinion, forty years later. The poet found in the Queen, besides a certain sort of "stately innocence," a marked "breadth of mind and wisdom." The only test open to us now is the public record of Victoria's reign. She certainly will never rank as one of the sovereigns whose personal ascendency was overpowering. Not with a Catharine or Maria Theresa, or even an Elizabeth, is it natural to compare her as a ruler. We cannot even say of her, as Bossuet said of another Queen of England, that "any other station than a throne would have been unworthy of her." Queen Victoria's finest qualities were womanly before they were royal; and it is a woman's tact and grace, silently influencing the policy of a mighty empire through an unprecedented reign, which we chiefly admire in her in her capacity as sovereign.

She was a Constitutional monarch. In that limitation we see the check which would have been put upon even a more masterful character than hers, if it had occupied the English throne. In Great Britain the Queen reigns, she does not govern. As for Victoria, she was fortunate in having as her first Prime Minister and Constitutional tutor in one, Lord Melbourne. That statesman's ready profanity—characteristic of the age when everybody damned everybody's eyes—and other personal peculiarities have loomed so large in story and legend as to obscure the real sagacity and accomplishments of the man. In reality, no shrewder or happier adviser of the young Queen could have been imagined. With tact equal to her own, and with firm decision always in the background for use when necessary, he discharged with great skill the difficult task of inducting a girl into the duties of Constitutional Queen of England. Perhaps his sharpest collision with her was on the point of the title which her husband, Prince Albert, was to be given. According to Lord Shaftesbury (reported by Mr. Russell), the Queen strongly wished the Prince to be made King Consort by Act of Parliament. Melbourne evaded the issue as long as possible, but her Majesty finally insisted upon a categorical answer. "I thought it my duty to be very plain with her," said the Premier afterwards. "I said, 'For God's sake, let's hear no more of it, ma'am; for if you once get the English people into the way of making kings, you will get them into the way of unmaking them.'"

Victoria's relations to her long succession of Prime Ministers would furnish an interesting theme for a large chapter in the history of her reign. That she was not at all partial to Mr. Gladstone is well known. "He talks to me as if I were a public meeting," she is reported to have said. Her aversion to summoning Mr. Gladstone in 1892 to form a Ministry, with her futile efforts to induce other Liberal leaders to undertake the task, was perhaps the severest strain to which she ever put the Constitutional prerogatives of the Crown. With Disraeli she was on the most cordial terms, even of personal and almost intimate friendship. He was an adroit courtier, and said in the last year of his life to Matthew Arnold, "Every one likes flattery; and when it comes to Royalty, you should lay it on with a trowel."

In one great department of government a great part is yet left to English sovereigns. We mean foreign policy. In this the Queen's influence was undoubtedly both powerful and most beneficent. From her earliest years she gave unremitting and intelligent attention to all the phases of England's world-wide international relations. Foreign dispatches and blue books found in her a regular and attentive reader. She had in addition the great advantage of hearing, in confidential conversation with the leading actors in great events, first-hand accounts of the progress of negotiations, of crises impending, of dangers to be skirted. More than one member of the English diplomatic service, admitted to the Queen's presence, has been astonished at the extent and minuteness of her information. Sir Bartle Frere, for example, before going to South Africa in 1877, had an interview with the Queen, and was as much amazed as delighted to find how closely she had followed the official correspondence.

That the Queen's one great hope and almost passion, so far as she could exert her influence in foreign affairs, was to avoid war, is testified to by many witnesses. Twice, and only twice, in her reign did a great foreign war come in spite of her efforts to prevent it; and if the terrible losses and sufferings of the Crimean war—now admitted to have been needless and fruitless—gave her in early life a horror of appeals to arms, the pitiful tragedy of the South African conflict may well be believed to have hastened her end. In other emergencies, the Queen's love of peace was more effective. She is thought to have done more than any one else to prevent the threatened war between Germany and France in 1875. Her bearing at the time of the *Trent* affair in our civil war is well known. Like Lincoln, she moderated the tone of the dispatches of the Ministers directly in charge of the negotiations, and thus helped to avert the awful calamity of war between England and the United States. This high and noble exertion of the power of the English Queen will be in the eyes of posterity one of her chief titles to affectionate remembrance and to fame.

It is a venerable figure which the world has watched going down to the grave. To say that in America the death of no other foreign sovereign could excite the sympathetic concern—almost a sense of personal loss—which is perceptible in all classes, is faintly to suggest the place which Queen Victoria long held in public esteem in this country. It is not simply ties of race and speech that make the difference; not alone the glamour and almost mythic glory which necessarily gather around a reign so beyond all precedent; it is the womanly virtues, kept clear and shining in exalted station, to which we pay tribute. We may make our own the words of the Bishop of Meaux, respecting the Queen of France, and say of Queen Victoria that "God raised her to the summit of human greatness in order to make the purity and constant orderliness of her life the more conspicuous and instructive." Thackeray paused, in the hard words which truth compelled him to utter in regard to the earlier monarchs of the House of Hanover, to speak in honest praise of the "good life" and "unsullied virtue" which all acknowledged in the "inheritrix of the sceptre" of the Georges. She was granted, as the Canon of St. Paul's prayed that she might be, in the service following her accession, a "long sojourning upon earth," and passed from it secure in the affection and memory not only of her own loyal subjects, whose attachment to her has been something wonderfully personal and passionate, but of alien peoples and distant lands.

MASSACRES BY CHRISTIANS IN CHINA.

Six months ago the press of the civilized world was filled with gruesome stories of the massacre of Christians by Chinese; to-day, Christendom is, or ought to be, standing in shame and confusion of face before the fact that Christian troops in China have surpassed the very Boxers in cruelty, in outrage, in rapine and ravage. Soldiers' letters and even some admissions by officers high in command have reached the public from time to time, and prepared the general mind for the horrors that were certain to be brought to light later. But even the most apprehensive could scarcely have been expecting such a fearful tale of wreck and slaughter as is given us in this month's English magazines, by two eye-witnesses whose testimony cannot be disputed. One of them is Sir

Robert Hart. He declares, in the *Fortnightly*, that "the days of Taepingdom, when native warred with native, showed nothing worse" than the atrocities committed by the allied forces in China.

The most detailed account, however, is that in the *Contemporary*, by Dr. E. J. Dillon. Readers may remember him as the man who, six years ago, was giving to the world the full story of the Turkish massacres in Armenia. He speaks thus as an expert in all matters of fiendish cruelty. Certainly no one but a man with nerves of steel could have witnessed the sights which he beheld in China and come away sane. His reports are too horrible, in their darkest features, to be reprinted. We limit ourselves to one or two of his less lurid pictures. Having one day to step over eight human bodies lying in an alley in Tungtchau, Dr. Dillon asked a non-commissioned officer why these Chinamen had been killed:

"'Eight?' he answered; 'there are seven more down there. What they did? All they could. They actually did nothing. Ask what they would have done, and I shall answer, "Arson." They were suspected of an intention to set fire to houses here.'"

This was but an example of the way in which thousands of men, women, and children, throughout three Chinese provinces, were butchered on suspicion, or out of mere whim. The rivers were choked with corpses. The dead lay in heaps in the burned towns. Neither age nor sex was spared. Dr. Dillon's pages show that all the wholesale murders and tortures of history—the massacre of the innocents by Herod, the Dragonades, the slaughter of the Waldenses, even the glutting of Turkish fury in Bulgaria and Armenia—must yield in completeness of horror to the work of the soldiers of Christian nations, who had gone to China for the sake of rebuking heathen cruelties!

On one aspect of Dr. Dillon's revelations we can touch but shudderingly as we pass. This is the frightful extent of the frightful crimes against Chinese women. Some of the specific cases he gives would be incredible, did he not cite names and places, and declare what his own eyes had seen. We seem to be reading of unspeakable monsters. After one piteous tale of mingled outrage and bloodshed, Dr. Dillon adds:

"I knew of others whose wives and daughters hanged themselves on trees or drowned themselves in garden wells, in order to escape a much worse lot. Chinese women honestly believed that no more terrible fate could overtake them than to fall alive into the hands of Europeans and Americans. And it is to be feared that they were right. Buddhism and Confucianism have their martyrs to chastity, whose heroic feats no martyrology will ever record. Some of those obscure but right-minded girls and women hurled themselves into the river, and, finding only three feet of water there, kept their heads under the surface until death had set his seal on the sacrifice of their life. . . . But a large number of ill-starred women fell alive into the hands of the allied troops. I saw some of them in Pekin and Tungtchau, but already dead, with frightful gashes in the breast, or skulls smashed in, and one with a horribly mutilated body. There is a lady missionary in Pekin who, in company with a female colleague, busied herself, to my knowledge, for months in shielding Chinese women and girls from being raped by Christian and European soldiers, and the work was anything but easy, though I have reason to believe that it has proved eminently successful. Even in the broad daylight soldiers hung about the Refuge and employed various devices and tricks to get hold of the women, whom they ought to have been the first to protect."

To come down, after this, to mere looting is a comparative relief. In the systematic stealing the soldiers of all nationalities took a part. The Japanese officers were the first to get their men in hand and repress and punish looting; next in order of merit came the Americans. But the robbery was wholesale and unblushing. Writing of what he saw in Pekin, Sir Robert Hart says that "even some missionaries took such a leading part in 'spoiling the Egyptians' for the greater glory of God that a bystander was heard to say, 'For a century to come Chinese converts will consider looting and vengeance Christian virtues!'"

We are glad and proud to say that Dr. Dillon exonerates American troops from anything but a minor and sporadic share in the atrocities. Indeed, he says that, so far as he knows, "no officers or soldiers of English or German-speaking nationalities have been guilty of the abominations against defenceless women." This agrees with the accounts of Japanese newspaper correspondents in China, who placed the American detachment first (after the Japanese) in point of discipline and good behavior. Dr. Dillon is of the same mind as other impartial observers in regard to the Japanese. They were, he says, "the only Power among the allies who understood the natives, gained their confidence, restored perfect order, and reëstablished the reign of law." This was heaping coals of fire with a vengeance upon the heads of those Christian nations which were exclaiming with horror at the Japanese barbarities at Port Arthur! Japan might well leave the primacy in wanton bloodshed and beastly crime to the so-called Christian Powers.

What is the moral of all this? The familiar old one that war is hell, and that men who engage in it tend to revert to the nature of devils. Sir Robert Hart remarks that "the warriors of this new century can be as brutal, with all their wonderful discipline and up-to-date weapons, as were ever the savages of earlier times with tomahawk, boomerang, or assegai." This is one thing that the Chinese experience teaches. War is the unchaining of the brute. Kipling's barbarous praise of war has its proper commentary in these tales of massacre and lustful cruelty which are putting Christian countries to the blush. The ideal which he held up before English youth, in 'Stalky & Co.,' was that of letting loose well-drilled men "on the south side of Europe, with a sufficiency of Sikhs and a reasonable prospect of loot." Well, he got his Sikhs loose in China, and American soldiers, Dr. Dillon tells us, and we are glad to learn, shot them down for violating helpless Chinese women.

The whole record has not yet leaped to light. Gen. Chaffee's dispatches are evidently too plain-spoken for the War Department to think it prudent to publish them. But enough is known to make it certain that Christendom has bettered the instruction of the Boxers, and has no right hereafter to cast a stone at the Chinese, or any other dwellers in the habitations of cruelty.

THE DISMALER SCIENCE.

Political economy has suffered much reproach for its figment, "the economic man." That shape of dread was, in reality, a perfectly legitimate and sound invention. Huxley rightly put it on a par with a scientific hypothesis, as an aid to analysis and investigation. But there was great confusion about it in the popular mind. To describe minutely how a perfectly selfish man would act was taken to mean that in that way all men ought to act. Hasty and illogical writers cried out with horror that economists were ruling out all the nobler qualities of human nature, and, by their supposition of a man actuated only by material self-interest, were lending their authority to the screwing down of wages, the grinding of the face of the poor, and the adoption of a hard-and-fast law of supply and demand, in place of the Golden Rule, as the true norm of conduct. It was political economy, thus conceived (*mis*conceived, of course), that Carlyle in 1850 called, "by way of eminence, the *dismal science*."

All this is an old story, and these misunderstandings no longer vex instructed people; but the supposed doctrine of the economists has, strangely enough, become the avowed principle of mighty nations. The fictitious dismal science of industry and trade has been taken over and made a real and dismaler science in the realm of national life and activity. Read Chancellor von Bülow's frank avowals before the Reichstag. He was speaking of the unwillingness of the German Government to receive President Kruger, and said that the question whether the Boers were right or wrong had nothing to do with the case. "I cannot conduct foreign policy from the point of view of pure moral philosophy. It is not ours to ask which is right and which is wrong. The politician is no judge of morals; he has solely to maintain the interests and rights of his own country." Is not that the true Gradgrind note? Could the "economic man," made Chancellor and set to rule over a mighty empire, more cynically avow selfishness to be the end and standard of

national policy? No wonder that the venerable Professor Mommsen felt indignation burning hot within him at Von Bülow's light dismissal of a world-injustice (*Weltunrecht*), and wrote to the Berlin *Nation* to protest that the possibility of Germans going over to such an ignoble policy was "the wildest of wild dreams."

Of course, it is possible to quibble over the word "interests" in the question of international ethics, just as it is in the utilitarian philosophy. As it can be maintained that it is "useful" for a man to be unselfish, high-minded, generous, brave and kind, so it can be argued that the true "interests" of a country require her to sympathize with liberty, to aid oppressed peoples, to preserve high political ideals at home by admiring and assisting them abroad. This is possible, but it is not the fair intent of what Chancellor von Bülow said and was understood to mean. He made a stark affirmation of the supremacy of selfish material interests as the true guide of the statesman in all international relations. In what way can I make the most money, get the most land, obtain the most advantage over the weak, and most ingratiate myself with the strong? That, according to the German Chancellor, is the only question which the head of a nation needs to ask. Given the answer, the rule of conduct is given. And in this, of course, he was but saying what Lord Salisbury says, what President McKinley acts upon though he may be ashamed to say it.

In other words, according to the avowals and the acts of three of the great Powers of the world, diplomacy is the true dismal science—far less a "gay science" than political economy ever was. We are to regulate our conduct towards other nations according to the ethics of the huckster. Making money is the only test of right action. Cheating somebody is the only virtue. Cozening a weak people out of their land is the only success. Great Britain in South Africa, Germany in China, and the United States in the Philippines are the great exemplars of this kind of international morality. Their statesmen have taken an exploded and discredited doctrine of private morality, and made it the regulative spring of public morality. Of course, they cannot be as honest about it as Machiavelli was. They have to mix a little hypocrisy with their brutality, and pretend that they are acting for the good of the annexed populations. Saying nothing about the hypocrisy, we may affirm with Leslie Stephen that, looking at the facts, "while the benefit is doubtful, the admitted evil is undeniable and enormous."

One such evil is unquestionably the terrible reaction which man or nation suffers that falls away from high ideals. In this sense there is a solemn truth in what Mr. Cleveland said respecting our long Philippine injustice, that, after it, "our country will never be the same again." We may yet right the wrong; we may still make a moral recovery; but we shall have lost something never to be regained. We have made the dreadful mistake of

> "——supposing
> That freemen may like bondsmen kneel and truckle,
> And then stand up as usual, without losing
> An inch of stature."

We are already experiencing some of the results of a national policy of sheer selfishness and greed. The watchwords of liberty stick in our throats. The old generous cries of encouragement to men struggling to be free, die on our lips. Our public oratory rings more and more of the guinea. National greatness is recorded not in lyric or history, but in a ledger. We have become subdued to the grovelling standard of national morality which we have adopted, and are Wordsworth's "selfish men" in a selfish nation. The only hope is that our shamefaced attitude toward Boer and Filipino may speedily convince us that a dismal science of international action makes dismal citizens of a republic; and lead us to seek leaders and a policy that will "raise us up," and "give us manners, virtue, freedom, power."

THE WORK-CURE FOR TRAMPS.

Massachusetts notoriously bears an evil reputation among tramps, and her methods of dealing with them have, therefore, a peculiar interest for States that have not yet learned the best way of discouraging the vagabond fraternity. These methods vary greatly in different localities. In one the tramps are sent to the common jail; in another, a special tramp-house or (less invidious accommodation) a wayfarers' lodge is provided. In one the tramp is fed, while in another food is withheld. This town exacts work of the vagrant passing guest, and the next entertains him freely. Thus the plans adopted in the Bay State, as conveniently displayed in a recent publication of the American Statistical Association, are in an unusual degree representative and instructive.

In the year 1899 the cases of vagrancy in Massachusetts numbered 207,081 (it must be remembered here that the same tramp may have been entertained many times in the course of the year), and the resulting draft on the public purse was $33,086. Of the 184 cities and towns (about half of the whole number) which report on their methods, 65 shelter and feed vagrants, but do not make them work, nor arrest them, except upon repeated application for aid or more serious charges. Among towns of this class it is interesting to note that the tramps prefer those which lodge and feed their vagrants in police stations over those that provide especial accommodation. The city of Worcester, for instance, which feeds its tramps at the police station on nothing more toothsome than crackers costing 1.4 cents per tramp per meal, harbors in the course of a year one tramp for every nine inhabitants; while Springfield, which provides more generous entertainment at a wayfarers' lodge, escapes with only one to thirty-five, and even Boston (the natural Mecca of New England trampdom), under similar conditions, is burdened with but one tramp for every twenty-one citizens. To make the comparison fair, it should be added that Boston and Springfield exact work—a thing which the vagabond soul abhors. In general, however, the facts substantiate the theory recently advanced by Josiah Flynt and Francis Walton, in their striking book 'The Powers that Prey,' that there is a kind of elective affinity between the police and the lawbreaker; while the experience of Worcester, unless the back door is exceptionally hospitable in that city, abundantly proves that the way to have tramps is to feed and shelter them without requiring any return in work.

That the way to discourage tramps is, conversely, to make them work, is strikingly shown by the statistics of the neighboring cities of Springfield, Chicopee, and Holyoke, in the Connecticut River valley. Springfield offers entertainment to all comers at the wayfarers' lodge, as a set-off to the sawing of one-fourth of a cord of wood. During last year 1,472 vagrants, one for every thirty-five of the population, availed themselves of this privilege. Holyoke, which provides lodging at the police station but no food, harbors double the gross number, or one to thirteen. Chicopee, under the same system, handles one for every six, fairly surpassing the evil case of Worcester. That is, no food and no work are infinitely preferable, in the tramp's eyes, to food gained in the sweat of his face. If further proof were necessary that compulsory work is the great deterrent of vagrancy, it is furnished in the experience of Chicopee. In 1895 a rumor appeared in the Springfield papers that Chicopee was to establish a wood-yard. The nightly tale of tramps dropped immediately from some twenty-five to about half a dozen, till the disquieting report had been satisfactorily and officially contradicted, when the normal average was reëstablished.

The investigation was not without its humors. The small towns particularly found it difficult to provide work. At Marion they managed to set their tramps at breaking stone during the week, but, lacking Sunday employment, had in mind substituting compulsory church attendance for stone-breaking. More than half the towns believe that tramps should be bathed before being fed, while a few protest on the ground of common humanity; few, however, actually make an effort to enforce cleanliness.

(The investigation seems to prove that accommodation should be provided for tramps and other vagrants; that such accommodation should be preferably apart from police stations or almshouses, because the knowledge that tramps are especially provided for tends to lessen that voluntary aid through which chiefly the vagrant life is possible; finally, that the uniform exaction of work will do more than anything else to check, and eventually to do away with, the social plague which trampdom increasingly threatens to be. This is the conclusion of the whole matter, in the view of the investigators—that there is no kindness in making it easy for a man to tramp, instead of trying to get regular work; that the sooner a man who is slipping into vagrancy can be forced to realize that it is a way of life not tolerated in the community, the better for him, and that there seems to be evidence that the cities and towns which most consistently make an effort to exact work of the men whom they lodge and feed, do most to make this understood, and thereby do most to check vagrancy.

A SICILIAN TRAINING-SCHOOL.

MONTREAL, January, 1901.

Few visitors to the charming city of Palermo, "La Felice," have either leisure or disposition to pay heed to the serious, hard-working aspect of a life which, superficially at least, appears to be led chiefly in the bustle and gay *insouciance* of sunlit Southern streets. I am quite sure that, of the scores of strangers who annually pay a stereotyped homage to the beauty of the Arabo-Norman palace of La Zisa, not one in fifty casts a glance across the street to a plain yellow building of unpretending exterior, the purpose and work of which in the steady *Risorgimento* of Italy, I found mention of neither in guide-books nor in works of Sicilian travel. A four-line item among the city news in a local newspaper informed me that a study of Dante had been read to her pupils and their friends by Signorina ——, one of the teachers in the Casa Educatrice Whitaker; and a few questions in the right quarter not only informed me as to the nature of the institution, but also brought about a most interesting visit to the place itself under the guidance of one whose family name has, for now two generations, stood high in all endeavors for the improvement of Sicily and her people.

The Educatorio Whitaker, to call it by its official name, occupies the apartments of an old convent, secularized along with so many others after the war of unification. With a few necessary changes, the building, both inside and out, still retains much of its original aspect; but the animating spirit of the place is no longer reactionary. In July, 1876, a committee or board in charge of the asylums for poor children determined to establish a training-school, the graduates of which should be fully qualified to teach in their various institutions; for between the inactivity of the state and the still more marked indifference of the recently dispossessed religious orders, the education and training of young women under the new conditions were entirely neglected. Private subscribers soon gave liberally to the enterprise, and on the 1st of January, 1881, the institution took the name of its chief benefactor, which it still retains. Since that time, the present representatives of the late Mr. Whitaker's family have continued to supply much the largest share of the needs of the establishment. It is worthy of especial note that the first serious effort to place the education of Sicilian women on something else than a strictly ecclesiastical or conventual basis was chiefly owing to the philanthropy of an Englishman. Apart from this, the success of the school, to which I shall presently refer, must be placed to the credit of Cavaliere Scandurra, its director, whose life has been devoted to the task since its foundation.

On the occasion of my visit, I was charmingly received by him and by three of his assistants, who appeared almost surprised, yet not displeased, that a travelling stranger should feel curiosity or interest in their work. Perhaps the most immediately gratifying circumstance to myself was that the talk was not necessarily restricted to Italian, for one of these young ladies spoke excellent French, and another was about as well versed in English. Entering by the main door, now no longer barred or locked, one is ushered into a plain, bare hall, which serves for general exercises and reunions. It was formerly the chapel, but the old narrow windows have, with one exception, given way to spacious openings, which admit both light and air. Cav. Scandurra pointed out one window, still in its primitive condition, which, he said, would be modernized as soon as the exchequer would permit; nevertheless, he appeared to find something worth consideration in the proposal to let it stand as a contrast between the old and the new régime. As we entered this hall a class of some twenty little girls all rose to their feet and smilingly greeted us with a very well-executed song in unison. I was informed that the seven hundred pupils of the establishment might have welcomed me in similar fashion had I but expressed the desire. As the reader can well imagine, even a case-hardened teacher might quail at the mere thought of meeting fourteen hundred eyes of Sicilian girls. Behind stretches the playground, formerly the convent-garden, reached through broad portals; and here clusters of larger girls, several of them almost young women, were standing or playing in groups. Certainly, a *bella gioventù*; hardly a face or figure but bore signs of health and intelligence, in marked contrast with so many of the popular types one sees every day in the streets of Palermo. And it must be remembered that none of these girls belong to the wealthy or pampered class. Almost without exception they are daughters of the *petite bourgeoisie*, often of the very poor; but the care given to their training in every particular results in a general impression of robustness, while cultivating also a prevailing disposition of cheerfulness and contentment, if physiognomy has any value as a sign. The system of discipline, as I subsequently found, is the rule of mildness and persuasion.

On the same floor as the hall lie the refectory, pantry, and kitchen, all extremely simple in fittings and furniture, but so specklessly clean as to make one eager for the privilege of enjoying a meal there; here, also, the attendants looked smilingly on, in pleased satisfaction at the approbation which their labors called for and got. Not a trace of the odor of cooking is allowed to hang about the place; and the trim look of the maids in neat caps and aprons forms a striking contrast with what ignorant travellers commonly describe as the *laisser-aller* of southern Europe.

Passing up a broad and well-swept stone staircase, we reach the classrooms, all of which are situated on the first floor; the living rooms above I very naturally neither saw nor asked to visit. The classrooms, in spite of their extreme simplicity, remain interesting because of the ingenious plan by which they were devised. This consisted in breaking down a succession of thick partition walls belonging to an *enfilade* of nuns' cells, four or five of the latter together thus making a long, rather low-ceiled room, with plenty of light and air through sensibly enlarged windows. In such rooms as these the young Sicilian girl need not forget her faith or religious duties, but she can further learn the history of her country, and her own responsibilities as the probable mother of sons of regenerated Italy. To point such lessons, the teacher (of history, let us say) has but to lead her class across the corridor to a little balcony from which, over the housetops, the eye falls on the glorious color of the line of hills enclosing the Conca d'Oro; and off to the left the sun sheds a gleam on the monument to Garibaldi, crowning the eminence from which the leader of the "Mille" looked down before his victorious descent upon Palermo. It was he and his followers who rendered possible the extension of secular learning to women under such conditions as these in the Italy of our day. It was encouraging to hear that much the same thought had been anticipated by the present Dowager Queen of Italy, who some years ago paid a visit to the institution, not only in her official capacity, but as representing the achievement and aspirations of Italian womanhood. Of this visit a very palpable sign remains in a set of beautifully colored pictures of flowers, used as models by the pupils in the classes of embroidery and fancy work; these, presented by her Majesty Queen Margherita, were framed by one of the distinguished lady patronesses of the institution, herself a member of an ancient Sicilian family and yet entirely in sympathy with the new order of things.

The work of the school is divided into four principal departments, which, in the judgment of the administration, suffice for all the present wants of the class of girls for whom the scheme is designed. I must again point out that there is no striving here after what we call the "higher education" of women; the Educatorio puts forward no university pretensions whatever, and thus by entering into no rivalry with official institutions, seems to have succeeded (if my observations were accurate) in winning and keeping the support of official good opinion. There is, in the first place, a boarding-school for girls. In this, as in the other departments, the cost is so low that people of very modest means can yet afford to send their daughters to it, while deserving, but entirely destitute, young persons can also be received; the charges in such cases being defrayed out of the original gift and also by constant fresh

supplies. There were at the time of my visit sixty resident pupils, several without other family or home, whom the school thus undertakes to train thoroughly for a special purpose, and establish in respectable positions after they leave.

Most of the pupils, however, enter into the second category of day-scholars, wisely handed over to the Educatorio authorities by the directing-board of the free schools of Palermo. This contingent, principally, swells the number actually receiving instruction here to the already mentioned figure of seven hundred, all of them taught by young women who have themselves been approved of by the institution. These teachers come from the normal-school of the Educatorio, the department which, so far as I could judge from visible results, appeared to me the crowning success of the place. Between 1876 and 1899, one hundred and thirty-six young women have been drilled in the work of teaching in various branches, but all on a sound basis of middle-class training. Thirteen of them are now engaged in the school itself, all but two as regular teachers or professors. A school at Randazzo, with a kindergarten, employs no less than eight. And the eagerness with which such instructors are sought throughout the country is proved by the fact that thirty-four of them are engaged in various public schools about the island. As a sign of the care exercised in completing the work of the school, I may add that a trained teacher is not, on leaving, thrust out to find or struggle for a position as best she may, but the authorities (and chiefly the admirable director of the Educatorio) secure appointments for such as have no family to return to, or are unable to wait for work. Some of these positions being in the newly acquired colony of Eritrea, a colonial section became imperative; and I was much interested in hearing that Arabic, taught by a young Egyptian lady, forms an important item in the programme.

In the practical department, or work-school, are taught a variety of useful pursuits, such as needlework of several kinds, designing, drawing, and so forth, all without views to the "accomplishment" element in education, but merely in order to further the growth of the feeling of self-help and social usefulness in the learners, who subsequently convey them into the home or the world of work. Some of the drawings, it may be mentioned, were executed by tiny girls of twelve years of age, and, although taken from complicated and difficult relief models, would be a credit to any art-school. In fact, the quality of the work done in all departments has proved so uniformly excellent that graduates of the Educatorio are now entitled to offer themselves as candidates for all the Government girls' schools in town or country, without further examination. Besides all this valuable and thorough training, great care is observed in keeping up the original higher moral purpose of the institution by gently dwelling on the teacher's vocation with all the self-discipline involved in the right comprehension of it; character and conduct are constantly insisted on, not only in regard to the internal administration of the school, but as indispensable elements in the recommendation given to any teacher aspiring to a place. And as this appears to be achieved through no system of punishment whatever, but by the constant example of the head and his staff, it would seem as though the admittedly difficult problem of dealing with Sicilian character has been solved, so far as the women are concerned, within the four walls of this secularized convent. I am glad to be able to say that I have never been more profoundly impressed with the results of such a method than in this special instance. Perhaps the only regrettable feature connected with it is the professedly imperative necessity of restricting the benefits of such education and training to members of the Catholic Church.

But much the most encouraging reflection, after such a visit as this, is that here, after all, apparently, is the truest hope for those who have not yet lost their faith in the future of Sicily—and of Italy. In spite of economic confusion, of political insecurity even more alarming, work of this kind is being carried on all over the country, in corners unvisited by the tourist, through the efforts of a host of patient and modest teachers. It is my sincere conviction that their generation will see its reward. P. T. L.

THE CASPIAN SEA.

KRASNOVODSK, October 13, 1900.

When the imagination properly takes in the facts, it gives one a strange sensation to be sailing about over the waters of the Caspian Sea, and to wander over its low-lying shores. For, except when we look at our barometer, it is difficult to realize that we are in the centre of a vast depression in the surface of the earth nearly 100 feet (exactly 84 feet) below the level of the sea. But our barometer has reached its limit and is no longer of use. When we inquire further, and examine the facts more carefully, we learn that a sandy ridge of only twenty-three feet in height is all that prevents the backward flow of the Black Sea into the northern part of the Caspian, through the long and swampy depression of Lake Manytch; while everything around indicates that the Caspian basin was once full to overflowing, and that the present sea is but a survival of a vast oceanic depression.

The Caspian Sea is 740 miles long and from 200 to 400 miles wide. Its area is about 181,000 square miles, but its drainage basin is immensely larger. The Volga alone brings into it the drainage of more than 500,000 square miles of European Russia, and the Ural, 80,000; while six other rivers from the Caucasus and the table-lands to the south and southeast, contribute the quota furnished by two or three hundred thousand more. Indeed, the water pouring into the Caspian probably exceeds that brought into the Black Sea by the Danube, the Don, and the other streams emptying into it. And yet the Caspian Sea is not full. That it was once full and running over is shown by a variety of considerations. It is surrounded on its whole northern end and on its southeastern side by wide, low plains, but little above its level, which are everywhere impregnated with salt, and which contain the shells of mollusks like those now inhabiting the sea. All over these areas are scattered minor depressions, many of which are considerably lower than the sea, and are either completely dried up, having salt deposits in the bottom, or are partially filled with water much salter than that of the ocean.

A curious fact about the Caspian Sea itself, however, is that its water is much less salt than that of the ocean. In the shallow northern portion of the sea, which receives the drainage of all central and southern Russia, the water of the Caspian is so fresh, especially in the early summer months, as to be drinkable; while in the deeper southern portion the water is less salt than that of the Black Sea, and only one-third as salt as the ocean. At first thought, this would appear to be inconsistent with the theory that the Caspian basin is a partially dried-up portion of an oceanic belt, for in that case it would seem that, as with Great Salt Lake and the Dead Sea, the water ought to increase in saltness as it becomes less in volume. An interesting process is found to be going on, however, which constantly tends to reduce the salinity of the water, and which helps us to understand how those vast salt deposits which underlie central New York, eastern Ohio, and southern Michigan might have been formed. Of course we do not refer to the constant inflow of fresh water, for that is all removed by evaporation, but the Caspian Sea is surrounded on its most arid sides by numerous and large bays connected with the main body of water by narrow and shallow channels through which currents are constantly flowing from the sea, but not back into it. This is because the evaporation is so great that the inflowing currents are barely sufficient to supply the waste from that source. The consequence is, that an enormous amount of salt is carried off from the sea into these receptacles and there detained. One of the longest of these is the Karaboghaz, or Bitter Water, a bay nearly one hundred miles in diameter, situated about midway on the eastern shore, and connected with the sea by a channel only five feet deep and four hundred and fifty wide. Through this the water of the Caspian is constantly flowing at a rate which is never less than a mile and a half an hour, and is usually three miles an hour. Von Baer, who has investigated the matter most carefully, estimates that through this channel alone 350,000 tons of salt is daily withdrawn from the central body of the sea. Many similar basins have already been filled with the salt which has crystallized from the water thus brought into them and evaporated.

There is, however, another probable explanation of the low salinity of the Caspian Sea which has not been properly considered. This is to be found in the recentness of the causes which have brought about the present conditions of things. The process of desiccation over the basin of the Caspian has necessarily gone on with great rapidity since its outlets were elevated above sea level. For, while the rainfall is less than a foot per annum, the evaporation is probably three feet. When, therefore, its area was twice as large as at present, its level was very likely reduced as much as a foot per annum, notwithstanding the inflow of its great rivers. With its present contracted surface it just balances these contributions. This rapid process of evaporation resulted in leaving a large part of the salt stranded over the outlying abandoned bed. It has not had time to get back into the sea. It is probable, also, that the original saltness had been much reduced by the overflow into the Black Sea, which would have continued for some time after the original elevation of the region.

As we have already said, the greatest contributor of water to the Caspian Sea is the Volga, which brings into it a large part of the drainage of all Russia. But, about 300 miles above its present mouth, this river so

nearly approaches the trough of the Don, which empties into the Sea of Azov, and is so nearly on a level with it, that a canal fifty miles long is made to connect the two. It is evident, therefore, that slight physical changes might divert the waters of the Volga into the lower valley of the Don, and so into the Black Sea, thus robbing the Caspian of its present main supply. The result of such a diversion would be a great contraction of its area and lowering of its surface. Curiously enough, such a contraction and lowering of the surface even since the Christian era is witnessed to by historical evidence. The city of Derbend is situated on the west shore of the Caspian, where a spur of the Caucasus Mountains comes down to the water's edge. This has always been a fortified point, and is reported to have been strengthened by Alexander the Great. But the foundations of masonry are ascertained to extend more than fifty feet below the present level of the sea. Moreover, it is reported that the natives proposed to conduct Alexander across dry-shod, which could only have been done if the shallow ridge running across the sea from the Caucasus Mountains near Baku to the Grand Balkan near Krasnovodsk had been laid bare by a general lowering of the water. This condition of things is supposed to have continued down to about the fifth century of the Christian era.

In view, also, of the historical references to such a fluctuation in the lower course of the Volga, there would seem, therefore, little doubt that far-reaching physical changes have occurred in this region in comparatively recent times. How profoundly these have affected the complex movement of population in Western Asia and Eastern Europe is a question of the greatest interest. It is instructive to find, also, how generally the study of the physical conditions of the East is confirming the sources of ancient history, and rendering easy of belief many statements which an incomplete knowledge of the conditions had tended to discredit. And still the Caspian Sea has a future far greater than its past. Its fisheries, its petroleum products, and its commerce are building up great and rich cities upon all its shores. A single company in Petrovsk pays $200,000 for its fishing privileges at the mouth of the Kura River. Astrakhan, at the mouth of the Volga, is a city of 120,000 inhabitants, and the commerce passing through it is comparable to that going through the Sault Ste. Marie. A small district near Baku produces more oil than the entire United States, and the city already has a population of nearly 200,000; while Krasnovodsk, the railroad terminus from which I write, on the eastern shore, though dependent on distilled water, and water brought in on the cars, now commands the commerce of a large part of Central Asia.

G. Frederick Wright.

MLLE. ROBESPIERRE.

Paris, January 2, 1901.

We may see, in our own time, how rapidly history is changed into legend and transformed according to the passions of the hour. A legend has connected itself with the sister of the famous Terrorist Robespierre, and M. Lenotre, in his valuable volume, 'Vieilles Maisons, Vieux Papiers,' has taken the trouble to tell us the real truth about her. The legend was formed after the publication in 1834, a long time after the Terror, of the 'Memoirs of Charlotte Robespierre.' These Memoirs were published from a manuscript after the death of Mlle. Robespierre, by a "Robespierrist arriéré," says M. Lenotre. Her testament, written with her own hand on the 6th of February, 1828, was examined by M. Lenotre at the office of a notary of the La Tournelle quarter. It is thus worded:

"Wishing, before paying to Nature the tribute which all mortals owe to her, to make known my sentiments towards my eldest brother, I declare that I always knew him as a man full of virtue; I protest against all the letters, detrimental to his honor, which have been attributed to him; and, wishing to dispose of what I shall leave at my death, I hereby constitute Mlle. Reine-Louise-Victoire Mathon my universal legatee."

The Memoirs are written in the same spirit. "Oh," says M. Lenotre, "in what tender colors Robespierre is painted in them! What sensibility, what amiable resignation! The heroes of Florian are Tiberiuses beside him; every line celebrates the mildness of his character, the purity of his heart, his even temper, the simplicity of his life, etc." When the men of Thermidor attack her brother, she utters imprecations against them. She represents herself as having for forty years bemoaned this well-beloved brother, and she repeats on every occasion, "Oh, had he only lived!" "Well," adds M. Lenotre, "if he had lived, perhaps Charlotte would not have written a line." He has gone over old documents kept at the General Security department. "Mlle. de Robespierre," he says, "probably thought that nobody would ever look there for the refutation of her romance."

The mother of Charlotte Robespierre died young; the father, "called to foreign parts by mysterious interests," left Arras in 1766 and never reappeared. Robespierre and his brother Augustin were taken in by their grandfather, a brewer; their young sister Charlotte, by her aunts, two old and pious maids, who were very poor. By the protection of the Bishop of Arras, Charlotte was admitted into a charitable establishment administered by a Jesuit. The two brothers were educated, the eldest at Louis-le-Grand, with the help of the Abbé de Saint Waast. In 1781 we find them living with their sister in a small house at Arras, which is still shown to strangers. In 1789 Maximilian, who had a legal position, was elected to the States-General. After the session of the Constituent Assembly, he was appointed "public prosecutor." His sister helped him with the little money she had to establish himself in Paris.

Robespierre lived in the house of a cabinet-maker named Duplay, in a house in the Rue St. Honoré, which is still preserved in part. Duplay, his wife, and children became for Robespierre a sort of family; they were very proud of him, flattered him in every way, and, when Charlotte came from Arras to live with him, they tried to disgust her and quarrelled with her. Charlotte took lodgings in the same quarter, in the Rue St. Florentin, and persuaded her brother to live with her. He consented for a while, but the Duplays soon brought him back triumphantly to their own house. The younger Robespierre tried to console her by taking her with him on a mission to the army of Italy. Unfortunately, he took also with him a young lady of easy virtue with whom Charlotte soon quarrelled. Augustin ordered his sister to leave the army, and she returned to her deserted apartment in the Rue St. Florentin.

The Duplays kept guard around Robespierre; they felt, or affected to feel, continued apprehensions about him, they were persuaded that all the world was conspiring against their lodger. One day Charlotte, who wished to reconcile herself with her brother, sent to him, through a friend, two pots of confitures. Mrs. Duplay sent them back angrily. "Take this away; I don't want her to poison Robespierre." After a while Robespierre sent for his sister. He received her amicably, but told her that, in her position, she could not remain in Paris, she had better return to Arras. She consented, and left for Arras with Lebon, pro-consul of the province of Artois. As soon as she arrived, she was denounced as an aristocrat to the popular society of the town, at the instigation of Lebon himself, if we may credit the author of 'The Secrets of Joseph Lebon.' The pro-consul was an intimate friend of the Duplays. Charlotte was much frightened, and placed herself under the protection of an enemy of Lebon, Florent Guyot, a member of the Convention, who was at the time the commander of Lille. Guyot sent her back to Paris, but she dared not return to her apartment in the Rue St. Florentin, which was too near the house of the Duplays. She took refuge in the house of Citoyenne Laporte, wife of a judge of the revolutionary tribunal of Paris, a quondam glove and perfumery merchant.

Charlotte was staying still at his house on the famous day of the 9th Thermidor. Forty years afterwards the Memoirs speak thus of this event: "I rush out in the street, my head bewildered and despairing. I call, I look for my brothers; I learn that they are at the Conciergerie. I run thither, I beg with clasped hands to see them; I fall on my knees before the soldiers; they turn me away. My reason goes; I don't know what happened, what became of me. . . . When I came to myself I was in prison." Charlotte was carried away by her imagination. In reality, as soon as she heard of the arrest of her brothers, she left her apartment. She never showed herself at the Conciergerie, but prudently took refuge in the Halles quarter, at the house of a Mme. Béguin, under an assumed name. She was however, discovered there by the spies of the Committee of General Security three days afterwards, and conducted to the Section of the Contrat Social (are they not admirable, these names of General Security, Social Contract, etc.?).

"It must be said," writes M. Lenotre, "that in the face of danger the behavior of this sister of the Gracchi was deplorable. She disavowed her brothers with a disconcerting ease, told how they had turned her out and she had nearly been their victim. She swore that if she had suspected their infamous plot, she would have denounced them rather than see her country perish. She did not forget the woman Duplay, whom she accused of all her misfortunes, and who, at the same hour, mad with terror, strangled herself in the prison of Sainte-Pélagie, where she had been thrown on the evening of the 9th Thermidor. Citoyenne Béguin was not more discreet; she knew, for certain, that Robespierre had determined to send to the guillotine all those who showed any interest in his sister. In these interrogatories, all the mysteries of the Duplay house were revealed—the frequent visits of Fouquier-Tinville to the 'Incorruptible'; the way in which were fabricated, in the family circle, the lists of the condemned; the daily relations entertained with some of the members

of the jury of the revolutionary tribunals in Paris, in Arras, etc."

Charlotte saved her; "having renounced the heroic part, she exaggerated platitude." After a few days' imprisonment, finding herself penniless, she asked for an asylum at the house of a compatriot named Mathon. She asked the men of Thermidor, who had sent her brother to the guillotine, for a pension, in a petition in which she abused her brothers. The Committee of General Security decided that "the Citoyenne Robespierre, whom the tyrants had persecuted, deserved the confidence of good citizens and the protection of the constituted authorities. These were invited to give her the aid and assistance which the purest civism deserves, and which French loyalty ought to accord."

Charlotte's history ends here. She lived for forty years after the great catastrophes of the end of the eighteenth century. There must have been reasons for the continuance of her pension during this long time. The Thermidorians were pensioning the woman who had been a witness against her own brother, and had denounced him as a moral monster; but why did all succeeding Governments continue to pay her a pension of 2,000 francs? Was it a mere act of charity? Was it because she possessed secrets, and in order to purchase her silence concerning certain men and things? Many of the Terrorists and regicides became great personages in Napoleon's reign. Bonaparte himself had had occasion to meet Charlotte at Nice, when he was still an almost unknown officer of artillery. In her Memoirs, Charlotte Robespierre says that Fouché offered to marry her. "Fouché," she says, "was not handsome, but he had a charming manner and was extremely amiable. He spoke to me of marriage, and I confess that I had no repugnance to this tie, and was rather disposed to give my hand to a man whom my brother represented to me as a pure Democrat and his friend." Her pension was continued under the Bourbons, after the Restoration, and under Louis Philippe, after the Revolution of 1830. She lived, during her last years, in a house near the Jardin des Plantes, under an assumed name. She had in her room a lithographic portrait of her brother Maximilian, and, curiously enough, a miniature of Josephine Beauharnais. She died on the 1st of August, 1834, at the age of seventy-four. At the sale of her effects, the portrait of Robespierre went for two francs, and the medallion of Josephine for one franc. The sale netted 328 francs.

Correspondence.

WAR IS HELL.

To the Editor of The Nation:

Sir: If your correspondent (p. 30, No. 1854) had signed himself "Humanity" instead of "Equity," there would have been more logic in his position. "War is always cruel," was the astute reply of President Loubet to ex-President Kruger when the latter made some reference to British cruelties. If one takes the ground that all war is indefensible, and that all that is done in war in destroying life and property is wrong, denunciation of some of the recent acts of British generals in South Africa would be at least consistent and intelligible. But there are very few who take that position, and it does not appear that soi-disant "Equity" is one of them. Under the generally accepted system of morals, even among civilized races, war, with all that it is known to imply, is not regarded as immoral, provided the cause is good. Moreover, under that same system of morals, the individuals who are deputed to conduct a war on behalf of their country are not regarded, even by those who may consider the war in question an unjustifiable one, as immoral or in any way reprehensible for their participation in the acts of war, provided these individual soldiers conduct the war, with all its inseparable cruelties, according to recognized and established usages.

Now, I submit that "Equity" is unjust in his attitude towards the British generals in South Africa. No act of theirs has been reported which was contrary to the recognized usage of so-called civilized warfare. Gen. P. H. Sheridan, in his day's report of October 7, 1864, to Gen. U. S. Grant, after describing the devastating of the farms in a large section by his orders, says: "Lieut. John R. Meigs, my engineer officer, was murdered beyond Harrisburg near Dayton. For this atrocious act all the houses within an area of five miles were burned." I quote this merely as an instance on which I can readily lay my hand. All of us who are old enough can remember similar military acts in the wars of 1866 between Prussia and Austria, and of 1870 between Germany and France. The treatment of the francs-tireurs by the Germans in France was much discussed at the time, and was generally admitted to be a necessary measure on the part of the invaders, and to be permissible under the generally accepted rules of war. In the present South African war great forbearance and a generous interpretation of the rules of war on the part of the British generals have been necessitated by the unusual circumstance that the army opposing them was not uniformed. And this forbearance has been frequently exemplified. The recent burning of farm steadings has been resorted to only after due warning that hostile acts by non-combatants in territory evacuated by the Boer army, or by paroled combatants, would be so punished. In this policy, and in the execution of it, the British generals have been, not more, but less "cruel" than is customary in like circumstances.

If your correspondent is one who considers all war wrong and regards all who take part in it as criminals, and therefore feels impelled to protest against any and all of the cruel essentials of war, we have not the same ground of dispute with him, particularly if he will drop the name of Equity and call himself Pity—or, say, Quaker.

This protest is written by one who can sign himself Almost a Quaker.

January 13, 1901.

LONGFELLOW AT BOWDOIN.

To the Editor of The Nation:

Sir: The catalogue of a collection of first editions of American authors, to be sold at auction in New York city the last of this month, prints a considerable portion of an autograph letter of Hon. Stephen Longfellow and asserts that it refers to the poet Henry W. Longfellow, at that time an undergraduate in Bowdoin College. As custodian of the Faculty records of that period, I beg permission to inform the public through your columns that the poet was not under college censure at any time during his course, and that the reference in the letter cited above is to another person.—Respectfully, Geo. T. Little.

Bowdoin College, January 15, 1901.

Notes.

In the Dent-Macmillan "Temple Classics" we have to note the completion of F. S. Ellis's English version of the 'Romance of the Rose,' in three volumes; Macaulay's Essays in five; and Vasari's 'Lives of the Painters' in eight. These three titles show well enough the range of this companionable series, notable for the quality of editorial selection as well as execution in detail; but we can also name among recent issues 'Ivanhoe' in two volumes, Mrs. Mitford's 'Our Village,' and La Motte Fouqué's 'Sintram.' Almost all of these are illustrated, and each has its charming bookplate.

Cooper's 'Pathfinder' appears in a compressed but comely and legible reissue in one volume, bearing Macmillan's imprint. There are twelve full-page pen-and-ink drawings by Charles E. Brock, sufficient both as decoration and as illustration.

Four years ago we bestowed merited commendation on W. Garrett Horder's 'Treasury of American Sacred Song' (Henry Frowde). In the new edition which has just appeared, we observe that our criticism, in quite unimportant particulars, has been heeded, and it behooves us to apologize for having misspelt his name. We need say no more except to note that five additional authors have been drawn upon, viz., the Rev. Henry van Dyke, Lloyd Mifflin, Mrs. Annie Adams Fields, Martha Gilbert Dickinson (who now keeps company with her famous aunt), and Mary Gardiner Brainard (niece of J. G. C. Brainard, but he not in this collection). Their biographies are duly affixed to the previous series.

The two volumes of Prof. Charles M. Andrews's 'Historical Development of Modern Europe, from the Congress of Vienna to the Present Time, 1815-1897' (Putnams), have been combined in one with their separate pagination, and dubbed "Student's Edition." As it is, however, a straightaway narrative, without notes or apparatus except maps and index, the general public should not be warned off. We have already expressed a critical judgment of this work.

Our readers will remember that, a little more than two years ago, Mr. J. G. Frazer of Trinity College, Cambridge, published a translation of Pausanias's Description of Greece, with an elaborate commentary—the whole filling six stately volumes. He now, under the title 'Pausanias, and Other Greek Sketches' (Macmillan), has reprinted the introduction to his large work, omitting all learned apparatus, together with nearly a hundred of the longer and more independent descriptions of his commentary, averaging a little more than two pages in length, and his article on Pericles in the 'Encyclopædia Britannica.' The book is not for archæologists, but for the ordinary reader of culture. It gives little information about excavations and their results, and omits the description of the prehistoric fortress Gla in Bœotia,

perhaps as too technical. The style is lively and pleasant, avoiding alike the condensation of a guidebook or an encyclopædia and the prolixity of many books of travel. From no other book can the reader gain with less effort so clear a general idea of the plain of Marathon, the fall of the Styx, and other less-known places, and he will learn incidentally a good deal about Greek life. Many a traveller who has been in Athens, but has not journeyed in the interior of Greece, will be surprised to learn of the variety of the scenery of the kingdom. The book will encourage excursions in Greece, not merely by specialists, but by all who like to travel where the greatest variety of grand and of gentle scenery, and unusual conditions of life, are seen in the smallest compass. Within a few years, Greece is likely to become a favorite with ordinary tourists. As yet, comparatively few have learned how easy and attractive a trip through the little kingdom has become.

Ginn & Co. have produced a facsimile of the famous 'New England Primer' from an edition of 1785-1790 in Mr. G. A. Plimpton's remarkable collection of school-books. Only a single leaf—the last—has had to be supplied in ordinary type set by hand. The whole affair is a matter for the vest pocket.

'The American Art Annual' (Boston: Noyes, Platt & Co.) appears in its third volume under the editorial supervision of Florence M. Levy. The principal new features are a directory of architects and of art teachers, the list of artist members of the Fine Arts Federation of New York, and the tabulating of bequests and gifts, prizes and scholarships of the year. The 'Annual,' with its record of important sales, exhibitions, and art organizations, becomes every year more valuable. The proof-reading of the present volume is regrettably deficient.

We have received from Mrs. Jonas Gilman Clark a quarto volume commemorative of her late husband (1815-1900), the founder of Clark University, at Worcester, Mass. In spite of a somewhat meagre biographical sketch, it is clear that Mr. Clark's life was marked by no little variety, dealing with both coasts of the American continent, and with a considerable period of residence in New York. His pedigree, like his public spirit, was characteristically New England. He was in sympathy with the abolitionists, and he owed no small part of his fortune to faith in the country's future, and therefore financial credit, in the dark days of the civil war. In all that is quoted from his own lips about the aim of his university foundation there is a noticeable vagueness, only incidentally dispelled in some of the obituary articles of the press. A portrait of Mr. Clark accompanies the volume.

The *Praktika* (or Reports) of the Archæological Society of Athens for the year 1899, which has just appeared, gives a succinct account of the work which the Society accomplished during that year. Excavations were conducted on the northern slope of the hill of Colonus, where graves were found of the sixth or fifth century B. C., near Eretria, with a trace of the temple of Amarysian Artemis; at the Piræus, with interesting discoveries of details with regard to the war-harbor at Athens; at Platæa, at Thermon, at Thermopylæ, at Epidaurus, and elsewhere. The longest report, of more than twenty pages, has to do with the pass of Thermopylæ, and seems more thorough than any preceding discussion of that district. Much less space than has been usual in these Reports is devoted to routine business, and the pamphlet is filled with matter of scientific interest. Appended to the reports are two plans of the Stoa of Attalus at Athens, before and after the excavations of 1898-1899, and six phototypes of the ruins at the sanctuary of Asclepius at Epidaurus, including the gymnasium and the odeum.

A few weeks ago, men engaged in sponge-fishery brought to Athens a fragment of an ancient statue, and offered to the Minister of Education, on condition of a suitable reward, to show where a whole shipload of such objects lay beneath the water. After some inquiry, the Navy Department of Greece sent a boat to investigate and to aid in the recovery of the works of art. About the middle of last month the boat returned to the Piræus, with the information that the sunken treasures lay thirty fathoms deep, close to a rocky islet, not very far from the island of Cythera, off the Spartan coast. They are so near the shore that the boat which was sent did not venture to approach close enough to be of real service, and in the rough December weather the divers accomplished little. Two headless statues and many fragments, including the bronze head of a boxer, which is said to resemble that in Rome, have been brought to Athens, and more definite arrangements are to be made for the rescue of what remains in the sea. To judge from this account a ship bearing works of art was at some time wrecked on this island, but when this happened, and whither the ship was bound, no one knows. The memory of such a disaster had been wholly lost.

The recent death of Maulvi Imadud-din closes a noteworthy career. He was the lineal descendant of the Sassanian King Nausherwan the Just, of Persia. In the line were four renowned Mohammedan saints, whose names and shrines are now objects of reverence and places of pilgrimage. Educated by the best masters of his time, he became at an early age himself a master in Islam, so that he took a leading part in the famous discussion of Dr. Pfander and Mr. (afterwards Bishop) French with Mohammedans at Agra. In 1866, when forty-four years of age, he publicly avowed his belief in Christianity, and was baptized. It is a remarkable fact that two other of the four upholders of the Moslem faith in that discussion followed his example. Although offered a high Government position, he preferred to take orders, and for the remaining thirty-four years of his life he ministered to the church at Amritsar, in which he was baptized. "Great as a preacher," says the Punjab paper from which we derive this account, "as a writer he was greater still. The mere enumeration of his books would fill some pages." They were works dealing with every type and phase of Mohammedan controversy, which found their way to lands as far apart as Java and Montenegro, and writings intended for the instruction of Christians. The degree of D.D. was conferred upon him from Lambeth, *honoris causa*, as a unique tribute and recognition of his great services and attainments. We do not recall any other instance in our days of the conversion of a Mohammedan of such high rank to Christianity.

The principal subject in the Consular Reports for January is the coal crisis in Europe and the consequent increased demand for American coal. There is also a report of a Committee on Commercial Education in Scotland which is of general interest. The need of improvement, it affirms, is due mainly to the extraordinary development of business and the expansion of international commerce within the last two generations; the changing conditions and methods of conducting business arising out of this; and the commercial rivalry of Continental nations and America. Certain defects in elementary education, as the inability of boys entering offices to compose a letter properly, are pointed out; the necessity of the better teaching of the modern languages is urged; and the suggestion is made that faculties of commerce should be established in the universities to enable commercial education to take its proper place in the educational system. The possibility of a great increase in the gold product of the world in the near future is shown from the report of an American mining-engineer on the quartz-mining district of Sarela, Central Siberia. He says that the present product of the Russian empire, $25,000,000 per year, is almost entirely placer gold, and that the methods for working the deposits have undergone no improvement for fifty years, while the quartz veins, which in some places are extraordinarily rich, are entirely undeveloped.

It appears from the Annual Register of the American Mathematical Society that no less than twenty-two members of the society are women. This is a very remarkable showing. When it is remembered that it is only a very few years since it was firmly believed by nearly every one that the structure of a woman's brain forbade her studying the higher mathematics, and also that no subjects ever come before this society for consideration which are not such as would have caused to stand on end, a few years ago, the hair of nearly every American man, let alone the American woman, the perfect cordiality and friendliness with which women are now received into all learned societies in this country may be taken as showing that American men, at least, are ceasing to deserve the epithet of the Unfair Sex. Of this Mathematical Society a woman, Professor Scott, is a member of the council. Of more than one scientific society a woman has already been president. Women may well begin to think that for them, in this country, the millennium is well on its way.

—To judge by a very temperate and sensible article of Prof. Adolfo Posada, in *La España Moderna*, Spain may still hope for a moral reconquest of the colonies she has dominated and driven to revolt. At the Hispano-American Conference in Spain, which met on November 10, 1900, she was undeniably forced to eat a certain amount of humble-pie, but, like the friends of Col. Newcome, the young republics turned away their faces while she gobbled her portion, and then lavished words of affection upon the common motherland. The sense of the American States was that they were free—for ever free—but well disposed, and desirous of proclaiming themselves "in solidarity with their own history." Señor Sierra, delegate from Mexico, who seems to have expressed the feelings of the Americans most tellingly, regards the Latin and Germanic tendencies as all but irreconcilable; he looks forward to interminable conflicts

between the race which views "the action of the individual as a means of realizing social solidarity," and that Saxon type which "looks upon society as a means of reinforcing individual action." Of course, it is easier to forgive and forget when the actors in the original tragedy are long dead and gone, but Spain is distinctly apologetic; she wishes the republics clearly to understand that she is no longer "Spain the rival, Spain the mistress, Spain the traditional," but means to be "Spain the liberal, the progressive, the *European*." The governing classes of the past and their blindness have been responsible for policies of domination and isolation; they are gone, and Spain is not so black as she is painted. Passing over the details of the Conference, already noted in these columns, we find that its general object was the creation of intra-racial sympathy through conformity to common forms of language, education, commercial methods, etc. In short, emphasis was laid on all the essentials that make for racial assimilation, save a common religion and privilege of intermarriage—which, in the nature of the case, needed no attention. We may even find traces of hostility to ex-Latin nations and a disposition to retain group-advantages for group-use. Best of all, Posada says, Spain has been forced to think of the Americans and know them; both sides seem to believe that they have become reacquainted with exceptionally fine people.

—'The Civilization of the East' is the English title of a tiny volume in the Temple Primers series, translated by J. H. Loewe from the German of Dr. Fritz Hommel (London: Dent & Co.; New York: Macmillan). It covers approximately the same area and the same period covered by Maspero's monumental work, viz., Western Asia, with Egypt, from the dawn of history to the middle or end of the fifth century B. C. It is a handy, interesting book, and, on the whole, a useful compendium of what is known of the histories of those countries during that period. On the reader who has not followed the discoveries of the last twenty-five years and their interpretation, the perusal of this brief sketch will produce an impression of astonishment at the amount which has been learned in that time and the extent to which our geographical horizon has been extended. Ancient Oriental history is no longer a record of Egyptian, Babylonian, and Assyrian civilization, much less a history of Israel, Persia, and Greece. We read of powerful kingdoms in Elam, Armenia, Asia Minor, and Arabia playing an important rôle, influencing the development of religion and civilization, contending for hegemony, and at times securing it. Nor is the West without its share in the history of the civilization of the East. Not alone Egypt, but Palestine and Syria also are affected by the invasions of peoples from the islands and coasts of the West, barbarians from the point of view of the Egyptians, Phœnicians, and Canaanites, who bear to them the same relation which, at a later time, the Normans bore to the seaboard peoples of Southern Europe. Unfortunately, as in most of Dr. Hommel's books, theories, often acute and suggestive, it is true, are too frequently presented as facts. This is especially true of those portions of the work which deal with the earlier periods. For instance, it is here stated as a fact that "the West Semitic alphabet, commonly called the Phœnician," was invented "about the year 2000" and "handed down to the Greeks towards the end of the second millennium" by Phœnician colonists. All that we really know is, that as late as the fourteenth century B. C., the Phœnicians were using, for some purposes at least, the cuneiform script, while the earliest inscriptions in the so-called Phœnician alphabet which we possess do not antedate 1000 B. C. The names of a number of the old Babylonian kings assume a somewhat new and unfamiliar shape in Dr. Hommel's transcriptions. His chronology of the earlier period is also different from any hitherto presented; but, in the present state of uncertainty, it is, perhaps, inevitable that each man should have his own chronology. While thankful to Dr. Hommel for many of the suggestions in this little book, it seems to us that such a popular condensation should record established facts rather than private speculations. The only map in the book, a "map of the lands of the Bible," is sketchy and incorrect to a degree.

—It is a safe assertion that Caxton's 'Golden Legend' is the most comprehensive hagiological book of the fifteenth century. However his work may be related to the original 'Historia Lombardica' of Jacobus de Voragine—who was a meritorious and conscientious compiler, too, according to his lights—through the legends in French, in English, and in Latin which he used, he undoubtedly showed in it that independence which characterized him generally, and labored studiously towards completeness and orderliness. So he produced a book which is a necessity for the student of mediæval life, and even, from the background it gives, for every reader of Chaucer who cares to understand what he reads. Its claim, too, might be put on the broader basis of its own fascination and picturesqueness, and there may even be some left who, like its first genderer, the worthy Archbishop of Genoa, and its second or third father, William Caxton, will find it a book unto edification and spiritual profit. All these must thank Mr. Frederick S. Ellis that he has reëdited it in Dent's "Temple Classics" (New York: Macmillan). The present seven charming little volumes are practically a reproduction in modern spelling of his earlier sumptuous edition, which was printed by William Morris at the Kelmscott Press. The equipment in this new form is generally good. There are two excellent indices, and each volume has a fitting frontispiece by Miss Emily Ford, and a fairly satisfactory glossary. But in the glossary to the first volume there is a very strange blunder, not found in the Kelmscott edition. In its glossary we read, in explanation of Nebuzar-adan, "The title of Nebuzar-adan, as given in the Hebrew, is 'chief of the slayers,' which the English translators, following the Vulgate, understand as 'slayers of men,' and so interpret the name as 'captain of the guard.' But in the Septuagint, Nebuzar-adan is taken to be 'chief of the slayers of beasts,' hence [in Caxton, I. p. 164 of this edition] the title of 'prince of the cooks.'" That is perfectly correct, but in the glossary here, we are most perversely told, "This name [*i. e.*, Nebuzar-adan] means literally, in the Hebrew (II. Kings, xxv. [v. 8]) 'chief of the slayers,'" *etc.*; which is better than anything the Little Minister ever got from "the original Hebrew." Of course the *name* Nebuzar-adan is Assyrian, and to be translated "Nebo has given seed"; the *title* which follows immediately means 'chief of the slayers,' and either of beasts or of men.

—The bit of confusion which the note further attempts to explain is a very curious one. But some points in the tangle seem certain. First, that neither Jacobus de Voragine nor Caxton had any connection with the Septuagint, nor did they know anything about a Latin version of the Septuagint, and so could not have followed it. Their Latin Bible was their Bible; beyond it their horizon did not go. But, second, that Latin Bible, originally translated from the Hebrew by Jerome, had become in many places grievously corrupted from the Old Latin, a translation from the Septuagint in use before that of Jerome. Apparently, then, in this passage, in the text or texts used by De Voragine and Caxton—or their sources—this reading from the Old Latin appeared. It seems likely, too, that the same sense lies behind "car il estoit prince des gueux," the reading in the French text which Caxton is supposed to have followed. The note upon which this is a super-annotation is the only one of any length which Mr. Ellis gives, and it is a pity that it should have fared so ill. It is only right to add that the text itself seems to be most trustworthy, and to have been edited with scrupulous care.

—It is a weakness in some archæological, or otherwise scientific, travellers to think that the general public will not hear anything calling for the least effort of the brain, but must be entertained with descriptions of scenery of the most intolerable length and dulness, with vapid and narrow comments, in words of one syllable and ideas of less, on the national and individual characteristics they meet, and with tales of the woes of the traveller, faced and outfaced by the extortionate innkeeper, the too intelligent native, and the lively insect. And the same scientists seem in the delusion that the public really wants all this tangle of words that lead to nothing. Anthony Wilkin's 'Among the Berbers of Algeria' (Cassell & Co.) is a case in point, but with redeeming features. Mr. Wilkin is evidently a competent anthropologist and has the right scientific spirit. He is very apologetic for the bits of anthropology in study of the Berbers and their works generally which have insisted on staying in his book. The fact is that the book, apart from them, would be unspeakably dull, lacking vitality enough to hang together. It were well if he would take this to heart. The more scientific he is, and the harder he rides his hobby, the better his reader will be pleased. We like to hear how he measured the skulls of a whole village and what he thinks of the origin and nature of the Berber race in its divisions, and of the Arabs in their very different way. His *obiter dicta*, even, when within his own sphere, have salt and flavor. The anti-Semitic situation in Algeria, too, is a "live" subject, but the traveller's talk and padding are leather and prunella of the shabbiest. Further, his sociological observations would be of more value if they had been reached through a better linguistic knowledge; but since he started with no Berber or Arabic, and with a French that was shaky in its "tutoyer," a *caveat lector* is called for. Geographically, too, Mr. Wilkin is to be taken cautiously. The map which he used must have been of a quite astonishing badness. We have consulted five, two English, one American, and two

German, on the elusive Lake Hodna. Of these, only one, that in Black's Atlas, gives it frankly and bluely as if it were an ordinary lake. The others all indicate, diversely but sufficiently, that it is more or less a salt marsh and of variable size. Again, without defending the anti-Semitic attitude of the French population of Algeria, it is well to remember how rapidly the Jews there are increasing. It is only recently that the French birth-rate rose above the death-rate, while the Jews have from forty-three to fifty-seven births in the thousand, with twenty-four to twenty-eight deaths. One of the best features of the book is the numerous photographs. They are all original and some are excellent. The reproduction is exceptionally good.

COVENTRY PATMORE.

Memoirs and Correspondence of Coventry Patmore. By Basil Champneys. London: George Bell & Sons; New York: Macmillan Co. 2 vols., 8vo.

The practice now prevalent in historiography, whereby a student, endowed with the single faculty of patient diligence, devotes himself to a particular subject, digs up everything accessible that has any bearing on it, and sets it all down in such shape as occurs to him, is having its effect upon biography. Some memoirs tempt the reader to inquire why, if they had to be constructed at all, it should be on such a scale, and why not by somebody else. It is possible to lose perspective and write around a topic with the result of obscuration. Of a certain type of orator it has been said that "you could hear him better if he were not so loud"; and so, about some men and things, one might know more if less were told. 'The Angel in the House' illustrated all the domestic virtues, won no little popularity, and led some to consider its author a genius. He enjoyed in early life the intimacy of Tennyson; he was a friend or correspondent of Browning, Ruskin, Carlyle, the Preraphaelites, and other eminences, some of whom professed to rate his verses very high. He was doubtless an amiable, honorable, and cultivated man; yet the strongest impression given by these volumes is of his earnest religiousness and his entire satisfaction with the ways of the Church of Rome, to which he was admitted when past forty.

Coventry Kearsey Dighton Patmore was born July 23, 1823: this book does not enable us to confirm or correct the cyclopædia statement that it was at Woodford, Essex. Except for six months in 1839-1840 at a school in France, where he was not happy, he was "educated at home" and on his own plan. Being capable and studious, he early learned a good deal of chemistry, mathematics, and art, as well as letters, and gained, as he said, much more knowledge than he would have acquired in the usual ways, but less mental discipline. This fact may account for some of his peculiarities: he was always an independent, self-made sort of person. His father was an agnostic and a man of letters in a small way, with a circle of friends that was of some use to the son; but by becoming financially involved, he left England "secretly and suddenly" in 1845, and his children were thrown on their own resources. Except for the brief period of stringency which followed, the poet's life was happy and prosperous. By the kindness of Milnes (Lord Houghton) he obtained in 1846 a place in the British Museum, which he kept for twenty years, or till he no longer needed it. During this period he wrote much for the reviews. His first book of verse had appeared in 1844; we need not quarrel with his later opinion of it, which was not high, but it brought a long letter from Bulwer, who found in it "unmistakable testimonials of no common genius." Another volume was published in 1853, and 'The Angel,' in four parts, in 1854-63. Tennyson wrote him, "You have begun an immortal poem"; but Patmore complained of "the total silence of the press about the 'Espousals.'" It was perhaps a more important service which he did to literature early in 1850 in recovering the manuscript of 'In Memoriam'—"a long, butcher-ledger-like book," left behind by the author "in a closet in which he kept his tea and bread and butter. The landlady assured me that no such book had been left there, and objected to my going to see; but I insisted, and, pushing by her, ran upstairs and found the manuscript." Patmore regarded Tennyson as his closest friend, and "used to follow him about like a dog"; but soon after this they were severed by a trivial misunderstanding. The biographer thinks that there was "growing mutual alienation, combined with some degree of strain upon their original relations." The smaller poet thought the greater was writing himself out, that "the earlier [poems] were Tennyson, and the later ['The Princess' and 'Maud'] Tennysonian." At this rate—*i. e.*, on supposed equal terms intellectually—their old relations plainly could not last.

Of his Museum experience Patmore wrote: "I did a good deal more than the average work; yet, during my twenty years of service, I may say that I read tens of thousands of books." If the tens were but two, that made a thousand a year, or about three a day; pretty rapid work, even if he had not been otherwise busy. He meant "looking into" them, which is not exactly reading. More nearly accurate, perhaps, is his "conclusion, that, of the forty miles of shelves in the Museum, forty feet would contain all the real literature of the world." That estimate, we fear, would exclude many poems and most of the longer Memoirs.

Apart from his own books, the chief events of his life were three marriages, in 1847, 1864, and 1881, and his reception into the Church of Rome—it was by no means a sudden conversion—in 1864. He lived mainly in London till 1866, when he bought a country place in Essex and turned farmer. From 1874 till 1891 he had a handsome house on the coast, at Hastings. His last years were spent at Lymington in Hampshire, and there he died, November 26, 1896. One abode, one way of life, a single occupation, did not content him; he liked variety. Through all his changes he had love, honor, troops of friends; and doubtless he deserved them. Of smaller men and worse poets there have been far more than of those bigger and better than he. Not the least valuable part of these volumes is the sixteen pages of his autobiography, recording his religious experience. For his first eleven years he "neither knew nor cared whether there was a God or no." To the age of five his mother made him say the Lord's Prayer and a hymn; then his father "forbade her thus to interfere with my freedom of intellect." For five or six years after that, his devotions were omitted, except once, when, "my nurse having provoked me greatly by some real or imaginary ill-usage, I knelt and prayed with much fervor that she might hate me as I hated her; for I could imagine no more terrific punishment for her than that." At eleven or twelve, chancing on a devotional book, he felt "a torrent of light and joy," a brief ecstasy, which left a minute and latent germ of faith and "a habitual discontent with the unideal condition of the world within and without me." At sixteen a precociously hopeless passion found a pathetic vent in "praying more than once with torrents of tears that the young lady might be happy, especially in marriage, with whomsoever it might be." Then he took refuge in poetry, as before in science. Now "angels spoke from time to time to me, as they do to all"; he began to have visions and revelations. While preparing a tragedy, his impressions deepened and widened. Yet his "religious life was an utter solitude"; "none of my family or friends ever went to church"; they were all Gallios. At nineteen this changed, with a visit to relatives in Edinburgh, pious members of the Free Kirk. Here friends told him that "an eminent Christian, such as I aspired to be, ought to be able to make extemporaneous prayer aloud, for the benefit of his company." He tried it and failed lamentably: "This meat was too strong for me." Then he went home and read Strauss; it moved him not. By and by he was confirmed—though this is not in the autobiography. As he grew older, "a simple sense of reality led me at first to the exclusive use of ancient Catholic books of devotion, and afterwards to abandon, as almost useless, all moral and theological writings which were not Catholic." He excepts Butler's 'Analogy,' the only good thing that ever came out of the Protestant Nazareth.

Patmore was one of those for whom all paths lead to Rome. No external influence led him thither, but a steady inward drawing. Yet his outward submission was long delayed, chiefly through tender regard for the wife of his youth, the heroine of his chief work. She had a Puritan's horror of the Pope: "A few days before she died, she said to me with tears, 'When I am gone, they will get you; and then I shall see you no more.'" In thus procrastinating he thought himself unsafe, perhaps guilty, not having her excuse of invincible ignorance. More secular minds may honor his respect for her gracious memory, which helped to postpone for nearly two years the step she had abhorred.

His later experiences on this line are hardly for Protestant appreciation. From a certain standpoint, doubt is the devil's chief work: no shadow of this worst of woes ever troubled him again. But in 1877 he rose to a higher state of grace by correcting a previously deficient affection and reverence for the B. V. M. and making a pilgrimage to Lourdes, which he twice afterwards repeated. Yet, however thorough a convert, he remained his own man. He accepted Roman doctrines because they suited him, and he had held out long after another would have yielded. He found the Eternal City worse than uninteresting at first (March, 1864), though two months later it was "by far the most religious and the least canting place I have ever seen." Later, when he was working up his 'Odes': "I have now read theology for four hours a day for five months. I am getting rather muzzy-pated with it. It

is like living on brandy and soda-water. . . . This prodigious dose of divinity has made me feel half-chloroformed." The following, however satisfactory to the emancipated, could hardly please the conservative of any school:

"I have been reading Gibbon's 'Decline and Fall' with great pleasure and admiration. Nine-tenths of what people of all 'denominations' shriek at him for is simply true. His sneers are almost always at priests, not religion. His sketch of the progress of Christianity in the first three centuries is the only piece of ecclesiastical history I have ever found interesting, or indeed intelligible."

Patmore's opinions were his own, whether any one else shared them or no. W. M. Rossetti says that Patmore, setting Burns above Tennyson, "instanced, as a line of unsurpassable beauty, 'With joy unfeigned brothers and sisters meet,'" which recalls F. W. Robertson's jest on genial critics: "As the poet beautifully remarks, 'She did so.'" This, to be sure, was in 1849; but throughout life Patmore's dicta went on in the same free, large, random, hit-or-miss style. Bacon's philosophy was "as base as his life"; Longfellow wrote some good lines and "heaps of slush"; Crashaw, of whom Patmore knew little till 1881, produced in "Music's Duet" "perhaps the most wonderful piece of word-craft ever done"; Robert Bridges—or perhaps any other poet—could hardly be recognized "when alternately stretched and cramped on the Procustes' bed of the sonnet"; Henry James "is incomparably the greatest living writer of fiction." With some of these judgments one may agree; but then his son, who died at twenty-two, "had he lived, would probably have reached the very highest place among contemporary English poets," and he himself was "the only poet of the generation, except Barnes, who has steadily maintained a literary conscience." On meeting Miss Byles, who became his second wife, he wrote, "I had never before beheld so beautiful a personality," though her predecessor, to whom he was devoted, and whom he most sincerely mourned, had been noted for beauty of person, mind, and character. As his biographer is forced to admit, his superlatives express "enthusiasm rather than comparison." That habit never left him.

His coreligionists, he thought, cared less for his poetry than did others. Yet Manning, as early as 1855, had recognized not only its purity and chivalry, but "a predominance of imagination over fancy," and "of the intelligence over the imagination." His self-estimate had liberal backing from friends. Thus "H., who is one of the most sober, cultivated, and severe of critics, says that 'The Unknown Eros' surpasses, in weight of matter and loftiness and perfection of style, all the poetry of the past generation, and is as secure as any book ever written of becoming a permanent British classic." Also, "Ruskin writes that 'no living human being' has ever done anything that has helped him so much as the Odes!" These Odes (1877-78), though the public neglected them, were, Patmore thought, his best verse-work, as they were his last. The last was always the best—till it was in type; then, "all the meaning and beauty I fancied I saw in them seems to have vanished," and he fears he may be "nothing but a miserable, self-deluded poetaster." That is a happy touch of nature; but where is the truth between the two extremes?

Mr. Champneys has handled his voluminous material by sections, which are mainly topical rather than chronological, so that you may look for the same thing in half-a-dozen places; the result is something of a jungle. There is an index of twenty pages, but it does not always aid the inquirer: who can "spot" every allusion in innumerable letters, fragments, and aphorisms? There are chapters on "Principles and Ideals," "The Church," etc., which may make fine reading for a Patmore Society. The book as it stands appeals chiefly to Patmorites, if there be such; but, with some slight concrete additions from without, it affords stuff to be boiled down into a briefer and continuous account of the man and his work in some future series of literary biographies.

WILLIAM HERSCHEL.

William Herschel and His Work. By James Sime. Charles Scribner's Sons. 8vo, pp. 265.

Before Herschel the Great, astronomy had consisted almost exclusively in measuring the positions of the stars, at different times, relative to one another and to the earth, and in searching out and testing hypotheses to explain their motions. The most important exception to this statement is that, as early as Ptolemy, at least, some astronomer—we may, for several reasons, guess it was a Babylonian—divided the visible fixed stars into six magnitudes, which were then further subdivided by affixing "greater" and "less" to their ordinal numbers. This is one of the most important facts in the history of science, for the reason that when the light of the stars came to be measured, several millennia later, it was found that there was a mathematical relation between the ordinal numbers of the magnitudes and the intensity of the light sufficiently accurate to form the basis of a mathematical mode of reasoning—a discovery which came almost too late to be of service in astronomy, but which may serve to assure us that direct estimates of differences of sensation of any kind will, under proper precautions, have sufficient objectivity to form the foundation for an exact science. The only other exceptions worth mentioning were Galileo's telescopic discoveries, and a small body of observations relating to the surfaces of the sun and moon. The old astronomy probably never can cease to be the crown of science, as having been the most efficient factor in the development of man's scientific intelligence; but its living importance is already beginning to cede to that of the new astronomy, which applies photometry, photography, spectroscopy, bolometry, polariscopy, and physics generally, to the study of the stellar universe.

The new generation justly regard Sir William Herschel as the father of the New Astronomy. It was he who first compared the spectra of the different stars; it was he who first made careful and definite observations upon the relative lustre of a great number of stars; it was he who first made a great telescope and showed, in the most masterly manner, all the uses to which it could be put; it was he who first proved the motion of the solar system as a whole; it was he who first showed that observation could discover the structure of the galactic cluster; it was he who first produced evidence of the variation of our climate with that of the frequency of sun-spots; it was the survey begun by him and completed by his son which discovered, and furnished us with tolerably accurate descriptions of by far the greater part of all the nebulæ known to-day; it was he who showed how to apply those observations to speculation upon the evolution of the universe; it was he who first undertook to survey the entire heavens systematically and with practicable thoroughness; it was he who first taught man to contemplate the heavens with an eye of discernment.

The greatness of the man and his enormous originality are proved by the fact that it is only within the last third of the last century that astronomers generally have recognized the importance of his work; and we have to thank many of his contemporaries in the astronomical world for demonstrating how far he shot above them by kindly recording, for the benefit of posterity, their own assified opinions of his results. The man who to-day has spent a lifetime in elaborating an exacter or wiser method in some branch of science still in the hands of fogies (as such branches there still are) will find a warming cordial in those contemporary criticisms of William Herschel.

One may be sure that a man of such achievement was a wonderfully real personality, with more life in him than other men, who seem mere shadows by his side. It may be doubted whether, among all his contemporaries, there was any except Napoleon Bonaparte to be compared with him in force of personality. He would have made the most splendid subject for a biographer of the first order, were it not that the greater part of his waking hours during his active years were spent with his eye glued to the telescope, or with his hands to the grinding-tool, so that his sister had to put the food into his mouth. What was his origin? Mr. Sime, who is one of that great tribe of biographers who are a little timid about the truth, tells us that his family was a "sturdy Protestant stock"; but it is easy to recognize in the name, from the Old High German *hêr*, "superior," one of those magnificent appellatives which are affected by our Semitic cousins; and when we find that grandfather Abraham Herschel begot Isaac, who begot Jacob, Sir William's eldest brother, we hardly need to be told more. The family, however, became Protestant, and emigrated from Moravia to Saxony, in consequence of this change of religion. Sir William's father, Isaac, was nothing but a poor and prolific Capellmeister of the regiment of Royal Hanoverian Guards; and his wife was the simplest of Hanoverian peasants, unable to write a letter to her husband, and energetically opposed to all learning, down to the very multiplication-table, as a most dangerous and unpractical thing, subversive of orderly life. The father, however, was a man of ability and breadth, who would often sit up to the small hours in conversation with Friedrich Wilhelm, the little sister in bed in the room, catching from time to time the names of Leibniz and Euler. This father was also a born musician, as were all (except possibly one) of his children, and most of their posterity since. William was a very clever composer, and lacked nothing of having an artistic nature, except those defects of character and of temper which are understood to belong to the genius. Literary capacity distinctly appears in all his writings. He learned languages with great facility, being

perfect in his French and English, without any regular schooling, and good in Italian and Latin. That he should have expressed a dislike for poetry on account of its untruthfulness, only goes to place him in the category of scientific minds of poetical tendencies, all of whom, from Plato down, have been more keenly sensible than other men of the dangers of poetry. Poets always liked him; and the very notes of observations which he would call out in dictation to his sister within, as he would stand at his telescope outside, with the thermometer perhaps toward zero, and his person carefully brought as near as possible to the temperature of the atmosphere, have, as Professor Holden has shown, their poetical breaks.

Capellmeister Isaac of course found Wilhelm a place in his band, and at the age of seventeen, about the beginning of 1756, they first went to England with the regiment. At the gloomy opening of the campaign of 1757, they were ordered into the field. The father's health had been pretty well broken in the former war with France (he had been at Fontenoy), and now that same Duke of Cumberland, again their commander, was defeated anew at Hastembeck. The mother, at this, insisted upon her "practical" view of the proper thing to be done, which was, that William should desert. This he accordingly did, and went to England so hurriedly that he was not even able to carry anything with him; and when his mother dispatched his things after him, she did not see fit to include his precious Locke's 'Essay concerning Human Understanding.' So there was the boy on a foreign shore, without acquaintances, almost without a penny, but with such a "go" in him that within ten years he occupied the lucrative post of organist of the Octagon Chapel in the fashionable city of Bath, conducted all the concerts at the rooms and the theatre, besides having a separate orchestra of his own of a hundred pieces, was overwhelmed with pupils, and, after seventeen hours of work daily, would go to bed to unbend his mind with Smith's 'Harmonics' or Maclaurin's 'Fluxions.'

Smith's 'Harmonics' led him to Smith's 'Optics,' and, finding his time hang heavy on his hands after the day's work would be done, he took to making himself telescopes in order that he might see what no mortal had seen before. Meantime, he was doing everything for the family in Hanover, and had found time, himself, to make the grand tour. At any rate, he had been as far as Italy. His elder brother, Jacob, was an eminent musician; but the other four were looked after by William. Sophia's five sons were provided with places as musicians at the English court. Another brother, Alexander, though an energetic man and good musician, lived much in William's house, and was pensioned by him. The remaining brother, Dietrich, also a musician, seems to have been almost supported by William, and received £2,000 by his will. The other sister, Carolina became William's astronomical assistant and a distinguished astronomer herself. He himself received from the astronomer-king, George III., for whom a major planet had been named, the first to be discovered in historic times, the munificent pension of £200, along with his pardon; and he bequeathed to his son, Sir John, two estates and about thirty thousand pounds. His lady was residuary legatee. This was pretty well done, for a man who had hardly given himself time to look nearer earth than the orbit of the Georgium Sidus. One of the most powerful intellects that the history of human science can show, with a musical and artistic temperament sufficient to give him a place in the history of that art, an administrator of such ability as to raise him from something like twenty shillings, with which he landed in England, to positive wealth by his own unaided efforts, he was certainly as well-rounded and well-vitalized a reality as any man need be, even in the age of the French Revolution.

Mr. Sime's biography is rather confused. It does not compare for an instant with another life of the same hero, published by the same house twenty years ago, which was a perfect gem of literary judgment and skill, and remarkable for the justice and knowledge of its scientific appreciations, being in fact the work of a leading astronomer, the Chevalier Holden—to call him by a title which, it is needless to say, he does not use. Mr. Sime has omitted some things which the earlier writer did not fail to make clear, has inserted a few items which his predecessor seems to have rejected as distracting details, has corrected one error, that Herschel's degree of LL.D. came from Oxford, though really from Edinburgh, and has made a nice padding of irrelevant matter, which is not bad reading when it does not too much embroil the essential facts. In this way, he has contrived to double the "reading-matter," very much at the expense of the literary quality of his book. We miss the charming portraits of the earlier volume.

The Great Boer War. By A. Conan Doyle. With six maps in colors. McClure, Phillips & Co.

It is certainly too near the events to get the proper perspective for an accurate and unbiassed history of the Boer war, especially while hostilities are still going on, even though they are in the guerilla stage, the last embers of a once furious flame soon to be stamped out, and when the documents which would clear up many doubtful points are yet unpublished. But it is satisfactory for those to whom the operations in South Africa have come in a fragmentary way, to have a good bird's-eye view of the year's warfare, with the details unified into a coherent and intelligible *ensemble;* and this is furnished by Conan Doyle. He served as a surgeon in one of the great hospitals, and, while modestly deprecating any pretension of giving an elaborate study of the war fortified by documents, does present a thoroughly readable account of the transactions in their bearings upon one another, with vivid and not highly colored pictures of battles, and with a discussion of the causes and probable outcome of the war, which, if from the standpoint of a sturdy advocate of the essential justice of the British side, is nevertheless moderate and generous in temper, judicial in praise and blame, and without a trace of rancor or mere partisanship.

The history, until it reaches the last tangles of the guerilla warfare in the Orange River Colony (or Orange Free State, as we used to know it), which is still the seat of these disturbances, and where the operations are of that minor type difficult to make interesting, is full of life and of enlightenment upon hitherto dark places. It relieves the British soldier from those suspicions of lack of sticking quality which have led some recent critics to declare that the Englisn army had lost its ancient fighting fire. Dr. Doyle shows this criticism to be unjust as to the men, and, so far as bravery is concerned, as to the officers, although he makes many unfavorable comments upon the inability of the sort of officers, high and low, which the existing appointment system puts over better men, to recognize new conditions. As to the causes of the war, the author insists with much force that the match which enkindled the explosion, without which there would have been no other hostilities than those waged by tongue and pen, was not Rhodes's intrigues or Cabinet aspirations for empire, but the rejection by the Kruger Government of the entirely reasonable demands of the "Uitlanders," the settlers in the mining districts, for a larger participation in the administration of public affairs. Had the Boer rulers been possessed of an atom's appreciation of the inevitable requirements of a modern republic, they could, by a judicious extension of the franchise, have fortified their government in the hearts of these newcomers, of whom only a small majority had any desire to put the state into the British colonial system. There were Boers sufficiently sagacious to see this truth, but the majority, led by Kruger, readers of the letter of the Old Testament, and, like the Puritans of the sixteenth century, infatuated with the conviction that they were the modern children of Israel, foreordained to possess the earth and to overcome all unbelievers, not only brutally denied these petitions for rights, but intrigued and made elaborate preparations for the extension of their empire over the neighboring British colonies.

With regard to the military operations when hostilities were under way, it appears that the melancholy series of disasters which, in the autumn of 1899, carried dismay to English homes and legislative halls, were largely due to the tactics of generals blind to the revolution which long-range cannon and magazine-rifles in the hands of sharpshooters had wrought in modes of assault and defence. For the first month or two the attempts of the British generals to carry fortified Boer positions were made with solid columns moving against the enemy's front, where riflemen, lying behind rocks and ditches, made a special mark of the uniformed officers, the fatalities among colonels being distressingly great. At Colenso, in Natal, on the 15th of December, 1899, Gen. Buller sent brigades to the assault of fortified positions in quarter column, with no scouts to learn the ground and no skirmishers to precede the battle. So at Magersfontein, on the march to Kimberley, on the 10th of December, a similar dense column, moving through an unknown country in the dark night, stumbled into an intrenchment of the Boers protected by wire abbatis, and was hurled back in utter disorganization, as might be expected of the most valiant troops under such conditions. Two months of such blunders were a sufficient lesson, and, by the time Roberts came into the field with large reinforcements, the method of attack of which Gen. Sherman was so distinguished a master in the Georgia campaign of 1864, of extending the advancing lines around the

flanks of the enemy and compelling him to fall back, was uniformly adopted, with the inevitable effect of neutralizing the elaborate strongholds of the Boers.

Some vigorous comments upon the new principles which ought to be adopted in British army organization are in the line of experience in other recent campaigns. There will be less attention given to the drill of keeping men in close touch, and much more time expended in teaching unerring marksmanship. Cavalry, with its ponderous burdens for the horse and its show swords, will become mounted infantry with the lightest possible amount of baggage. The rank and file must be better paid to entice into the service a higher order of intelligence. There is no discussion of the widely published accusations of the incompetence of the medical service of the army. The losses up to September last, when the book was written, were, in killed and died of wounds, 2,966; in deaths from disease, 5,621, while 29,166 invalids were sent home. Diet and weather are thus, as usual, shown to be the deadliest marksmen of warfare. That there was no want of tenacity in fighting is illustrated by Buller's loss, in the relief of Ladysmith, of more than 20 per cent. of his forces.

The Clergy in American Life and Letters. By Daniel Dulany Addison. The Macmillan Co.

Mr. Addison's book does not compare favorably with Col. Higginson's 'Old Cambridge' and Mr. Swift's 'Brook Farm,' its predecessors in Mr. Woodberry's series of "National Studies in American Letters." In so far as it justifies its title, it does so much more because of its exhibition of the clergy in their relation to American life than in their relation to American letters. Indeed, as respects the latter, the outcome of Mr. Addison's study is almost nil, seeing to how slight an extent his clergy shine as men of letters. This is partly the fault of the clergy, but partly Mr. Addison's, so little has he addressed himself to the literary elements in the clerical development, so little stress has he laid upon the distinctive literary qualities of one clergyman or another. It must be confessed that the amount of pure literature produced by American clergymen, as such, has not been conspicuously large. Our impression is that much more of it has been the work of unfamed men than of the famous sort. The sermon of which nothing is known beyond the parish bounds has often a distincter literary character than the sermons of Brooks or Beecher or Parker. But it would be easily possible to indicate a body of prose literature, and to make a collection of verse written by clergymen in pursuance of a congenial avocation, of which there is but slight suggestion in Mr. Addison's pages, but which would be highly creditable. On the side of verse, Mr. Stedman's 'American Anthology' is an instructive illustration.

The division of Mr. Addison's book is into four chapters of a general character, "The Clergy in American Life," "Early Writers and Historians," "Poetry and Romance," and "Denominational Literature," and six chapters on as many different men. The first suggests the question whether the clergy are making good the promise of their colonial days. Many of them of late have seemed to be the merest echoes of the more strenuous politicians, and to be particularly ingenious in the discovery of pious phrases wherewith to gloze abominable deeds. There have been like things before now, and Mr. Addison is far too lenient in his dealing with the conduct of the clergy during the anti-slavery conflict. Garrison's construction may have been too stern, but it was far juster than this saccharine apology. It is a pity that Mr. Addison's self-imposed conditions did not permit him to dwell upon Jonathan Edwards. One such passage as Edwards's description of his elect lady, Sarah Pierrepont, would have been convincing of his literary quality. The list of later clerical historians includes Jacob and John S. C. Abbott, but not Jared Sparks. To say of O. B. Frothingham that "literature claimed his most serious work" would be a gross mistake if his sermons had not had a noble literary form. It will be news to many that an "exaggeration of the importance of details" was a defect of his work. Too little care for them was his most serious fault. Is it because Col. Higginson still lives that he is not mentioned with the historians? With many others he illustrates that clerical apprenticeship to literature of which Mr. Addison makes but the scantiest note. Hence merely casual references to Emerson, who was still a Unitarian minister when he published 'Nature' in 1836, and gave the "Divinity School Address" in 1838. Hence, coming to poetry, entire omission of such notable poems as those written by Cranch and Dwight and Wasson. Any mention of hymn-writers which omits the name of Samuel Johnson fails of completeness by that sign. Mr. Addison's list has other faults. A recent Episcopal hymnal which contains 150 hymns, 89 of them written by American Unitarians, corrects his statement that the hymn-writers have for the most part spent their strength upon denominational lines.

Mr. Addison's first special chapter is devoted to Timothy Dwight. This, like those that follow, is well written, but not very well. The chapters on Channing and Parker are remarkable for their generous appreciation of men who are not of Mr. Addison's household of faith. Like many others, he uses Channing as a club with which to smite the Abolitionists. He does less than justice to Channing's style, which was at least remarkable for its lucidity. Some praise is also due to the deliverance of the sermon from the bonds of Scriptural exegesis and textual quotation. Channing and Buckminster (who is not mentioned) did much to this effect, and Edward Everett, also unmentioned, was a preacher who carried further their reform. To listen to Buckminster's preaching, said Andrews Norton, "was like walking in the triumphal procession of Truth." The account of Parker is wholly kind and sympathetic, but it is not true that political interests ever absorbed the bulk of his preaching, nor that his early verses were less religious than the later. Parker's "Journal" is a much less continuous "diary" than Mr. Addison conceives it to be. The date of his first preaching in the Music Hall was not March 21, 1852, but November 21. The chapter on Bushnell suffers from the inevitable comparison with the full and rich biography by Dr. Munger which has so recently appeared, but is intrinsically good. So is the chapter on Beecher; and that on Phillips Brooks has, to an exceptional degree, the accent of personal acquaintance and entire admiration. Here, as elsewhere, we would gladly have had a more analytical treatment of the preacher's literary form. Where the relation to life is paramount, some mention of Dr. Bellows would seem to be required. Indeed, the list of social helpers might be indefinitely extended. It is a mistake to compare Brooks with Bushnell as a clergyman "universally known and loved." Bushnell was not universally loved, but very cordially disliked and hated by a good many of the saints.

But none of these deductions is sufficient of itself, or with the others, to prevent Mr. Addison's book from being an interesting and suggestive treatment of a large and fertile theme.

Ueber die Anlage zur Mathematik. Von P. J. Möbius. Mit 51 Bildnissen. Leipzig: J. A. Barth. Pp. vi. + 331.

Fate, the author tells us, is responsible for this book about mathematics written by one who is no mathematician, but a psychiatrist. Its *raison d'être* appears to have been "a casual and rather late" acquaintance with the works of Gall, the phrenologist, for whose rehabilitation as a man of science Dr. Möbius is much concerned. The particular point of departure for the present work is Gall's essay on the "sense for numbers," which the author reproduces (pp. 11-32), while a further tribute to the phrenologist is added in the form of a rather lengthy appendix (pp. 195-331) dealing with his life and works. The rest of the book is devoted to the consideration of "Mathematical Talent," "The Mathematical Organ," "The Skull and Brain of Mathematicians," etc. The fifty-one portraits are those of mathematicians (here, as elsewhere in the book, Dr. Möbius is quite generous in his interpretation of the term, welcoming heartily astronomers, physicists, etc., and not always insisting upon a very high standard of talent) of all ages and countries, from Archimedes (?) down to Felix Klein. It is regrettable that the author's own "number-sense" is so constituted as not to feel the necessity of an index, the absence of which in a volume of this nature is inexcusable.

The "mathematical organ," as Möbius (after Gall) describes it, consists in an "abnormal formation" of the lower edges of the forehead and the adjacent orbital regions, corresponding to a particular development of the anterior end of the third frontal convolution of the brain. This "abnormal formation" may be described as an increased breadth of the lower part of the forehead, greater prominence of the bony portions (with hyperplasia of flesh and skin), and a depression of the outer orbital ridge giving rise to a "droop" of the outer half of the upper eyelid. Such is the "bump" of mathematics. By these signs ought we to know all great mathematicians; sometimes, however, the fleshy "bump" alone, or even large and bushy eyebrows, can point the way, for exercise of the part of the brain just mentioned has, outside, its very material concomitants. The exact place in the brain where the "mathematical sense" resides is "the region in the anterior end of the third frontal convolution, where the latter passes over into the second"—Gall's locality for the sense of numbers. Here, then, lies "the mathematical centre," as the author does not hesitate to call it; here sits the muse who presides over the destinies of the "queen of the sciences." Verily, the age of the man of Spy, or of him of the Neanderthal, must

have furnished a goodly number of prima-facie mathematicians! Anthropology and neurology will demand far more evidence than Dr. Möbius vouchsafes before they will accredit his thesis. "Marks" of the mathematician there are, perhaps, but they are surely more subtle than anything indicated here.

In women, the "abnormal development" of the fronto-orbital region is noticeably less than in man, and the non-appearance of the "bump" in question gives the author a chance to denominate the mathematical talent an exclusively masculine possession. For him, "a mathematical woman is unnatural"; mathematical and womanly are contradictory terms; no mathematical woman was ever anything more than a good scholar. In order to maintain this position, Dr. Möbius has to make the most of some very doubtful pathological phenomena, and to dismiss mathematicians like Sophia Kovalevsky with the sentence (not his own), "All her scientific labors are completions and developments of the theses of the master (in this case, Weierstrass)"; a dictum which, extended to other branches of science, would decimate the ranks of genius. Are none worthy who come after the king? It is easy enough to say that in woman great talent and sound health rarely go together, but how can the pathological be circumscribed so that male genius may escape the taint? That the average male skull is about midway between the skull of woman and the skull of the mathematician, the latter being "an intensification of the specifically male type," may or may not be true, and may or may not be significant. At any rate, women have good company in Goethe, whose skull, in so far as the "mathematical organ" is concerned, is "absolutely feminine," and Raphael, who was similarly constituted.

But, in spite of much that is unscientific or crudely naïve in this book, it is one well worth reading, for it contains also a great deal of valuable and interesting information about men of mathematical genius. According to Dr. Möbius, when mathematical ability is inherited (this is the fact with only a minority), it is through the father, "there being no case in which such inheritance was through the mother"—a rather hazardous statement, it seems to us. The daughters of mathematicians do not show any strongly marked predilection for mathematics, while marriages between mathematicians and daughters of mathematicians do not seem to produce any greater proportion of mathematically gifted offspring than do other marriages. That a large number of mathematicians have been born in large families, may be without special significance, while, as the author himself notes, the fact that so many are born among the lower classes of society is but one index of the greater fact that these classes still form the mass of sane and healthy mankind. The vogue of mathematics in Italy in the Middle Ages, in France and Germany in the eighteenth and nineteenth centuries, is by no means a proof of the existence of "a connection between high culture and mathematical genius." The coincidences of mathematical talent and ability in other branches of human knowledge deserve further investigation. Relatively common seems to be a coincidence of mathematical and philological talent, and musical mathematicians are not at all rare, while mathematicians with a talent for painting or sculpture are less numerous. Theology and jurisprudence seem not to possess the closest of ties with mathematics, while those of philosophy are much nearer. It is putting the case a little too strongly, however, to declare that "between mathematics and poetry there is a gulf fixed." Nor are the mathematical representatives in general literature so few in number as some think.

Mathematicians, as a rule, tend to be long-lived, and many of them have come from long-lived families. They are, likewise, not subject *per se* to mental diseases, although, like most so-called "intellectuals," they manifest "nervousness." Their idiosyncrasies have probably been exaggerated, and are, on the whole, no greater than those of other classes of geniuses in similar environments. They are also, in spite of the popular impression to the contrary, very often of a "fiery" or passionate temperament. Perhaps the most interesting suggestion in the book is the author's contention that "the relative rarity of mathematical talent is a good reason for not insisting upon mathematics as the basis of higher education." *Videant consules!*

Memories of the Tennysons. By H. D. Rawnsley. Glasgow: James MacLehose & Sons; New York: Macmillan. 12mo, pp. xvi, 252.

Canon Rawnsley met the Laureate for the first time in 1884; but the families had been neighbors when the century was young, and the friendship was handed down from father to son, and, with the Canon and his brother, to grandsons. The Rawnsleys for two generations were born and bred in the region where Tennyson received his first impressions, among the scenes so often celebrated in his poems. The old churches, the lanes and fields, the sands of the Lincolnshire coast, are here brought before us; and aged peasants contribute their recollections of "th' owd doctor" and his children, who "hedd'n't an ounce of pride—would stop and talk wi' any one on the road." Alfred, it appears, was "a 'dacious one," and "a rough un," "straängen fond o' the jam as well as the peärs," and "a regular boy for the cats." One of these survivals had heard that he "addles his bread by his writings; is worth some hundreds, they do saäy," but was skeptical on further information: "Naäy, naäy, sir, you mun be mistaken; sewerly it's hundreds, not thousands." As the poet and his brothers grew, "sich fine, up-straight men they all were, and sich heads of hair and sich a walk!" After the father's death and some experience with an unsatisfactory curate, "he said he would go to church to accommodate his mother, but he could well have liked to get up a meeting hissen, for the church parsons were such hypocrites. . . . He was quite a religious young man, was Mr. Halfred, leastways would have been if he had been dragged up by the Wesleyans." Such was the old sexton's judgment.

Mr. Rawnsley thinks that it was this freedom and familiarity of his youth alone which brought Tennyson into acquaintance with common human nature and made possible certain parts of his work. In maturer life, as we all know, he was shy, secluded, open and easy only with his intimates. Where did he meet his Northern Farmer? Scarcely at first hand, unless with a long interval between the interview and the report. Mr. Rawnsley gave him some of the material, such as the story of the pond that was used for immersion, with sad results to the cows: "I blaäm them howry owd Baptisses for it all, coomin' and pizenin' my pond by leavin' their nasty owd sins behint 'em." Also the churchwarden's comments and advice apropos of his ordination:

"Well, Mr. Rownsley, I can seä by that white thing round your throat that they've gone and maäde a parson on you. Well, well, God Omighty knows theer mun beä parsons as well as farmers, and you'd beä a fool i' the crewyard along o' the beasts, I reckon, and I should mebbe beä as big a fool in the pulpit o' Sunday. . . . Tek my advice; doän't thou saäy nowt to noabody for a year or more, but crip and crawl and git along under the hedge bottoms for a bit, and they'll maäke a bishop on ye yit."

On hearing this, Tennyson said, "Give me that and I will make something of it." And so he did of the other.

According to these chronicles, it was to Mr. Rawnsley that he said, "A man without humor is a fool"; and of Gladstone, "I love him, but I hate his politics"; and of his peerage, "I did not want it. How can I take off a cocked hat and bow three times in the House of Lords? And that is all it amounts to. I don't like this cocked-hat business at all." Just before this he had complained of the tourists, their impudence, and "the horrible way they stare," and told his guest of an incredible American woman who had never seen his portrait. She "walked right up to me on the lawn in front of the house one day and asked if I had seen Mr. Tennyson, and I said, Yes. Where was he? I told her I had seen him, half an hour before, down there, and she scuttled off like a thing possessed. It was true enough, for I had been down there half an hour ago. It's horrible: what have I done that I should be thus tormented?"

To the same friend the poet revealed his over-sensitiveness about the critics. "They allow me nothing. For instance, 'The deep moans round with many voices.' 'The deep,' Byron; 'moans,' Horace; 'many voices,' Homer, and so on." And again:

> "In my youth, the growls;
> In mine age, the owls;
> After death, the ghouls!"

As to personalities and localities, he said that "Lilian" and the other early feminine titles meant nobody in particular, "and that he never described Somersby in any poem but the Ode to Memory and In Memoriam. The Moated Grange was in Lincolnshire, but not at Somersby, nor was The Brook the Somersby beck; 'Flow down, cold Rivulet' was." As to some of his habits: "He did everything in a large way. The tobacco-jar by his fireside quite held a gallon, and at his early breakfast he would take his tea in a bowl, saying, 'A teacup is such a niggardly allowance.' "

There are perils in this sort of writing; but Mr. Rawnsley plays the part of Boswell briefly, and with mitigations which leave no unpleasant impression. Besides the chapters specially cited, he has others of his own on the poet's funeral, on "Virgil and Tennyson," and on Charles Tennyson Turner, with two by his father and brother. His personality is no more obtruded on the reader than it was on the laureate: he is a practised, sensible, and agreeable prose writer, as well as a minor poet.

The sixteen illustrations are mostly unfamiliar, and add to the interest of the book. Among them are a somewhat rude and

archaic portrait of the poet's mother, and two quaint drawings, one representing "Tennyson sprawled upon the deck of the Bordeaux steamer, in his top-hat and long Inverness cape or coaching-coat, with books strewn at his feet, and talking to the delighted audience of fair girls in magnificent coal-scuttle bonnets." The other depicts Arthur Hallam similarly posed, reading Scott aloud.

Webster's International Dictionary of the English Language, . . . under the Supervision of Noah Porter, D.D., LL.D. To which is now added A Supplement of Twenty - five Thousand Words and Phrases. W. T. Harris, Ph.D., LL.D., editor-in-chief. Springfield, Mass.: G. & C. Merriam Co. 1900.

Wide currency has been given to the fact that Dr. Murray has said that perhaps Webster's International Dictionary is the best of one-volume English dictionaries. Surely, no living man's opinion upon such a question can carry so much weight as Dr. Murray's, especially to one who has read the whole lecture in which he said this, and has noted the spirit of giving each work its full due which pervades that most interesting delivery. Considering how long it is since the quarto Worcester was last revised, that the Standard (which, at any rate, contains some peculiar information that will always give it an historical interest) was probably only known to Dr. Murray as published in two volumes, that Stormonth is a comparatively small book, and that all the other one-volume English dictionaries are abridgments, the "perhaps" of Dr. Murray's utterance is the only thing about it that could surprise anybody. The International now appears with a supplement of twenty-five thousand words, an addition of one-seventh part to the bulk of the former vocabulary. These are words which have come into importance during the last ten years. Their multitude measures our progress during that period. A full half of them belong to the physical sciences, and of these nine out of ten to biology, including medicine. There must be five or six thousand botanical terms, alone, in the supplement. About a tenth or twelfth of the additions are words of local use. Probably not five per cent. of them are good literary words. There are near a thousand colloquial and slang expressions. Spanish and French words, terms of art, terms of theology, philosophy, and bibliography make up the chief of the remainder.

We have taken the trouble to test the work by making a number of lists of twenty-five words (each list containing words in a different branch) that have acquired importance during the last ten years. We have then looked these out, both in the body of the work and in the supplement. This examination did not extend to literary English (because we presume that a person who wants information about such words would go to a much larger dictionary), but was chiefly confined to scientific terms. The result was to show us that the biology, and especially the general evolutionary biology, and the botany, had been extraordinarily well done, both in the main body of the work and in the supplement, and most of the other branches were found very well done in the main work, and, for the most part, fairly well kept up in the supplement. Certainly, the more philosophical sciences, mathematics, logic, metaphysics, and psychology, are the least satisfactory. Both the old editor-in-chief and the new one, the Hon. W. T. Harris, Ph.D., LL.D., were philosophers mainly occupied with obsolescent systems of thought.

Of course, such a work will inevitably be open to just criticism in thousands of places. Many faults might have been set right at moderate expense, by small alterations in the plates. Why, for example, should a list of chemical elements be put before the reader which not only omits all the new elements, the interest of most of which is uncommonly great—and some of these are not even given in the supplement—but also includes sundry pretended elements that never had very strong claims to the title, and are now known not to be such? Such names ought to be in the vocabulary, but not in a list of elements.

It is popularly supposed, we believe, that the great effort of a dictionary-maker is to get together as many words as possible. That probably was true at an early stage of the art, but to-day his great struggle—especially if it be a one-volume dictionary that he is making—is to keep his work within its prescribed bounds. A dictionary, however, is a work which must continue to be sufficient for many years; and, for that reason, the head of each department should be a man thoroughly imbued with the spirit of the coming developments in that department. If space is to be made, it should be done by striking out matters of detail; but there should be a disposition to welcome all words which signify new ideas that are seriously pressing for recognition in each branch. To that end, the editor-in-chief should be a man of the most modern and progressive spirit, always impressing the specialists with this view of what is wanted. It would be easy to show that this has not, in all cases, been done in the present instance, and that several departments of the dictionary have suffered in consequence of its not having been done. Nevertheless, the whole is a magnificent work of the greatest every-day utility.

The Life and Death of Richard Yea-and-Nay. By Maurice Hewlett. The Macmillan Co. 1900. 12mo, pp. 410.

Not once but many times the troubadour, Bertran de Born, who knew him well, calls Cœur-de-Lion *Oc et No,* "Yea-and-Nay." Here was a title for Mr. Hewlett's book and his clue to the labyrinth of cross-purposes, of doing and undoing, that was Richard. In the wrong Richard did to the woman that loved him lay the forecast of his more notorious tragedy. When he renounced Jehane of the Fair Girdle, he said nay to his heart; when he snatched her back from the altar, he said nay to his head. He was bold enough to marry her despite policy, craven enough to cast her off again for policy. When the zeal of the cross burned within him, he was logical enough to marry Berengère of Navarre, and with her dower buy him a way to the Holy Land; illogical enough, once married, to refuse to be husband to her. In the holy war he won the love of none, the obedience of few, the admiration of all. A nature that flings away what it desires, and grasps again for what it has cast aside—there is something monstrous in this Yea-and-Nay. And it is no small part of Mr. Hewlett's achievement that he has gained for such a hero, with the reader's moral condemnation, his sympathy. A "snatching lion, sudden, arrogant, shockingly swift; a gross deed done in a flash which was its wonderful beauty"—that is Richard in action, and, perhaps, here lies his fascination. In any case, Mr. Hewlett has taken Cœur-de-Lion out of the passing show of romance, and fixed him as a man suffering and causing suffering. Hitherto he might be taken for granted, like Arthur or Robin Hood; henceforth he must be reckoned with like Tristan or Tito Melema.

If Richard trusted neither heart nor head, Jehane, Mr. Hewlett's happiest creation, might have been counted among those

"That weren trewe in lovyng al hir lyves."

From the sullen, beautiful girl of the dark tower who sent Richard back to his duty and his princess, to the mother of his son who sacrificed her body that her lord might live, she is steadfast in loving through yea and through nay. One cannot doubt that she has joined that band of "love's martyrs" which follow Chaucer's Queen Alceste.

It will have already appeared that this book shows much of the "high seriousness" of the great "dramatic" novels, to use Mr. Paul More's suggestive classification. This has not prevented certain qualities of the "epic" novel as well. Behind and about the main characters lies a whole troubled world. The Abbot Milo, through whom Mr. Hewlett chooses to see Richard, is a presentation such as fiction had not yet seen of the ecclesiastical culture of the twelfth century. In him is all its elaborately graceful pedantry, its shrewd worldly wisdom, its capabilities of enthusiasm, with practical disregard of the deeper moral issues. The mediæval combination of refinement in taste with sheer brutality in morals is seen in Richard's rivals and fellow-crusaders. The mere citation of memorable descriptive passages, like the death of Henry II. and the poetical debate or tenzon at Autaforte, would unduly prolong our notice, but this much should be said, that the sound of arms in this book has the epic ring, and is in nowise to be confounded with the mere clatter of present-day romance.

Of the manner of the book much good is to be said, but with certain reservations. It was perilous to crowd a novel of character into a romance, and the book suffers from this very duplication of interest. More than this crowding, one feels at times that Mr. Hewlett is over-mastered by his material. The tragic destiny of Anjou looms large before him, and he writes visibly under its obsession, as a tragedian swept out of his art into real sobbings. The reader would have welcomed more frequent resting-places like the smiling sea-picture which preludes Richard's landing in Palestine. More of this Mr. Hewlett might have conceded without compromising the unity of his book.

Of the striking prose of this novel, highly wrought and distinguished as it is, a word should be said. There are many euphuisms. To the more common euphuism of prettiness Mr. Hewlett has never condescended. But there is a euphuism of power to which the greater spirits are prone. To it Mr. Hewlett has often yielded. As in a great painting of Delacroix, the whole landscape — shrubs, trees, rocks, mountainsides—writhes and swings with the wrestling figures of Jacob and the angel till the mind reels with the sense of action, so in Mr. Hewlett's narrative the minimal

things have a kind of distracting life of their own. You read: "The devil of Anjou sat eating King Henry's eyes, and you saw him at his meal," but you had just been told: "His features seemed to have been hacked coarsely out of wood and as coarsely painted; but what might have passed by such means for a man was transformed by his burning eyes, with their fuel of pain, into the similitude of a fallen angel." Here was enough of eyes and angels.

It was Mr. Hewlett's prose style that convinced us some ten years ago that the publication of 'Earthwork out of Tuscany' was an event in English literature. That judgment, so far as it went, we have had no occasion to retract. Whether in the more facile success of 'Forest Lovers,' in the trenchant brilliancy of 'Little Novels of Italy,' or in his minor pieces, Mr. Hewlett has never lacked the penetrating word and the enkindling phrase. It is his quality. In 'Richard Yea-and-Nay' it comes near to being his defect. The style is, indeed, simpler than before, but it lacks that unconscious ease which befits a great novel, as this very nearly is. It can be said of few books that they suffer from a surplusage of ideas and images, of few that their success is compromised by sheer virtuosity. If certain defects of this notable book have been considered somewhat at length, it is in the confidence that Mr. Hewlett's 'Richard Yea-and-Nay' is only the earnest of the great romance that no other writer of the day is so likely to give us.

Old English Glosses. Edited by Arthur S. Napier, M.A., Ph.D. Oxford: Clarendon Press; New York: H. Frowde. 1900.

This volume, from the Merton Professor of English Language and Literature at Oxford, forms the most recent addition (part xi.) to the mediæval and modern series of the *Anecdota Oxoniensia,* as the miscellanies, taken chiefly from texts, documents, and extracts in the Oxford libraries and published from time to time by the University, are called. The volume is a large quarto of some three hundred pages of text, notes, and indexes (both Latin and English), and forty pages of introductory matter. It is clearly, accurately, and attractively printed in a way that does credit to the mechanical resources of the Clarendon Press.

The practice of writing-in English words over the Latin of classic texts, which most of us have fallen into in our school days, is by no means a modern one. The English monk of the eleventh century did precisely the same thing. After working out the meaning of a difficult context, he would set up for the guidance of the next reader a translation of the most difficult words written in over the text. This was done by glossing the word or passage sometimes in simpler Latin, sometimes in English, sometimes in both; often, too, there would be supplied to the text an *ordo,* setting its idiomatically placed Latin words in the order of the vernacular. At a time when Latin vocabularies were clumsy and Latin grammars were comparatively inaccessible, such practices as these were necessary.

It was a service of this sort that Bishop Asser rendered King Alfred when "he explained" ("enodavit" is Malmesbury's graphic term for it) "the meaning of Boethius *de Consolatione* in simpler words, and the King turned these into English." The Latin works of Aldhelm, as Professor Napier points out, are especially full of these "enodations," and have always furnished rich material for the Old English lexicographer. They stood badly in need of editing, for many of their words have been taken into our Old English dictionaries without a careful study of what they stood for. To collect and edit carefully these and such other glosses as were accessible, is a task which Professor Napier set himself a number of years ago and has now successfully achieved.

The book itself, which its editor modestly describes as "a small instalment towards the future Corpus of Old English Glosses," is really much more than this. In the first place, it is an example of accurate and condensed scholarship, which the young English student will do well to take for his model. The introductions are brief, accurate, essential, and clearly written, with not a sentence of padding, not a paragraph of literary writing in the whole. The text is presented in all the accuracy and purity of its original form, without alteration, without botching. The notes contain an amount of apposite explanatory information such as is rarely packed away in so brief a compass. Everywhere in the book is the brevity, accuracy, consistency of positive scientific method. Such work is of permanent value, and, once done, needs not to be done over again.

Then, again, the book marks a distinct advance in English lexicography. It lays once and for all many of the ghost-words which have haunted Old English dictionaries since the days of Sumner and Lye. Pedigrees of a few of these creatures of editorial misreadings and scribal misunderstandings Professor Napier gives in his editorial preface; others are run down in the subsequent notes. And all this valuable and final criticism is clearly and simply put, without any of the *eureka* spirit which sometimes mars such work. The book shows also many interesting new forms of Old English words, enlarging thus our knowledge of Old English grammar as well as that of Old English vocabulary.

At present such work as this of Professor Napier's seems in its interest rather remote. Few save specialists in the subject care to follow its progress. But surely the time will come when we shall seek out the origins of this marvellous speech of ours, and study Old English with something like an intelligent sympathy. We shall then be struck with the poetic character of Old English thinking, such as is shown in these glossaries and is impressed indelibly upon Old English literature, both poetry and prose. Our English ancestors were the most literary of all the Western barbarians, and even the scanty remains of their literature which have come down to us show clearly the poetic quality of their speech. Their words speak always of human experience, something seen, or heard, or touched. Even when they are called upon to name an abstract idea, they name it with a peculiar vividness and directness which is the very essence of literature. Their narrative poetry is a series of pictures rapidly suggested to the mind by picturesque associations. Where their poetry touches on the emotions, it is the poignant experience of an individual which is represented. In their speech and in their literature lies the germ of that English poetic expression which reaches its full flower in Shakspere.

It is a mistake to think of such work as this which lies before us as having for its concern only "philology," and as being inspired merely by a scientific curiosity to know the meanings and forms of words. Words are nothing apart from literature. They do not exist because they are so many curious combination of various humanly formed speech-sounds, but because they are part of the mind's life. They develop and grow with the growth and development of human experience, and the study of them apart from human experience is lifeless and fruitless. The scientific scholarship which Professor Napier has been developing at Oxford is by no means what is commonly thought of and spoken of as the "philological" study of English. It has nothing to do with so-called "roots" and "stems," "affixes" and "suffixes"; but its goal is the accurate knowledge of the organic life and development of an idiom which is alive today in the mind of every one who thinks in English, and the scientific understanding of the organic life and development of a literature that is as rich in human interest as any the world has yet produced. Such scholarship can afford to be patient, for science as well as art is long.

HENRY HOLT & CO., N. Y.

Ready January, 1901. 100 copies printed for subscribers only.

B. F. STEVENS'S

Facsimile of the Unpublished

British Head Quarters Coloured Manuscript Map of New York and Environs (1782).

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale, 6½ inches to a mile, 10 ft. by 4 ft.

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbour, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island, including Brooklyn, the Works on Paulus Hook, and parts of the Jersey Shore. It has a copious Table of References to various Works (British and American), some of them with notes as to the time of their construction or destruction.

A few extra copies of sheet 8 have been printed, so that it can be sent as a specimen on application from intending subscribers.

PRICES:

(Which include all charges—except duty, if any—to any address in the United States):

Mounted on linen and folded in book form, with leather slip case..... $30.00 net

24 Sheets unmounted (22 inches by 15 inches) in Portfolio ..... $25.00 net

A Timely and Important Book

RUSSIA AND THE RUSSIANS

By EDMUND NOBLE, author of "The Russian Revolt." 12mo, $1.50.

"Any book is timely which helps the outside world to an understanding of the inside of Russian national life. For there is very little use in trying to understand the meaning of the enormous part which the Muscovites of to-day are playing on the international stage unless we can first learn to know something of Russian society, and wherein the people of that vast and strange empire differ in their ideas and habits and environment from the people of other parts of the globe.

"Such a book is Mr. Noble's. . . .

"'Russia and the Russians' is a wholesome book for America and th Americans. It will serve to correct some erroneous and mischievous notions which have found lodgment in this part of the world."—*Boston Advertiser*

"Mr. Noble has performed a task demanded by the times in a manner most acceptable for seekers of truth conveyed in attractive diction. Starting with a view of the land and the people and the laying of the foundations of a great nation, he shows how Russia became an autocracy as one of the consequences of the Tatar-Mongol conquest, tells of the work done by Peter the Great toward assimilating Russia to the civilization of Western Europe, a work carried on upon a minor scale by the women reformers of the next fifty years, the spread of liberalism, the response to it in the emancipation of the peasants, and the growth of colonization with Siberian exile as a powerful influence, and he comes finally to a consideration of the future of the empire."—*Manufacturers' Record*, Baltimore.

"It is a story of intense interest and shows the Russian people in a clear light. The book throbs with the action and passion and sufferings and triumphs of this great people. In conception, treatment and literary style the work is worthy the great subject which it presents."—*Boston Beacon.*

"Mr. Noble has a chapter upon language and literature which will be found most interesting."—*San Francisco Bulletin.*

VOL. LXXII—NO. 1857. THURSDAY, JANUARY 31, 1901. PRICE TEN CENTS.

35,000 copies of the "Great Boer War," by A. Conan Doyle, have been sold in England. Two editions have been exhausted in this country and the sale is rapidly increasing.

The original copy of "Lincoln: His Book," published in facsimile by McClure, Phillips & Co., has been acquired by Col. William H. Lambert of Philadelphia, who has the largest collection of Lincolniana in existence.

Reviews of "The Trust Problem," by Prof. Jenks, have been made in French, German, Austrian, English, Italian, Spanish, Australian, and Chinese papers. The publishers, McClure, Phillips & Co., will go to press shortly with the fourth edition.

In his recent report, President Schurman of the Philippine Commission called "Noli Me Tangere" the Bible of the Filipinos, and its author, Dr. Jose Rizal, the greatest Filipino who ever lived. "Noli Me Tangere" has been translated into English under the title, "An Eagle Flight," and is published by McClure, Phillips & Co.

Among the early February publications will be Ida M. Tarbell's "Napoleon and Josephine," a new and revised edition of her "Napoleon," which reached a sale of nearly 100,000 copies. The same elaborate illustrations will be preserved in the forthcoming edition, which has been supplemented and enlarged through the addition of a sympathetic sketch of Josephine. Writing of Miss Tarbell's work at this time recalls her very complete "Life of Lincoln," which is brought out in two volumes. Interest in Lincoln is reviving and this intimate view of him as a man should commend itself to many readers.

Within a week McClure-Phillips will publish "The Encyclopædia of Etiquette," compiled by Emily Holt, which is said to cover the entire subject of what to do, what to say, what to write, what to wear. The volume is illustrated by reproductions of specially posed photographs and is claimed to be the most complete book of manners for every-day use ever published.

"A little plain, ordinary, common sense on the subject of the criminal and his relation to the social system is not unwelcome," says the New York *Sun*, "and the reader will find it in a series of stories of the under world under the title of '*Powers That Prey*.' The authors of this volume are Josiah Flynt and Francis Walton. The former has just returned from Europe, where he has been collecting material for more criminal tales."

An Important Historical Book Now Ready

ABRAHAM LINCOLN: HIS BOOK

"I do not perceive," wrote Lincoln in 1858, "how I can express myself more plainly than I have in the foregoing. I have expressly disclaimed all intention to bring about social and political equality between the white and black races. I have made it equally plain that I think the negro is included in the word 'men' used in the Declaration of Independence."

This volume is a facsimile reproduction of Lincoln's note book in which he put down his views on negro equality.

Leather, 16mo. $1.00 *net*.

Just Published.

THE PHILIPPINES: THE WAR AND THE PEOPLE

Being a record of Personal Observations and Experiences by Albert G. Robinson.

This book, which will constitute one of the most important contributions to first-hand sources of information concerning the Philippines, is made up primarily of letters written to the New York *Evening Post* by Mr. Robinson as its Special Correspondent. The substance of these letters has been expanded and wrought over into a clear, connected and complete statement of what the author saw in the Philippines and what he thinks about what he saw there.

Cloth, large 12mo. $2.00.

Volumes of Present and Future Interest.

THE AWAKENING *of the* EAST

By PIERRE LEROY-BEAULIEU. With an introduction by Henry Norman. Cloth, 12mo, $1.50

Under the divisions Siberia, China and Japan, the author has traced the development of Asia from their golden age of long ago down to the modern present. He treats comprehensively the evolution of Japan, the astonishing development of Russia in Siberia, and the changes in China. "Altogether," says the *Nation*, "this is a very timely and very able book by an author who gathers without prejudice his facts at first hand."

AN AMERICAN ENGINEER IN CHINA

By WILLIAM BARCLAY PARSONS. Cloth, 12mo. $1.50.

"Mr. Parsons writes with great clearness, simplicity and good sense, and in a spirit of reasonableness that will commend his book to all serious readers. It is full of first-hand information of a valuable character, enlivened and brightened by touches of humor and by anecdotes that make it readable throughout."—New York *Commercial Advertiser*.

THE GREAT BOER WAR

By A. CONAN DOYLE. Cloth, 12mo, $1.50

"A good view of the year's warfare, a thoroughly readable account of the transactions in their bearings upon one another, with vivid and not highly colored battles, and with a discussion of the causes and probable outcome of the war, which is moderate and generous in temper, judicial in praise and blame, and without a trace of rancor or mere partisanship."—*The Nation*.

AN EDUCATIONAL DIRECTORY

I.—THE NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

THE MACMILLAN COMPANY'S NEW BOOKS

PUBLISHED THIS WEEK:

The first volume of a reference work of the very greatest value to general readers as well as to architects.

Dictionary of Architecture and Building

Edited by **RUSSELL STURGIS,** Past President of The Architectural League, New York, author of "European Architecture," etc.

Volume I. Just ready. Sold only on subscription for the set of three vols. Royal 8vo, in cloth, **$20** *net;* half leather, **$30** *net.*

Among the very many contributors writing on every possible related topic,—including Acoustics, Color, Design, Electrical Appliances, etc.—in this volume, may be named almost at random:

ROBERT W. GIBSON, President of The Architectural League, CHARLES BABCOCK of Cornell University, F. D. SHERMAN of Columbia University, ALLAN MARQUAND, WM. R. WARE, W. R. LETHABY, R. PHENÈ SPIERS, London; H. LANGFORD WARREN, Boston; PETER B. WIGHT, Chicago, WALTER COOK, New York; JOHN LA FARGE, CHARLES DE KAY, CARYL COLEMAN, Pres. of the Church Glass and Decorating Company. Cross references aid the convenience of the student, and a superb series of illustrations completes a work of high artistic as well as utilitarian value.

AUTHORITATIVE *in its sources;* ILLUSTRATED *most profusely* PRACTICAL and in all ways COMPLETE.

AMERICAN HISTORY TOLD BY CONTEMPORARIES

By ALBERT BUSHNELL HART, Professor of History, Harvard University. **Volume III. National Expansion, 1783-1845.** Cloth, **$2.00.**

Vol. I. Era of Colonization (1493-1689) $2.00

TO FOLLOW
Vol. IV. Welding the Nation (1845 —)

Vol. II. Building of the Republic (1689-1783) $2.00

"We do not hesitate to commend the undertaking as likely to prove **of indispensable usefulness.**"—*The Nation.*

Part I. **The Practical Introduction.** For Teachers, Pupils, Students and Libraries on SOURCES AND THEIR USES.
Part II. **The United States in 1783:** Social Conditions 1780-1800—Economic Conditions 1783-1800—Political Conditions 1780-1790—The Frontier 1783-1800.
Part III. **The Confederation:** A Rope of Sand—Territorial Questions—Trade and Commerce.
Part IV. **The Federal Constitution:** Reasons for a New Constitution—The Federal Convention—Ratification of the Constitution—Framing a Government.
Part V. **Federal Supremacy:** Parties and Party Leaders—Foreign Relations—Fall of the Federalists.
Part VI. **Jeffersonian Supremacy:** Jefferson Democracy—Territorial Expansion—Neutral Trade—War of 1812.
Part VII. **National Consciousness:** National Spirit—The Great West—Foreign Policy.
Part VIII. **Social and Political Readjustment:** The People in 1830—Jacksonian Democracy—Enlargement of Intercourse.
Part IX. **Slavery and Abolition:** Actual Conditions of Slavery—Anti-Slavery and Abolition—Slavery as a National Institution—Annexation of Texas.

Under each of the topics indicated in each Part the editor quotes from five to eight passages, each from some contemporary writing in the manner already familiar to the readers of Volumes I. and II. of this "indispensable" series.

OTHER RECENT ISSUES FOR THE STUDENT OF AMERICAN HISTORY.

Indispensable to the editor or newspaper writer since its information is not yet in the standard dictionaries, etc.

THE BEST NEW NOVELS.

IN THE PALACE OF THE KING

A LOVE STORY OF OLD MADRID

By F. MARION CRAWFORD, author of "Saracinesca," etc. Cloth, **$1.50**

THE LIFE AND DEATH OF RICHARD YEA-AND-NAY

By MAURICE HEWLETT, author of "The Forest Lovers." Cloth, **$1.50**

WHO GOES THERE?

THE STORY OF A SPY IN THE CIVIL WAR. By B. K. BENSON. Cloth, **$1.50**

All have a basis in history, yet are as different as the times they describe, and each is **the very best of its kind**—the reconstruction of brilliant court scenes, with "a grasp upon the attention that is tremendous, perhaps unequaled"; the marvellous portraiture of King Richard, "the earnest," said last week's *Nation*, "of the great romance which no other writer of the day is so likely to give us"; and the best story of the civil war written for years. "An exquisitely written, as well as excitingly brilliant and captivating romance of the civil war."—*Atlanta Constitution.*

THE MACMILLAN COMPANY, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, JANUARY 31, 1901.

The Week.

The silly and credulous Imperialists, as distinct from the bloodthirsty species, have got no end of comfort out of the report that large numbers of Filipinos are taking the oath of allegiance to the United States. A child with a new rattle could not be happier then they—or more foolish. Why, the theory with which they start is that the Filipino is a treacherous cut-throat! He is bound by no law of man or God. If he swears to high heaven that he wants his freedom, and will fight for it till he dies, no more attention is to be paid to him than to a tiger howling in the jungle. Yet the timid geese who think they are Imperialists because they squawk loudly, tell us, that the instant this untrustworthy and unspeakable monster of a Filipino takes the oath of allegiance to the United States, he becomes a noble example of good citizenship and a fit candidate for membership in the Republican party! They who believe that will believe anything. It is not often, however, that silliness meets with so swift a refutation as in their case. On the very day when these simple-minded editors were publishing their jubilations, they were compelled to read a Manila dispatch saying that Gen. MacArthur was about to deport a lot of natives, since he had discovered that they "swore allegiance to the United States for the purpose of facilitating revolutionary operations"!

Speaking seriously of the oath of allegiance pressed upon Filipinos, one clause of it makes the man who takes it "solemnly swear that I will support the Constitution of the United States." But what on earth has the Constitution to do with the case? It does not apply to the Philippines, so the Administration contends. The Attorney-General argued for hours before the Supreme Court that the Filipinos are outside the pale of Constitutional immunities and privileges. Yet the same Government that takes this attitude requires Filipinos to swear that they will stand by a Constitution which does not stand by them. This is too much. The old Scotch lady who admitted that she did not know what the Solemn League and Covenant was, but vehemently declared, "I'll maintеen it," is left far in the rear by the absurdity of a Filipino's oath to support the Constitution of America, in which, America declares in the same breath, he has neither part nor lot.

While the draft of the Cuban Constitution may be subject to amendment under debate, its leading intent and provisions are clear. No one can deny that they contemplate a republican form of government, modelled in general upon our own, but even more quickly responsive, in some respects, to the will of the people. We are glad to see that the Convention has squarely met Secretary Root's challenge, in all that relates to a limited Cuban sovereignty. His idea that free and independent Cuba should have neither army nor navy, should contract no public loan, and should have no direct diplomatic relations with foreign countries, is contemptuously brushed aside. The Cuban Constitution explicitly provides that all these attributes of sovereignty shall be reserved to the Cuban Republic. It is much to be hoped that the Convention will bring its labors to a close at an early day. The sooner it places its completed Constitution before the American Administration, the sooner will it appear whether the latter means to keep faith or not.

Into the merits of the unhappy controversy between Gen. Wood and Superintendent Frye we have not entered, and do not intend to enter now. The material is as yet lacking for an intelligent judgment on the points at issue. But, whatever may be the facts about Cuban schools and the new law for their regulation, one thing is clear—Mr. Frye should have been clung to and used in the work if it were at all possible to do so. The reason is to be found in the very statement issued in Gen. Wood's name, explaining why he considered it advisable to reorganize the Cuban school department. In this he admits Mr. Frye's great "popularity" among the native teachers and people in general, and adds that it is "undiminished to-day, and is even more than popularity, for it is based on affection." A man of whom that can be said, should have been grappled with hooks of steel to the Cuban Administration. One who has the affection and sympathies of the Cuban people is worth more as a governing force than ten regiments. There was no secret about Mr. Frye's popularity. It sprang from his hearty entering into the hopes and aspirations of the Cubans. He did not, like the rest of official America, cease cheering for "Cuba Libre" the moment the war was over, and as soon as the island began to appear a very fruitful Naboth's vineyard for us to seize upon. Mr. Frye always spoke, and spoke openly, as if the United States intended to keep its solemn promise, and as if Cuba were to be launched as an independent nation. This made him popular with the Cubans; it appears to have made him unpopular with the American military government. His practical dismissal is undoubtedly a great grief to the islanders, and will be one proof more to their minds that our Government has no real intention of making Cuba free and independent.

An examination of the bill for the increase of the army as it now stands shows that it was distinctly improved by the alterations of the House and Senate conferees. It is in no sense a "reorganization" bill, although widely so termed, but merely one which carries with it wholesale enlargements of staff and line, and which prescribes some radical departures from American military traditions. Since Secretary Root's plan for an interchangeable line and staff has been adopted, the bill is in this respect a real triumph for the Secretary, despite the fact that the system is not to be introduced until the many staff vacancies created by the bill are filled with volunteer-army friends of the Congressional spoilsmen. If the disappearance of the absurd veterinary corps from the provisions of the bill is a cause for satisfaction, the fact that the service is in many places thrown open to volunteers with pulls is, on the other hand, disheartening to all who desire to see merit rule in the military as well as in the civil service. Fortunately, the line is somewhat protected by an age limit and examinations as to fitness before appointment; but what other army would tolerate second and first lieutenants aged forty?

The opportunities for place-hunters are unequalled in the history of the army. Indeed, the measure, in so far as its primary effects are concerned, should properly be entitled "A bill to demoralize and disorganize the army." Every second lieutenant of artillery, cavalry, and infantry will be promoted on the passage of the law, and a large number of vacancies will still remain among the first lieutenants. These places are to be filled by volunteer officers now being brought back from the Philippines, and volunteer and regular soldiers of one year's service. But how and when? It is very easy to raise additional regiments on paper, but the mere collecting and examining of the necessary officers is a task of months, even if the requisite enlisted recruits are forthcoming. It will take years before the army can settle down to stable conditions, and begin to attain again that standard of efficiency and *esprit de corps* so marked at the outbreak of the war with Spain, and so lacking ever since, owing to the conditions of service, the frequent changes in organization, and the poor material injected in 1898 and 1899, thanks to the politicians.

In still other aspects the bill deserves the attention of the public. Primarily, it is a departure from all recognized tradition and a distinct step towards Imperialism, in that it confers upon the President the right to fix the size of the army between a minimum of 58,000 and a maximum of 100,000 men—a privilege bestowed by the Constitution on Congress and hitherto jealously guarded by that body. It is true that the President receives the power to maintain the maximum strength only during the "present exigencies of the service, or until such time as Congress may hereafter otherwise direct." But this violation of the fundamental principle as to the separate functions of the executive, legislative, and judicial branches of the Government is none the less serious. The bill also breaks with the past in that it calls for a large increase of the standing army in what the Administration considers "a time of peace." Similarly important enlargements in the history of the regular army are to be found only during the wars with England, with the Confederacy, and with Spain.

When the naval appropriations waxed enormous at the close of the brief struggle with Spain, they were justly attributed to war expenditures. Now, in 1901, after two years of peace, the annual Naval Appropriation Bill is twenty-five millions larger than the one for 1900; and although only four new vessels are provided for, the total expenditure is to be not less than eighty millions of dollars. In other words, the sum asked for the next fiscal year is more than twice as large as that voted in 1898. Of this vast amount which the House Committee on Naval Affairs is willing to bestow upon the navy, some fifty millions are to go directly to the expansion of the service, twenty-five millions for the construction of ships already authorized, and the rest for repairs and the improvement of permanent depots, navy-yards, and construction plants. If this is not a long step in the direction of militarism, it is certainly an alarming symptom of the readiness of Congress to fasten large military burdens upon the country. Already the military and naval expenditures of the United States surpass those of Germany for her "nation in arms."

The statement made by Secretary Gage of the reasons why Congressman Hill's Gold Standard Bill should pass, has not been surpassed for clearness by anything that we have seen in the silver controversy. The substance of it is that confidence, like charity, begins at home. If the Government wants the holder of silver dollars to believe that they are equal in value to gold, the Government must begin by treating them as such. But what did the Government actually do? The House last March passed a bill making gold and silver dollars exchangeable for each other at the Treasury. The Senate struck that clause out and the bill passed without it. What was the public to infer from that change in the form of the bill? Evidently, that the Government itself doubted whether the silver dollar would at all times and under all circumstances be the equal of the gold one. This is the whole philosophy of the monetary situation to-day. The Government makes a distinction between silver and gold, and because it does so the financial community makes a distinction. The ordinary citizen does not know any difference between the two, but the bankers and money dealers stand ready to "turn in silver" to the Treasury, and keep back gold, at any time when the financial horizon looks squally; and they do so merely and solely because the Government, while receiving silver dollars at the back door in the form of taxes, refuses to redeem them at the front door in gold.

The salient points in the report of the Senate Finance Committee on the Tax Reduction Bill are the retention of the stamp tax on bank checks and the reduction of the tax on tobacco. Both of these changes are in accord with justice and sound principles of finance. The tax on bank checks is paid by those who have balances in banks; that is, by the well-to-do classes. The affixing of stamps on checks is not an annoyance, or not necessarily such. Anybody can procure the checks already stamped by paying a lump sum, after which the use of them is not more annoying than that of unstamped ones. The sum of $7,000,000 per annum is realized from this tax. The question for Congress to consider is whether this sum can be raised more easily and equitably in any other way. An impartial answer must be in the negative. This was one of the last of the civil-war imposts to be repealed. It might very properly have been retained then. On the other hand, the tax on tobacco is essentially a tax on the poor. The use of tobacco is common to all classes, the poor as well as the rich. Whether we call it a luxury or a necessity, the fact remains that the burden falls upon those who use tobacco, and that fully 90 per cent. of them are wage-earners. The rich man who smokes may use a more costly article, but the amount he consumes is usually not greater than that of the poor man. Consequently, it is an unequal tax in the sense that the burden is imposed not according to the ability of the citizen to bear it. On the other hand, it is optional with anybody to pay the tobacco tax or not. He can refrain from using the article, and thus avoid paying both the tax and the prime cost. In other words, it is a self-imposed tax, and for this reason there is much to be said in favor of retaining it in a moderate degree.

The further reduction of the tax on beer, additional to that which was made by the House, is very questionable. It testifies merely to the political pull of the brewers in nearly all the large cities of the Union. The lower tax will be so much money in their pockets. The consumer will not get any reduction in price by reason of the reduction of tax. A large number of stamp taxes are repealed by the Senate bill, including those on telegraph dispatches, express and freight receipts, promissory notes, bills of lading, and warehouse receipts. These are taxes where the annoyance and inconvenience overbalance the revenue they bring in. The same may be said of the stamp duties on proprietary medicines. All these ought to be swept away. We cannot see any good reason for retaining any part of them. The bill does retain the tax on medicines of which the formula is or purports to be a secret. It also retains the tax on perfumery and cosmetics. These are the small crumbs of the War Revenue Bill. They ought to be thrown into the dust heap with the other scraps. *De minimis non curat lex.*

A banquet of the American Protective Tariff League is announced for February 16 at the Waldorf-Astoria, and circulars have been sent around asking for subscriptions at fifteen dollars each. There be banquets and banquets, some for general purposes and some for special purposes. The special purpose of this banquet, as we are informed, is to promote the reappointment of Wilbur F. Wakeman as Appraiser of the Port of New York at the expiration of his present term. Apart from any question of high tariff or low tariff, this is an appointment not fit to be made. Mr. Wakeman entered the Appraiser's office absolutely destitute of the kind of knowledge an appraiser ought to have, and his mental characteristics are such that all the knowledge he has gained since has been a damage to himself and to the Government and to the merchants of New York. He has kept the Customhouse in hot water by the most erratic and insensate rulings. He has been constantly at variance with Collector Bidwell, who is just as stanch a protectionist as himself, and who has been one of the very best Collectors the port of New York has ever had. Wakeman has acted upon the theory that importation is a crime. This is a mental kink in his head which his superior officers, including the Board of General Appraisers and the Secretary of the Treasury, have been trying in vain to straighten out, but the only thing they have been able to do is to force him to resign the position of Secretary of the Protective Tariff League while holding that of Ap-

praiser of Customs, which was rightly considered by Secretary Gage as a scandal. Columns of matter have been published in the newspapers about his frivolous "hold-ups" and exasperating delays of goods belonging to honorable merchants who are members of this same Protective Tariff League that is now asked to participate in a fifteen-dollar dinner to promote Wakeman's reappointment.

After a careful study of the question of superannuated employees in the civil service, a remarkably competent committee of the Civil-Service Reform Association, Richard Henry Dana, William Dudley Foulke, and Silas W. Burt, unanimously recommends as the best remedy a life-insurance system on the deferred annuity plan, to which all employees must subscribe during the probation period. The policies are to be non-assignable, if the plan is adopted, and secured by deposits by the insuring companies in Government control. Details of the plan are to be worked out by a special commission, but the proposition itself has distinct merits which from the start commend it to most favorable consideration. The objections to a national system of civil pensions are too obvious to need restatement. The frightful abuses of the military pension list are arguments against it which cannot be talked away. A plan by which the office-holder who is to benefit by the annuity after retirement himself contributes towards the annuity, necessarily engenders a better spirit, and one of economy and self-help, far different in its effect upon the beneficiary from that created by the knowledge that the Government is to supply the pension. The committee's report and its further elaboration will render useless a stock argument against the merit system, which, by the way, has at present as little foundation in fact as most of the other criticisms. This is the charge that the service is already full of superannuated men because of the merit system. But as the latter did not go into effect until 1883, and the age of its appointees averaged less than thirty years, it is plain that any superannuated employees of to-day are chargeable to the spoils method of appointments only. The committee carefully went over all possible systems of pensions on this side of the ocean and on the other, and it is not probable that its plan can be improved upon. The only argument against it which occurs to us is the possibility of its leading to a demand for increased pay on the part of office-holders to make up for the annual payments on policies.

It is not true that the absent are always wrong. The Chinese were absent on Sunday evening when Bishop Potter said that they had been foully treated by so-called Christians in China—travellers, traders, promoters, and money-getters. He should have added soldiers, officers, and statesmen. "What we need to do first of all," said the Bishop, "is to convert the people we send to the Chinese." This was a centre shot, but there is another thing that needs to be done quite as much, and that is, to abate the unconscionable demands made upon that poverty-stricken people for money indemnity. As bearing on them there has been published by Johns Hopkins University an abstract of an address delivered there by Mr. Alfred E. Hippisley, an Englishman who has resided many years in China, in the office of the Imperial Customs under Sir Robert Hart. Mr. Hippisley shows by figures, with which he has become familiar by long experience, that China cannot pay even the smallest of the sums demanded of her. She had the greatest difficulty in raising the money for the Japanese indemnity in 1895. To do this she was obliged to mortgage her customs revenue up to the hilt. Her credit is not equal to borrowing the money, and even if she could float a new loan, she would inevitably make default of the interest, whereupon the Governments would foreclose and seize the country. Everything points to seizure now, since the longer the foreign occupation continues, the larger the demand for indemnity becomes.

As Oklahoma is pretty sure to become a State before long, the rest of the country is interested in finding out what are the chief elements in its population. On the presumption that the Legislature fairly represents the people, it appears that all sections of the country have made contributions. The larger part of the members were not born, as might have been expected, in the neighboring States of Kansas, Missouri, Arkansas, and Texas. There are five natives of Ohio and as many of Indiana; three of Illinois and two of Wisconsin; while New York, Pennsylvania, Massachusetts, and Maine are each represented by one member. Kentucky also has one; and of the other Southern States Arkansas has contributed three and Missouri one. The occupations of the thirty-nine members of the Legislature furnish another indication that lawyers, in whatever part of the country they find themselves, are likely to come to the front; there are ten of them in the Legislature of this agricultural Territory, against eight business men and seven farmers. The indications, in spite of the fluctuations of the Republican vote since 1894, are that the admission of Oklahoma will be a safe Administration measure. Six years ago the Republicans cast 42 per cent. of the votes; in 1896, when the Democrats and Populists combined against and defeated them, 48 per cent.; but in 1898 they defeated the Democrats by a vote of 28,456 to 19,088, or 60 per cent. At the last election the Republicans lost some of this ground, their vote amounting to 38,253, or 52 per cent., a majority over the Democrats of 4,728. In the Territorial Legislature they now hold twenty-one seats, a majority over all of three, the Fusionists having elected ten members, the Democrats seven, and the Populists one.

It should not be overlooked that the death of Queen Victoria gives the established churches of England and Scotland a new head. In England the monarch's supremacy in things ecclesiastical is exercised chiefly in the appointments to episcopal sees—one such vacancy exists at present through the death of Dr. Creighton—and, although the Premier advises in such matters, the authority of the sovereign is by no means nominal. It is notorious, for instance, that Canon Liddon would have become a bishop but for royal disfavor. Within the Church of England there is a growing section which resents this intrusion of the secular arm, and especially protests against the unreality of the *congé d'élire*. The agitation for self-government is likely to be accelerated by the change in the person of the head. However correct may be the general belief that the new King has shaken off his earlier follies, there can be no doubt that his qualifications for any kind of control over the affairs of a religious organization are not equal to those of the late Queen. It will, therefore, not be surprising if his accession contributes to the spread of disestablishment principles within the Church itself.

That the French Ministry has not committed itself blindly to the new *Kulturkampf*, is shown by the publication, in two volumes, of elaborate statistics of the growth of the religious orders since 1850, and of their present wealth. From this survey it appears that in 1850 their properties were worth about $10,000,000, while to-day their ostensible property is at least $220,000,000, and their wealth held in trust, or otherwise concealed from the authorities, is estimated (a hostile estimate, it should be said) to be three times as much. What public service do the 3,216 religious houses of France perform? is the question that the Government with its Socialist allies will soon ask. To this it may be answered that three-quarters of the religious establishments maintain schools, that many care for orphans or do other works of charity. But the feeling is general in France, and shared by many of the secular clergy, that the orders are a charge on the State, and many of them hostile to republican institutions; and it is this feeling that is likely to prevail over arguments about the rights of private property, or the more sentimental considerations which the orders bring forward in their defence.

MORE TRUTH ABOUT THE PHILIPPINES.

That Americans, both as individuals and as a Government, have been guilty of the vice of "presumptuous judgment" concerning the Philippines, few of them any longer deny. The facts are too patent. As accurate prediction is the sure and crowning proof of a scientific theory, so falsified prophecies are the haunting accompaniment of slovenly guess-work. And in this Philippine fiasco all the leading actors stand self-confessed as surprised blunderers or lying prophets. President McKinley has innocently admitted that he "never dreamed" that there would be a Philippine insurrection against our rule. The ablest diplomat of the Paris Commission—we mean, of course, the Hon. Whitelaw Reid—thought the prospect of any native rising so "remote" as to be wholly negligible. Gen. Merritt flatly told our Peace Commissioners at Paris that there would be "no danger of conflict" if the United States took the islands. But why enlarge the list? All concerned are in the same boat. The event is so different from the anticipation that it is impossible to defend our Philippine policy as far-sighted. Moles in charge of the affair would have looked beyond their own noses just about as far as we have done. The whole nation, from President down, stands convicted in the eyes of the world of a "presumptuous judgment" concerning the Philippines. The problem before us was not what we thought it was; our attempted solution is now seen to be ludicrously inadequate.

We are beginning to see the reasons for some of the honest mistakes we have made. One of them has been an inordinate trust in the "man who has been there." Lord Palmerston's old gibe on this subject should have warned us. As he sarcastically explained in the House of Commons, the "man who has been there," knowing nothing of the language, history, habits, or real ideas of the natives, is usually loaded up with a mass of misinformation. How many of our officers in the Philippines speak Spanish? We are informed that only two of the entire number have ever so much as studied Tagal. Is it not evident, then, that they must rely upon native interpreters and go-betweens? Granting that such persons are not simply working and lying for the pay they get from Americans, how truthfully will they be apt to reflect the real sentiments of their people in arms? How correct a notion of the spirit of Washington's army at Morristown, and of the residents in the interior, could Gen. Howe have got from renegade Americans in his pay in New York?

Such queries are suggested with fresh force by a reading of the latest important book on the subject—'The Inhabitants of the Philippines' (Scribners). Its author, Mr. Frederic H. Sawyer, is an English engineer who has lived fourteen years in the Philippines. He knew Spanish well when he went there, and later acquired a knowledge of the Tagal language. Not a skilled writer, he sets forth in a blunt way the results of his prolonged and extensive personal observations. Let it be said at once that he is not an Anti-Imperialist. He thinks it eminently proper and desirable for the United States to seize and subdue the Philippines; only he insists that we have gone about the job in a bungling way. We have too readily taken the word of officers who have been only "a few weeks in Manila amongst sycophantic Mestizo-Americanistas." The really significant report of Messrs. Wilcox and Sargent, U. S. N., who travelled through North Luzon and reported what they saw, our Government ignored. The result is, says this Imperialist, that American rule in the Philippines has "begun unfortunately." It will "take a generation to efface" the hatred which the natives now feel for Americans. If some compromise be not reached, we shall need "a huge army to keep the natives down." "Unless some arrangement is come to with the natives, there can be no lasting peace."

The whole drift of those portions of Mr. Sawyer's book which deal with the American occupation is that we have been from the beginning misinformed and misled, and have gone on from one blunder to another. Our Paris Commissioners had the wool pulled over their eyes. The President was badly served by both civilians and soldiers to whom he looked for information and guidance. The consequence is, says Mr. Sawyer, a "wretched war that commenced February, 1899, and is still proceeding." "In it the Americans do not seem to me to have displayed the resourcefulness and adaptability one would have expected from them." The soldiers were "good fighting-men," but in Manila their "daily scenes of drunkenness and debauchery have filled the quiet natives with alarm and horror," while the army has brought "in its train a flood of cosmopolitan harlotry." Gen. Otis had no authority, and frittered away his time. Judge Taft "seems to have inherited the cheerful optimism" of his predecessors, reporting the insurrection "ended" with a like blind disregard of the facts.

The recent roseate report of the Philippine Commission was dated November 30, 1900. Secretary Root must have had it in his hands at least three weeks. Why did he withhold it from Congress? Did he want to get the Army Bill through first under fear of military disasters? Just after having got his 100,000 men, does it not look a little strange to tell Congress that the time has come to set up a civil government, and to repress "disturbances" by the local native police? We make no insinuations. We ask only for information. The thing looks queer. Then why should there be such a sudden demand for the passage of the Spooner resolution? That is said to furnish the authority for the kind of civil government now needed in the Philippines. But the very first sentence of the Spooner resolution reads: "When all insurrection against the United States . . . shall have been *completely* suppressed, etc." Nobody maintains that this is yet the case. Secretary Root cannot, for otherwise his asking for an army of 100,000 men would have been under false pretences. Judge Taft cannot, for he deftly withdraws his famous prediction that all would be over within sixty days after the reëlection of McKinley. He writes now to Mr. Root that when, in accordance with "your cable direction," he predicted that the end would come in two months' time, he did not think he should live to have to confess that the insurrection would last "for a somewhat longer period." The reason he gives for this handsome withdrawal of his campaign prediction is that "two unfortunate reverses" of our troops made the insurgent leaders "more defiant and boastful." These were the petty affairs at Siniloan and Marinduque. In the first, twenty-four officers and men were killed; in the second, Capt. Shields and fifty-one men were captured, but afterwards released. Evidently these are mere pin-pricks in a war in which 60,000 men are engaged; yet Judge Taft alleges them as the sufficient explanation of the failure of his magnificent prediction. Perhaps, however, this is only his way of saying that he is ashamed of having made it at all, "in reply to your cabled direction."

The most pointed questions in all this business relate to the friars. It is evident that the Administration has got itself into an *impasse* in that matter. By article viii. of the Treaty of Paris we are bound to maintain the property rights of the religious orders. Judge Taft has looked into their titles, and found them perfect. The friars legally own, he reports, some 403,000 acres of land, exclusive of buildings, etc. The natural thing to do would be, of course, to reinstate the religious orders in possession of their property. This was, apparently, the first intention of the President. His Catholic agent in the Philippines, Archbishop Chapelle, in an interview with a Dominican Provincial, printed in the Manila *Progreso* of January 14, 1900, said that the friars had been needlessly alarmed; that he came to the country with the best disposition towards them; and that, when they were restored to their parishes, they would be regarded as "American institutions and elements of order."

The Philippine Commission, however, after taking pains to arrive at the real

native opinion, discovers that the restoration of the friars is simply impossible. Their legal right is complete; we are bound by treaty obligation to support it; yet the thing cannot be done. It would inflame the insurrection into tenfold fury. What, then, is to be done? Buy the friars off, says Judge Taft. They will sell out at a "satisfactory price"—he seems not to dare to say how large. He does say, though, that the United States, not the island revenues, will have to furnish the money. Here we are, then, face to face with a most ugly difficulty which our Paris Commissioners, *d'un cœur léger*, foisted upon us. The case has been forcibly put, in its awkward alternatives, by the Rev. Dr. Leonard Bacon. He writes:

"(1.) There is neither Constitutional nor legal provision by which we can molest these ancient titles, but a distinct prohibition of such interference except by making full compensation. Archbishop Chapelle is understood to have named $20,000,000 as a price at which the several orders might be willing to commute their claims. (2.) Supposing the Constitutional and legal difficulties removed, under the novel doctrine that we have the right to rule these islands as an absolute despotism, there is not a leading politician of any party who would dare to lift a hand either to infringe these titles, or to indemnify the Roman missionary orders with enormous cash endowments out of the National Treasury. (3.) Supposing Constitutional and legal and political difficulties all obviated, we have bound ourselves by treaty with the ancient tyrant of the islands that we will perpetuate the worst of its tyranny. Is there any way out from this trouble, either for ourselves, or for the islanders? I can see one way, and only one."

We suppose Dr. Bacon means withdrawal from the islands. That, at any rate, is the "bountiful answer" which fits all Philippine questions.

THE PROPOSED BANK TAX.

Many outrages have been inflicted on the State of New York in the name of reform, and the proposal to equalize burdens by nearly doubling the taxes now borne by both national and State banks is one of the worst of them. It is a simple scheme of confiscation. Every one who knows anything about the subject knows that the banks, as a whole, now pay much more than an equitable share of the tax on personal property. The amount of their capital and surplus is known, and it cannot be falsely reported or concealed. Government bonds are exempt from taxation; but the courts have contrived to hold that they are not exempt when they form part of the capital of the bank. As a matter of fact, the personal property of the banks of the State is assessed as fully as real estate, and in the city of New York it is assessed at a higher rate than real estate. The National Banking Act provides that "the taxation shall not be at a greater rate than is made or assessed upon other moneyed capital in the hands of individual citizens." The Banking Law of the State of New York contains a like provision. Both are openly, persistently, and outrageously violated. No individuals, except perhaps executors and women who are caught in the toils of the law, are assessed at anything like the rate which is imposed on banking capital, nor could they pay their taxes if they were. Probably there are very few assessments of banking capital now made which are legal, and if the bill now before the Legislature is enacted, there will be none. For this bill proposes to levy, in addition to all the present local taxes, a tax of one per cent. on the capital, surplus, and undivided profits of every bank. Such a tax might be endured by a stockholder who was rich, just as he might endure any other loss, but it spells ruin for many of the smaller banks, which have now all they can do to "make strap and buckle meet."

The State of Pennsylvania adjoins for hundreds of miles the State of New York, and commerce pays no attention to State lines. In the State of Pennsylvania banks pay a tax of four-tenths of one per cent. In New York they pay three or four times as much, and it is easy to see that they have hard work to meet outside competitors when they are near the State line. Were a tax of one per cent. added to their present burdens, they could not meet this competition. They would have to distribute their surplus, or give up their charters and become private banks, or go out of business altogether. Some banks are already considering these alternatives. To a certain extent these conditions exist in the city of New York. It would be inconvenient and expensive to transfer banking capital to New Jersey; but it might be less expensive than to attempt to use it in New York, if present burdens are to be increased. It would be undesirable to distribute to stockholders that part of banking capital which is called surplus; but it might be less undesirable than to have it dissipated in paying taxes. It would be a hardship were incorporated banks compelled to transform themselves into private bankers; but it might be less of a misfortune than for them to withdraw from business.

It is well known that, taking the towns and cities of the State, the banks pay from 25 to 75 per cent. of the total personalty tax. In a city of medium size, near the Pennsylvania line, there are two banks which pay 43 per cent. of this tax. The women of the city—some of them widows of railroad men killed in discharging their duties, who have been so foolish as to invest the insurance paid on their husbands' lives in mortgages—pay 17 per cent. of this tax. The men of the city pay 15 per cent. of it. A proposal to increase the tax paid by widows of railroad engineers on mortgages held by them would not impress the public as equitable. It is quite as much so, however, as the proposed bank tax. One of the banks in the city referred to pays taxes amounting to 5⅛ per cent. on its capital, and over 2½ per cent. on its capital and surplus. Its present city, county, and State taxes amount to about 1½ per cent. on capital and surplus; the proposed tax would increase this by two-thirds. Were it enacted, the two banks in that city would pay more than 60 per cent. of the whole tax on personal property.

The number of banks, national and State, is small, and that of their stockholders not very large. Bankers, as a rule, have not made it a practice to send money to Albany to promote or to prevent legislation; their only resource is in appeals to reason and justice. On the other hand, attacks on the "money power," open or covert, are supposed to be very effective with the people. The farmers are told that they are to be exempted from all direct State taxation, and that the banks are to make up the deficiency. A very large part of it would be made up in the city of New York. The 62,000 voters of the State Grange are expected to be enthusiastic and unanimous in support of this bill, and they far outnumber the stockholders of banks. Whether they outnumber the independent voters, who change the political complexion of this State when their reason is appealed to and their sense of justice aroused, is another question.

Whether expedient from a party point of view or not, such measures as this are economically pernicious. New York is a great commercial and manufacturing State, requiring the most copious banking facilities. It is hardly necessary to say that enough hindrances to its industry and trade are already provided by Government. To contract its banking facilities—for such in the long run must be the effect of overtaxation—is simply killing the goose that lays the golden eggs. The banks ask no favors, and it is safe to say that they will get none. But they do ask that, in view of the present outrageous inequalities and burdens of their taxation, whatever change is made shall be in the direction of justice, and not further away from it. Doubtless they could get satisfactory treatment by paying for it; but their proper course is to fight this bill in the Legislature, and, if beaten there, to fight it in the courts. In doing so, they will be contending for their own interests no more than for those of the whole community.

THE INTERNATIONAL COPYRIGHT ACT.

A public document of more than usual interest is the report of the Commissioner of Labor in response to the resolution of the Senate, of January 23, 1900, directing that official to "investi-

gate the effect upon labor, production, and wages of the International Copyright Act, approved March 3, 1891, and report the results of his inquiries." Such results as were obtainable are set out in a pamphlet of ninety-nine pages, of which the last eleven pages consist of a republication of the copyright laws in force. Of the remaining text, seventy-seven pages contain verbatim statements from publishers, leading printers, the American Copyright League, etc., giving opinions, pro and con, as to the value and effect of the act in question, and less than six pages additional are devoted to an explanation of the methods used in making this inquiry, with the Commissioner's summing up of such evidence as he has succeeded in collecting.

Tables are printed showing (a) the number of copyright entries, and amount of fees applied, from July 10, 1870, to December 31, 1900; (b) the number of entries of foreign and United States productions, respectively, and the fees for the same from July 1, 1895, to December 31, 1900; and (c) the number of articles deposited at the Copyright Office during the last three fiscal years. In this last table the articles are arranged by classes, but no distinction has been made between productions of foreign authorship and works by native authors, so that it is difficult to see how any deductions can rightly be made from these tables as to the effect of the law upon the number of entries made or articles deposited. It is assumed that one effect of the law has been greatly to increase the number of copyright entries, because "the year 1890 (that immediately preceding the passage of the act) shows an increase of but 1,813 entries over the number for 1889, while the year 1891 shows an increase over 1890 of 6,119 entries, although the act did not become operative until July 1 of that year." A careful examination, however, of the table of entries and fees, from 1870 down, shows such noticeable fluctuations that it is doubtful if such an assumption can safely be made. Unfortunately, no exact figures are available for the foreign and United States entries, respectively, up to July 1, 1897, but for the three calendar years following the entries are: 1898, foreign, 7,779, United States, 69,095; 1899, foreign, 8,122, United States, 78,370; 1900, foreign, 8,478, United States, 89,489, while the increase in the entries, foreign and United States, respectively, for the last two years was: 1899, foreign, 343, United States, 9,275; 1900, foreign, 356, United States, 11,119, showing that, of the yearly increase, the foreign entries made a very small proportion. It is probable that, of the total increase from 1890 to 1891, a larger percentage was due to entries for foreign productions, but, even so, it was probably a small proportion of the total increase of 6,119; and up to 1900, inclusive, the highest number of entries for the productions of foreign authors, etc., in any one year since the act went into force, July 1, 1891, was only 8,478.

The Commissioner explains that, on its becoming apparent that detailed statistical information of the character contemplated by the resolution could not be secured, an endeavor was made to obtain expressions of opinion from the class of people whose conclusions would be of most value—publishers, printers, and the official members of printing unions and allied trades-unions—by addressing to them a series of seven questions designed to bring out the views of the persons and establishments to whom they were submitted, regarding the general results of the law as affecting labor and production. Altogether, seventy responses were received, of which fifty-five are set down as regarding the law and its results more or less favorably, while fifteen consider it detrimental.

Commissioner Wright points out that the clause requiring the manufacture in the United States of copyright works, the feature of the law directly affecting "labor, production, and wages," was adopted at the instance of the typographical unions; but although prominent members of the International Typographical Union in several principal cities were personally interviewed, and requested to submit facts and their own views regarding the beneficial or detrimental effects of the act, only oral statements could be obtained from some of them to the effect "that, in their opinion, the law has been of no real benefit to printers or allied craftsmen; that the 'manufacturing clause' of the law, requiring copyrighted works of foreign authors to be printed from type set, or from plates made from type set in the United States, is violated to a considerable extent by the fraudulent importation from Europe of stereotype plates, which are used for the printing of such works in the United States; and that the effect of the law is to confine the labor of production of each copyrighted work to the employees of the single establishment to whom the monopoly of publication is secured under the law, whereas, were it not for the law, the works of many foreign authors would be published by several different establishments, thus giving employment to a largely increased number of operatives." The Commissioner adds that effort was made to secure definite statements giving instances of violation of the "manufacturing clause," but none could be obtained, and no expression of views beyond oral ones, such as quoted, could be secured.

It is to be presumed that the statement that, were it not for the existing law, the works of many foreign authors would be published by several different establishments, thus giving employment to a largely increased number of operatives, is made in remembrance of the old times of literary piracy, when there was a possibility of free scrambling for the works of popular foreign authors; but the document under consideration contains evidence from most competent sources that the competition this very scramble induced led to cheap work, and consequently narrowed the compensation earned by printers as compared with that obtained through the higher quality of book production under the protection of the copyright law.

The questions sent out were as follows: (1.) Has the international copyright law been detrimental or beneficial to (a) publishers or book manufacturers; (b) compositors, pressmen, bookbinders, and employees generally; (c) American authors; (d) foreign authors; (e) the book-purchasing public? (2.) In what respects has the law been detrimental or beneficial to each of the above-mentioned classes? (3.) Has the effect of the law been to increase or to reduce the selling price of books? About how much per cent.? (4.) Was "piracy," as practised prior to the enactment of the international copyright law, beneficial or injurious to printers or publishers? (5.) Do American and European publishers exchange stereotype plates, or are European plates used to any extent in the production of books in America? (6.) What is your general opinion as to the operation and effect of the international copyright law? (7.) In what respects do you think the law in question should be amended or changed?

The responses to these questions indicate, according to the summary, that a large majority of the establishments interviewed heartily favor the law, believing it to be highly beneficial in its general operation and effect, although some of them criticise certain of its features, and express their views as to amendments of the law that are deemed desirable. On the other hand, "a comparatively small but highly respectable number" of establishments are said to be "utterly opposed to the law," believing it to be pernicious in practice and wrong in principle.

Whether favorable or adverse to the law, the individuals or firms represented favor certain changes in the copyright laws now in force, the principal alterations proposed being summarized as follows:

"(1.) It is believed by many publishers that the 'manufacturing clause,' requiring the manufacture wholly within the United States of copyrighted books, photographs, chromos, or lithographs, whether the work of residents or non-residents, should be abrogated.

"(2.) That the requirement of publication of copyright works in the United States not later than the date of their publication in any other country (which has the effect of requiring simultaneous publication on both sides of the Atlantic of the works of English [and American] authors) should be changed so as to allow a reasonable time to elapse between publication abroad and at home.

"(3.) That the term of existence of copy-

right should be extended beyond the limited period now granted.

"(4.) That the publication in the United States of unauthorized translations of copyrighted books of foreigners other than English should be prohibited."

This last proposition would seem to be adequately met by the provision in the present law, Revised Statutes, section 4952, as amended by the act of March 3, 1891, reading as follows: "And authors or their assigns shall have exclusive right to dramatize or translate any of their works for which copyright shall have been obtained under the laws of the United States." What is desired, apparently, is that, in the case of books in foreign languages not now copyrighted in the United States by reason of the type-setting stipulation, the author or assignee should be allowed to secure copyright on an authorized English translation, to the exclusion of any unauthorized translation into English.

Thanks are due to Commissioner Wright for having elicited and brought together the very interesting and valuable opinions on this important subject, printed in his report, and we hope in a subsequent article to present a collated summary of them.

SCHOOL AND COLLEGE.

To get some kind of continuity of method and ideal into our polymorphous system of education is certainly an urgent necessity. Consequently, President Low's recent effort to bring Columbia into closer touch with the public-school system by permitting the substitution of an extra quantum of mathematics in lieu of the usual Latin requirement for admission—though by no means a new attempt to fill up the gap that exists between the two earlier stages of our system—deserves serious attention. His recommendation will certainly be cited and appealed to as a precedent by lesser colleges and universities; and in many a Western faculty Columbia and Cornell will be held up as bright examples of modern tendencies in education at the East.

The want of continuity between our elementary and our higher education which this recommendation of President Low's seeks to supply, is the result of the peculiar growth of our educational system. The public school and the college were primarily designed to meet quite different social and intellectual conditions. The original ideal of the one was the perfect citizen; of the other, the well-trained minister of the gospel, and incidentally the perfect gentleman. The one is modern, and a part of that political creed which was kept so bright during the last century, but is getting somewhat tarnished now, viz., All men are politically equal. The other is mediæval, and is based upon the intellectual division of men into lay and cleric. The one has always retained its democratic features; the other has not yet got rid of the earmark of its aristocratic origin.

In its earlier history the academy, not the public school, was the dominant influence in our elementary education, and the elementary and higher ideals did not so loudly clash. But, as the influence of the academy has grown weaker, the strength and pervasiveness of the public school have grown greater, until now the latter is become the dominant factor, and we have before us the problem of articulating the public school with the college. It is no easy task. Western universities (most of them are really colleges), growing up under local conditions and holding chiefly utilitarian or scientific ideals before them, have not been vexed by the problem, but our stronger Eastern universities and colleges have it still to work out. While these institutions have met the modern demand for scientific training, they have also sought to retain their ideals of culture, and most of them have succeeded in the effort. The modern public school, being nearer to the popular heart, has sacrificed ideals of culture to those of science, so that while the ordinary public schools can send up to the college or university students prepared to continue their education along scientific lines, most of them are unable to furnish the necessary propædeutic for culture. Hence a lack of continuity between the two.

President Low's idea of a solution is simply and frankly to follow Western experience: to unify the two along the line of the physical sciences and utilitarian aims, a line of least resistance, and let the culture go. This is merely a robbing of Peter to pay Paul. Peter's fate need not give the public much anxiety, as it is hardly likely that President Low's recommendation will be followed by the stronger universities and colleges of the East, and Western universities are already beginning to learn that there must be something in education besides science, if it is to be at all adequate to modern needs. But his proposal calls sharply to our attention the need of an elementary discipline of culture which, while being modern in content, scientific in method, catholic in ideal, practical in effect, shall also be such an elementary discipline as will naturally and easily adjust itself to the higher discipline of culture imparted in our universities and colleges.

English is the only subject which can fulfil these conditions; but English is unfortunately a discipline whose value is not yet clearly recognized by the public, either lay or academic. If, in casting about for such a connecting link, our attention is directed to our own language and literature, we sadly shake our heads, for we see clearly that our present methods of studying English do not yield us what we want, and we naturally conclude that the subject itself is not broad enough or serious enough to supply the place of elementary classics. Nor is it, as now taught: its principles are dogmatic, not scientific; its rules are arbitrary, not empiric; its judgments are emotional, not rational; its teachers are many of them untrained and incompetent; and its educational machinery is not yet developed.

We are strengthened in our conclusion as to the inadequacy of English as an elementary discipline of culture by the opinions of the last generation of literary critics, who were sadly convinced of our literature's lack of "high seriousness." We have not yet found out that these somewhat pretentious arraignments were made by men who were quite ignorant of English—men whose notions of literature and language were those of the sixteenth century. These imposing judgments still weigh upon us; they are so soberly positive, so speciously disinterested, so calmly classic, that we can hardly believe them wrong. So we treat the question as a settled one. We go on teaching our language according to antiquated and unscientific methods hopelessly at variance with modern thinking, and revamping Renaissance judgments of our literature hopelessly at variance with the simple facts of its life and history. Thus, when we are forced to the conclusion that our classical machinery of elementary culture is inadequate to modern intellectual life and to our modern educational conditions, we think that we must abandon culture, at least elementary culture, altogether, and devote the earlier years of training to a preparation for the pursuit of science. Small wonder if those of us who cannot ignore the value of culture are thus compelled to oppose the development of science as the only means of retaining what culture there is in our educational system.

THE NEW KING'S DIFFICULTIES.

First among the difficulties which the new King of England has to confront may be considered those that are personal. "Woe to the man who comes after the King!" says the proverb. Double woe to the King who comes after the Queen—such a Queen as Victoria. The passing of her immemorial dignity and prestige would make the rôle of any successor a painful one, by sheer contrast, at first. As for the character and aptitudes of the King, it would be idle to deny that the "fatal shadows" of his reputation as Prince of Wales walk by him still. Everybody is, of course, turning for historic comfort to the example of Henry V., whose youth had "faulty wandered and irregular," but who became a moral and puissant monarch. Harry of Monmouth, however, reached the throne and "turned away his former self" at the age of twenty-

six. It is a different matter becoming King at sixty.

At the same time, it is only fair to say that, in his princely function, as distinct from his private life, King Edward VII. has been entirely correct. He has won high praise in this regard even from English radicals. Frederic Harrison and Mr. Morley, for example, have spoken of his wholly proper and praiseworthy conception and discharge of his public duties. What they meant was that he bore himself as the heir apparent should in a Constitutional monarchy. He had, or expressed, no political opinions. As between parties he knew no choice. He never attempted to influence legislation by Parliament. As a smiling Prince, he officiated at endless public ceremonials and festival occasions without once making a slip in speech or bearing. One feels like making an exception of his effusive greeting of Cecil Rhodes in public when that raider came to England to stand trial. If the royal sympathies were wholly personal in that matter, they might better have been kept for private manifestation. But when all is said, there can be no question that the new King will enter upon his reign perfectly instructed in the rights and duties of an English sovereign.

His more serious difficulties will be found, not in the King, but in the kingdom. Great Britain turned the century distinctly under a cloud. Her immediate embarrassments are considerable, but it is the future to which her leading statesmen and industrial authorities look with an apprehension which they do not conceal. They dread lest the conditions which carried England to the pitch of prosperity and greatness in the nineteenth century have so changed and are changing that a decline must set in. When men so diverse as Mr. Chamberlain and Lord Rosebery, and financial and commercial organs of opinion of all shades, publicly warn Englishmen that their trade has passed its perihelion, and that rivals are more and more oustripping them in the race for industrial supremacy, it is not strange that nervousness and even pessimism mark the attitude of England confronting the new century.

In how sharp contrast all this is with the early and middle years of Victoria's reign, a glance backward is enough to show. English manufactures and commerce had had two mighty forward impulses during the past hundred years. The first came at the close of the Napoleonic wars. The Continent was prostrate, and unravaged England pressed rapidly to the front. Later came the still more remarkable expansion of commerce when England had the luck, or foresight, alone among the nations, to embrace free trade. Every wave of the sea rolled wealth upon her. Her merchants and manufacturers made Liverpool and London the centre to which the trade and finance of the whole world gravitated. And the fiscal policy of freedom was but a part of the great Liberal movement which bore English life and government forward upon its swelling tide. Mr. Gladstone wrote in 1887, in review of the half-century marked by the Queen's Jubilee, that the period had been "in the main a process of setting free the individual man." That date, 1887, may hereafter come to be regarded as England's grand climacteric. Since then have come the murmurs about the weary Titan, and the foreboding voices have swollen to the chorus which has been sounding in our ears of late.

Still, the progress of nations has always been characterized by checks and fresh starts, and in all such matters we must heed the poet's injunction to

> "——remember how the course of Time will swerve,
> Crook, and turn upon itself in many a backward-streaming curve."

England's resources are yet vast and her power and pride unbroken. It is not actual change and loss so much as the fear of them by which thoughtful Englishmen are troubled. We are simply pointing out that it is King Edward's misfortune to come to the throne in an atmosphere of vague despondency, rather than in that air of buoyant hope which went so well with the fresh young life of the Queen of 1837. Future reality may give the lie to present apprehensions. Wielding his mother's sceptre, the King may prove as great a friend and promoter of peace as she was, though it is hard to see how he can make good her dynastic authority and influence with so many of the reigning houses of Europe. Difficulties, many and grave, undoubtedly confront King Edward and the statesmen councillors who must guide the destinies of Great Britain; but to the manly spirit, to prescient statecraft, difficulties are but the measure of effort, and may become the measure of triumph.

A FEW FRENCH SPEECH SOUNDS.

RUTGERS COLLEGE, January 12, 1901.

It was my good fortune, last month, taking flight from the wear and tear of the winter examinations, to pay our big sister Columbia a brief visit. You remember that she welcomed us, the public, with open arms, to hear Monsieur Coquelin address the university on the subject of "Art and the Comedian."

I had come, it must be confessed, not for the purpose of soaring on the wings of the imagination into the realms of art, but largely for the very unimaginative object of listening to the speaker's pronunciation. Everybody pronounces, after a fashion, and everything is grist to the phonetic mill. So the eagerness to analyze "any old" pronunciation, begging the famous actor's pardon, rises higher and higher, and has already flooded the field of philology. As Gildersleeve said, if my memory serves me correctly, in his address before the Philological Congress at Philadelphia on "Occultations and Mutilations of Philology" (in the words of his paraphrase)—but in his own inimitable way, with just that touch of genial irony that adds zest—one may as a last resource always arouse the flagging interest of the modern philologist by introducing the subject of phonetics.

It is a difficult task to describe an unfamiliar speech sound so as to convey a correct impression to the ear of the reader not versed in phonetic lore. Let one state at length its formation by the speech organs, compare it with familiar sounds, and finally enumerate the constituent elements of the complex sound wave—and the last may be done to a very limited extent—all these expedients will probably fail to produce the correct effect on his auditory nerve. Still more crudely, one may appropriate the terminology of the fine arts. Indeed, the French symbolists assure us that sound has color. It is interesting to think of the possibilities along this line; for instance, the comparatively low rate of ether vibration which we call red might correspond to the slower atmospheric vibrations, and in the same manner the blue, on the opposite side of the spectrum, to the more rapid sound waves, let us say German *u* and *i* respectively. I fear, however, that it will be necessary to agree upon an arbitrary convention, for some of our sound colorists tell us that *i* is red, others that it is blue. So striking a disagreement of doctors is likely to prevent advance along this line.

The words of Monsieur Coquelin's title, "L'Art et le Comédien," were spoken distinctly, with a characteristically French prolongation of the vowel in *art*, followed by a gentle choking sound which serves the Parisian as an *r*. It seemed as though for a space and a half of time the voice, like a bird, hovered in mid air before swooping swiftly down. The hover, you will understand, is the vowel, and the swoop the rapid succession of sounds that followed. With what pleasure the ear clings to those none too frequent long vowels of modern French! Let the grammarian say anathema, and prove to us by citations from this and that authority that they should be no longer than our English short vowels; they who take sufficient interest in French accent, in the popular use of the term, to read thus far, either have already heard, or, barring accidents, will some time hear, on the soil of northern France, that same trumpet tone of the lengthened vowel. You know what a Yankee drawl is; it represents deliberation, sound judgment, stubbornness; it is a shibboleth to some, but music in the ears of one New England bred. It is this frequent drawl, as I have heard it in the rural districts of Maine and New Hampshire, that comes closest to the occasional long vowel of French, and indicates perhaps the strain of Dutch blood found in Celtic veins, that strange intermixture of fire and water which constitutes the Frenchman.

The *r* which was heard in Monsieur Coquelin's discourse was neither the English nor yet the Italian sound, once used exclusively in France, but one which is known as uvular, velar, guttural, *grasseyée*, or, in plain English, fat, but for which none of these terms is adequate. Uvular *r* comes nearest to hitting it, but there is a trilled and an untrilled

variety, which this denomination does not distinguish. I was unable to decide, from where I sat, which of these was employed by the speaker, but presume the former. The uvular character is common to both. The term *grasseyée* was originally applied to the trill, and later transferred to the smooth liquid. The former is spoken in most French cities; both are general over large parts of Germany. The latter resembles, in its lack of trill, our initial *r*, as in *rose;* it would not be badly described as a smooth or untrilled uvular *r*. As one of my students remarked, it sounds a little like a *w*, as in *wed*, for instance. It adds to speech a liquid richness that familiarity renders pleasing, attractive even.

The Association Phonétique has an interesting way of indicating this delicious sound: take a capital r, R; invert it, ʁ; now hold this before a mirror and copy. One may imagine what deep roots the phonetic fad has sent down into the minds of its devotees to survive this sort of thing. Is it, then, surprising that the fiery darts of Professor Peck have not yet quite consumed them? Yet with four distinct *r*'s claiming recognition, not including the four voiceless varieties of these, is it strange that the ordinary right-side-up, left-side-left letters were found insufficient for the emergency? It was meet that the odder symbols should be assigned to the younger members of the phonetic alphabet.

In France the uvular *r* is of recent origin. To be sure, in the sixteenth century there was in Paris a popular attempt to get rid of the strenuous trill, and for a time it was reduced to a sort of *z* sound. The Parisians said *pèse* and *mèse* for *père* and *mère*, but the rest of the nation was against them, and so they ultimately abandoned it save in a few words; *chaire*, for instance, became *chaise* in its popular signification, and remained so. Again, in the eighteenth century the firm lingual trill became in Paris a more gentle uvular trill; however, some say that the dainty *précieuses* of King Louis's time were instrumental in this change. Be this as it may, in the nineteenth century this fluttering sound, like a gurgling brook, runs into a smoothly flowing stream, unbroken by a ripple. But, just as the French poet and dramatist, particularly the former, are still fettered by the bonds of tradition, so the conscientious actor still strives to perpetuate a more conservative pronunciation and hence to employ the lingual *r*. Therefore, I fully expected to hear the latter from the lips of Monsieur Coquelin—that is, in French stage parlance, to hear him *vibrate*.

Legouvé *fils* illustrates the value set upon this vibration, in his "L'Art de la Lecture," by the following anecdote. A famous actor once described to him the strange way in which he had gotten rid of his fat *r*. He was young and talented, and was seeking at one and the same time two ends which, although equally desirable, were equally difficult of attainment, namely, the tongue-trilled *r* and the hand of a young girl of whom he was passionately enamoured. Six months of labor had brought him no greater success in one case than in the other. "L'*r* s'obstinait à rester dans la gorge, et la demoiselle à rester demoiselle." At last one fine day, or rather *evening*, after beseeching her and uttering tender vows for an hour, he touches her hard heart; the damsel says yes! Wild with joy, he leaps down the stairway four stairs at a stride, and, on passing the janitor's room, hurls at him sonorously, triumphantly: "Cordon, s'il vous plaît!"—when, what is his surprise to hear the *r* in *cordon* sound with as pure a vibration as that of the Italian *r*. Seized with sudden fear (for belike it is but a happy chance), he repeats, with the same success. There can be no doubt about it. The trilled *r* is his! And home he goes, repeating all along the way, for he was in mortal terror of losing his recent acquisition, "Cordon, s'il vous plaît! Cordon, s'il vous plaît!" Suddenly another significant event! At the turn of a street there comes forth from the sewer and runs right under his feet an enormous rat! Ha, a rat! another *r*! He adds this to the first and intermingles them. He shouts them out together. "Un rat! Cordon! Cordon! Un gros rat! Cordon! un gros rat! un gros rat!" 'Et les *r* roulent et la rue en retentit!' And he goes home victorious. He has conquered two rebels, love and *vibration*.

I do not doubt that Monsieur Coquelin *vibrates* on the stage, but it is evident that his natural *r* is now that of Paris, and that all his dramatic training has not been able to eradicate it. One does not expect, even in the natural speech of the man or woman trained for the French stage, the provincialisms of pronunciation which are found at times in *conférenciers* and *critiques* of the highest repute, such as Brunetière and Larroumet; and yet the city dialect has in this one respect, at any rate, stamped itself unmistakably upon Monsieur Coquelin. The educated Londoner rarely escapes all traces of Cockney taint, blissfully ignorant though he be thereof; his *day* has frequently a tinge of *die*, and his *boat* of *bout*. No more may the Parisian unpremeditatedly voice the sunny trill and thrill of the Italian *r* and of the fields of France. Why should we expect him to? No man *can* escape altogether the influence of his environment, even of his phonetic environment; indeed, the latter is a product of the former, so that not only does the speech of those around us model ours, but still more subtly do those influences which have gradually guided speech sounds towards a more or less stable goal, strive constantly to hold their own, in so far as they have attained this goal. Thus, the conditions found in a great city are extreme; they establish special laws of sound development. A world city is a law unto itself along all lines, intellectual and emotional, phonetic and kinetic.

Thanks to the *moutonnier* character of the French, the phonetic influence of Paris is greater than that of London; so, while one may easily offend a Londoner by intimating that his pronunciation betrays his origin, one flatters a Frenchman by attributing to him a Parisian accent. Nevertheless, "Paris is not France," and while there is, even within the city, a strong conservatism which still employs the cultured speech of other days, in some provincial cities, especially along the Loire—in Orléans, in Tours, in Blois, ancient homes of royalty—this is still more general.

They who teach this pronunciation, be they to the manner born or no, are constantly exposed to the danger of exaggerating distinctions. Time and again they find it necessary to insist that *a, ai, e, eu, o* have at least two clearly defined sounds in French; thus, *la* and *pas, gai* and *mai, nez* and *mets, neuf* and *peu, rose* and *mort*. In order to impress this fact, and to make the contrast more perceptible to the untrained ear, they magnify it. For the *e* of *fête*, there is perhaps substituted a more open sound, approaching the *ä* in German *Käse*. The unphonetic reader will readily observe a difference, if he can succeed in getting the two together in their native purity. The same danger lurks in the *o* of *hotte* and *hôte*. As for the two close sounds, *é* and *ô*, as in *lé* and *tôt*, they are rarely acquired by an American adult, and are utterly impossible to most of us; certainly there is little danger of our making them too close, unless we push them to the point of *lie* and *tout*. This is precisely what is done by a good friend of mine, who has spent some years in close intimacy with French boys in Paris, and, after all, it is a closer approximation than one usually hears. There is a tendency, also, to separate too widely the *a* and *â*, and thus *patte* and *pâle* are converted into *Pat* and *Paul*, approximately. One actually hears something very much like this in certain parts of France; but, on the other hand, the distinction between the two is entirely lost with many Parisians, and a compromise sound, much like our *a* in *part*, is substituted for both.

Monsieur Coquelin's speech avoided such extremes, however; his vowels were clearly but not pedantically differentiated. For this very reason, it is a pleasant and a helpful thing for the teacher or student of French to listen, either here or *outre mer*, to the speech of those who represent the traditions of the French stage, and therefore the best traditions of the language; it is certainly more likely to improve the "French accent" than indiscriminate association with the natives. It is difficult to maintain intact that which has been acquired in language, even in one's vernacular. Several years spent abroad sometimes affect quite unconsciously but profoundly the pronunciation; I recall the case of an Italian residence of ten odd years producing this effect. Even one or two years' foreign study is sufficient to cause subtle phonetic modifications which are none the less appreciable and persistent. We who have gone mad on speech sounds are therefore glad of the opportunity, while awaiting patiently or otherwise a larger one, to hear a pure French, fresh from the soil, such as is afforded us by the advent of a great French actor.

EDWIN B. DAVIS.

ON THE MAKING OF A NATIONAL GALLERY.

LONDON, December 20, 1900.

Rumor has reached England of a movement to establish a National Gallery in the United States. How much truth is in it, I cannot easily find out at this distance, but I hope there is some foundation in fact, so many are the possibilities presented by such a scheme. A National Gallery, started at this late date, could profit by the errors and follies of a century of almost universal national-gallery mismanagement.

In one sense America is as well provided as many European countries. For if Germany has the collections of Berlin, Dresden, and Munich; if Edinburgh and Dublin, no less than London, possess their nationally supported art institutions; if Florence and

Venice have totally eclipsed Rome; if every provincial town in France makes an attempt, and often a very interesting attempt, to set up a Louvre and a Luxembourg on its own account—and England is trying to do the same thing—so, of course, can America boast of its numerous museums and academies in the capitals and large towns of many different States. But the nation is still without the great National Gallery which surely it is old enough and rich enough and ambitious enough to support. Nor is it too late to get together a collection that would be, as a whole, more perfect than even the most famous in Europe.

Let me explain what I mean. In certain respects, naturally, a collection made now could not approach many begun with far greater advantage. It could never rival the Prado's series of Velasquez, the Titians and Tintorettos of Venice, the Rembrandts of Amsterdam, the Turners of London, the Rubenses of the Louvre, to take the most familiar instances. But, on the other hand, there is no reason why it should not aim at the more complete representation of all countries and schools for which the London National Gallery is noted, especially if the absurd prejudices responsible for such unfortunate and unpardonable gaps in London were carefully discouraged.

This may seem a foolish excess of optimism. But consider a moment the origin and the early development of the principal national galleries. It is not possible to go into detail, but it may be stated broadly that, in the greater number, the nucleus has been formed by royal, papal, or ducal collections. Even in Paris, where the First Republic gave the Louvre to the people, the walls of the royal palace of the Luxembourg had to be stripped to insure something more than an empty value to the gift. Perhaps London is the chief exception, for when the National Gallery was founded in 1824, the royal palaces handed over none of their treasures to the country, nor were any of the castles and mansions throughout England drawn upon. Angerstein received £60,000 for his pictures, the foundation of the national collection, and the Gallery since then has served as a favorite loophole of escape from the Bankruptcy Court for lordly families—the most notorious case being the purchase by the Government of the Ansidei Madonna from the Duke of Marlborough for £70,000. As a rule, the notable bequests have come from private patrons. The drawback to the older royal collections is that, though the kings and popes and grand dukes who made them were the most discriminating connoisseurs who ever lived, yet, at the same time, they accumulated, in one way or another, a great deal of rubbish, and this rubbish, as well as the masterpieces, is to be seen in almost every gallery in Europe. And so with the private bequests, like the Vernon and many others in London, at first apt to be eagerly accepted without reservations. Is it necessary to point out the miles of commonplace, only made respectable by age, through which, everywhere, one must wade before coming to the work of the master?

Less fault of this kind is to be found with the London National Gallery than any other, though it also suffers from well-meant legacies heavily burdened by conditions. In its unwillingness to spend money on pictures—except in noble charity—the British Government has been too ready to accept any and everything offered, on any terms, and praise the generosity of the donor. The Tate Gallery—the mistaken investment of an otherwise successful sugar-maker—is one result of this policy; the pictures at South Kensington—many, however, governmental blunders—are another. Even at Hertford House, it is to be regretted that no chance of selection was left. Many real treasures have been gained, but the nation is also saddled with much that would be better hidden in cellars or stored in attics, instead of proudly displayed. Indeed, the British Government is, at last, waking up to the fact that, pleasant as it is to receive, it is not always wise.

An American National Gallery might be started free from encumbrances. There would be no Presidential collection to form the nucleus. Warned by the example of Europe, the directors would begin their work by making an absolute rule that all conditional gifts should be refused. They would reserve the right to select and reject. Then one object would be to secure the masterpiece at any price, and to include the work of only so many second and third-rate men as would insure the necessary historical sequence. They would prize bare rooms above walls crowded with repetitions of primitive cock-eyed Madonnas, and the cabinets jammed with tedious Flemish revels and Dutch trivialities that turn most of the European galleries into a weariness to the flesh, instead of the joy they ought to be. The pleasure of the art-lovers would be considered equally with that of the historian, and such discretion would be exercised that the scientific critic within the American gallery would find his occupation gone. I admit that all this suggests the coming of the millennium in museum management. But it would not be as impossible as it sounds, provided we should have the patience to foster the very slow growth of our national collection, and the sense to employ a competent director. Balancing the advantage of beginning with free hands would be the disadvantage of beginning so late that the masterpiece is no longer to be had for the asking, or the stealing—save in China. It is brought into the market rarely, and then it has its value. But, given years, I do not see why the perfect collection, for which the world has long waited, should not be got together in America—especially if our other warning be taken from European experience and policy.

At the head of South Kensington we have seen a Major-General who knew nothing of active service—had probably never known his regiment since the days when, a lieutenant, I believe, he was given a berth at South Kensington, where, leading his clerks, he gradually rose in the army ranks as he was promoted to higher and higher artistic and scientific offices. He has been succeeded by a Royal Engineer, an eminent scientist, and, therefore, presumably well equipped to guard the art interests of the Museum. We have seen the methods of another South Kensington official, an Art Referee, exposed to severe comment and searching examination, while a reproach often brought against the institution is that all its good positions seem to be regarded as, more or less, entailed in certain families. We see to-day, in charge of the National Gallery, a painter who is also Director of the Tate Gallery and President of the Royal Academy, in which capacity he is expected to produce a few pictures a year, and he would indeed be an unlimited genius if, under the circumstances, he fulfilled any one of his duties more than fairly well. He has for a keeper a man who is an estimable person, no doubt, but whose special qualifications, I fancy, could not be explained even by Mr. Balfour, to whom, through a curiously complicated business and family connection, it is rumored he owes his appointment. The British Museum has not been spared somewhat similar gossip, for it has been whispered, upon whose authority I cannot say, that if a certain man made it what it is, the family have had their reward. In command of the Irish Gallery is an amiable art critic, whose chief recommendation, apparently, was his entire colorlessness and respectable mediocrity.

I have heard the suggestion of an American National Gallery ridiculed, but I do not see why the scheme is not desirable and possible both, if a high standard be accepted from the start, and directors and officials found who would maintain it. There are, however, certain things that must be done. To begin with, the National Gallery should be in Washington. The capital of the United States, and not of any one State, is the place for it, because of many obvious reasons; one of the strongest being that a National Museum is already in existence there. Then, it would not be practical to encourage art nationally without the appointment of a Minister of the Fine Arts, though he might, as in France, be connected with Education. It would be necessary to draw up very stringent and strong rules on the same lines as those observed all over Europe. The first is, that the work of no living artist should be hung in the gallery; not until at least ten years after an artist's death should his claims be even considered. The gallery should be international, and not for the sole benefit of American artists, who, if it is to be of real excellence, must be content with the same proportion of space granted to the artists of any other nation. Unless such elementary laws were made and strictly adhered to, there would be no use in thinking about the matter. As to the Director, it is only necessary to say that he should be of upright character, wide experience, and universal artistic knowledge. He should be assisted, of course, by a Committee of Selection composed of artists, connoisseurs, and museum-keepers—not, as in England, a directorate of lords, bankers, and brokers. Unless some such course is carried out, the gallery would prove the prey of every scheming artist who could not sell his pictures. It would become a scandal, like the Chantrey Bequest, to which decrepit Academicians look as a haven of refuge for their otherwise unsalable work. The Chantrey Bequest, as administered by the Royal Academy, is the greatest artistic scandal in England.

In order to prevent such a deplorable state of affairs, the same course should be followed as in France. A supplementary gallery, modelled on the Luxembourg, should be started for living artists, and, to avoid the corruption that has made the Chantrey collection a laughing-stock, a uniform price

should be paid for works purchased. This is the French plan. The price barely compensates the artist, but he regards it as an honor to be represented in the national collection of living artists. If he is big enough, if his work is of enough importance, he may, at times, stipulate that it shall eventually go to the Louvre. But this is not the wisest policy. Other work, bought by the state, instead of being promoted to the Louvre, is sent at once to provincial museums, and may never get even to the Luxembourg. The American Luxembourg, again like the French, should not be confined to national artists, but should be open to the artists of the world. Matters are so delightfully ordered in France that the two Paris Salons, more or less subsidized by the nation, are state-supported affairs, and it is almost solely from them that pictures are bought for the Luxembourg, though for the Louvre they are purchased wherever they can be found.

The National Gallery should also include, as in France, sculpture, engraving, medals, and a certain amount of architecture and decoration. In a word, it should be representative of the Fine and Applied Arts. But, to insure good results, there must be no confusion between a museum for the exhibition of the work of living artists and a gallery for the exhibition of the work of deceased masters. If the former only were contemplated, it would not be worth attempting, for it would lead to endless jobbery. With modifications, the French system could be carried out perfectly. We have no Salons, but we have exhibitions in at least New York, Boston, Philadelphia, Pittsburgh, Chicago; and there is no reason why, for a Luxembourg, the Government should not buy pictures from these different shows, if the money were granted by Congress. But I repeat again, if pictures by living artists are purchased, they must go into a National Modern Gallery—a Luxembourg. If, on the other hand, the larger scheme be adopted, in the great National Gallery—the American Louvre—the work of living men must be ignored altogether. It seems to me that such a National Gallery is more to be desired than a Luxembourg, for, at the present moment, the American artist, both at home and abroad, is getting as much encouragement as the artist of any other nationality—as, frequently, it is only right that he should.

THE CONSTITUTION IN THE TERRITORIES.

To the Editor of The Nation:

Sir: History is said to be philosophy teaching by example. From an historical point of view, it has long been settled that, in legislating for Territories, Congress is not restrained by the limitations of the Constitution. The organic acts that have created Territorial governments show that the men who made the Constitution did not construe it as extending beyond the confines of the States. The Ordinance adopted by the first Congress that sat under the Constitution, prohibiting slavery in the Northwest Territory, was void if, in legislating for a Territory, Congress is subject to the prohibitions that apply to the States. Mr. Lincoln conceded, in the debates with Douglas and in his first inaugural, that Congress had no power to abolish slavery in a State. He did maintain, on the authority of many precedents, that Congress had such a right in a Territory. If it did possess such a right, it must be inherent in its absolute sovereignty over the domain. If the Constitution goes into a Territory, it must go as a whole. In the first Congress were sixteen members, including James Madison, who had sat in the Convention that framed the Constitution. The Ordinance was passed unanimously; George Washington signed it. The security against the abuse of the power was that it was over contiguous territory that was filling up by white immigration from the States. Every Congressman had constituents in the Territories. No express power was given to Congress to interfere with the African slave trade "so far as States now existing permitted," before the year 1808. Yet the act of 1798 for organizing the Mississippi Territory prohibited the importation of slaves from foreign ports under the penalty of a fine and the freedom of the slaves. How could Congress exercise such authority in Mississippi except on the theory of absolute sovereignty? This regulation acted like a protective tariff against Africa and in favor of the home market. If the Constitution was in force in Mississippi, the act was void. The Constitution protected the African slave trade with the States until 1808.

The act for the government of Louisiana (1803) was drafted by Thomas Jefferson and his Secretary of State, James Madison. It was reported to Congress by John Randolph of Roanoke. These statesmen called themselves strict constructionists as to all legislation for the States. They evidently thought that Congress in a Territory had plenary power "to bind and loose." The bill invested the President with the despotic authority of the Spanish Kings. When Charles the Fifth retired to a monastery, he did not lay down a more imperial power. The ordinance provided, (1) that no slave should be imported from any place outside of the United States; (2) no slave could be brought into the Territory, from any State, that had been imported since 1798; (3) it prohibited slaves being brought into the Territory except by a citizen of the United States removing there for actual settlement, and being at the time the bona-fide owner of the slave. An unnaturalized Irishman could not remove with his slaves from Virginia to Louisiana; nor could slaves be brought there for sale. The penalty for violating the law was a fine and the freedom of the slaves. If this legislation was valid—and it was never questioned—it was because the will of Congress was the supreme law of Louisiana.

The Constitution guarantees to each State —*not to the Territories*—a republican form of government. Wherever the Constitution goes, republican government goes with it. The government that Jefferson gave to the Creoles was no more republican than what we have given to the Filipinos. But Jefferson's regimen prepared Louisiana to become a State. The Philippines grafted on the Union would be the Gorgon's head on the shield of Minerva.—Respectfully,

Jno. S. Mosby.

San Francisco, January 12, 1901.

STANFORD UNIVERSITY.

To the Editor of The Nation:

Sir: The present situation at Stanford University leads me, very unwillingly, to address a word of warning, through your columns, to the younger instructors and assistants at other American universities. It is probable that, during the next few weeks, several of them will be invited to take the places of the expelled and resigning Stanford professors. I would urge upon them not to be in too great a hurry to accept the invitation—not to do so until they have taken pains to inform themselves concerning the causes of the present crisis, and feel persuaded in their consciences that they are justified in supporting Mrs. Stanford. I do not wish to prejudge the controversy, and I am ready to grant that there may be "another side." I wish only to point out that the dismissal of the heads of two departments and the resignation of two others, together with the withdrawal of some of the younger men, constitute strong prima-facie grounds, at present, for suspecting that academic liberty is really in danger. Until this fear is removed, the acceptance of a Stanford position is in the highest degree indecorous. It cannot be necessary for me to characterize the action, should it appear that the fear is justified.

It may be said (1) that, by going to teach there a man does not necessarily take sides, and (2) that it is a pity that the work of the students should be interrupted. But (1) supposing, what is at any rate possible, that Mrs. Stanford has acted tyrannically, it is evident that the best way to educate the Stanford administration to a higher conception of a university is by the refusal of scholars outside to have anything to do with such an institution. And (2) it should be observed that it is Mrs. Stanford who has taken the initiative in interrupting the studies of the place, by the dismissal of Professor Howard in the midst of the college year, and that there are worse things that can happen to American university life than the removal of a few score of students from one Californian institution to another.

I repeat, however, that the evidence is not yet accessible by which we professors at the Eastern universities can fairly judge of the situation at Stanford. My present purpose is simply to advise men who are tempted by offers of appointment to give a thought to the larger aspects of the case, and to be quite sure that they know what they are about.

W. J. Ashley.

Cambridge, Mass., January 20, 1901.

To the Editor of The Nation:

Sir: The exact nature of what is going on at Palo Alto cannot be judged from brief telegrams at a distance. In particular, all who know President Jordan will wait, at least, for his own statement, before they will believe that he has taken sides against academic freedom of speech. Possibly the precise truth will never be widely known, just as most of us are still at a loss as to similar and recent troubles in Providence, Chicago, etc. One moral, however, we need not wait to draw.

It is said that civil engineers, graduates of the costly technical schools, are actually paid less, the country over, and have certainly a far more precarious tenure, than the mechanics who drive locomotives. The difference is largely due to a wise organic

union in the one body and utter lack of it in the other. A causeless discharge, a cruel cut in wages, a grievous insult, cannot befall an engine-driver without precipitating war with the whole body. They are strong enough to protect all their worthy members. Discharge a civil engineer for any reason, and the public announcement only occasions a hundred applications for the vacant place.

College teachers are in quite as helpless condition. If Professor Ross has really been summarily dismissed at midwinter, for daring to express a temperate opinion as to the economic and moral value of Chinese labor, he certainly cannot appeal to any body of his peers for protection. While we claim to be the best-educated and worst-paid of all professional classes, such a lack of organization is a lasting disgrace.

The capitalists who control the railroads express, with apparent cordiality, their approval of the "Brotherhoods." Surely the trustees of colleges and universities would not oppose an organized effort to increase the independence and self-respect of their employees. Such a union should, perhaps, not actually include executive officers, for the obvious reason that those persons are necessarily in closer confidential relations as to many matters with the Board of Trustees than with their instructors. But their real personal sympathies are, in nearly all cases, with the class from which they have sprung, to which, indeed, in many cases they actually still belong.

It must be remembered that even the much criticised power of the "walking delegate" is not always, in itself, too great for an individual, or a small deliberative council, to hold. The Chicago riots found a much greater power lodged in the hands of a single fearless citizen named Grover Cleveland, and it was wielded for the public safety.

If all collegiate and university instructors were now organized for mutual improvement and protection, if the largest discretionary powers were lodged in the hands of five such men as—let us say—Woodrow Wilson, J. L. Laughlin, Bernadotte Perrin, W. P. Trent, and Ephraim Emerton, the events at Palo Alto would be immediately investigated by them. If the general cause of academic freedom really is bound up in the case, such measures as a unanimous resignation of the faculty, a general secession of the student-body, would be largely within the control of men who could be trusted to use them with fearless discretion.

Least of all men should we need to be reminded that the events of the past have a habit of recurring, with disastrous results to the dunces who have forgotten the "review lesson." An old Göttingen student will be allowed to recall the tyrannical discharge of the famous seven professors, and to rejoice that it caused a general hegira of students, and crippled the university for decades. He is blind indeed who does not see that the day is at hand, if not already come, when there *may* occur in America, here and there, attempts by wealthy founders or boards of trustees to silence real freedom of academic investigation and discussion on certain economic questions. In such cases the persecution of one is the concern of each. All studies should converge upon the moulding of fearless, open-minded, truth-loving men and citizens. No man can be a real master in science, literature, or history who does not keep this larger duty always in view. A time-serving coward cannot inculcate valor. The rights of every man or body of men rest ultimately, in large part, on the fact that he or it will fight for them, if need be. Since isolation, poverty, and many other causes tend to make us timid and weak, we should find strength and courage in union.

Perhaps such a union should at first be effected in each centre of learning, while the problem of larger affiliation is left to the future. For instance, what we ought now to desire is a frank statement from the Stanford faculty as a whole. Indeed, courageous united action by that body would right the injustice—if such it is—in a day. But, at any rate, thoughtful men will agree that a crisis like that in Hanover in 1837 would find us far less prepared, whether locally or nationally, than were or are to-day the teachers and students of imperialistic Germany.

WM. C. LAWTON.

FARM-BURNING.

TO THE EDITOR OF THE NATION:

SIR: We all admit that war is sometimes inevitable and that it is "hell." But, without being "Quakers," we may wish to put some limits to hell-fire. Tilly and Wallenstein no doubt regarded their atrocities as mournful necessities of war. Louis XIV. regarded the ravaging of the Palatinate, and Marlborough regarded the ravaging of Bavaria, as a mournful necessity of war. Probably the soldiers of the allied armies who are ransacking, ravishing, and looting in China view their own proceedings in the same light. Lord Clyde (Sir Colin Campbell), in the war with the Sepoy mutineers, forbade his soldiers to burn a village in which one of his men had been killed, saying that it could lead to nothing but exasperation. He was not a man wanting in military vigor. To nothing but exasperation is farm-burning likely to lead in the case of such people as De Wet. The country is being laid desolate and the people are being reduced to desperation. The subjoined passages from the letter of a soldier serving in South Africa will probably suffice to put an end to prevarication about the farm-burning, and to prove that it is not confined to farms in which the white flag has been misused, or which are being used for the purpose of defence.

EQUITY.

"From that on during the rest of the trek, which lasted four days, our progress was like the old-time forays in the Highlands of Scotland two centuries ago. The country is very like Scotland, and we moved on from valley to valley 'lifting' cattle and sheep, burning, looting, and turning out the women and children to sit and cry beside the ruins of their once beautiful farmsteads. It was the first touch of Kitchener's iron hand. And we were the knuckles. It was a terrible thing to see, and I don't know that I want to see another trip of the sort, but we could not help approving the policy, though it rather revolted most of us to be the instruments. I am glad to say the artillery were exempt from it. During the days that followed, it was our duty to go into action on the hills and cover with our guns the troops who did the burning. We did not get anything like a fair share of the loot, but I don't think my men objected to that. We burned a track about six miles wide through these fertile valleys, and completely destroyed the village of Witpoort and the town of Dulstroon. The column left a trail of fire and smoke behind it that could be seen at Belfast. Some of the houses that were too solidly built to burn were blown up. Away off on a flank you would see a huge toadstool of dust, rocks, and rafters rise solemnly into the air and then subside in a heap of débris. Ten seconds afterwards a tremendous roar, like the report of a cow gun, would rend the air, and the dust would blow slowly away. Many of the houses were surrounded by beautiful gardens abloom with roses, lilies, and hollyhocks, and embowered in fruit trees. As we sat by the guns, we would see a troop of mounted men streaming off towards a farm. With my glasses I could see the women and children bundled out, their bedding thrown through the windows after them. The soldiers would carry it out of reach of the flames, and the next moment smoke would commence curling up from the windows and doors—at first a faint blue mist, then becoming denser until it rolled in clouds. The cavalry would ride rapidly away, and the poor women and children, utterly confounded by the sudden visitation, would remain standing in the yard or garden watching their home disappear in fire and smoke."

"The column marched into Witpoort, a pretty little village surrounded by hills. The guns were placed on the hills and trained on the place, and the cavalry and mounted infantry rode into it and looted and burned every house and shop, except one belonging to a British subject. The flour mill was blown up. We sat on the hills and watched the scene. When the mounted troops rode back, they looked like a gang of dissolute peddlers. Their saddles were hung like Christmas trees with shawls, clocks, mandolins, teakettles, lamps—every sort of imaginable article—besides chickens, ducks, geese, sucking pigs, vegetables, and agricultural products galore. All we gunners got was the merry ha-ha, and such unconsidered trifles as the bloated cavalry chose to donate to us."

LOWLAND AND HIGHLAND.

TO THE EDITOR OF THE NATION:

SIR: In reading your criticism of Lang's 'Prince Charles Edward' in the *Nation* of the 10th inst., I was surprised to notice a reproduction of the very common mistake that Scotchman and Highlander are synonymous terms. "Every Scottish lad," it is said, "grows up in an atmosphere of hero-worship for the Highlanders who charged at Prestonpans, at Falkirk, and at Culloden." The Lowland Scotch, who form more than three-fourths of the nation, differ widely from the Highlanders in origin, in language, in traditions. Every Scottish lad of Lowland origin who has read history knows what his race suffered from the later members of the Stuart family. It is well known that Prince Charles's grandfather, then Duke of York, used to sit in the Council Chamber in Edinburgh while the Covenanters were put to the torture, and kept his seat after the other members of the Council had left the room unable to bear the sight of so much agony. The great bulk of the Scottish people are Presbyterian, and they know the frightful struggle their ancestors had with the Stuarts to preserve their religion. The idea that they entertained any fond regard for the memory of the race is a myth which could find shelter only in such heads as Andrew Lang's, a man who glories in being called a mythologist, and who has devoted most of his attention to folk-lore and fairy stories. It is well known in Scotland that he never loses an opportunity to throw mud at King William, the Duke of Marlborough, and the Whig party generally. Had it not been for the successful exertions of the Whigs to expel the Stuarts from the throne, Britain would have been

another Spain to-day, with Lang for Poet Laureate. J. G. W.

OTTAWA, CANADA, January 14, 1901.

[We must ask our correspondent to believe that we are quite familiar with the ethnological difference between Lowlanders and Highlanders! If we were so inclined, we might make a technical stand on a sentence in Lord Rosebery's 'Napoleon' (Harper's ed., p. 244): "The Scots are still Jacobites at heart." The adjective which we used was "Scottish." But what we really meant was that the youth of Scotland to-day, whether Highland or Lowland by origin and quite apart from political views, have an admiration, amounting to hero-worship, for the splendid courage shown by the clans during the Forty-five. We leave aside personal knowledge of national opinion, which might be challenged, and point to the influence of Lowland novelists, from Sir Walter to Louis Stevenson. They have surrounded the last Stuart rising with an atmosphere of romance. Like "J. G. W.," we feel no great fondness for divine right nor for the coercive methods which the Stuarts applied to religion—but then the Highlanders were not enlightened Whigs. They were men who grasped the ideal of loyalty and gave their lives for it. Matthew Arnold loved Oxford because it had been the "home of lost causes, and forsaken beliefs, and unpopular names, and impossible loyalties." There are still those who hold that the legitimate sovereign of Great Britain is Maria Teresa, a Bavarian Princess, descended from Henrietta, Duchess of Orleans, youngest daughter of Charles I. But this archæological fact should prevent few Lowlanders from recognizing the gallantry of the clans more than one hundred and fifty years ago. To doubt that, seems to us no less impossible than it would be to recover the cattle which the Highlanders used to "lift" from their more industrious and intelligent, though far less picturesque, neighbors of the Lowlands. As for the present feeling, a kilted regiment awakens enthusiasm, whether its recruits come from Cromarty, Lanark, or London. Scotland has many heroic memories; but no country, however divided in the past, can afford, after a lasting and harmonious union has been secured, to throw away a glorious episode like the Forty-five. The Duke of Cumberland may have had his uses in the creation, but, from what we know of modern Scottish sentiment, we very much doubt whether the Edinburgh school-boy would erect him on a pedestal to the exclusion of Lochiel. Europeans see the same thing, for does not François Coppée say of Charles Edward:

"L'Écosse ne peut pas te juger, elle t'aime"?

Scotland reveres the heroism of the Covenanters. It is our conviction that she also reveres the valor of the clans. —ED. NATION.]

COACHING INTERCOLLEGIATE DEBATERS.

TO THE EDITOR OF THE NATION:

SIR: If the occasional criticism that appears in your columns on the matter of intercollegiate debates may be taken as evidence, there is considerable dissatisfaction with present methods, and a not unreasonable doubt as to the utility of the debates themselves. The latter question I do not wish to discuss, but I should like to raise one question concerning the methods now followed in preparation for the debates.

From time to time an unverified rumor has found its way into print, to the effect that members of the faculties of some institutions represented in the debates afford a good deal of assistance to the contestants. On the other hand, it is said that this practice does not obtain in all the institutions represented. Evidently, some kinds of aid may with perfect propriety be given. No one, for example, will be likely to object to bibliographies, however elaborate, that enable the contestants to proceed without delay to the study of the question. But systematic coaching on the question by specialists, whether members of college faculties or not, seems to some persons to afford opportunity for abuses not easy to detect, and to give an unfair advantage to one side or the other.

I am not at this moment concerned to express any opinion on the moral aspects of the question, as to what aid is permissible and what is not. I desire, rather, to call forth, if possible, an authoritative statement as to the actual practice of the institutions represented in intercollegiate debates. There will be abundant opportunity for moral disquisition by specialists in ethics after the actual facts are before us.

Respectfully yours, INQUIRER.

January 22, 1901.

THE SIDGWICK MEMORIAL.

TO THE EDITOR OF THE NATION:

SIR: In speaking of the proposed memorial to the late Prof. Henry Sdgwick, in your issue of January 17, you mention his interest in the cause of the education of women as a chief reason why American students should subscribe to the memorial fund. There are other reasons, also, which are calculated to appeal even to those who never enjoyed the privilege of meeting him in his Cambridge home. Many students of philosophy, of ethics, and of economic science owe a debt of gratitude for Professor Sidgwick's published writings. But, beyond this, it is pleasant, now that he is gone, to remember how deeply he was interested in American affairs, how warmly he welcomed the era of good feeling between his country and our own, how quick and hearty were his greetings to scholars from the United States, and how generous his endeavors to aid them in securing the opportunities and facilities needed for their work. In these things, indeed, Professor Sidgwick was not singular among the English scholars of the time; but because of his winning character and personal charm, he was fitted, as few others, not only to make the visitor from across the sea at home in the older Cambridge, but also to help to knit the bonds of understanding and good will which, in the end, must prove the most potent of alliances between our kindred peoples.

This work Professor Sidgwick continued to do almost to the day of his untimely death; and because of it his memory should be honored beyond the circles of those who knew him personally, or who took a technical interest in his researches.

A. C. ARMSTRONG.

WESLEYAN UNIVERSITY, MIDDLETOWN, CONN., January 22, 1901.

THE WONDERFUL CENTURY.

TO THE EDITOR OF THE NATION:

SIR: I beg to draw the attention of "L. N. D." (see the *Nation* of December 20, 1900, p. 489) to a book, published two years ago, viz., 'The Wonderful Century: Its Successes and its Failures,' by Alfred Russel Wallace (New York: Dodd, Mead & Co.), in which the celebrated English naturalist treats in part i., "Successes," in fifteen chapters, (1) Modes of Travelling, (2) Labor-Saving Machinery, (3) The Conveyance of Thought, (4) Fire and Light, (5) New Applications of Light: Photography, (6) New Applications of Light: Spectrum Analysis, (7) Theoretical Discoveries in Physics, (8) Minor Applications of Physical Principles, (9) The Importance of Dust: A Source of Beauty and Essential to Life, (10) A Few of the Great Problems of Chemistry, (11) Astronomy and Cosmic Theories, (12) Geology: The Glacial Epoch, and the Antiquity of Man, (13) Evolution and Natural Selection, (14) Popular Discoveries in Physiology, (15) Estimate of Achievements: The Nineteenth as Compared with Earlier Centuries.

This will perhaps partly satisfy the requirements of your correspondent from Louisville, Ky. A. B. MEYER.

DRESDEN, GERMANY, January 3, 1901.

PROFESSOR HOLLAND'S 'ELEMENTS OF JURISPRUDENCE.'

TO THE EDITOR OF THE NATION:

SIR: In your issue of December 6 the reviewer of Prof. T. E. Holland's 'Elements of Jurisprudence' complains that the Table of Cases has been left out of the ninth edition. Will you allow me to explain that this was an accidental omission, not discovered until after publication? Now, however, the "Table of Cases, English, Scotch, and American," thus unfortunately omitted, has been bound in all copies of the book in stock, and I shall, as a matter of course, supply the missing pages gratuitously to any bookseller or other person who has purchased the work. Thanking you in anticipation for allowing me to make this statement, I am, yours obediently,

HENRY FROWDE.

OXFORD UNIVERSITY PRESS,
91 AND 93 FIFTH AVENUE, NEW YORK.

Notes.

The Oxford University Press American Branch has arranged with the Rev. F. N. Peloubet to issue a 'Teachers' Commentary on the New Testament' in ten volumes, beginning with Matthew on February 1, at a moderate price.

A new edition, revised, of Professor Bemis's 'Municipal Monopolies' is in the press of T. Y. Crowell & Co.

Prof. William MacDonald of Bowdoin, who has been called to the chair of history vacated at Brown University by Professor Jameson, has enlarged and thoroughly revised Johnston's 'History of the United States for Schools,' and it will shortly be published by Henry Holt & Co.

The fifty-third issue of 'Who's Who,' for 1901 (London: A. & C. Black; New York: Macmillan), exhibits the incorporation of that old stand-by, 'Men and Women of the Time,' which has fairly been run off the track by its more nimble and handy competitor. Consequently we may turn to this indispensable work as confidently for McKinley and Crispi as for Chamberlain or Morley. There is still a place left, however, for our 'Who's Who in America.'

"Authentic edition" is the brand of the latest reissue of Dickens, by Chapman & Hall (New York: Scribners), in twenty-six volumes. That is to say, we have here a reproduction of Dickens's revision of 1867-'68. The rest of the story is that no work exceeds one volume (with implication of a condensed typography), and that we have the older illustrations—as, for the 'Pickwick Papers,' by Seymour and Phiz; 'Old Curiosity Shop,' by Cattermole, Phiz, and others; 'A Tale of Two Cities,' 'Nicholas Nickleby,' and 'Martin Chuzzlewit,' by Phiz; 'Oliver Twist,' by Cruikshank, etc.—while each volume so far has a colored frontispiece. The binding is simple, in green cloth. The reader will, it must be confessed, find these books somewhat bulky for the hand, but their cheapness will go to offset this.

Among the press correspondents drawn to Manila by our unhappy occupation of the Philippines, none proved himself more worthy to accept his employers' "brief injunction to tell the truth as I saw it" than Mr. Albert Gardner Robinson, correspondent of the New York *Evening Post*. His candor was everywhere acknowledged, and his self-restraint was not invisible to the initiated. Time, by not finishing up the job in the East, has preserved the interest of his letters, which might else have been relegated to the historian, and McClure, Phillips & Co. have enabled him to reprint them in a handsome volume ('The Philippines: The War and the People'), for which the historian will still be thankful, while the layman reads it for his enjoyment and better information. Mr. Robinson has wisely not attempted to rewrite or combine his current impressions, and stands by the views he expressed in February, 1900, as to the Chinese factor in our problem of dominion, and in 1899, as to Filipino capacity for self-government, and the perils of imposing American ideas "regardless of established habit, custom, and belief."

'The Hoosiers,' by Meredith Nicholson (Macmillan), is a praiseworthy attempt to demonstrate the injustice of the widespread belief that Indiana is a State where nothing of consequence ever happened, whose history is as monotonous as her prairies, and of which nobody outside of her borders ever thinks, except on the approach of a Presidential election. Mr. Nicholson shows us that there is much that is interesting about the Hoosiers. They have a history running back almost to the eighteenth century, besides certain peculiarities of dialect, and an entirely original way of playing the fiddle. He points, with just pride, to the fact that Indiana has produced such statesmen as Oliver P. Morton and Benjamin Harrison; poets like James Whitcomb Riley, and novelists like Dr. Eggleston and Gen. Wallace. These we know and admire; as no doubt we should admire Misses Mary H. Krout, Angelina Teal, Evaleen Stein, and the rest of the "Indiana choir," if we had had the advantage of perusing their works.

Edward FitzGerald's Miscellanies have been collected by Mr. W. Aldis Wright, and published by Macmillan in the Golden Treasury Series. Most of the contents have been in type before, but not in ways to attract wide attention; their known or probable dates (not here cited in every case) extend over the half-century of the author's adult life. "Euphranor" fills nearly half the little volume, and the Memoir of Bernard Barton a quarter of it; next to these come the preface to Polonius and Introduction to Readings in Crabbe. The prose pieces testify chiefly to FitzGerald's scholarship and to his regard for his friends; but in the three little poems, though apparently produced in youth, one may find or fancy a touch of the genius which blazed forth, long after, in the Quatrains. They have nothing of the fierce independence and defiant pride of Omar; but their gentle and tender melancholy is (in two of them at least) relieved by that sort of doubtful hope which is traceable under the "cheerful and jocund despair" of the later poem; so that these delicate bits of verse, discovered only some ten years ago, must be welcome to all Omarians, as not unworthy, in their modest way, to be associated with the 'Rubáiyát.'

Since Dr. Arnold's days, Rugby has held a peculiarly honorable place in the estimation of Englishmen. Eton and Harrow may be more brilliant, but for solid qualities, for public-school honor and manliness of tone, Rugby has no rival. Stories of Rugby life inevitably show the results of the Arnold tradition, which at its best produced athletic boys with a high standard of honor, and, with less favorable material, turned out a certain proportion of prigs. It is not always easy to preserve the mean as we see it in 'Tom Brown,' but Mr. A. G. Butler, author of 'The Three Friends: A Story of Rugby in the Forties' (Henry Frowde), has been fairly successful. The tale hovers between fiction and fact, and the schoolboy who reads it for stirring descriptions of football and cricket will be disconcerted at finding himself let in for a discussion of 'In Memoriam' by Clough and Matthew Arnold. Still, there are games and school rows and rivalries in plenty, and the book is a slight but faithful picture of Rugby at the time when Matthew Arnold made his short-lived essay as a master in the school under the régime of Tait, later Archbishop of Canterbury.

'Mechanical Traction in War for Road Transport' (London: Sampson Low, Marston & Co.; Philadelphia: Lippincott) is a translation of a report, by Col. Lariz of the German army, which gives the history of traction engines and automobiles in military operations. Two were used by the English in the Crimean war, two by the Germans in the Franco-Prussian war, and twelve by the Russians in the Russo-Turkish war of 1878. In 1899 the English sent fifteen traction engines and two ploughing engines to South Africa; a special corps was organized for their operation, and they have been successfully used for the transport of baggage and gun-carriages. Lord Roberts also ordered a train of steel cars to carry ammunition and small guns, which was built in England about a year ago, and successfully drawn on common roads by a heavy traction engine. The translator has added notes regarding experiments and trials of speed, and he presents a letter from the Chief of Engineers of the United States army stating that road engines have never been seriously considered as a means of army transportation by any department of our Government.

"E. V. B.," whose rose anthology is of grateful memory, is less happy in her latest volume, 'Sylvana's Letters to an Unknown Friend' (Macmillan). The book is characterized by the same delicacy and sweetness which are so attractive in the brief preface to 'Ros Rosarum,' but, running on as it does over a goodly number of pages, it rather palls upon us. Perhaps for a garden book it is hardly earthy enough, and not quite human enough for a real collection of letters. There is an occasional error, as when the author speaks of corpse candles, saying she believes they belong to the family of Agarics. This is surprising, for "E. V. B." should know that corpse candles, like puffballs, belong to the Gasteromycetes.

Professor Bailey of Cornell University has added another elementary botany to the list of his works. The volume at hand, published by Macmillan, entitled simply 'Botany,' is for the use of pupils, and is written in a vein intended "to expand the mind and sympathies." Accordingly, a pleasant style of presentation, both in words and in illustrations, has been provided. Indeed, in seeking to invest the subject with human interest, an occasional figure of speech has taken on a decidedly anthropomorphic stamp. The sentimental significance of the aspect of various trees has led the author to impute characteristic expressions to various forms of top and various colors of foliage. How the "language of flowers" can consistently be omitted from this volume is hardly clear. The usual chapters in books of the day on elementary botany here find place, even to the discussion of tension zones and plant societies. Why the author has seen fit to revive the defective terms "exogen" and "endogen" does not appear. The little flora closing the book includes a few of the commoner wild and cultivated plants, and will make smooth the path to the Latin name, so beset with difficulty (and with discipline) in the larger floras. Perhaps the horticultural flavor is pretty strong in the book, but high-school pupils should be instructed in grafting. In spite of these faults, Professor Bailey's enthusiasm and originality make the book thoroughly attractive.

The great activity prevailing in all departments of botanical science has rendered the existing glossaries of its technical terms more and more inadequate. Mr. Benjamin Daydon Jackson's work in the 'Index Kewensis' is well known, and the appearance of his 'Glossary of Botanic Terms, with their Derivation and Accent' (London: Duckworth; Philadelphia: Lippincott) arouses hopeful anticipations. Considering the reasonable limits of such a work, one is convinced that few terms of any importance have been omitted. Nevertheless, it is somewhat disconcerting in a book listing fifteen thousand words to find no mention of "chemotropism" and "kinoplasm." The large majority of listed words are naturally in small general use among botanists, but it is well to know where those

words may be found which have been from time to time proposed by those who have sought to clarify and amplify the terminology of special lines of research. That the term "death-point," as used by one specialist, should need explanation seems to reflect upon some one: the glossary can scarcely be asked to furnish notes elucidating the work of individual writers. The definitions are, for the most part, clear and concise. It is inadequate, however, to define the Darwinian curvature as "effects produced on growing organs, as root tips, in consequence of irritation," or to say that "Ion is a physical term defined by J. F. Clark as the division of a molecule." The volume is compact and convenient.

The admirable series of "Oxford Classical Texts" issuing at present from the Clarendon Press includes the 'Historia Græca' or 'Hellenica,' edited by E. C. Marchant. A useful companion to this volume, published by the same press, is a 'Commentary on the Hellenica of Xenophon,' by G. E. Underhill. This work is necessarily based on the labors of Dindorf, Breitenbach, and Büchenschütz, but at the same time sums up the gist of many treatises and monographs, and offers in its introduction and appendices a careful and judicial series of discussions of the many problems that arise in connection with this most unequal and baffling narrative. After a thorough sifting of all the evidence, and especially the internal evidence, Mr. Underhill regards the 'Hellenica' as the outcome of "a diary or commonplace book" kept for nearly half a century, and worked up at irregular intervals into a more or less continuous history. This explains the unevenness and irregularities of treatment, and the shifting point of view which leads Xenophon so often "to fall between two stools." Niebuhr and Grote rated the 'Hellenica' very low—quite too low, undoubtedly—by contrast with Thucydides. But contrasted with our other sources of information—the Attic orators and even Plutarch or Diodorus—the merits of the 'Hellenica' are shining; it becomes comparatively an impartial document. The grammatical notes in Mr. Underhill's Commentary are sometimes curiously elementary; the historical apparatus and commentary are valuable and complete.

Song books for children containing music and verses are printed in all countries, but an illustrated song book of this kind (with colored pictures) is a novelty in Germany. Schott's Sons of Mainz (New York: G. Schirmer) have issued this novelty under the title of 'Unser Liederbuch.' It contains a number of tunes judiciously selected by Mrs. Friedrike Merck, arranged by Fritz Volbach, and cleverly illustrated by Ludwig von Zumbusch. The little book will find a welcome on this side of the water, where it originated, as well as on the other.

The main object of Mr. J. E. S. Moore's expedition to Lake Tanganyika in eastern Africa, described in the *Geographical Journal* for January, was to determine its geological history by an examination of its extraordinary marine fauna. This was found to be absolutely unlike the fauna of the lakes to the north and the south of it, and the conclusion was reached that the lake formerly had connection with the sea by the Congo basin. There are known to be ninety species of fishes in it, seventy-two of which are new, seventeen being types of new genera. Of these Mr. Moore added in this expedition twenty-three new species and two new genera. In an ascent of one of the ridges of Ruwenzori, which he narrates at length, he discovered that it was not, as has been supposed, a single mountain, but a long range of mountains separated by deep valleys. A brief but interesting account, from Sir H. Johnston's reports, is given of the dwarfs in Central Africa, their appearance, language, dances, and songs, for they "have a good idea of singing, and form themselves into little companies of minstrels, bearing a far-off resemblance to those of St. James's Hall." He also ascertained that there exists in their forests an animal of the horse tribe not hitherto known or described. He was able to secure only portions of imperfect skins. Dr. Nathorst sketches the history of the exploration of the coast of northeastern Greenland.

Petermann's Mitteilungen, number twelve, contains an account of a journey in the province of Shantung, China, and a description of two remarkable earthquakes in Greece. There is also a detailed notice of the first volume of the scientific results of Nansen's expedition, and some interesting facts in regard to the race strife in Macedonia. The Bulgarian propaganda seems to be declining in strength, for the official organs of the principality acknowledge that in some districts the children are flocking to the Greek schools. Attention is called to the fact that, out of forty-nine grand-viziers who ruled Turkey during its period of greatest prosperity, 1453-1623, only five were Turks! The rest were Greeks, Illyrians, Armenians, etc., and one Italian.

Students of mediæval social history ought not to allow the elaborate monograph of seventy-seven pages, by Prof. Georg von Below, in the current number (N. F., Band L., Heft 1) of the *Historische Zeitschrift*, to escape their attention. It bears the elaborate title "Concerning Theories of the Economic Development of Nations, with especial regard to the Town-Economy of the German Middle Ages"; and it need hardly be said that it has been directly called forth by the remarkable vogue so rapidly acquired by the evolutionary formulæ of Professor Bücher. The criticism they have received at the hands of Eduard Meyer, from the point of view of the historian of antiquity, they now receive from the point of view of a profoundly learned mediævalist. Professor von Below's controversial style has been chastened by time; and the reader can now take an unalloyed pleasure in the acuteness of his distinctions and the breadth of his reading. For, whatever one may finally think of his conclusions, his writings have always this merit, that they put before one the exact position of the question in contemporary scientific literature; and it is a welcome sight to find a professed historian who is so thoroughly well acquainted with the writings of professed economists, whether he agrees with them or no.

Since the newness of the subject has worn off, we do not hear much of the university-extension movement in German cities. It is gratifying, therefore, to learn, upon inquiry, that the idea continues to be fruitful in various centres of learning. As an instance, we refer to the fourth annual report of the Volks-Hochschul-Verein in Munich, according to which fourteen courses of lectures were given to more than three thousand hearers during the session 1899-1900. Of the hearers, not far from one-third were laborers and mechanics, and more than one-half students, teachers, clerks, subaltern officials, etc. Persons belonging to the former class were charged fifteen cents, those of the latter class twenty-four cents, for a course of six lectures; other persons paid three marks, or less than seventy-five cents. The lecturers included scholars of world-wide reputation, members of the faculties of the University and technical high school, and the management of the Verein is in the hands of men like Von Baeyer, Brentano, Furtwängler, Von Winckel, Von Zittel (the President of the Royal Academy of Sciences). Professor Ebert's course of lectures on electricity, and those by Professors Von Reber and Riehl on the history of art (given on Sunday afternoons in the Pinakothek), drew such crowds of hearers that hundreds had to be denied admission for want of room. It is suggested that, in the future, illustrative lectures be also given in the Glyptothek and in the magnificent new National Museum.

It will be good news to such as have found the Palazzo Piombino closed during a hurried visit to Rome, that the notable collections of antique marbles transferred thither from the Villa Ludovisi has been acquired by the Italian Government. The collection will be housed temporarily in the Museum of the Baths of Diocletian. There it will be possible to see, at all times, the "Juno Ludovisi," in plaster effigy, the divinity of Goethe's Weimar household; the "Resting Ares," the "Galatian and his Wife," and the other pieces of this famous collection. Whenever the acquisition of the Villa Borghese is finally effected by the Government, these marbles are to be permanently installed in the Casino Borghese.

The approaching celebration of the hundredth anniversary of John Marshall's accession to the Supreme Court (February 4, 1801), has been improved by C. Klackner, No. 7 West Twenty-eighth Street, to bring out a facsimile to scale of St.-Mémin's profile crayon of the Chief Justice. This likeness was drawn (with the French artist's usual appliance, the physionotrace) in March, 1808, in Marshall's fifty-third year. The background is red, and measures approximately 17x22 inches. The spirited head is life-size. The present owner of the original, Mr. Thomas Marshall Smith of Baltimore, vouches for the entire success of this striking reproduction.

A correspondent has obligingly called our attention to the fact that the proposal of President Lodge of the University of Birmingham, noticed in these columns on December 27 last, viz., that examinations should be deferred till some time after teaching ceases, has been in operation for many years in Dalhousie College, Halifax, N. S. It is there applied to students taking what are called "Special Courses for Degrees," which are planned to occupy the last two years of their college life. The arrangement, which was probably suggested by the practice of the two older English universities, is said to work well.

The Baltimore Association for the Promotion of the University Education of Women offers a fellowship of the value of $500 for the year 1901-1902. This fellowship will be available for work at either an American or a foreign university. As, in the award of this

fellowship, preference will be given to women from Maryland, or women who have identified themselves with educational interests in Maryland, the Johns Hopkins University is again reminded of the illogical and isolated position it still occupies among the leading universities of the United States, in excluding from its graduate courses (except in the medical department) the college women of the State and city from which it receives its support. Additional value is given to this Baltimore fellowship by the statement that it "may, in exceptional instances, be held for two successive years by the same person." Applications should be presented before March 25 to any member of the committee on award, of which Dr. Mary Sherwood is chairman, and her address The Arundel.

—In a second series Mr. E. J. Payne continues the 'Voyages of the Elizabethan Seamen to America' (Henry Frowde) which he began seven years ago. Like its predecessor, this volume consists of select narratives drawn from the 'Principal Navigations' of Hakluyt. As editor Mr. Payne contributes an introduction of forty pages, besides a rather meagre stock of footnotes. An abridgment of Hakluyt may to some resemble a volume of elegant extracts from Homer, but, just as we occasionally skip the catalogue of the ships, it must be admitted that certain parts of Hakluyt may be judiciously overlooked. We use this comparison because Froude has called the 'Principal Navigations' "the prose epic of the modern English nation." Mr. Payne approaches the three large folios in the same spirit, although he recalls the very uncomplimentary phrase of Prof. William Smyth, who styled them "an unwieldy and unsightly mass." The publications of the Hakluyt Society are only for specialists, millionaires, and public libraries. The rest of us may be glad to get the best 'Voyages' in modern print and at a moderate price. Mr. Payne began with Hawkins, Frobisher, and Drake. The chief pieces in his second series are Cavendish's 'First Voyage' and Raleigh's 'Discovery of Guiana.' Along with these bulky narratives, which occupy more than two-thirds of the space, are given 'Gilbert's Voyage,' 'Amadas and Barlow's Voyage,' 'Cavendish's Last Voyage,' and, for an appendix, the singular and passionate letter wherein the dying Cavendish assails Davis when under the conviction that he has been deserted. "The *Roebuck* left me in the most desolate case that ever man was left in. What is become of her, I cannot imagine; if she be returned into *England*, it is a most admirable matter, but if she be at home, or any other of my goods whatsoever return into *England*, I have made you [Sir Tristram Gorges] only possessor of them. And now to come to that villain that hath been the death of me, and the decay of this whole action, I mean *Davis* whose only treachery, in running from me, hath been an utter ruin of all; if any good return by him, as ever you love me, make such friends as he of all others may reap least gain." Here we get the true Elizabethan, who was a good hater as well as a good fighter. Mr. Payne offers a fitting comment: "There was no cant about Cavendish. Others, in a like situation, might have thought it a Christian duty formally to forgive 'that villain that hath been the death of me and the decay of this whole action.' Cavendish merely charges his executor to see that Davis reaps as little profit as possible from his supposed treachery." From the present volume we may also give one example of the spaciousness which marked Queen Elizabeth's reign. When Gilbert was preparing his expedition of 1578 he asked for letters patent "to discover and inhabit some strange place, with special provisoes for their safeties whom policy requireth to have most annoyed, by which means the doing of the contrary shall be imputed to the executors' fault." And he got them! Every one of the relations named above is well known to students of English history, and none needs special criticism. We hope that Mr. Payne's selections may bring these classical narratives of Elizabethan seamanship to the familiar knowledge of a still wider circle.

—For the fifth time, at least, in the past 3,000 years, Singan has become the capital of the Chinese Empire. This distinction it owes to its unrivalled position in the heart of the mountains, some six hundred miles to the southwest of Pekin. Here are the only practicable passes across the range which separates northern from central and western China, and also the head of the valley which forms the great highway to central Asia. At this point two rivers unite to flow through the gate of Tung-kwan into the Yellow River, thus affording easy access to the eastern and northern provinces. Trade-routes from every direction have converged here, in consequence, from time immemorial, and made it a place of great commercial importance, famed for the enterprise and wealth of its merchants. The approach to it, says a recent traveller, is through a region which is like one continued park, with knolls and lawns and winding paths, covered with wild flowers. The city itself stands in the middle of a vast wheatfield, and is surrounded by high walls, said to be forty miles in circumference, with four huge gates, each flanked by two magnificent towers. The principal streets are well paved with flagstones, and are full of good shops, together with imposing temples and Government buildings. At that time, 1866, it was densely filled with houses, having little or no vacant grounds or gardens, and had a population exceeded in China only by Canton. A French Roman Catholic bishop resided there, who claimed that his diocese contained 20,000 native Christians. A later visitor refers to his courteous treatment by the people, who thronged the streets, and apparently had none of the hatred of foreigners, now so prevalent. No remains of ancient buildings have as yet been discovered, but in the Pei Lin, or "Forest of Tablets," Singan possesses the most valuable archæological and historical museum in the empire. These are mostly the work of scholars, and the subjects are various. Some are simply specimens of elegant calligraphy, while others represent historical scenes of five dynasties. Some are emblematical animals, sacred birds, drawings of famous mountains, and still others are likenesses of great men, including a full-sized portrait of Confucius, and several of his disciples. The most celebrated of all are the thirteen classics, cut in stone, dating from the Tang dynasty, and far anterior to those in Pekin, now so famous. Of still greater interest is the Nestorian Tablet, which was erected in 781 A. D., and found in 1625 embedded in the wall of a dilapidated temple, and is said to be the oldest Christian inscription in Asia. It is written in Syriac and Chinese, and consists of a vague abstract of Christian doctrine, an historical summary in prose and octosyllabic verse, and a list of one hundred and twenty-nine names of Syrians and Chinese, most of whom are characterized as priests.

—During its continuous life of more than thirty centuries, an age which few cities can equal, Singan has been identified with some of the greatest men of whom China can boast, and the most glorious periods of her history. It emerges from the dim obscurity of prehistoric times under the name of Changan, "continual peace"—a name still preserved as that of one of the quarters of the modern city. In 1122 B. C. it was made the seat of government by Wu-wang, founder of the Chow dynasty, who, with his father and brother, ranked with the most distinguished men of antiquity for their erudition, integrity, patriotism, and inventions. Nearly a thousand years later, Chi Hwangti, the first universal emperor, chose it for his capital. In order to improve its approaches, he constructed magnificent roads and bridges, some of which remain to the present day. Across the narrow valleys of the mountain passes he or his successor threw suspension bridges, thus anticipating European science by twenty centuries. But his fame as the builder of these public works and of the Great Wall is eclipsed by his misdirected zeal as a reformer. Convinced that the slavish idolatry of the past which characterized his people was fatal to all progress, he ordered that every book referring to the past history of the Empire should be burned. This decree, which was almost universally obeyed, though with considerable resistance and loss of life, in all probability strengthened the national characteristic which is as powerful to-day as in his time. The fact that no history is taught in the Chinese schools later than 1644, the date of the establishment of the present Mantchu dynasty, is an apt illustration of it. At the beginning of the seventh century of our era, the greatest of all the native Chinese sovereigns, Taitsong, made Singan his capital. Here in 635 he cordially welcomed the Nestorian priest Olopun. Having ordered the sacred books which the stranger had brought with him to be translated in the imperial library, says the commemorative tablet to which reference has been made, the Emperor examined them, and, "becoming impressed with the rectitude and truth of the religion, gave special orders for its dissemination, and directed that a church be built in the square of justice and peace." In our own times the city is noted for its splendid defence in 1865 against the Mohammedan rebels, who were unable to capture it, notwithstanding the fact that among its inhabitants were 50,000 followers of the prophet. These were compelled, in order to save their lives, to renounce their faith and to place in their mosques tablets of the Emperor and of Confucius. The reoccupation of the old capital, after the lapse of so many centuries, even though it be temporary, may not impossibly presage the opening of a new and brighter era for China than that which is apparently just drawing to a close.

—That curious byway of the Greek drama, the satyric after-piece, survives for us in a single example, the "Cyclops" of Euripides.

The play has attracted few editors, for the obvious reason that, apart from its unique position as a literary type, it cannot compare in interest with any other of the eighteen (or nineteen, if we include the "Rhesus") extant plays of Euripides. And since, in the ordinary college curriculum of classical study in America, hardly two plays of Euripides can be included, and those at the expense of more Sophocles, it is not likely that the "Cyclops" will ever be read by others than classical scholars whose independent studies have made the commentary of a college edition superfluous. Such a work, therefore, as that of Mr. John Patterson ('The Cyclops of Euripides': Macmillan) is a pure labor of love. His edition is adapted for school and college use, and includes a very readable introduction, dealing with the myths connected with the story, good grammatical and critical notes, and an index. If it supplies a want that was hardly felt, it will be of interest to many scholars, and, perhaps, even to some general readers whose knowledge of the play is confined to Shelley's translation. The Cyclops legend is best known to students of literature through the Odyssey, Theocritus, and Virgil. The brutal cannibal in the "Cyclops" of Euripides is drawn from the Odyssey, and there is little trace of the lovelorn swain of Theocritus, who "shepherded his love with song," and wished that he could carry to Galatea "either white lilies, or the soft poppy with its scarlet petals." The degradation of Odysseus, which is so noticeable in the plays of Euripides and of Sophocles, is maintained in the "Cyclops," although here and there the resourceful hero makes speeches of almost tragic dignity. The lyrics describing the pastoral life of Sicily are full of lightness and charm.

—In 'Le Soulèvement de la Flandre Maritime de 1323-1328' (Brussels: Librairie Kiessling, under the auspices of the Académie Royale de Belgique—Commission Royale d'Histoire), Prof. Henri Pirenne of Ghent has furnished us for the first time with an exact and complete copy of one of the most important documents relative to Flemish history in the Middle Ages. This is the 'Book of Inventory of Hereditaments of Flemings Slain in the Battle of Cassel, 1328,' of which the unique original is preserved in the National Library at Paris. M. Mannier, its first editor, in 1863, printed the list of personal names, but altogether omitted the accompanying list of properties. After most of the names occur such statements as these: "1 manoir et 18 mesures de terre," or "2 lines de terre, item 1 mesure de fief," or "1 maison et 1 quartier de terre," or the like. It is evident that this is the most valuable part of the record, and M. Pirenne has facilitated its use by a geographical table, and by a number of statistical summaries. In his interesting introduction, Professor Pirenne gives his own version of the Peasants' Rising in Western Flanders, which was crushed in so sanguinary a fashion in the battle of Cassel. It was not, he holds, a national revolt against French domination; it was a social movement, which had for its object the destruction of the nobility. But, although this was so, it must not be compared to the Jacquerie a few years later in France. It was not a rising of despair, the outcome of starvation or grinding poverty; on the contrary, the peasants of that part of Flanders were particularly well-to-do, and their leaders belonged to the middle class. In the historical explanation which the editor attempts of the existence of this relatively free and prosperous peasant population, there is much that is still obscure, but doubtless the conditions in 1323 were such as he describes. In Flanders, as in England in 1381, it would seem that the spread of the doctrine of equality had a good deal to do with the insurrection.

HENRY GEORGE.

The Life of Henry George. By his Son, Henry George, jr. Doubleday & McClure Co. 1900.

The author of this biography has certainly one qualification for his task—that of complete sympathy with the purposes and ideas to which Henry George devoted his life. Those who share this sympathy could hardly ask for a more enthusiastic tribute to the memory of their leader, or one that should chronicle with more loving care every little detail of his personal history. Moreover, in this case the glamour which influences filial piety tends rather to reveal than to conceal the truth. When the biographer regards every trait of his hero as excellent, and every act as memorable, he is under no temptation to extenuate what seems blameworthy, or to omit what might arouse hostile criticism. We do not hesitate to say that whoever wishes to know what manner of man Henry George was, can by reading this book satisfy his curiosity as well as he could have done by meeting him face to face.

Taking a dispassionate view of the man and his work, we cannot resist the conclusion that his life furnished the refutation of his theories. He planned a social revolution in the name of justice; and he must be taken as a type of the class of men who would administer such a revolution were it to come to pass. He had excellent natural abilities, and the influences of his home appear to have been elevating. Of his mother it is impossible to speak without reverence, and all the members of his family were devoted to him. Nevertheless, as a boy, he seems to have had little disposition to make a profitable use of his time, or to do credit to his breeding. If not dissolute, he had dissipated habits, and spent his earnings with a gang of roysterers for drink and tobacco. He went to sea before the mast, and on his return worked at type-setting from time to time, his employers not finding it desirable to retain his services permanently. He secured an appointment as ship's steward on a naval vessel, with good prospects of advancement, but deserted as soon as he reached California. He started for the Frazer River gold-fields, but got only as far as Victoria, where he obtained a place in the store of a relative, toward whom, according to his own account, he "behaved badly." He soon drifted back to San Francisco, but found no better means of support than occasional jobs of type-setting.

Again he started for the gold mines, but had to return to San Francisco as a tramp, and fall back once more on type-setting, a trade by which he was able to earn a living when he kept at it. Then followed a number of journalistic ventures, which were invariably unsuccessful. In the depths of adversity and embarrassed by the debts that he continually incurred, he nevertheless borrowed the money to contract a runaway marriage, which, however, proved a happy one. Under the pressure of new responsibilities, he worked at type-setting with unusual persistence, and actually saved a little money. A few gambling ventures in mining stocks quickly caused it to vanish. After this came a period of privation, almost of starvation; in fact he was at one time impelled to stop a stranger in the street and demand $5 of him. The stranger complied with the demand; had he not, Mr. George tells us, "I think I was desperate enough to have killed him." At last the uses of adversity became manifest, and Mr. George wrote an essay, "On the Profitable Employment of Time," which contains as much wisdom as some of his later productions. In this essay he observes that he has not employed the time and means at his command faithfully and advantageously, as he might have done, and consequently, that he has himself to blame for at least a part of his non-success. He continues:

"The hours which I have idled away, though made miserable by the consciousness of accomplishing nothing, had been sufficient to make me master of almost any common branch of study. . . . My efforts in any direction, save the beaten track in which I have been used to earn my bread, are, when perceptible, jerky, irregular, and without intelligent continuous direction. . . . I am constantly longing for wealth; the wide difference between my wishes and the means of gratifying them at my command keeps me in perpetual disquiet. . . . It is my principal object in life to obtain wealth, or at least, more of it than I have at present. . . . But, always wishing for some chance to make a sudden leap forward, I have never been able to direct my mind and concentrate my attention upon those slow processes by which everything mental (and in most cases, material) is acquired."

These reflections led to some serious attempts at writing for publication—attempts which brought prompt recognition, and laid the foundation for such literary fame as was later obtained. For some time newspaper reporting and editorial work were industriously pursued, debts were paid off, and the possibility of opening a bank account was considered. But more speculative occupations soon restored the normal condition of impecuniosity, and resulted in such discomfort as convinced Mr. George that something must be radically wrong in the constitution of a society wherein his desire for wealth failed so miserably of gratification. Gradually the notion became clear to him that poverty was not due to indolence, improvidence, dishonesty, and incapacity, but to the appropriation of the land, and this idea was ever after the *leitmotiv* of all his outgivings.

He had already taken part in the political contests in California, and been aroused to wrath by the unscrupulous conduct of some of the wealthy magnates of that State. It happened that the faction to which he had given his support was successful, and Mr. George felt no scruple in trying to obtain through the institution of government that wealth with which the individual members of society had not recompensed his exertions.

"I wrote," he tells us, "to Gov. Irwin, whom I had been instrumental in electing a few months before, and asked him to give me a place where there was little to do and something to get, so that I might devote myself to some important writing. He gave me the office of State Inspector of Gas Meters, which yielded, though intermittently, a sufficient revenue to live on, and which required very little work."

This office was regarded as "one of the most lucrative within the Executive gift," and Mr. George procured an amendment of the law which greatly increased his official gains. He might now have established his family in comfort, but "the wish to get beyond the anxieties of a hand-to-mouth way of living" drew him into "mining investments," and, in spite of his wife's advice to gamble in nothing but newspapers, he "invested" in various bonanzas in 1872, and again in 1875, with the same result that attended all his business enterprises. Unfortunately, the bonanza of gas-meter inspection had also ceased to be "lucrative"; but 'Progress and Poverty,' the book destined soon to be famous, had been written, and the doctrine so eloquently set forth therein made for the author friends who saw to it that his pecuniary needs should be supplied. His future was assured, and, as a social and political agitator, he soon exercised an influence (abroad as well as in this country) which was phenomenal. Not a few of his converts were men of distinction, some of them were sincere reformers, and many who could not altogether accept his creed gave him their support from sympathy with the generous aims which he professed. Many a victory did he win over those who attacked him with insufficient equipment, and some of his most brilliant work was done in exposing the fallacies of those who attempted to penetrate the joints of his armor. But his later career is still within the recollection of the public, and calls for no comment here.

We have dwelt at length on some of the sordid particulars of this life, because, as we have said, they explain why Mr. George's plan for equalizing wealth met with little support among the sober-minded. Theoretically, the plan was attractive and far from unreasonable. It might have been made the basis of a comprehensive reform in taxation. It was urged with undeniable power and with genuine eloquence. But it contemplated the violent suppression of one of the oldest and most widely diffused forms of property, which was bound up with the family, and indeed with most of our fundamental institutions, so intimately as to place the idea of its abolition quite outside of the grasp of ordinary minds. It is conceivable that, under some circumstances, substantial people might give their consent to a revolutionary change in the system of land tenure which they had been brought up to regard as part of the constitution of the universe, even if they did not comprehend it. Some one combining the lofty character of Washington with the practical sagacity of Franklin might persuade even conservative men to intrust the welfare of the country to the managers of a "blind pool." But confidence has its limits, and no amount of eloquence will convince responsible people that it is wise to risk the prosperity of the country by adopting the counsels of a leader whose private undertakings have invariably resulted in disappointment and ruin. Certainly no one acquainted with Mr. George's financial record would put money into any enterprise which he was to manage, with any expectation of getting it back again; and his promise that poverty would disappear if property in land were confiscated, was evidently not believed by the community.

But the most conclusive refutation of his prophecies was furnished by his action in securing a lucrative public office in order to further his private ends. The whole gist of his scheme lay in the transference of rent from the landlords to the people. Such a transfer must necessarily be invidious. It would give great opportunities for peculation and extravagance on the part of the officers of government; and Mr. George illustrated the manner in which these functionaries might divert the revenues of the landlords into their own pockets. The number of citizens trying to get places where there is "little to do and something to get" is infinite. The number of places of this description is large and constantly increasing. Their multiplication is one of the greatest hindrances to the improvement of the condition of the common people. Our landlords may or may not be a useful social class, but they compare favorably with our politicians. Until we have more assurance than our present condition—and Mr. George's example—afford that the revenues of the landlords will not be appropriated by the politicians, common sense will not expect the millennium to follow the abolition of property in land.

SHAFTESBURY.

The Life, Unpublished Letters, and Philosophical Regimen of Anthony Earl of Shaftesbury, Author of the 'Characteristicks.' Edited by Benjamin Rand. London: Swan Sonnenschein & Co.; New York: Macmillan. 1900. 8vo, pp. xxxi, 535.

Characteristics of Men, Manners, Opinions, Times, etc. By the Rt. Hon. Anthony Earl of Shaftesbury. Edited, with an Introduction and Notes, by John M. Robertson. New York: E. P. Dutton & Co. 1900. 2 vols. 8vo. Pp. xlix+338, viii+275.

Shaftesbury, the third of that title and moralist, not only was educated and reared upon philosophical principles, but was veritably bred philosophically. For, his sire being about sixteen years old, the grandfather, that extraordinary man, Ashley Cooper, then Lord Ashley, dispatched the philosopher Locke into the northern counties to select a mother for the future head of his house. A great fortune was not required, but she was to be of "good blood, good person and constitution, and, above all, good education and a character as remote as possible from that of a court or town-bred lady." She was found in the person of a daughter of the Earl (afterwards Duke) of Rutland. The marriage took place September 22, 1669, and the moralist was born February 26, 1671, his father being then nineteen years old. He was immediately taken in charge by his grandfather, by whom his education was intrusted to the absolute direction of Locke. The result of this curious experiment was that the scion turned out to be a man of weak constitution, but strong character, a perfect Whig, a highly accomplished gentleman, a forcible writer. But his master passion was a love of virtue, as taught by Epictetus and Marcus Aurelius.

Dr. Rand has discovered, among the Shaftesbury papers in the Record Office, two note-books filled with meditations by the moralist for his own edification, and gives them here apparently complete. They fill 272 pages of the volume. Dr. Rand has entitled this matter "The Philosophical Regimen," but Shaftesbury himself headed it Ἀσκήματα, *i. e.*, Training Exercises. Words cognate with this were commonly used in Greek by those who adhered to the Socratic opinion that virtue is a thing to be learned. But Shaftesbury, broadly dividing all ancient philosophy into that of stoical and that of Epicurean color, no doubt wrote this word at the head of his meditations as a sort of general stoical confession; and Dr. Rand pronounces that the Phrygian "slave, the Roman emperor, and the English nobleman must abide the three great exponents of stoical philosophy." This dictum ought certainly to be modified; for the first two are not exponents of stoical philosophy at all; they are simply stoical moralists. They rarely touch upon the philosophy which made so large a part of stoicism; and where they do so, they are as often as not heretical. As for Shaftesbury, he accepts, of course, to begin the account, all those stoical ideas which have become assimilated into the common sense of the modern European. His usual method of reasoning by means of divisions and reductions to the absurd is also in the stoical style. But to the rest of the elaborate stoical logic he makes little allusion, and that little is rather depreciatory. Of that epistemological pragmatism which is near the root of stoicism, he shows, neither in the 'Characteristicks' nor in these new Ascemata, the smallest comprehension; but that is not surprising to us when we have seen the best historians of ancient philosophy puzzled and led astray by the doctrine.

To the germinal conviction from which stoicism springs, that the only end of man lies in action, and that knowledge, as such, is an idle accomplishment, Shaftesbury may be said to be more faithful than Zeno and Chrysippus ever were. Questions that excited the deepest and liveliest interest under the Poecile, even that of a future life, are dismissed by him with a cold shoulder and the question, How does this concern me? The same spirit manifests itself in his characteristically stoical taste for allegory and emblems; and, notwithstanding his long studies of art in Italy, the now published letters show him attaching great importance to the vignettes that ornament the 'Characteristicks,' which, though pretty, are the flattest of far-fetched symbols, betraying a heart that, even after long familiarity with art, can value it only as a means of calling attention to homilies. It is no wonder that we find in such a writer few traces of the materialism of the stoics or of their other purely metaphysical opinions, beyond those that have passed into the common traditional ways of thinking. Among those may be reckoned his conception of God, and the particular shade of optimism which is symbolized by the cobweb in the vignette to the second volume of the 'Characteristicks,' showing now flies have been created for the benefit of spiders. In regard to the freedom of the will, his position appears to be that of orthodox stoicism.

Just as his too sincere acceptance of the vital principle of stoicism makes him a bit of a heretic among stoical metaphysicians, so his thorough acceptance of the great maxim of stoic morals—Follow Nature—causes him to diverge considerably from stoical apathy. The newly discovered Ascemata are stuffed full of quotations from the ancients, the great majority of them from three men whom Shaftesbury seems to have regarded as the great depositaries of the art of virtue. Two of them are Epic-

tetus and Marcus Aurelius: the third is a Latin author. The reader, we will wager, is jumping to the conclusion that it is Seneca. Not exactly, it is that stern moralist Quintus Flaccus. On the sole occasion when Shaftesbury's disciplined intellect plays truant and goes chasing the butterfly knowledge for knowledge's sake, it is in seeking to prove to the Lockian logician Le Clerc that Horace was first and last a consistent stoic, and that it was only for a brief intermediate period that he was led away by Mæcenas towards Epicureanism. One sadly fears that the poet's gentlemanly grace has quite blinded and well-nigh seduced the innocent Shaftesbury. At any rate, what Shaftesbury understands by following nature is not at all the suppression of all emotion, but just such a degree of emotional lukewarmness and good-humored composure as the hedonistic Horace loved to parade. For all that, human nature is not capable of greater earnestness than Shaftesbury's in his quest after the highest virtue. We feel it in the style of the 'Characteristicks,' and it is proved to demonstration by the newly published book. Thus, we find that Shaftesbury had developed a kind of stoicism of his own. It was not a particularly profound kind, philosophically considered; yet the new publication is likely to prompt fresh studies of stoicism, to a better comprehension of what it was in the school at Athens, and also of what development it is capable in a modern intellectual climate.

The letters of Shaftesbury which Dr. Rand has printed fill as many pages as the Ascemata. Many of them are of interest in reference to his own philosophy, especially in relation to that of Leibniz. His regard for his master, Locke, led him to conceal his pretty thorough dissent from Locke's great masterpiece; and it was only toward the close of his life, in 1709, that he confided the true state of things to one person in a letter here given. A number of letters addressed to Locke show Shaftesbury's personal veneration and affection for the philosopher. There are also many political letters which show his inherited Whiggism, coming as near to a passion as stoicism would permit, and the effective blows that he was able to strike for true liberty. Other more personal letters are by no means the least significant in studying his philosophy, and go to increase our esteem for his conception of morals. The same is true of his letters to his protégés. But those to Thomas Micklethwaite are of interest for other reasons.

Dr. Rand has done his work very diligently. To the innumerable Greek and Latin passages he has appended translations, and has usually stated where they are found. It is to be regretted that he has not supplied the volume with an index. The portrait is a reproduction of a worn impression of the frontispiece to the 'Characteristicks.'

Messrs. E. P. Dutton & Co. present us with a very beautiful reprint of the 'Characteristicks,' with a readable and, on the whole, instructive introduction by Mr. J. M. Robertson. It is the first edition that has appeared for over a century. The reason is obvious. The number of persons who care to study an exploded theory of morals is small; and those few will prefer Hutcheson's exposition. Or, if they must have Shaftesbury, there were four old editions, superbly printed, and often magnificently bound, extremely accurate, and with the vignettes and other minutiæ which were so important in Shaftesbury's own estimation; and these are still easily procurable at low prices. It is true that all the editions before the fifth omit the "Letter concerning Design," which Shaftesbury intended should be included, and which (all the more because of its philistinism) throws an important light upon his ways of thinking. But then, this is omitted in the new edition as well. Mr. Robertson's introduction contains a number of statements and expressions which we may believe he would have modified had he been acquainted with the contents of Mr. Rand's volume; such, for example, as the notion that the least metaphysical of moralists was chiefly influenced by the most metaphysical, Spinoza. But, that corrective being now at hand, the value of Mr. Robertson's introduction depends upon its positive merits, not on its errors. Its discussion of Shaftesbury from a literary point of view is fairly good, not fully doing justice to his extraordinary earnestness, emphasizing a little too much his fashionableness, his earldom-ness (though this is somewhat obliterated by the modernization of Shaftesbury's peculiar spellings and other little idiosyncrasies which disappear in the reprint), but, nevertheless, bringing to light a number of points which the student of Shaftesbury will be glad to have so clearly put before him; and, on the whole, well characterizing the celebrated characterist upon his literary side.

RECENT FICTION.

In the Palace of the King. By F. Marion Crawford. Macmillan.

Old Fires and Profitable Ghosts. By A. T. Quiller-Couch. Charles Scribner's Sons.

Chloris of the Island. By H. B. Marriott Watson. Harper & Bros.

Visiting the Sin. By Emma Rayner. Small, Maynard & Co.

Story of a Spy in the Civil War. By B. K. Benson. Macmillan.

Mr. Crawford's romance of Spain wears the air of practised acquaintance with country and costumes and manners that pervades his stories of Italy, of America, of India, of the world at large. He has a marked talent for assimilating local color, not to make mention of a broader historic sense. Even though he may adopt, as it is the romancer's right to do, the extreme romantic view of history, it is aways a living and moving picture that he evolves for us, of which we do not ask that it be true so long as it is interesting. The events of the novel under consideration are those of a single night in the palace of Philip II. of Spain. Though they are varied and stirring, they could hardly have filled an entire volume had not the author freely exercised another of his conspicuous talents, that of leisurely descant. Events rush in old Madrid; but between actions writer and reader might be sipping coffee under a tree. Homilies on love, on blindness, on dwarfs, on the honor of soldiers and the etiquette of the Spanish Court, act as sedatives between thrills. A discourse on the *pavana* while one waits to know if the hero is fatally stabbed keeps the pulses steady. Philip II. has no apologist or modern reconstructor in Mr. Crawford. Not one of the imputed misdemeanors or crimes of history or rumor is omitted from the damning catalogue of his villanies, whether it be his very unpleasant manners or the death of Don Carlos. Don John of Austria, the hero of the night's adventures, is made as heroic and spotless as the heart of novel-reader could wish. There is, indeed, a comforting absence of halftones in the picture, that is exceeding peaceful to the complication-tossed reader of the novel of muddled motive.

'Old Fires and Profitable Ghosts' consists of stories of *"revenants;* persons who, either in spirit or in body, revisit old scenes, return upon old selves or old emotions, or relate a message from a world beyond perception." Mr. Quiller-Couch here, as ever, is the master of an exquisite art. Rarely absent from his work, we think it more persuasively present when his revenants are bodily than when they are spiritistic. In spite of his ghosts being introduced as "profitable," we find them on the whole less so than the "Old Fires"—and, moreover, less imaginative. Every-day material, as this accomplished writer treats it, is weird enough and poetic enough without his summoning the supernatural to its intensifying. We are not sure that there does not lurk a subtler thrill in the figure of the Prophet Elisha in his old age coming painfully over the rough mountain path to the Plain of Jezreel and meeting again the Shunammite woman, than in the ghostly night ride of the living man and his dead friend into the place of departed spirits. "The Penance of John Emmet," though told with more clumsy involution than is the wont of "Q.," is a story that strikes home as true to the point of inevitability. "The Lady of the Red Admirals" is a charming example of the author's lighter touch at its best. "The Singular Adventure of a Small Free-Trader" is another. In one of the sketches the Wandering Jew appears in Cornish setting, wearing the new form with the old fascination. But whichever story makes the closest appeal to the reader, he will hardly fail to find somewhere the power, poetry, and dramatic instinct without morbidness of which a book by this writer always holds the promise.

Like "Q.'s," Marriott Watson's book deals with the place and the day when smugglers were politely called free-traders, but the mode of treatment is as different as possible. 'Chloris of the Island' begins with an elopement, and progresses to a tavern brawl. Next, the island looms in view with its caves devoted to smuggling and treason; and for the rest of the long novel we are kept in frantic chase from island to mainland and back, by sail and oar, by swimming in and under water—not plain water, but whirlpools—pistols at the back, quicksands in front, daggers and vengeance on all sides; the beautiful Chloris, now hostile, now friendly, acting as motive for the hero's deeds of alternate detection and protection. For land experience there is perpetual scurrying over sand-dune wastes, with a convenient cottage on the dunes where the heroine may intelligently leave the incriminating letter from Bonaparte intrusted to her by the hero to be destroyed; no reasonable cause appearing for this sensible action except that there may be one more sandy tramp, and that the insisted-on cottage may be the background for the villain's last appearance. The tale of adventure is surely growing a little preposterous.

Yet, with a certain amount of sifting, this might be a fine wild tale of a fine wild Irish family gone wrong. The hero's domestic happiness, to be sure, is hardly beyond question with a wife to whom, in the climax of courtship, he feels impelled to say: "I am not used to these storms, and, by God! they are wearisome." But with that we need not concern ourselves since it is the author, and not we, on whom rests the responsibility of ordering the wedding-coach for London far from the madding crowd of smugglers, gunpowder-barrels, and dunes. And the very excess of salt-water soaking, sand-hill climbing, thunder-storm drenching, woods-scouring, may serve a beneficent purpose in putting the story beyond the chance of dramatization. A perpetually wet hero is not for the stage, though, to be sure, the illustrations represent him as point-device after the most absorbent swimming.

Caves and mysterious forest adventures flourish luxuriantly, too, in 'Visiting the Sin.' The groundwork of the story is the mass of superstition and tradition that in 1875 prevailed in the more inaccessible parts of Kentucky and Tennessee, and stood uncontroverted for a creed to the mountaineers. The universality of these beliefs, the old-witch stories and usages, the blending of a rude sort of religion with the lust of blood, are strikingly indicated as by one familiar with her theme. The story has considerable power, and would have more if it were less repetitious as to both incident and description, and if there were cut out from the 450 pages some of the irrelevant episodes. Naomi's first great mistake was natural, and led naturally to tragic consequences. To make her repeat that mistake is a grave error in perspective on the part of her designer. Similarly, there is lack of invention in putting most of the rescuing into the hands of small boys. The merit of the dialect must be judged by experts, but to the average dog on whom such food is tried it would seem strange that the girl who at one time says, "Ain't you got any sense?" should at another achieve the following query: "Where, in this case, do your astute eyes discover the head of the murderer, which is to prove a target for a too highly educated popular morality?" We have touched on some of the weak points of the book, and return in conclusion to its real merit as a picture of a by-gone semi-civilization.

Two classes of readers will find in Mr. Benson's 'Story of a Spy in the Civil War' much that is entertaining. Those who like to recall the inside experience of the army line, which is seldom touched by war histories, but is mostly preserved in the lore of old soldiers' home talks and of Grand Army "camp-fires," may seek here effective pictures of the every-day toil, drudgery, and daring of the campaigns of the first three years of the civil war, especially among the spies and scouts upon whose love of adventure and willingness to assume great risks for patriotic ends much of the success of the generals' plans depended. While the narrative has this army world for its scene, its central motive is for the deliberation of persons who are attracted by questions of the mystery of mind, in the presentation of the remarkable double consciousness of Jones Berwick, private in the Eleventh Massachusetts Infantry, who, as the result of an accident of his boyhood, was liable to attacks of disease which destroyed the larger part of his memory, especially of events and personages of recent acquaintance. Such a loss of his old consciousness befell Berwick one day, in the summer of 1862, when he was exploring the Confederate lines in search of information for McClellan; and when he awoke from the effects of a concussion of cannon-shot, he had no knowledge of his identity or previous history, insomuch that the only means of placing him were his Confederate uniform and the accompanying papers which served the uses of his scouting disguise. Upon the strength of these, Jones Berwick of the Massachusetts regiment became Berwick Jones of the First South Carolina Infantry, and in that capacity, after due instruction as to the aims and inspiration of the Confederacy, he fought ardently until his slowly awakened first consciousness returned to drive him back to his old friends in the Union lines. The occasional hints of possible occult gifts in the mind of Berwick's guiding genius through most of his metal tribulations (one Dr. Khayme) do not develop into any mystical elements which disturb the simplicity and verisimilitude of most of the narrative, whose art is such that the reader may be in doubt whether the tale is pure fiction or essentially a biography of an actual life.

The Real Chinese Question. By Chester Holcombe, for many years Interpreter, Secretary of Legation, and Acting Minister of the United States at Pekin. Dodd, Mead & Co. 1900. Pp. 386.

Mr. Holcombe's introduction argues that our prejudice against Chinese idiosyncrasies is little less than theirs against ours. When we think we understand their ignorance, we are ignorant of their understanding. He says, "They need machines to make work, not to save it." The reviewer was with a Chicago machine-maker who, when we called on the head of a factory in Hankow, persuaded him to purchase a machine which would save nine-tenths of the labor in a certain process. Three years afterward the Chicagoan's partner was there, and visited the factory. He found the customer satisfied with his purchase, but was pointed to the machine still standing in its original packing-case. "It is most valuable," said its owner, "where it is. Pointing to it with a threat of putting it in operation strikes with panic, and puts an end to all labor troubles with operatives." That labor-saving devices mean for the moment starvation was made clear to the reviewer as he approached Canton and met a steamboat without any engine, because its wheels were set at work by fifty or more men trampling with their feet on a tread-mill contrivance which covered half the deck.

The subsequent chapters treat of Chinese character, literati, societies, army, navy, opinions about strangers, the missionary, diplomacy, opium, foreign aggression, projected partition, and hoped-for reform. Few travellers in the Far Orient and much fewer home-keepers can read any one of these sections without a distinct feeling that they have learned new facts and ideas as well. The chapter on opium will give a typical taste of the author's quality. Opium is there gibbeted not only as the greatest domestic curse, but as the root of all evil in the foreign relations of China. Up to 1775, that weed had not been used to any appreciable extent. Laws forbidding the culture, import, and consumption of it have always been made and executed by the Government as far as possible. But illicit commerce, begun in 1773 by the East India Company, grew with such rapidity (thanks to clipper barks making the most of every sequestered landing) that China soon became the chief outlet for the product of India. Individual cunning, force, and bribery were not wanting, but the arch-smuggler was the British Government, which, practically absorbing the India Company, carried on its death-dealing work to a belligerent consummation. Its excuse for this wrong was the need of the lucrative export tax and of a market for the India drug. In the long run, Britain's loss was more than her gain. China's output of tea and sugar no more than balanced her outlay for opium, while no pound of that intoxicant failed to cripple the ability of more than one native for buying the manufactures which came mainly from Britain. Besides, the seventeen hundred thousand acres which Hindoos set apart for poppy culture might have yielded a nourishing crop that would have lessened the census of famine victims by more than one million. In 1839 the Chinese sovereign dispatched his ablest functionary to Canton to stem the stream of poison that was pouring in there, and his parting words are said to have been: "How can I die and meet my imperial ancestors until this direful evil is removed?"

Commissioner Lin was invested with the most unqualified authority ever conferred upon a Chinese subject (p. 259). The vicegerent proved so incorruptible as to scorn the bribe of a thousand chests of opium, and energetic enough to destroy more than twenty times as many, as well as to extort from British smugglers written engagements that they would sin no more against the laws of the land. The opium war which followed was ended in 1842 by China (at the cannon's mouth) paying twenty-three millions of dollars as indemnity to Britain, and ceding to her the most opportune stations in the Chinese domain for smuggling. Another war, growing out of China's endeavors to execute her laws against opium smugglers, broke out within twenty years, and in this struggle a principal agent was Sir John Bowring, who wrote the hymn "In the Cross of Christ I Glory." He bombarded Canton, and would have laid it in ashes had it not been ransomed by a more enormous treasure than it was thought could be paid. The reviewer has there drunk tea with a mandarin whose father, How-Qua, according to popular report, was then mulcted of a million dollars. The outcome of this war was the capture of Peking, the looting of the Emperor's summer palace, the legalizing of opium import, and its obstruction by a merely nominal tariff. The British had allies in this invasion, but were mainly blameworthy in Chinese eyes. They alone raised opium as a staple crop. It was they who had first and chiefly put opium into Chinese mouths to steal away their brains and transform them into beasts.

A more touching story was never told than the plain tale of a personal appeal, before the second war, from the imperial family and cabinet to Queen Victoria. In 1868 they sent a letter beseeching her, in the name of a common humanity, to agree with the Emperor on measures by which the baneful

traffic might be brought to an end. That this letter reached her Majesty, the Chinese, after an ominous silence, were informed by the British Minister through whom it had been transmitted, but that no answer had been made, and he added that none might be expected. "To the everlasting shame of the British nation," writes one of the Queen's Counsel, "no answer was ever made." Mr. Holcombe describes one of the literati whom he saw at an open-air meeting with a tiny jar in his hand and the stain on a finger which betrays slaves to narcotic poison, who soon turned away with a scowl, muttering, "Take away your opium and then talk of your Jesus."

In Mr. Holcombe's view, there can be no partition of a people who number a fourth part of the human race, who have no geographical lines of cleavage, and who, against such an atrocity, are united like one individual soul. Nor can they fail of a grand development, being in no element moribund or decadent, but of most perdurable toughness. They will gridiron their empire with railroads as swiftly as they have just forested it with telegraph-poles. They cannot long be held in leading-strings, and will shake off shackling fetters. The masses are not opium slaves. Their business firms have never tolerated opium-eaters, and governmental reform will start by holding the use of that poison to disqualify for appointment to any public office.

If wicked outsiders will not cease from troubling, let them beware lest Mr. Holcombe's forecast prove true:

"The Chinese is not in love with the European, and there is no reason whatever to expect that he could be easily brought to call him master. One thing he might do. He might take somewhat readily to the profession of arms, for he possesses all the natural qualities of a good soldier. He might submit to all the drill and study involved in the modern science of war until expert with the sword, and then, when in his judgment the time had come, thrust it into his instructor and oppressor" (p. 348).

Mr. Holcombe has seen as fine a body of men under arms in China—saving only the lack of officers—as can be found elsewhere (p. 129).

Songs of Modern Greece. Edited by G. F. Abbott. Cambridge (Eng.) University Press; New York: Macmillan.

This is an attractive little volume of lyrics well chosen and edited on a sensible plan. Each song is provided with an introduction and sufficient notes, explanatory or etymological, and is accompanied by a literal translation. The result is, that any student of ancient Greek will find here an excellent introduction to the vernacular in which the ballads are written, and will soon discover that most of the words, though strangers at first sight, are really old friends slightly disguised or transformed. Many, indeed, are as old as Homer or Hesiod, for a traveller in the Levant may hear a boatman, for instance, apply to his tackle some designation as old as the Odyssey. The fact is well brought out in these selections that the main bulk even of the vernacular is solidly based on the ancient tongue, and is but slightly disguised even in the colloquial speech. There are little lyrics every word of which is absolutely pure classic Greek, with the verbal forms but slightly altered, while in others the vocabulary is mingled with Italian, Arabic, and Turkish—that is to say, the language is alive, and carries signs of the various soils in which it has grown. The more popular ballads flit rapidly about from one end to the other of the Greek world, and in their travels soon lose definite traces of local color and of dialectic peculiarities. "The Greek language," says Mr. Abbott, "is so elastic that provincial idioms and expressions can easily, and, so to speak, unconsciously, disappear without in the least altering the sense or the rhythm of the original." This vital process must have gone on in the past when the rhapsodists carried the Homeric poems from island to island and from shore to shore; it is a factor that must be reckoned with in any analysis of the Homeric language, and it is evidently a shifting and elusive factor, which nullifies, in the main, attempts like Fick's to recover after thirty centuries the original dialect, "on the assumption that the present form is the result of systematic redaction."

However, these selections are quite too charming to waste their sweetness on the scholar who is seeking merely a philological appendix and commentary on the classical Greek. The poems have a piquant national and characteristic flavor quite their own, and certainly most seductive. Though the selection is made up largely of the editor's own gleanings, and is designed not to trench on previous publications in Western Europe, it offers a surprising freshness, variety, and delicacy of sentiment, sprightliness, exquisite fancy and naïveté, and occasionally a fine lyric frenzy expressed with perfect directness and simplicity. The melancholy fact is, that these unknown improvisers show more genuine poetic gifts than most of the modern versifiers whose names are known in Athens. Mr. Abbott is only a gleaner after Fauriel and Passow; yet we should feel loath to exchange his little volume against the bulky 'Parnassos' of 1,000 pages that appeared in Athens about 1880. Even to the 'Parnassos' we say *macte virtute*, which may be rendered, Hibernicè, "More power to you." For, if we look at home, and subtract from Mr. Stedman's 'American Anthology' the contributions of three or four real poets, what have we to boast of, hitherto? We have no wild flowers to compare with the blossoms of this native Grecian flora.

BOOKS OF THE WEEK.

Amery, L. S. The Times History of the War in South Africa. Vol. I. London: Sampson Low, Marston & Co.; New York: Scribners. $25 per set of 5 vols.
Aron, Joseph. Canada Transvaal. New ed. Montrouge (Seine): J. Aron. 2 fr.
Beames, John. A Translation of Glanville. Washington: John Byrne & Co. $3.
Beckman, Mrs. William. Backsheesh: A Woman's Wanderings. San Francisco: The Whitaker & Ray Co. $1.50.

Two Notable Books

relating to the Victorian Era are

VICTORIAN POETS

By E. C. STEDMAN

With Topical Analysis in Margin, and full Analytical Index. *Thirtieth Impression.* Revised and extended. With an Introductory Note relating to the last decade. of the Nineteenth Century. Crown 8vo, gilt top, $2.25; half calf, $3 50.

The leading poets included in Mr. Stedman's survey are Tennyson, Landor, the Brownings, Hood, Arnold, "Barry Cornwall," Buchanan, Morris, Swinburne, and Rossetti It also embraces very fully the minor poets and schools of the period, and with its copious notes and index forms a complete guide-book to the poetry of the Victorian era.

One of the most thorough, workmanlike, and artistic pieces of real critical writing that we have in English. For the period covered by it, it is the most comprehensive, profound, and lucid literary exposition that has appeared in this country or elsewhere.—MOSES COIT TYLER, *Cornell University.*

A VICTORIAN ANTHOLOGY

By E. C. STEDMAN

Selections illustrating the editor's critical review of British poetry in the reign of Victoria ("Victorian Poets"). With brief biographies of the authors quoted, a fine frontispiece portrait of Queen Victoria, and a vignette of the Poets' Corner in Westminster Abbey. Large crown 8vo, 784 pages, gilt top, $2.50; full gilt, $3.00; half calf, $4.50; levant, or tree calf, $6.00.

Any one who has studied that marvelously delicate and accurate critical review of British poetry during the reign of Victoria, by Mr. E. C. Stedman, will admit, without a moment's question, that there is no one on either side of the Atlantic better fitted than he to edit an anthology of the period, which will give much more than a glimpse into the rich contributions which Great Britain has made in the years 1837-1895, to the literature of the finest of arts, poetry. Mr. Stedman's "Victorian Poets" has deservedly become a standard both in England and America, and his present volume takes its proper place as a companion book, illustrating with delightful and graphic charm the views of the critic.—*Boston Advertiser.*

Large Paper Edition

This comprised 250 numbered copies. A few copies can still be had, in two octavo volumes, printed upon high-grade paper, with two etched Photogravures of Queen Victoria. The vignette on the engraved title represents the Poets' Corner in Westminster Abbey. Price $10.00 *net.*

VOL. LXXII—NO. 1858. THURSDAY, FEBRUARY 7, 1901. PRICE TEN CENTS.

A NEW NOVEL BY HENRY JAMES

The Sacred Fount. By HENRY JAMES

(*12mo, $1.50*)

NOTHING that Mr. James has written presents in more explicit and definite form the traits that mark the latest development of his mature talent than this new story of a group of personages at a week-end English country-house party. "The Sacred Fount" is the distilled essence of his art and epitomizes his panorama of life. It is a masterpiece of an absolutely unprecedented order. The reciprocal relations of the various sharply distinguished characters form the web of the story, which will be followed by the reader with an interest of suspense commonly aroused only by dramatic incident and climax.

New Volume in the Music Lover's Library

The Opera, Past and Present

By W. F. APTHORP. (*With portraits. 12mo, $1.25 net.*)

Beginnings—The European Conquest—Gluck—Mozart—The Italians—The French School—The Germans—Wagner—The Art of the Opera Singer—The Present—Appendix.

A CLEAR and connected account of the establishment and gradual evolution of the Opera as an art, especially as regards the interrelation and effect upon each other of the different schools, composers, and epoch-making works. The book has the distinction and the authoritative quality attaching to everything Mr. Apthorp writes.

ALREADY PUBLISHED IN THE MUSIC LOVER'S LIBRARY

Finck's "Songs and Song Writers," and Henderson's "Orchestra and Orchestral Music." (*Each, $1.25 net.*)

The Social Life of the Hebrews

By Rev. EDWARD DAY. [*Semitic Series.*] (*12mo, $1.25 net.*)

THIS volume, at once scholarly and popular, follows the "Babylonians and Assyrians" in the important Semitic Series, and is a Study of Hebrew Sociology. The life which the people actually lived, their manners and customs, their occupations and diversions, their literature and education, their laws and institutions, are specially brought out.

In the same Series. **BABYLONIANS AND ASSYRIANS. Life and Customs.** (With Special Reference to the Contract Tablets and Letters.) By Professor A. H. SAYCE, University of Oxford, England "Prof. Sayce is an excellent writer to lead off a series of this nature. . . . This charming and elegant little volume."—*Saturday Review* (London).

TWO BOOKS BY EUGENE SCHUYLER

Memoir and Essays (*8vo, $2.50 net.*)

THIS volume includes a comprehensive memoir of Eugene Schuyler, by Evelyn Schuyler Schaeffer, and essays entitled "Count Leo Tolstoy Twenty Years Ago," "The Minnesota Heir of a Serbian King," and "The Lost Plant."

Italian Influences (*8vo, $2.50 net.*)

A SCORE of essays on subjects connected with art and literary topics in Italy. Mr. Schuyler's long residence in Italy and his unusual equipment give distinction and value to this volume.

Ready Shortly

New and Revised Edition

An Introduction to Sociology

By ARTHUR FAIRBANKS, Ph.D. (*8vo, $1.50 net.*)

A REISSUE, carefully revised and in part rewritten, of Prof. Fairbanks' instructive monograph. The new edition places fresh emphasis on the practical aim of the volume—namely, to give the student sound and careful expositions of the basis and principles of the science.

POPULAR EDITION.

The Historical Development of Modern Europe

From the Congress of Vienna to the present time. By CHARLES M. ANDREWS, Professor of History in Bryn Mawr College. Two volumes in one, with maps. 8vo, $2.75 net.

"Professor Andrews's work . . . on its first appearance from the press was recognized widely as an original and instructive addition to historical literature. Certain characteristics of its own in the way of sound judgment and penetrating criticism made it evident that no student of European history in this country could afford to neglect it. The impression produced by the first volume is fully borne out by the second. . . .

"Among recent historical works none is likely to prove more useful both to the student and to the general reader than this. . . . No other book in English is so good, and German books, like that of Muller, are much harder reading."
—*Providence Journal.*

Concerning Some Successful Books.

Monastic life has never before been depicted with the distinctness and force that characterize Miss MARGARET POTTER'S remarkable novel,

UNCANONIZED,

which has been reviewed with such expressions of appreciation as few books of last season called forth. It has been freely termed "A distinct and decided success," and Richard Henry Stoddard said in the *N. Y. Mail and Express:* "Uncanonized manifests a seriousness of intellectual purpose that is rare in this age of shallow and rapid writing."

A timely book and one that has been eagerly awaited by the public is Mrs. ELIZABETH WORMELEY LATIMER'S

THE LAST YEARS OF THE 19TH CENTURY.

It is a summary of the most important happenings in the last decade written with the fulness of information and human and personal charm which the numerous readers of Mrs. Latimer's 19th Century Histories feel sure of finding in her work. It is an indispensable supplement to her previous histories of Spain, Italy, Europe in Africa, Italy, Russia and Turkey, and France.

We published last year two works which have long been practically inaccessible to the English reader. One of these is

THE PRIVATE MEMOIRS OF MADAME ROLAND.

A French Classic and a work of intense interest, written on the eve of her execution by one of the noblest and purest actors in the French Revolution. It is a handsome book ably edited by EDWARD GILPIN JOHNSON.

The other is

MEMOIRS OF ALEXANDER I. AND THE COURT OF RUSSIA.

It was written in French by MME. LA COMTESSE DE CHOISEUL GOUFFIER, a personal friend of Alexander, and though it excited much attention on its appearance and has been freely used by historians, only two copies of the original are known to be extant. Miss MARY B. PATTERSON has translated it into excellent English, and the value and interest of its pictures of Alexander and Napoleon have been heartily recognized by the critics.

A brilliant work and one to which the press has shown extraordinary favor is Mrs. EVA EMERY DYE'S

McLOUGHLIN AND OLD OREGON.

It deals with a chapter of American history rich in romantic and moving incidents, and Mrs. Dye's lively, brilliant, picturesque style has made her history "more interesting than most of the recent novels," to quote from the *N. Y. Times Saturday Review's* opinion of it.

UNCANONIZED.....12mo, $1.50

THE LAST YEARS OF THE 19TH CENTURY.....Illus. cr. 8vo, $2.50

THE PRIVATE MEMOIRS OF MME. ROLAND.....Illus. 12mo, $1.50

MEMOIRS OF ALEXANDER I. AND THE COURT OF RUSSIA..Illus.12mo, $1.50

McLOUGHLIN AND OLD OREGON. 12mo, gilt top, with frontispiece, $1.50

A. C. McCLURG & CO., Chicago

J. B. LIPPINCOTT COMPANY

Announce for Publication During the Month of February

FICTION.

By MAURICE THOMPSON,
author of "Alice of Old Vincennes," etc.

Sweetheart Manette. 12mo. Ornamental, with a frontispiece by EMLEN McCONNELL. $1.25.

The many more than one hundred thousand readers of Mr. Thompson's recent popular novel should welcome with enthusiasm "Sweetheart Manette," redolent of romance, charmingly told, and brimful of interest from its first page to its last.

The scene is laid at old Bay St. Louis, near New Orleans, a field full of interest for the novelist and his readers.

By CYRUS TOWNSEND BRADY,
author of "The Freedom of the Sea," etc.

When Blades Are Out and Love's Afield. With 8 full-page illustrations by E. PLAISTED ABBOTT and many decorations by EDWARD STRATTON HOLLOWAY. 12mo. Ornamental binding, $1.50.

Some of Mr. Brady's previous novels have reached a sale of 35,000 copies. This new novel should outstrip all his previous works in popularity, for, while retaining the strength and virility of his earlier books, it much surpasses them in heart interest and charm. His previous novels appealed principally to men; this will add women also to his large audience of readers.

In form it will be one of the most attractive novels ever issued, the illustrations being printed with specially designed color borders.

Mr. Frohman is having the novel dramatized, and it will soon appear upon the stage.

By GUY BOOTHBY,
author of "Dr. Nikola," etc.

A Cabinet Secret. With illustrations by A. WALLIS MILLS. 12mo. Cloth, $1.50.

By Mrs. HUGH FRASER,
author of "The Splendid Porsenna."

A Little Grey Sheep. A Novel. 12mo. Cloth, $1.50.

The Splendid Porsenna. To be issued in Lippincott's Series of Select Novels. 12mo. Paper, 50 cents.

By Gen. CHARLES KING,
Author of "Ray's Daughter," etc.

In Spite of Foes; or, Ten Years' Trial. With frontispiece. 12mo. Cloth, $1.25.

By LOUIS BECKE and WALTER JEFFERY.

The Tapu of Banderah. 12mo. Cloth, $1.50.

By JOHN STRANGE WINTER,
Author of "Heart and Sword," etc.

The Career of a Beauty. A New Novel. 12mo. Cloth, $1.25.

By Mrs. BURTON HARRISON,
Author of "A Bachelor Maid," etc.

A Triple Entanglement. To be issued in Lippincott's Series of Select Novels. 12mo. Paper, 50 cents.

MISCELLANEOUS.

A MANUAL OF COACHING. By FAIRMAN ROGERS. *New Second Edition.* Illustrated with numerous full-page plates and engravings in the text. Octavo. 500 pages. Cloth, gilt top, $6.00, *net*; three-quarters levant, ornamental tooling, $10.00, *net.*

BY LAND AND SKY. By the REV. JOHN M. BACON, M.A., F.R.A.S. With 4 illustrations. 8vo. Cloth, $2.00.

A fascinating subject, ballooning and aerial photography, finds its latest exponent in "By Land and Sky," by Rev. John M. Bacon. Particularly interesting and valuable are Mr. Bacon's dates and observations on acoustics generally, and in connection with meteorological conditions, particularly clouds, rain, fog, wind, etc.,—upon which subject he has had the opportunity to make fullest investigation.

ABBOTT'S BIRD LIBRARY. BIRD-LAND ECHOES and THE BIRDS ABOUT US. By C. C. ABBOTT, M. D. Illustrated. 2 volumes in a flat box. $3.00. *Also sold separately.*

FRANGIPANI'S RING. AN EVENT IN THE LIFE OF HENRY THODE. Translated by Mrs. CARVILL LEWIS. With marginal designs by HANS THOMA, and 12 photographic reproductions. $6.50, *net.*

The story of Dr. Thode's discovery of the Ring and of his further discovery of the chronicles relating to the lovers who had exchanged it, is as romantic as anything in fiction, yet it is absolutely true.

SCIENTIFIC.

CHEMICAL ANALYSIS OF IRON. By ANDREW ALEXANDER BLAIR. *New Edition.* $5.00, *net.*

AN ELEMENTARY TEXT-BOOK OF COAL MINING. A Class-book for Elementary Students Preparing for the Science and Art Examination in "Principles of Mining" and for Colliery Managers' Examinations. By ROBERT PEEL, Mining Engineer. *Seventh Edition.* Small 12mo. Cloth, $1.00, *net.*

BIBLIOTICS; OR, THE STUDY OF DOCUMENTS. Determination of the Individual Character of Handwriting and Detection of Fraud and Forgery. New Methods of Research. By PERSIFOR FRAZER, Docteur ès-Sciences Naturelles Officier de l'Instruction Publique (France); Correspondent der K K Reichsanstalt zu Wien; Life Member American Philosophical Society, Franklin Institute, Academy of Natural Sciences, Pennsylvania Historical Society, etc., of Philadelphia. *Third Edition.* Greatly enlarged, rearranged, and, in part, rewritten. Illustrated by 18 full-page plates and sixteen in text. 12mo. Cloth, $2.50 *net.*

Sold by all booksellers, or sent, postpaid, by

J. B. LIPPINCOTT COMPANY, PUBLISHERS, PHILADELPHIA.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 7, 1901.

The Week.

It needs no semi-official outgivings from Washington to show that a crisis is approaching in the relations of the United States and Cuba. That the Administration feels nonplussed at the situation is only another way of saying, what all can see, that the situation is embarrassing. It is particularly awkward for our Government in that its plans and expectations in respect to Cuba have gone sadly awry. Secretary Root and Gen. Wood were confident, in the first place, that the Cuban Constitutional Convention would not be able to agree upon a frame of government for the island; that, if it did, it would be only after infinite delays and bitter wrangling; and that, in any case, a protectorate by the United States, with all sorts of political and trade and military and naval advantages explicitly reserved to us, would be readily accepted by the Cubans. This cheerful and cocksure official optimism now sees itself dashed to the ground. The Cubans have not been an undue time drafting their Constitution, they have not quarrelled, and they have paid no attention whatever to the programme kindly and condescendingly marked out for them by Mr. Root. It is evident that their completed Constitution will be in President McKinley's hands within a week or ten days. What will he do with it? What he said, in his last annual message, that he would do with it, was that he would "transmit it to the Congress." Why he should have said that was felt at the time to be a puzzle. What has Congress to do with the Constitution of a foreign country? The President himself was the one who ordered the Cubans to draw up a Constitution which should be "adequate to secure a stable, orderly, and free government"; what has become of the famous "wisdom of the Executive" if it is not equal to deciding whether the document to be laid before him meets that description?

And how if there is no Congress to which to transmit the plaguy document? Then an extra session will be called for the express purpose, say the wiseacres. That it ought to be called, we agree—that is, if it is necessary for Congress to pass on the Cuban Constitution, which we totally deny. However, the President has said that Congress must, and if it will not or cannot before March 4, then a Congress ought speedily to be assembled that will. We cannot in decency keep the Cubans suspended between heaven and earth for another year. They have taken every step which we have ordered them to do. They are now, or speedily will be, ready to set up that independent government which we are solemnly bound to grant them. It would look too much like a mockery, like a policy of deliberate exasperation, to say to them now that we were really very sorry, but that they would have to wait a year or two longer until Congress could make up its mind. In dignified silence the Cuban delegates ignore the demand of Gen. Wood, that they should "formulate" what ought to be the relations of the United States and Cuba. That is a matter wholly within the competence of the Cuban republic when fully launched. Our first and only pressing duty is to set up that republic. The President ought to have the mind and courage to do it unaided. If he will not, then Congress must step in and do it at the earliest possible day.

The Administration took two steps on Wednesday week in the carrying out of the nation's pledge to turn over the government of Cuba to its inhabitants. One was the determination to withdraw Major Ladd, the American army officer now on duty as Treasurer of the island, and to turn over the insular finances to the Cuban Secretary of Finance—a most important departure. The other significant action was the order for the further reduction of the garrison of the island by the withdrawal of the Tenth Infantry in February. The reason for the latter action may well be Gen. MacArthur's need of more troops to bridge over the period before the arrival of the new regiments, but its effect will be none the less reassuring, and will be accepted by the Cubans, like the turning over of the finances, as a proof that the United States really means to withdraw from the island. That stocks should have dropped two points in Havana directly, and that certain business men should "consider the cancellation of large orders," need alarm no one. But the merchants who declare that the present uncertainty is killing business have the truth on their side.

Openly and without a blush, the Republican press is preparing to support the Administration in its obvious intention to break our promise to Cuba, and to exhibit the United States to the world as a perjured nation. A convenient summary of our rake's progress in this affair would show the following steps. First, we made a solemn pledge; next, we boasted of it, and called upon mankind to admire us for our unparalleled self-denial; then we resolved in party convention and maintained in a thousand stump speeches that our pledge should be sacredly kept; after that we began to ask the Cubans what they would give us as a consideration for standing to our word; then, we said it was hard indeed to fulfil such a promise, but, of course, we were going to do it; next, we reasoned that, to be sure, we had promised, but there were many other things to be considered; presently it seemed to be doubtful if we could consistently keep our promise, and questionable if we ought to even if we wanted to. Only one step remained, and that was gallantly taken by the *Times* on Tuesday morning by intimating that we never made a promise to Cuba, and that those who say we did are laboring under a delusion and are really trying to create another "hell" in Cuba which it will cost us a second bloody war to destroy. But this is what our "holy war" has come to—something very like a "holy show"!

In the light of these developments, sympathy is plainly due those reluctant supporters of McKinley for re-election who are now petitioning him to make the same promise to the Filipinos that he made to the Cubans. A very epicure in broken promises would show signs of squeamishness, we should think, at having a Philippine dish offered him before he had fairly got his Cuban dainty down. We do not rate the President a sinner above all men who dwell in Washington—except as his power and responsibility are greater. Senator Frye comes out at this juncture with a charming explanation of his unwillingness to keep faith with Cuba. He was an "original annexationist," he cheerfully observes, and that, of course, absolves *him*. Other Congressmen and officials are equally cynical. To break our promise to the Cubans and then extend it to the Philippines would be too ghastly an hypocrisy for even our Washington experts in that art. Yet we have made certain promises to the Filipinos, short of independence; and what will the value of our word appear to them to be, even in those minor matters, when they see us coolly preparing to repudiate our pledge to Cuba, made in the most solemn and binding way?

The *Herald* has a telegram from Washington reporting a few words from a speech of Justice Harlan of the Supreme Court, at a banquet of the Loyal Legion in Washington, viz.:

> "The fathers of the republic never intended or desired that Congress should have authority, or any power, over any part of the surface of the earth free from the letter and the spirit of the Constitution."

This saying is interpreted as a foretaste

not of the coming decision of the Supreme Court in the Porto Rico case, but of what Justice Harlan, as one of nine members, thinks that it ought to be. Very likely Mr. Harlan has been annoyed by the comments of the press and of some public men on the appointment of his son as Attorney-General of Porto Rico while this case is pending in the court, and has taken an opportunity to make known that his opinions have not been changed by that circumstance. What his opinions were, could hardly have been a matter of doubt to any who had noticed the questions that he put to counsel while the argument was going on. In his present utterance as reported in the *Herald*, he has stated in another way the argument forcibly put by Mr. Carlisle in the Porto Rico tariff case, that the question is not whether the Constitution extends to Porto Rico, but whether it extends to the Executive and Congress of the United States. If it does so extend, they cannot make a tariff discrimination between Porto Rico and New York any more than between New York and Massachusetts.

Early last week we had from the Philippines a petition for civil government from "the Directory of the Federal Party." It assured the Senate and House of Representatives that while all previous Filipino parties had "more or less questioned American sovereignty," the Federal party, which numbered its accessions by thousands, made the "main plank" of its platform the "sovereignty of the United States." It should be said that the text of the petition was so thoroughly and idiomatically American, so free from southern exuberance and rhetoric, that the suspicion of Boston authorship (easy condemnation of the late Filipino petition for independence) has not yet been raised. Still, whether because good news from the Philippines has cheapened from very abundance, or for other reason less apparent, this pronunciamiento of the leaders of a great party has aroused singularly little enthusiasm in Administration circles. The Senate simply tabled the petition as if it were a private bill, and our neighbor, the *Times*, whose increasing sensitiveness on Philippine matters we note with sympathy, assumed a coldly skeptical attitude. These petitioners asked for the President the powers he was asking for himself. Was this mere coincidence? was the ungentle query. The *Times* would be pleased to know who the signers were, what their standing in the community, how far they represent the party they "direct," and, finally, what the strength and respectability of that party. The *Evening Post* proceeded to tell all about the seven signers. Of the "Directors," four were Filipinos, three of whom are, or have been, in the employ of the Philippine Commission, two were Spaniards, one was an American—he it was, presumably, who constructed the "platform" and drew up the gratifying "plank."

Gen. Otis, according to the Chicago *Journal*, has committed himself to the independence of the Filipinos at some time, near or remote. In an interview printed by that paper he says: "To my mind the great problem is, how can we get rid of the islands?" He believes that "after a series of years" it will be possible to establish home rule there. "How long it will be before this can be done," he continues, "I am not prepared to say. I think, however, that the sooner it can be done the better for this country," meaning the United States. This is the frankest statement we have had from any one who has held command in the islands since we took possession of them. We wish we could say as much for another statement of the General in the same interview. He says, "The backbone of the rebellion was broken before I left Manila." Gen. Otis left Manila on the 5th of May, 1900. Gen. MacArthur's report of October 1 following covers the intervening time. While noting the change of system adopted by Aguinaldo and his men from regular field service to guerrilla warfare, he says that the new warfare "has demanded more of discipline and as much of valor as was required during the period of regular operations against the concentrated field forces of the insurrection." There is nothing to show that there has been any less backbone since Gen. MacArthur wrote.

Last week the Baptists of Philadelphia condemned the methods by which the friars acquired their Philippine possessions, and protested against the continuance of the relations heretofore existing between the religious orders and our Government. Now the Methodist ministers of that city have adopted, without a dissenting voice, a report which demands not only the expropriation of the friars, but also their "continuous banishment." Their property, the report declares, "they have secured by theft and intimidation from the simple and confiding people." The report demands the absolute separation of the Church from the State, and protests against allowing any Roman Catholic, unless he is a regularly appointed military or civil officer, to announce that he is in any sense a representative of the United States Government. The President may well quake as he reads this manifesto. The Methodists have many votes, and they say clearly what they want. But the Roman Catholics have many votes, and what they want is known without saying; it will be said plainly enough when the time comes. The President will not dare to face the Protestants with a proposal to maintain the Roman Catholic orders, or to pay them millions of dollars for property "which they have secured by theft and intimidation." He will not dare to enrage the Roman Catholics by taking the other horn of the dilemma. Really, a decision of the Supreme Court adverse to Imperialism might not be altogether unwelcome, as taking the somewhat too vast orb of fate from shoulders that are not Atlantean.

We are glad that our system of "deporting" from Manila people whom we do not like—the latest victim being an American citizen—had some attention paid to it in the Senate on Thursday. Senator Hoar recalled the fact that arbitrary deportation of offending patriots was one of the counts in the American indictment of George III. But we have changed all that. The thing has its main significance, however, in its demonstration of the utter humbug of President McKinley's pretence that the "Bill of Rights"—the first ten amendments of the Constitution—was to be sacredly observed in the Philippines. Who has forgotten the unction of his instructions to Judge Taft, detailing these bulwarks of personal liberty, and saying that the Philippine Commission must do nothing in contravention of them? Deportation by military order goes ill with "the right of the people to be secure in their persons," no arrests to be made except upon warrants "supported by oath or affirmation," or with the prohibition of holding any person to answer for crime "unless on a presentment or indictment," and with the guarantee of "a speedy and public trial." All these privileges and immunities, upon which the President dwelt so feelingly, are contemptuously brushed aside by Gen. MacArthur, who deports at pleasure whom he will, not stopping even in the case of an American citizen whom he wants to be rid of.

In the week's debate on the Ship-Subsidy Bill another break in the Republican line was disclosed. Senator Perkins of California said that he would never consent to give subsidies to foreign-built ships. "Then," said Senator Frye, "you will kill the bill. If you strike out the provision for foreign ships I will abandon the bill. You will be forty years in getting a merchant marine without it." But if it is so desirable to bring in foreign-built ships, why should the number be limited to six for any company? Why should the privilege of bringing them in be restricted to ships in existence or contracted for on the 1st of January, 1899? Why not give an equal chance to all—owners and buyers? If the aim is to secure a merchant marine under the American flag in the shortest possible time, the best way would be to enable everybody to bring in foreign-built ships—the more

the merrier. Senator Frye's declaration really "lets the cat out of the bag." It discloses the fact that favoritism and private gain are the propelling force behind the bill, for if the real motive were public interest, all American citizens would be given an equal chance. Senator Perkins really dealt the bill a staggering blow when he declared that he would not vote for subsidies for foreign-built ships.

One fact stands forth prominently in the syndicate purchase of a controlling interest in the Southern Pacific Railway: the Union Pacific has now an opportunity to acquire possession of its outlet to San Francisco, and to make one system of its lines from the Missouri River to the coast of California, and in one way or another it is certain to make use of the opportunity. It has been to many people a matter of surprise that the Union Pacific did not move in the same direction in or before 1885, when the Southern Pacific Company astonished Wall Street by its absorption, through long-term lease, of the Central Pacific. The explanation was, however, first, that the owners of the Central Pacific were themselves the backers and projectors of the Southern enterprise, and, second, that the Union Pacific had its own hands full with its Kansas enterprises, and had already had to cut down its dividend rate from 7 per cent. to nothing. If the Central Pacific is to be transferred, directly or indirectly, to the Union Pacific, we should say that the public will receive the benefit. The alliance of these two roads under a common management is natural and reasonable. It involves no question of restricting competition; on the contrary, with a through line in the hands of the competent railway men who now control it, the probability is that economy of transcontinental transportation will be brought to a point where the shipper and passenger will be helped quite as much as the investor. Even with maintenance of firm railway rates as a consequence of the affiliations of Northern, Southern, and Central routes to the Pacific, it must be remembered that the average shipper in recent years has suffered much more from irregularity of rates and sudden changes than from exaction of increased charges.

Although paternalism in government is now in high favor, it is occasionally carried to an extreme which arouses vehement protest. Such is that of the makers and vendors of drugs and medicines against a bill purporting to regulate the practice of medicine, now before the New York Legislature. This benevolent measure proposes to make it a crime for any person not a licensed physician to recommend or advise for the use of any person not a member of his household "any remedy or agent whatsoever, whether with or without the use of any medicine, drug, instrument, or other appliance, for the treatment, relief, or cure of any wound, fracture, or bodily injury, infirmity, physical or mental, or other defect or disease." The members of the medical profession are, of course, presumptively best qualified to treat our ailments, but the laity will really insist on having something to say in the matter. To forbid all but physicians from applying well-known remedies would lead to most shocking results in cases of wounds and sudden illnesses, and the druggists deserve the support of the community in their action. If the bill is to effect its purpose, it should forbid every one to ask about his neighbor's health, for fear that the display of anxiety might have some disturbing effect on his nerves.

We have received from Major W. C. Gorgas, chief sanitary officer of Havana, a carefully compiled and elaborate report of the vital statistics of that city for the year 1900, which speaks well for the methods of his department. From these official figures it appears that there were 310 deaths from yellow fever in Havana last year, as against 103 in 1899, and 136 in 1898, a substantial increase, despite the improvement in sanitary conditions under American rule. This growth of the death list, which exceeds that reported in 1890 under Spanish rule by two, may partly be attributed to the large immigration, no less than 24,124 foreigners having settled in or passed through Havana in 1900. The real triumph of American methods of governing Havana over the Spanish system is shown by a comparative table of deaths from all diseases from 1890 to 1900. In 1900 the death-rate per thousand, notwithstanding the increase in yellow fever, had sunk to 24.40 from 33.67 in 1899, and 91.03 in 1898, the latter being the highest figures of the decade. Even in normal years of the Spanish rule, such as 1893, the death-rate was as high as 32.01. It must not be overlooked that the population of the city has risen steadily during this period, numbering 250,000 in 1900, or 31,500 more than in 1893, which adds to the impressiveness of Major Gorgas's showing. Whatever may be the outcome of the political situation in Cuba, the work of Major Gorgas and his fellow-officers must remain a large item on the credit side of our account with that island.

When the Powers accepted Count Von Waldersee as their Commander-in-Chief in China, they elected a hard task-master for the Chinese. The plan of evacuation promulgated by him looks like permanent occupation. In the first place, no movement can be made for six weeks on account of the weather. As China is expected to pay the cost of the occupation, this is so much added to the indemnity. Then the security for the indemnity must be satisfactory. The security will depend very much upon the amount, and, as that has not been fixed, the duration of the stay depends upon the demands of the most exacting of the Powers, which will probably be Germany herself. Moreover, the Chinese Government must give "proof that it is willing and able to maintain peace and order in the province of Pe-chi-li, and to effectually protect missionaries." If this is insisted upon, then the occupation depends upon the nature of the proof that shall be accepted for a future event. If indefinite occupation were desired, no scheme for prolonging it could be more deftly conceived. There seems to be a searching of hearts at Washington in regard to this matter, as though some part of the ravaging and ravishing that have disgraced the Christian name in China might be a blot on our escutcheon. Undoubtedly we must bear some share of this hideous outbreak of savagery and lust, although not a large share by comparison with others. It is large enough, however, to justify us in withdrawing from partnership with Waldersee, and in avoiding such joint occupations and complications hereafter.

When Chancellor von Bülow promised the Agrarians of the Prussian Chamber "protection against foreign products," it was clear that the Ministry was committed to a tariff war in behalf of German food-stuffs. The promise was repeated in more definite form by the Minister of Finance at the meeting of the Reichstag. There is perhaps a double purpose in this policy. The Chancellor, by admitting the fact of Agrarian distress and promising relief, hopes to bind more closely to himself the most doggedly persistent of all the German parties. This aid he may yet need against the Social Democrats, who gain in numbers and political weight. On the other hand, the great revenues which the new tariff is to bring in will be useful to a Chancellor with a vast project of naval expansion to carry out. The immediate interest of the situation for us is that the increased duties on our grain and other food products are sure to cripple our trade with Germany. We have ourselves, or rather our Senate, to blame for it. For more than a year the Senate has refused to take the reciprocity treaty negotiated by Commissioner Kasson out of its pigeonhole. If that were now in force, as it should be, we should be assured of a similarly favorable arrangement when the new German tariff is enacted. As it is, when our farmers and meat-packers find the shoe pinches, the State Department must negotiate *de novo*. And why should it hasten to throw another treaty to the Senators?

CHIEF-JUSTICE JOHN MARSHALL.

On the fourth day of February, 1801, John Marshall sat for the first time as Chief Justice of the Supreme Court of the United States. It was the day on which that court first sat at Washington as the seat of the national Government. The circumstances under which Marshall took office were remarkable and unpropitious. The conflict between the Federal and Republican parties had become envenomed to the last degree, and the defeat of the Federalists (with whom Marshall had acted) in the elections of 1800, drove them to desperate measures to retain power. The Administration spent its expiring days in filling the offices with its partisans. One of the last acts of Congress, in February, 1801, was to rearrange the judicial districts and to establish separate circuit courts. This act gave to President Adams the appointment of sixteen new judges, and he signed and delivered their commissions on the eve of his departure from office. The new officers were derisively styled "the Midnight Judges," and it was not to be expected from the bitter Republicans and Jacobins of that day—nor, indeed, from human nature itself—that such an attempt to perpetuate a policy of government condemned at the polls should be submitted to without a struggle.

After a fierce debate in Congress, the act creating the new circuit courts was repealed, and, in order to prevent the interference of the Supreme Court, Congress suspended the sessions of that body for nearly fourteen months, by abolishing the August term. The new President, Jefferson, hated the Federalists generally and Marshall particularly. Long after he had retired to private life he described the judiciary of the United States as a "subtle corps of sappers and miners constantly working underground to undermine the foundations of our confederated fabric," and Marshall as "a crafty chief judge who sophisticates the law to his mind by the turn of his own reasoning." No appointment could have been more offensive to Jefferson than that of Marshall, and, with a President personally and politically hostile, and a Congress in full sympathy with him, it was evident that the position of the Supreme Court was extremely perilous. Its independence, if not its existence, was threatened, and it is hardly too much to say that it was rescued by the indomitable determination, the powerful logic, and the practical statesmanship of John Marshall.

Every application of power requires a *pou sto*, and this was opportunely provided by the failure of the impeachment of Justice Chase. The managers of the proceeding were compelled to admit that the "high crimes and misdemeanors" of the Constitution meant indictable offences, and this effectually barred Congress from displacing judges who had once taken office. Had the impeachment resulted otherwise, the Supreme Court would have practically ceased to be a part of the Government, and even John Marshall, had he not been impeached, would have been unable to do more than make it a dignified court of law. When the impeachment failed, John Randolph, in a fury, proposed to amend the Constitution by making the judges removable on the joint address of the houses of Congress; but it was even then known that amending the Constitution was a slow and difficult process, and the motion failed. Its failure enabled Marshall to put a construction on the Constitution which could not be changed after his long reign was over, and which had indeed by that time come to be generally satisfactory.

Far from being daunted by the rage of his adversaries, Marshall forced the fighting. He went out of his way to find an issue, for the doctrine in the great case of Marbury against Madison is obiter. President Adams had nominated Marbury to an office, the Senate had confirmed him, his commission had been made out, signed by the President, and sealed with the seal of the United States. But it had not been delivered when Jefferson came into office, and he would not deliver it. Marbury applied to the Supreme Court for relief, which Marshall was obliged to deny on technical grounds, and this was properly all there was in the case. But Marshall took the opportunity to state his view of the powers of the Supreme Court, and his opinion established the doctrine that our Government is one of limited powers. It affirmed the power and the right of the Supreme Court to declare null and void any act of Congress which the court held to be in contravention of the Constitution. This decision made our Government one of laws, and not of men. Any other view would have established the principle, then maintained, and now, after the lapse of a century, reasserted, that Congress need not regard the letter of the Constitution, but might legislate according to its discretion, if it professed righteous purposes. Such a principle makes waste paper of the Constitution. Marshall exposed it in a few pregnant sentences:

> "The powers of the Legislature are defined and limited; and that those limits may not be mistaken or forgotten, the Constitution is written. To what purpose are powers limited, and to what purpose is that limitation committed to writing, if these limits may, at any time, be passed by those intended to be restrained? The distinction between a government with limited and unlimited powers is abolished if those limits do not confine the persons on whom they are imposed, and if acts prohibited and acts allowed are of equal obligation. . . . The Constitution is either a superior paramount law, unchangeable by ordinary means, or it is on a level with ordinary legislative acts, and, like other acts, is alterable when the Legislature shall please to alter it. If the former part of the alternative be true, then a legislative act contrary to the Constitution is not law; if the latter part be true, then written Constitutions are absurd attempts, on the part of the people, to limit a power in its own nature illimitable. . . . If an act of the Legislature repugnant to the Constitution is void, does it, notwithstanding its invalidity, bind the courts, and oblige them to give it effect? . . . This would be to overthrow in fact what was established in theory. . . . It is emphatically the province and duty of the judicial department to say what the law is. . . . If a law be in opposition to the Constitution; if both the law and the Constitution apply to a particular case, so that the Court must either decide that case conformably to the law, disregarding the Constitution, or conformably to the Constitution, disregarding the law—the Court must determine which of these conflicting rules governs the case. This is of the very essence of judicial duty."

To recognize and establish this principle was the work of a great statesman; to develop and apply it as occasion required in the operation of a new form of government was the work of a great lawyer. Gradually the salutary and conservative character of this principle emerged clearly from the smoke of party conflicts. Marshall was a Federalist; but the Republicans saw that he was one only within the limits of the Constitution, and the Federalists found that he would not transcend these limits. Partisan fury ceased to rage against the Supreme Court; and its power of veto, greater than that of the Executive, came to be respected. Party questions were limited, by the exclusion of all plans and measures not clearly within the Constitution, to the ordinary subjects of legislation and administration. Schemes and policies that have racked and wrecked many Governments, simply could not, under our system, become the subject of popular agitation. It was a magnificent achievement to give to this American Empire, as Marshall was the first to call it, peace and freedom from political controversies concerning the fundamental institutions upon the permanent preservation of which the happiness of any people depends; to suppress appeals to prejudice, to passion, to impulse, by compelling the submission of legislation and governmental policy to the tribunal of reason, interpreting a body of written principles and knowing no other authority. Only lawyers can understand what the great Chief Justice accomplished in making the Supreme Court a court of law; but every citizen should learn what we owe to him for making it one of the coördinate powers of the general Government. The Constitution declared the rights and liberties of the people; but John Marshall transformed the Constitution from a scroll of parchment into a vital force.

MARK TWAIN ON M'KINLEY.

We have already expressed our gratitude for the great service which Mr. Twain has rendered his countrymen, since returning to America, by admin-

istering to them large doses of wholesome truth in the form of satire. At first, his very victims shook with laughter. It was only Mark's admirable fooling, you know. But when his shafts began to pierce even the thick hide of our complacent Imperialists, they lost interest in the great American humorist. They had laughed gleefully, and slapped each other on the back, when he impaled Tammany on the lance of his irony; but the moment he began to let the sawdust out of their Imperial doll, they wondered at his poor taste, and feared his wit was growing dull. Anyhow, it was only after-dinner nonsense of his, which he himself would soon be ashamed of.

But Mr. Clemens returns to the attack in greater force than ever in the February *North American*. His satirical weapons never were keener, or played about the heads of Imperialists with a more merciless swish. In one long burst of sarcasm he exposes the weariful hypocrisy of the American policy in the Philippines, and covers it with ridicule mountain-high. Mark Twain was never a respecter of persons, and in this grim satire of his he flies straight at the highest. It is President McKinley whom he finds to have been playing "the European game, the Chamberlain game," when "the Philippine temptation" proved too strong—not only playing it, but playing it badly. Of the President's noble utterance about "criminal aggression," Mark says cruelly: "The memory of that fine saying will be outlived by the remembrance of no act of his but one—that he forgot it within the twelvemonth, and its honorable gospel along with it." Another dart of the satirist's, levelled at the same devoted head, is Mr. Twain's description of "the Trinity of our national gods," each with "the emblem of his service"—Washington, the sword of the Liberator; Lincoln, the Slave's Broken Chains; "The Master," the Chains Repaired. This is flat *lèse*-McKinley, in our humble opinion.

For theme and title of his delicious though biting satire, Mr. Clemens chose "The Person Sitting in Darkness." He rightly divined that benighted heathen, for whose good and goods we are making such great exertions, must be puzzled at our strange mixture of greed and godliness. Our satirist's aim is to explain the mystery. This he does by a long recital of "the historical facts" (Mark Twain being the inimitable historian), winding up with a summary which we cannot refrain from quoting. He kindly expounds the facts to the Sitter in Darkness:

> "They look doubtful, but in reality they are not. There have been lies; yes, but they were told in a good cause. We have been treacherous; but that was only in order that real good might come out of apparent evil. True, we have crushed a deceived and confiding people; we have turned against the weak and the friendless who trusted us; we have stamped out a just and intelligent and well-ordered republic; we have stabbed an ally in the back and slapped the face of a guest; we have bought a Shadow from an enemy that hadn't it to sell; we have robbed a trusting friend of his land and his liberty; we have invited our clean young men to shoulder a discredited musket and do bandit's work under a flag which bandits have been accustomed to fear, not to follow; we have debauched America's honor and blackened her face before the world; but each detail was for the best. We know this. The Head of every State and Sovereignty in Christendom and ninety per cent. of every legislative body in Christendom, including our Congress and our fifty State Legislatures, are members not only of the Church, but also of the Blessings-of-Civilization Trust. This world-girdling accumulation of trained morals, high principles, and justice, cannot do an unright thing, an unfair thing, an ungenerous thing, an unclean thing. It knows what it is about. Give yourself no uneasiness; it is all right."

It is a sure instinct which leads Mr. Clemens to barb his arrows with satire like this. In no other way can you so effectively assail a certain kind of sanctimonious and official humbug. Argument it sheds like rain. Appeals on moral grounds it answers with fresh rolling of the eyes heavenward. But a sarcastic flaying, like Mark Twain's, with a vigorous rubbing of salt on the raw, is the only way to reach a consciousness so deeply cased in fat. "Mr. Dooley" was the earliest to see this, and we hear amusing tales of the wondering amaze produced in the White House intellect by some of his irreverent jests. But Mark Twain easily steps to the front, and shows the youngsters that the *vieux sabreur* is still master of them all. Like another Aretino, it will soon be said of him that no monarch (or President) will dare commit a *sottise* or crime without first taking measures to avert his terrible satire.

The courage which Mr. Clemens has displayed is as great as his skill of pen. Other satirists have wreaked themselves upon the dead. It was in the 'Dialogues des Morts' that Cortes and Montezuma were set to discussing the morals of conquest *ad majorem Dei gloriam*, and also *ad majorem hominis pecuniam*. But Mr. Twain has boldly struck the shield of the living. His joking is no joke for its objects. Not counting the risk to his personal popularity, he has let us see the flame of his honest anger burning against shams and cheating in the highest matters of national policy. He is a man to be reckoned with in this business. The ordinary epithets cannot be flung at him. Mark Twain is no bilious, white-livered, wall-eyed hermit of a timid and foreign-aping Little American. He is "entirely American," as Mr. Howells has just affirmed, the strong native product of our great West. He is also a man who looks at this question in world-perspective. He has stood before kings. He is not dazzled by rhetoric about the American Empire. Growth of our soil and travelled observer of other nations, Mark Twain comes home to tell our flaunting Imperialists that he sees through their hypocrisies. Tell us what you think of him, champions of Imperialism! Let the blear-eyed professors and the dyspeptic editors off for one day, and give us your honest opinion of this typical and whole-hearted American, who stepped from the pilot-house of a Mississippi steamboat into first a national and then a European fame, and now fearlessly sides with the Filipinos against their American oppressors.

CUBAN CASUISTRY.

Grattan once jotted down in his memoranda: "I wrote a reply to George Grenville which I thought very good, for I had taken much care. It touched every point except the question. It kept clear of that." What is the one question in the Cuban business of which the Administration organs are now so carefully keeping clear? It is writ large in the joint resolution of Congress, signed by the President, in April, 1898:

> "The United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

It is that resolution, that solemn deliverance of a nation about to resort to the arbitrament of war, that tacit appeal to Heaven to favor a just cause, upon which all the Republican casuists are breaking their teeth. "Independence," observes one of them sagely, "is, after all, a relative term in the view of international law." If we calmly call Cuba independent, his idea appears to be, she will really be so though we so hedge her about that she cannot exercise a single attribute of sovereignty. But this unabashed defender of broken vows does not observe that Congress went further than the assertion that Cuba ought to be "independent"; it raised one hand to God, as it drew the sword with the other, and said it would not exercise so much as "control" over the island. Control is exceeding broad. It covers and excludes every twist and turn by which the dodging defenders of the Administration have thought to keep the letter of our national promise to the Cubans while shamelessly repudiating its spirit. "Control," in the joint resolution, is a *litera scripta* over which they cannot get with all their squirming.

We hear much, in this connection, about our "responsibilities." Now, our experience is that an Imperialist is always to be most violently suspected when he pulls a long face and begins to talk about his "responsibility." It means that he is thinking of stealing something. One would say that to be responsible for our plighted faith to Cuba was burden enough for the present. "Ah," reply our Imperialist Father Confessors, discussing this case of conscience, "but you

forget the Monroe Doctrine. We promised, it is true, but surely the world understood that we never could promise anything in conflict with the Monroe Doctrine. Besides, there is Germany. Do you suppose she will let the key to the Caribbean lie around unappropriated? And do look before you leap. First be sure that it would be prudent to allow Cuba to be free." Thus our Republican casuists, with a shameful elusiveness rivalling that of Pascal's Monsieur Distinguo. To all which the one direct and sufficient reply is, "You are trying to make us out a nation of liars."

Another desperate winding of the annexationists—for that, of course, is what they are—is to be seen in their grave pretence that the Treaty of Paris somehow superseded the joint resolution of Congress. We assumed treaty obligations in respect to Cuba, the contention is, which we cannot lightly relinquish. This might be maintained by one who had not read the Treaty of Paris, but a child who had really looked at its clauses relating to Cuba would not be able to argue in this way without blushing. Every "obligation" which we took upon ourselves in the Treaty, so far as Cuba is concerned, was expressly limited by article i. to "so long as such occupation shall last," and article xvi. spoke directly of "the termination of such occupancy." If the Commissioners had had the joint resolution before them when they wrote the Treaty, they could not have more carefully conformed to its letter and spirit. Far from overriding or in any way superseding the joint resolution of Congress, the Treaty of Paris confirms it in every respect, and reads as if specifically intended to carry it out.

"But you seem to forget how much money we shall make if we break our promise to Cuba." That is the last bastion of casuistry in which the annexationists and repudiationists take their stand. This is no exaggeration. The New York correspondent of the Philadelphia *Press* set forth on Saturday the "business" view of Cuban independence. To the syndicates, he said, the idea of American withdrawal from Cuba was perfectly preposterous. The Van Horne railway syndicate, shrewdly composed of politicians of both parties, was aghast at the notion. So was the "electric syndicate," and "the large financial interest centring round one of the more important of our trust companies." All these authorities were convinced that the most serious objections, legal and moral, lay against the proposal to turn Cuba over to its own people. And if law and morality fail, there remains always the jingle of the guinea. "If you only knew the size of the check I got for it," complained a man brought to book for a dastardly deed. That last infirmity of ignoble Imperialistic minds is evidently their final reliance in this Cuban scheme. But, for our part, we decline to debate with them on that ground. If it is a question of morals and national policy and honor, we have something to say; but you cannot, with self-respect, argue with men who confess that they keep their conscience in a bank account.

TAMMANY IN HISTORY.

The institution known throughout the civilized world as Tammany Hall well deserves an historian, whom it has now found in the person of Mr. Gustavus Myers. It administers the affairs of the greatest commercial city in the United States, and occasionally extends its control to those of the largest State in the Union. It has made and unmade Presidents, Senators, Congressmen, Governors, Mayors, and Aldermen. It dispenses revenues far greater than those of the Greek Republics which make such a figure in ancient history, and rivalling those of Imperial Rome. It controls more wealth and patronage than dozens of mediæval Kings or scores of modern States. Yet its Constitution is simplicity itself, its accounts can be kept in a pocketbook, and its corporate abode is as plain as a penitentiary. Its charter is very brief, but admirably expressive. It declares the purpose of the association to be "affording relief to the indigent and distressed members of said association, their widows and orphans, and others who may be proper objects of their charity." This purpose has been pursued with indefatigable and comprehensive industry from the time when the charter was granted down to the present moment. The relief provided has been far beyond the wildest dreams of the original founders; but the "indigent members" are as much in need of charity as ever, and are especially appreciative of the kind that suffereth long. As to the means whereby this "relief" was to be provided, the charter was discreetly obscure, and the rule of silence has ever since been as faithfully observed by the members of the order as in the convents of the Trappist monks.

No one could have been more ideally fitted to be the founder of this association than the individual whom Fate selected for that purpose. The name of William Mooney suggests the race that was thereafter to be potent in Tammany, and that still holds sway. This hero, who should have been eponymous, was charged with having deserted from the American army in 1776, and with having joined the British forces—charges which, in the absence of evidence, must be regarded as verified by the requirements of dramatic fitness. By way of furthering the charitable ends of his organization, he had himself appointed Superintendent of the Almshouse, at a salary of $1,000 and expenses for the support of his family not to exceed $500. After a year had expired, an investigating committee—always the evil genius of Tammany Hall—disclosed the fact that Mr. Mooney had appropriated about $4,000 in addition to his salary, had made away with about $1,000 worth of city supplies, and had expended various sums under the head of "trifles for Mrs. Mooney." The Grand Sachem was obliged to relinquish his office; but he proved that a true Tammany man is not discouraged by such clouds of adversity. He mysteriously became the owner of a number of houses, and on his death the society which he had founded pronounced a panegyric on his character, and gave him a glorious funeral procession.

That eminent statesman, Aaron Burr, early discovered the political advantages of an organization of this character, and presently became its leader. He thoroughly appreciated the opportunities for relief which it afforded, and when the estate of the lamented Mooney was appraised, a heap of unpaid bills for goods supplied to Mr. Burr was found. What are such little things "betune frinds"? Burr's friend and biographer, Matthew L. Davis, was one of the first of the Grand Sachems, and showed his appreciation of the privileges of that high post by defending the embargo of 1812, and smuggling out flour in violation of its provisions. In recognition of this exemplification of principle, he was reëlected Grand Sachem in 1814, and held the office for many years. At this time one of the proclamations of the organization invited the braves to meet, "and recount to each other the deeds of our departed chiefs and warriors in order that it may stimulate us to imitate them in whatever is virtuous and just." Another proclamation, in that fine vein of irony which has always marked the literary products of the organization, exhorted the people to support their equal rights "in opposition to Ambition, Tyranny, to Sophistry and Deception, to Bribery and Corruption," and especially "to an enthusiastic fondness and implicit confidence in their fellow fallible mortals." Mr. Davis, it should be added, cleared $80,000 from a contract obtained during the patriotic fervor of the war of 1812, to the support of which the members of the organization offered to contribute "their fortunes and sacred honor." This worthy was eventually convicted of participation in swindles involving millions of dollars, but secured a new trial and an acquittal. His name stands high on the Tammany roll of honor.

By the ingenious device of collective buying of real estate, the impecunious members of the organization succeeded in evading the property qualification required of voters. Seventy of them, by hook or by crook, managed to raise enough money to buy a house, and by such means Tammany soon came into control of the city government. One of

its first achievements, small in itself, but full of promise, was to obtain a grant of $1,000 from the Legislature for the purpose of erecting a monument over the bones of the patriots who had died on the British prison-ships. The monument was not erected, nor the money returned, but the records of the organization do not explain its disposition, and it was doubtless applied to the relief of the indigent. During the year 1809 the organization passed under one of the clouds which have from time to time darkened its prospects. There was a deficit of $250,000 in the city's accounts. One of the Grand Sachems had taken advantage of his office of City Comptroller to relieve the indigent by conveying to himself valuable land without paying for it—a transaction which aroused unfavorable comment. The dispensing of charitable relief again made trouble for a Sachem, who was removed from the office of Superintendent of the Almshouse for failing to discriminate between his own needs and those of the paupers. Another Sachem was compelled to resign because he became involved in like confusion concerning his fees as Inspector of Bread, and still another made a similar error as collector of assessments. So many cases of this kind were disclosed as to make the public uneasy, and Tammany's control was temporarily weakened. Of course, the braves who were the victims of the popular outcry were nobly sustained by the organization, and honored with high office and in due time with lucrative contracts.

Space would fail us to recount the achievements of Sachem Valentine, who, while Police Magistrate, showed his devotion to the good cause by taking money from prisoners; of Sachem Hubbard, whose accounts as Sheriff were such as to induce him to withdraw from public attention; of Sachem Broome, obliged by a cruel law to relinquish the office of City Clerk, because of "relief" granted at the city's expense to another Sachem; of Sachem Judah and Alderman Denniston, who showed too much appreciation of opportunities connected with lottery drawing to please the public; of Sachem Swartwout, whose spoils amounted to $1,250,000; of the numbers known by name to people of the present day. The roll of honor is a long one, and Mr. Myers has done admirable work in setting it forth. His book deserves the attention of every citizen of New York; but no publisher has thought it prudent to incur the risk of bringing it out. It may be obtained at the office of the Reform Club, No. 52 William Street, and those who read it will find it one of the most instructive essays in American political history that have ever appeared.

LITERARY PIRACY RECONSIDERED.

We recur to the report of the Commissioner of Labor on the results of the so-called International Copyright Act for the interesting expressions of opinion in response to one of his questions, viz.: Was "piracy," as practised prior to enactment, beneficial or injurious to printers or publishers? Of the seventy answers from publishers, printers, and others, fifty-five are scheduled as favorable and fifteen as "adverse" to the law, but of the fifteen, only six have been willing to record themselves as believing, unqualifiedly, that the former condition of free reprinting was distinctly favorable even to printers and publishers.

Mr. A. L. Burt of New York leads off with the declaration that the reprinting was certainly most beneficial to many branches of manufacture, because it furnished the employees in these branches with a good deal of additional work, now withdrawn because of the law. De Wolfe, Fiske & Co. of Boston think that "piracy" was, generally speaking, undoubtedly favorable to printers and publishers, and this opinion is shared by J. J. Little & Co. of New York, who include bookbinders among the beneficiaries, due to the fact that many publishers reprinted the same book. David McKay of Philadelphia thinks that not only printers, binders, and publishers, but also the reading public, were "undoubtedly" benefited by "what is commonly termed 'piracy'"; he adds, however, that "our moral right to appropriate the work of a foreign author without remuneration is another question." John F. Oltrogge of New York feels that the publisher's liberty, under the law prior to 1891, to publish whatever he chose of foreign matter, without paying the author or publisher any royalty, encouraged him to do so, and "provided more labor to the unemployed than at present." Millions of books were published, prior to 1891, in cheap form, as against thousands now, in the opinion of Street & Smith of New York, and self-evidently this multiplication of separate editions (of which they instance the twenty-two editions of Rider Haggard's 'She'), involving the making of new plates, gave aid to compositors, pressmen, bookbinders, and employees of the printing craft; whereas, in their opinion, "international copyright is directly opposed to these benefits." They add, however, "We have nothing to say as to the ethics of the case."

Among those giving qualified assent to the benefits of piracy are George Barrie & Son of Philadelphia, who think that labor was benefited, but not so greatly as publishers now are under the present law, while P. Blakiston's Son & Company believe the advantages and disadvantages of free reprinting about offset each other, although it is stated that, in the case of this firm, foreign books were imported rather than reprinted, owing to the danger of cheap, unauthorized reprints being issued. While R. F. Fenno & Co. of New York hold that piracy was beneficial to the printer, pressman, and general public, but not to the publisher, D. C. Heath & Co. of Boston consider that it was advantageous to pressmen and to certain publishers who live on reprints, paying no royalties, but was *not* of advantage to typesetters or honest publishers who paid authors' royalties. The Publishers' Printing Company, W. B. Saunders of Philadelphia, and the F. A. Stokes Company agree that piracy was beneficial to only a "small class of cheap, or piratical publishers," who, according to the last named, "still find sufficient unprotected material"; and they also hold that printers were not benefited. The American Baptist Publication Society admits that to some printers and publishers piracy was doubtless beneficial, while to publishers like themselves, or to printers employed in similar houses, it was far from beneficial, because it flooded the market with cheap books, and greatly hindered the publication of standard books by American authors. William Wood & Co. consider that the word "piracy" does not give a correct understanding of the acts to which it is applied, and maintain that such reprinting was always beneficial to the laboring class, but not always to publishers; while Henry Carey Baird & Co. hold that the "reprinting of English books not protected by law is no more 'piracy' than is the manufacture and use of processes, tools, and implements no longer protected by patent," and that such republication was of great advantage to printers, binders, paper-makers, and publishers. They further maintain that "every hour the importance of international copyright becomes less and less, as it almost entirely affects the authors and publishers of novels."

This is practically the whole case for the defence of piracy, so far as Commissioner Wright has collected any evidence. Turning to the negative side, there is not only the weight of numbers, but more unanimity of opinion, as well as emphasis. J. Q. Adams & Co. of Boston believe that piracy was, on the whole, injurious to publishers; and the verdict of the American Book Company is that it "never benefited anybody." The Secretary of the Authors' Copyright League does not think that it was ever beneficial to either printers or publishers to engage in the piratical business, although no doubt some grew rich at it; and Mr. Johnson adds, "I think public sentiment has got past considering this aspect of the question." D. Appleton & Co. think that some piratical firms secured large returns, but that in other cases the competition of pirates among themselves proved injurious, and that, on the whole, piracy was probably

not beneficial. In the opinion of Drexel Biddle of Philadelphia piracy was detrimental to printers, in that its keynote was competition in cheapness of manufacture; to publishers, because it allowed unlimited competition in cheap production, which necessitated small returns. The Blakely Printing Company of Philadelphia is of the opinion that it was never permanently beneficial either to printers or publishers. "We should say without a doubt," is the expression of The Burrows Brothers Co. of Cleveland, "that piracy could not have been in any way but detrimental to printers, in that the whole plan was to produce books as cheaply as possible, thereby badly affecting wages, . . . to publishers, from the fact that such simple copying or stealing of published works took out of the business entirely the opportunity of publishing original works and of promoting the literature of our own country." The Century Company does not think that piracy was beneficial to any one. "A system that breeds literary piracy and affords to authors and publishers no protection for the fruits of their intellectual toil, is bad in morals and pernicious in practice," is the verdict of the Cleveland Printing & Publishing Company. The well-known printers De Vinne & Co. say that piracy never benefited any interest, and the competition it provoked brought with it severe penalties. That piracy was beneficial to neither printers nor publishers is the opinion of Funk & Wagnalls Co., Henry Holt & Co., George W. Jacobs & Co., Kesler-Kirkpatrick Manufacturing Co., and the S. S. McClure Co. Houghton, Mifflin & Co. think the present order of things far better than the former, as "honesty is always better than dishonesty." Lee & Shepard never considered piracy beneficial to anybody, and the J. B. Lippincott Co. states that, generally speaking, it was not profitable, in many cases decidedly the reverse, and certainly injurious to the publishing trade in general, and doubts if it ever was of advantage to printers. The Penn Publishing Co. thinks that "pirated books have a tendency to demoralize book dealers and individual buyers," while Rand, McNally & Co. say "it may be true that piracy temporarily increased the volume of business, and thus the work for artisans, but the tendency is ultimately to contract it by calling out excessive competition, and thus causing a constant reduction of profits." D. Van Nostrand Co. think that piracy could not be beneficial, that the conditions of competition between rival "pirates" prevented any substantial business benefits to them, and explain that their views "are based purely upon the moral aspect of the whole matter."

The complete statement of G. P. Putnam's Sons does not readily lend itself to abridgment, but is a most admirable summing up of the case against piracy, which is held to have been beneficial, and that but measurably so, to only the very cheapest grade of printers, and for a short time to a small group of unscrupulous publishers, who, however, in fierce competition with each other, soon brought their margin of profit down below the safety-point. The case of the reputable American publishers (involving also the best interests of the book-purchasing community) is thus clearly stated:

"American publishers were not in a position to purchase the control of any literary material produced on the other side of the Atlantic, whether the production of such material had been undertaken at their own initiative or not. As a result, American publishers were debarred from entering into contracts with European authors, either directly or through their European publishers, for the production of books which were really required by American readers and students, and which would have proved of service to such readers. It was impossible to pay the compensation required by an author of the first class, and, in addition to such payment, to incur the risk and expense of the production of the book, possibly with illustrations or designs, unless there could be some assurance that, when the investment had been made, the market for the book would be controlled by the investor. Experiments were from time to time made in arranging for books by foreign authors; but whenever such books secured for themselves any preliminary attention with prospect of remunerative sale, unauthorized editions were promptly issued which, being cheaply put together and often incomplete, and which, being free of any burden of payment to the author, and being also in a position to take advantage of the advertising done for the authorized edition, were able to compete effectively with such authorized edition. The unauthorized reprinters did not themselves make much profit from such ventures, as, in their close competition with each other, they brought their selling prices down below the margin of safe profit for speculative publications. They were able, however, to prevent the original publishers from securing profit, and in so doing with the books which were thus pirated they naturally discouraged future similar undertakings."

Finally, the effects of the conditions obtaining as regards authors are thus concisely indicated:

"Foreign authors secured at haphazard an uncertain remuneration from their American readers, American authors secured but trifling returns from English readers, and American authors did not have a fair competition in the office of American publishers or with the American book-buying public, at least in regard to fiction or other light literature, with books which had to compete with the low-priced piracy editions of volumes by foreign authors."

IRISH AFFAIRS.

DUBLIN, January 13, 1901.

Irish affairs include, indeed mainly consist in, the Irish land question, as to which a new movement is now in development. Agitation against the landlord system and excessive rents is perennial, and has always been the chief plank in the Nationalist platform; but now the agitation is led and voiced by a Unionist of Unionists, Mr. T. W. Russell, who for the last five years has been a member of the Conservative Government, holding office as Secretary to the English Local Government Board.

Russell is a Scotchman by birth, an Irishman by long residence, a temperance advocate all his life, a champion of the Union ever since the Home Rule movement began, a bitter opponent of such phases of the land agitation as the "plan of campaign," "boycotting," and the "no-rent" movement, and for many years looked on by the landlords as their protector. He is a Presbyterian, and represents an Ulster constituency. He has always taken a prominent and intelligent part in Parliamentary inquiries into the land question, has had no small share in framing recent land acts, and personally has been on friendly terms with prominent Nationalists. He may be called a poor man, but is rich in having simple tastes, few wants, and an independent spirit. On the eve of the general election he made a speech to his constituents denouncing the administration of the Irish Land Acts as unjust and intolerable. He knew that the speech would mean the relinquishment of his office and salary of $7,500 a year. His services to the present Government had been such that he was offered a non-political and permanent post with a higher salary, but he declined this, saying he preferred to devote the rest of his life to the Irish land question and to temperance.

Russell's position is that the Land Acts were just, necessary, and sufficient, but that the courts, manned with judges saturated with landlord prejudices and ignorant of the history of Irish land tenure, have consistently refused to give effect to the laws passed by Parliament. During the last twenty years, act has been piled upon act, each successive statute being an attempt to remedy the judicial decisions by which the administrators discovered that the plainest words meant exactly the opposite of what was intended, and what was conveyed by them to the man of ordinary intelligence. The present Land Commission Russell holds to be the worst of all in its constitution, presided over by a partisan judge, and packed with men steeped to the lips in landlord prejudice.

There is nothing new in all this—the Nationalists have been saying the same thing for years; but it gives a new complexion to the complaint that it should be made by a late member of the Conservative Government, a pillar of the Union, and backed by the Protestant farmers of Ulster. "What is the use," asked Russell, "of passing an act of Parliament, and then appointing administrators opposed to its very conception who proceed to strangle it?" In 1881 Parnell made the same objection, in anticipation, saying that the Government would never appoint as Land Commissioners and Sub-Commissioners persons who understood the needs of, and who could sympathize with, the tenant farmers.

Before 1881, reformers of the Cobden and Bright school maintained that the worst of all proposed ways of dealing with the Irish land question was to give facilities for landlord and tenant going to law with each other. The Land League in 1880 took the same line, that the evils of the landlord system could not be mended, and that the system should be ended by giving every tenant the right to purchase his landlord's interest at a price or rate to be fixed by Parliament. Thirty years' experience of the administration of English land laws in Ireland has brought Russell to the same conclusion. The Land Commission, he contends, is a court of injustice. In view of the fall in prices, the reductions made in Irish rents leave the

farmer worse off than ever. The tenant's improvements, which it was the object of legislation to exempt from rent, remain in substance the landlord's property. A gigantic lawsuit in every parish is not only an intolerable burden on both landlord and tenant, but an enduring cause of unrest and social ill-will. Irish courts of justice filled with appointees of the dominant class will never do justice between landlord and tenant; they are incapable of doing it. Emigration, starvation, wages of farm laborers, discontent, and "disloyalty" are due to the fact that the rents taken by the landlords, of whom not one-half reside on or know anything of their estates, leave farmers neither a decent subsistence, nor the means of paying laborers a living wage. It is the interest of lawyers to encourage litigation, and to prevent the rapid operation of the Land-Purchase Acts by raising questions of title and procedure; they are the one class that has benefited substantially by Irish land legislation.

T. W. Russell's proposal is that the landlords shall be compulsorily expropriated and at once. He is thus absolutely in accord with the claims and projects of the Nationalists, but he apparently intends to confine his agitation to Ulster, and up to this has refused to address meetings outside that province. His late position in the Conservative Government, his life-long connection with the Unionists, his thorough acquaintance with the legal intricacies of the land laws, and his vigor as a speaker will secure him a hearing and attention in the House of Commons which no Nationalist could expect or obtain. Russell is not a man to take off his coat for nothing; he means business. His voluntary sacrifice of a well-paid official position is a proof of his earnestness which will appeal to many Englishmen; he is an acute parliamentarian, an unusually vigorous speaker, and he has an irrefutable case. But he has heavy odds against him, and has to solve the question whether a great reform can be wrung from a hostile Government against the wishes of a class of which that Government has been and is the special protector. No such reform has ever been attempted in Ireland unless the agitation demanding it has been accompanied by violence and riots which threatened to win by force what was refused by legislation.

In his interesting account of the anti-rent agitation in the State of New York, Mr. Cheyney concludes that "the whole history of agrarian contest shows that a system of land-holding which has become disadvantageous to the community will finally be abolished, even if what appear to be individual rights have to suffer in the process." That agitation was not conducted and would not have succeeded without violence. In Prince Edward's Island, the abolition by law of landlordism was also practically obtained by violence. Travelling this year in the State of Baden, every farmer to whom I spoke of the apparent comfort and prosperity of the farmers and country villages told me it dated from 1848, when oppressive manorial rights and dues, class privileges, and unequal taxation were abolished, but not until mansions had been wrecked, courthouses and records destroyed, and terror struck into the class whose oppressions were complained of.

The disadvantages of Irish land-tenure to both Ireland and England no longer need any proof. Generations of reformers have passed away without seeing their hopes realized, and now, after thirty years of continual patchwork legislation by the British Parliament, we have the same cry that this evil, to remedy which men have labored their lifetime, spent years in prison or exile, suffered capital punishment, been execrated by those whose unjust privileges they attacked, cannot be mended. It must be ended once and for all. England has many difficulties now confronting her, and if her difficulty is Ireland's opportunity, the present Irish movement may be more effectual than preceding ones.

AN IRISHMAN.

THE MANUSCRIPTS OF THE CONDÉ MUSEUM.—I.

PARIS, January 12, 1901.

On the 3d of April, 1897, when the Duke d'Aumale was on the point of starting for Italy, he left a note containing these words: "There shall be taken from my estate a sum of fifty thousand francs, which, under the supervision of my executors, shall be employed in finishing and printing the catalogues and inventories of the Condé Museum." The two first volumes of these catalogues have just appeared—magnificently made, and wholly consecrated to the manuscripts preserved in the library at Chantilly. The introduction was written entirely by the Duke d'Aumale, and is his personal work. The Duke always took a keen interest in his manuscripts. The first which he possessed came to him from the Condés and the Montmorencys. Speaking of the Constable of Montmorency—

"If the terrible warrior," writes the Duke d'Aumale, "whose severity was celebrated by D'Aubigné, was not a great clerk, he had noble instincts and a decided taste for beautiful things. Happy in the choice of the artists to whom he confided the execution of his thought, Jean Goujon, Jean Bullard, and others, he did not content himself with raising sumptuous houses, to fill them with masterpieces, sculptures, painted glass, tapestries; the literati, the poets were encouraged by him, and addressed to him their thanks in verse and in prose. To the works of the past he wished to add those of the present, and to unite on his bookshelves the most famous productions of the ancient writers. We have the testimony of André Duchesne, who was seized with admiration for the large quantity of manuscript books assembled by the Constable at Chantilly ('Genealogic History of the House of Montmorency')."

Many of these manuscripts have disappeared, but if we consider the vicissitudes which this collection went through, we are surprised that so many should be still left. Among those which have disappeared we must cite the Life of the Constable himself, which "John of Luxembourg, Bishop of Pamiers, Abbé of Ivry, of Arrivour, and of Saint Maur, one of the most eloquent men of his century, took the trouble to compose in Latin verse." The translation into French of the 'Triumphs' of Petrarch, by John of Mainières, Baron of Oppède, King's Councillor at the Parlement of Aix, dedicated to Montmorency, has also disappeared, with many other valuable manuscripts. The library at Chantilly fortunately still possesses volumes presented to Montmorency, in their old bindings, with the name, the arms, and device of the Constable. There are even some which belonged to the Constable's father, the first Lord of Chantilly bearing the name of Chantilly, Guillaume of Montmorency (his portrait, by Jean Clouet, may be seen at the Louvre). The grandson of the Constable, Duke François, inherited his tastes and added much to his collection.

There are at Chantilly twelve fine manuscripts, which all have the signature of "Jehan du Mas, Seigneur de l'Isle," who attached himself early to the fortunes of the Bourbons, and belonged to the household of the Sire de Beaujeu, who lived at the court of Charles d'Orléans, the poet who was so long a prisoner in England. When the Sire de Beaujeu married Anne de France, the daughter of the Duke d'Orléans, Jean du Mas followed his fortune, and found opportunities for coming into possession of fine manuscripts, among others some of the manuscripts of the Duke de Nemours. The Duke d'Aumale gives many curious details concerning forty-three manuscripts which belonged to Antoine de Chourses and to his wife, Catherine de Coëtivy.

The first inventory of the Montmorency manuscripts was made when the property of the Prince de Condé was seized and confiscated to the crown. The Prince had become a rebel, and he reëntered France only after the peace of the Pyrenees. He regained possession of his estates and of Chantilly, and when the Duchy of Bourbon was allotted to him in exchange for the Duchy of Albret, he found in the Castle of Moulins many fine books which the Bourbons had collected in the eighteenth century. All the manuscripts at Moulins were added by him to those of Chantilly.

The Prince of Condé, when he retired to Chantilly, took great care of his collections, and made many new acquisitions. In 1693, Pierre des Noyers, Secretary of the courageous and romantic Marie de Gonzague, Queen of Poland, the friend of M. le Prince, "the hero," left his library to Condé, and, among other manuscripts, twenty folio volumes of the correspondence of Marie de Gonzague. When Prince Louis-Joseph de Condé (who formed at the time of the Revolution the so-called army of Condé) built in Paris the palace which is still styled the Palais Bourbon, though it is now assigned to the President of the Chamber of Deputies, as it is close to the Chamber, the collections of manuscripts and books at Chantilly were transported to Paris.

"The Revolution," says the Duke d'Aumale, "was not long in troubling their peace. They were first maintained where they were, then passed to a depository in the Rue de Lille, somewhat in disorder. The printed volumes were dispersed and distributed among the libraries of the great cities of France. As for the manuscripts, united to the Archives, they were transported to the National Library, while the portfolios of charters, title-deeds, papers, etc., went to augment the somewhat disorderly National Archives, which they left afterwards, probably a little diminished. However, thanks to these circumstances, the manuscripts and papers of Condé were able to escape the complete dispersion which was the fate of so many other collections."

When Prince Louis-Joseph (the *père Prince*, as he was familiarly called in his family) came back to France in 1814, he was somewhat weakened in intellect by age, but not so much so that he did not remember what belonged to him. Many offers of hospitality were made to him. He quietly said, "I want to sleep in my own house," meaning the Palais Bourbon. This palace was then inhabited by M. de Fontanes, the grand master of the University. Being informed of it, the Prince said: "I do not know M. de Fontanes, but I shall be very happy to offer him the hospitality of my house." A bed had to

be made for the Prince in the Palais Bourbon, still occupied by M. de Fontanes. The Prince, who knew very well what he wanted, at once claimed his papers; he had studied them before the emigration, as he wrote an essay on the Life of the Great Condé. The papers were without delay returned to him.

When the Duke d'Aumale came into possession of the manuscripts of the Condé family, he first took the trouble to study and classify them. It was afterwards his good fortune to add, by purchase, some very valuable manuscripts to the collection. He tells us that, even at the time when he made war and became Governor in Algeria, he looked at his manuscripts between two campaigns. When he left for England after the Revolution of 1840, he sent for his collection of manuscripts and books, as soon as he had bought Orleans House at Twickenham, and he had a special wing added to the house for his library. He spent many lonely evenings in it, making himself familiar with the old manuscripts, and his great knowledge of French history helped him often in the study of these documents, many of which had an historical character.

In his purchases, he took special care to buy works not only which had a great artistic merit, but which had belonged to important personages, or which gave representations of them. The collection of his direct acquisitions consists of no less than 550 volumes, some of which present a history of the art of the miniaturist and of the decoration of vellum in its most brilliant form. We may cite, for instance, the Sacramentarium of Lorch; the portrait of the Emperor Otho (a leaf detached from a book of the tenth and eleventh centuries); the Psalterium of Ingeburga of the thirteenth century with which Saint Louis said his prayers; the Breviarium of Jeanne d'Evreux, belonging to the fourteenth century; the Horæ of the Duke de Berry, an incomparable monument of Franco-Italian art about 1400; the third volume of the 'Historical Mirror,' which belonged to the Duke de Nemours; the Horæ of Étienne Chevalier, from which detached pages had been cut, with their miniatures by Foucquet. These admirable vellum miniatures are, the Duke d'Aumale justly says, the perfection of French art in the Middle Ages. They were bought by him at Frankfort, he had them put in black frames, and they adorn the walls of a small room which he called his *Sanctuarium*, where are placed also two pictures by Raphael, the famous "Virgin of Orléans," which once belonged to the Regent of Orléans, and the three Graces, one of the works in the first manner of Raphael, which came from the galleries of Lord Dudley. Besides these two Raphaels there is a picture by Filippino Lippi, on an Italian *cassone* representing the scenes between Esther and Ahasuerus as they are related in the Bible. This admirable piece of Lippi's was one of the last purchases of the Duke d'Aumale; he was very proud of it, and liked to show it to his visitors. In the series of his illustrated vellum manuscripts, I cite (to continue the chronological order) a Diodorus Siculus and the 'Gallic War' of the time of Francis I.; and, in a later period, charming volumes of Jarry and of Rousselet.

Correspondence.

THE CONSTITUTION IN THE TERRITORIES.

To the Editor of The Nation:

Sir: Your correspondent of January 31, writing on "The Constitution in the Territories," asserts that it has long been settled historically that, "in legislating for the Territories, Congress is not limited by the Constitution." In support of this assertion he presents the following points: (1) Congress prohibited slavery in the Northwest Territory, although the Constitution gave Congress no power to interfere with slavery in the States; (2) Congress prohibited the importation of slaves into the Louisiana Territory before 1808, although the Constitution "protected the African slave trade with the States until 1808"; (3) the Constitution does not guarantee a republican government to the Territories, although, "wherever the Constitution goes, republican government goes with it."

This reasoning, I take it, is based upon a fundamentally mistaken notion of the Constitutional Law of the United States. Back of it all is the assumption that, "if the Constitution goes into the Territories, it goes as a whole," meaning, evidently, that, if Congress is subject to any limitation in the Territories, it is subject to the same limitations which bind it in the States. This is not the view entertained by the Supreme Court. According to that authority, the Constitution does go into the Territories, but, in the nature of the case, the provisions of the Constitution which refer to the States do not refer to the Territories. The Constitution defines the position of the States, and it defines the position of the Federal Government in our political system. The position of the Federal Government is not the same as the position of the States; yet no one has suggested that the Constitution does not for that reason "extend to" the Federal Government. In the same way the Constitution defines the position of the Territories, and that position is not the same as the position of either the Federal Government or the States. Further, the Constitution defines the relation of the Federal Government to the States and also to the Territories; but the relation sustained is not necessarily the same in both cases. Indeed, it is necessarily not the same, for otherwise there could be no distinction between States and Territories; in that case the Territories would be States.

The rule for interpreting the powers of the Federal Government in the States is, that all power not specifically given by the Constitution to the Federal Government, or denied by it to the States, is reserved to the States. Your correspondent assumes, evidently, that if the Constitution "goes into the Territories," the powers of the Federal Government there must be interpreted by the same rule. No greater misconception could well exist. The Federal Government has been given general, not specific, legislative power in the Territories, and the obvious rule, therefore, for interpreting that power is that all power not specifically denied to Congress is reserved to Congress. What are the specific limitations upon the power of Congress? They are the absolute prohibitions which guarantee the personal and property rights of the individual. In other words, the Constitution enumerates what the Federal Government can do in the States, but only what it cannot do in the Territories. Such was the view of the Supreme Court in the case of Murphy vs. Ramsey, decided in 1884 (114 U. S.).

With this theory the slavery legislation of Congress was not in conflict. Congress could not prohibit slavery in the States because it had no specific power to do so; it could prohibit slavery in the Territories because it was not specifically forbidden to do so. Likewise, it could prohibit the importation of slaves into the Territories because the constitutional limitation upon the power of Congress in this respect was not an absolute limitation, but referred in terms to the importation of slaves into the States "now existing." Finally, it is admitted that the Constitution guarantees a republican government to the States, and not to the Territories, but it does not follow that, wherever "the Constitution goes, republican government goes with it." The part of the Constitution which "goes into the Territories" is that part which gives Congress general legislative power over them, and the part which formulates the absolute limitations upon the power of the Federal Government everywhere. These limitations do not secure for the Territories political privileges, but personal and property rights. As the Court has so clearly said: "The personal and civil rights of the inhabitants of the Territories are secured to them, as to other citizens, by the principles of constitutional liberty which restrain all the agencies of government, State and national; their political rights are franchises which they hold as privileges in the legislative discretion of the United States."—Respectfully,

Carl Becker.

THE MISSOURI RIVER COMMISSION.

To the Editor of The Nation:

Sir: In its issue of January 17 the *Nation*, whose established reputation for probity and truth entitles its writings to more than ordinary consideration of the reading public, does great injustice in its criticism of the Missouri River Commission. The uninformed reader of the item would certainly be led to believe that the Commission had, of its own volition, diverted funds from their proper purposes of improving the channel to the protection of private property on the banks of the river; that the personnel of the Commission is wastefully large in proportion to that of the Mississippi River Commission; that the appropriations made for the improvement of the river are entirely incommensurable with its present and prospective commerce, and that it is less worthy of improvement than Raccoon Creek, N. J., or Bayou Teche, La.

Allow me to state a few facts in controversion. The Missouri River Commission has never, on its own motion, allotted nor advised the allotment of a single dollar from the general appropriation for the river to other than the legitimate purposes of channel improvement; on the contrary, in every one of its reports since its creation in 1884 it has protested against any diversion of funds to detached localities, and has strongly advised the prosecution of continuous and systematic work of improvement for

navigation purposes only. Its policy is well stated in one of its early reports,

"that the primary object of the improvement is to deepen the channel, and thus provide cheap *through* transportation for freights, by which the country may be developed and the money paid out be finally returned to the United States; that the cost of protecting any portion of the bank from erosion is so great that it is only in exceptional cases that the annual interest upon the investment does not exceed the annual loss without protection; that while it is true that there is a small amount of commerce on the river at this time, the object is to increase that commerce, and, if that object fails, the whole scheme is a financial failure, whether the destruction of property has been stopped or not."

It is true that a large amount of the appropriations for the river, since the above was written, has been diverted to work of protection at detached localities, but in all cases such diversion has been made by enactment of Congress itself, and the Commission has acted simply as the executive of Congress in making such expenditures. The Commission has no apologies to offer in regard to the navigable condition of the forty-five miles of river at the head of and covering about one-third of the length of the first reach of the river above its mouth, for the systematic improvement of which the remnants only of the appropriations in recent years have been permitted, by Congressional action, to be devoted.

The figures given in the *Nation* of the comparative personnel of the Missouri and Mississippi River Commissions are not only misleading but erroneous. They were doubtless obtained from the biennial register of July 1, 1899, in which are published the names of all employees of the Engineer Department then in actual service. The figures form no gauge of the actual number of persons employed during the year, especially on those works which are carried on by hired labor and not by contract. Of the 286 names enumerated under the Missouri River Commission, 109 were day laborers, and the remainder included all employees, from assistant engineers to waiters on the snagboat, most of whom were performing only temporary service.

The 272 names mentioned as the personnel of the Mississippi River Commission relate only to the employees of its Secretary, whose duties are mostly confined to work of survey and preservation of records, and no mention is made of the 384 employees in the departments carrying on work of construction published in the same book. In the same register the officer in charge of the Mississippi River Improvement between the mouths of the Missouri and the Ohio Rivers is credited with a personnel of 1,185 names, and it would be most unjust to charge him with extravagance on such data.

That a comparatively small amount of *through* commerce exists at the present time on the Missouri River is not due to scarcity of population and freight, nor even to an insufficiency in quantity of water. The Commission has fully demonstrated that the supply of water is ample when its flow is concentrated by systematic controlling works to afford, at least, a 6-foot navigable channel. The comparison of the Missouri River, which traverses or borders seven States, and whose drainage area, even below Sioux City, Ia., comprises over 200,000 square miles, with Raccoon Creek, New Jersey, can only be regarded as an attempt at pleasantry. We might with equal justice make the comparison with the deep water of the Great Lakes over which millions of tons are carried annually, or with a harbor teeming with trade, but so situated and favored by nature that no improvement has ever been or ever will be required. The Missouri River is in much the same condition as a contemplated through line of railroad would be with a few miles of completed track between its termini. Not until its termini are connected will the benefits of its improvement become fully apparent. Even in its present condition of unsatisfactory navigation, the Missouri River is an arbiter of freight rates to near-by valley points.

The Missouri River Commission doubtless owes its creation to the supposition that the establishment of such a body would unite the various interests of the valley in the common object of improving the river for navigation purposes. That such result has not followed the establishment of the Commission, is due to the fact that different communities along the river have been more impressed with the desirability of immediate protection from the ravages of the river than of opening up an artery of commerce, the benefits of which would not reach their particular localities for a number of years.

The administration of the Commission has been much the same as would have ensued had the work been in charge of a single officer, and the additional expense attending its administration is measured by the salaries of two civilian commissioners, the travelling expenses of the members, and a small additional clerical force. The Commission has made no protest against its abolishment, but does protest when misstatements are made affecting its integrity or its work.—Very respectfully,

ANTHONY H. BLAISDELL,
Mem. Am. Soc. Civil Engineers,
Assistant Engineer to the Missouri River Commission.

ST. LOUIS, February 2, 1901.

THE GENERAL, THE MINISTER, AND THE MISSIONARIES.

TO THE EDITOR OF THE NATION:

SIR: As the vast majority of your readers will not see a letter from Minister Conger's niece which appeared in the issue of the Des Moines, Ia., *Leader* for Sunday, January 27, I send you some verbatim extracts from it. It was written to the young lady's three brothers, residents of Des Moines:

"Stacks of silver have been found in Peking, but we have found very little. The Japanese took a treasury and must be worth millions now. Gen. Chaffee doesn't want to confiscate anything and acts accordingly. M. de Giers, the Russian Minister, got permission for his daughter and two sons, and Uncle Ed, Aunt Sarah, and I to go through the imperial city, which is under Russian control. . . . The houses are kept sealed, and a colonel with five officers took us around to unlock and lock the doors again. We went into the room where the Empress Dowager received the foreign ladies, and through all of her rooms. . . . In front of the throne was a table with handsome ornaments on it. I sat on the throne, as I did on nearly every one we saw. . . . We went on the island where the Empress was isolated, and in the throne-room where Uncle Ed had been received. . . . There were lots of store-rooms, but they will be empty in a short time, for the Russians are the worst looters imaginable. When we went there we were told that nothing should be carried away, consequently we were abiding by that to the very end, when we went into a room full of nice little snuff-boxes and jade dishes, and the officer in charge turned his back and all of the other officers filled their pockets. Then we noticed throughout all the buildings many things had been carried away, and that day the amount of stuff that disappeared in pockets and blouses was more than we could tell. We followed their example, and brought home a few little things. Though small, they are very fine, besides the fact that they are right from the palace."

After some description of the "Forbidden City," the imperial ancestral halls, "beautiful in handsome gold lacquer and yellow brocade satin," the camping-palaces of our troops and the British, the letter goes on:

"The Congregational missionaries moved into a prince's palace. It was full of beautiful things, so they have been selling them for the benefit of the mission. We went up there several times, each time finding things in the most out-of-the-way places. In dark, dusty, unused rooms are boxes piled on boxes, and cupboards where we found magnificent pieces of red lacquer, beautiful porcelain, and silks and fur-lined robes till there is no end."

The writer does not mention taking even "a few little things" here. Probably the missionaries kept better watch than the Russian guards. It will be interesting to see whether or not the next financial report of the American Board will contain "Proceeds of loot of Prince ——'s palace by missionaries, $——." As the Minister's baggage comes in free of duty, we may not hope to know just how well his family fared.

Yours very truly,

CELIA S. M. CURRIER.

IOWA CITY, IOWA, February 2, 1901.

JOHN MARSHALL ON EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: I enclose to you for publication a letter of John Marshall's, the original of which is in my possession, and, so far as I know, has never been printed before. It is addressed to

"Mr. John Marshall Jr.
"of Mont blanc
"near Oak hill
"Fauquier"

It is postmarked "Richmond, Va., Dec. 8." This, with the allusion to his grandson's letter of November 29, shows that its date should be December 7 instead of November 7. It is of interest as showing the great jurist's ideas on education.

WILLIAM F. ABBOT.

WORCESTER, MASS., February 2, 1901.

Richmond Novr 7th 1834

My dear Grandson

I had yesterday the pleasure of receiving your letter of the 29th of November, and am quite pleased with the course of study you are pursuing. Proficiency in Greek and Latin is indispensable to an accomplished scholar, and may be of great real advantage in our progress through human life. Cicero deserves to be studied still more for his talents than for the improvement in language to be derived from reading him. He was unquestionably, with the single exception of Demosthenes, the greatest orator among the ancients. He was too a profound Philosopher. His "de officiis" is among the most valuable treatises I have seen in the latin language.

History is among the most essential departments of knowledge; and, to an American, the histories of England and of the United States are most instructive. Every man ought to be intimately acquainted with the history of his own country. Those of England and of the

United States are so closely connected that the former seems to be introductory to the latter. They form one whole. Hume, as far as he goes, to the revolution of 1688, is generally thought the best Historian of England. Others have continued his narative [*sic*] to a late period, and it will be necessary to read them also.

There is no exercise of the mind from which more valuable improvement is to be drawn than from composition. In every situation of life the result of early practice will be valuable. Both in speaking and writing, the early habit of arranging our thoughts with regularity, so as to point them to the object to be proved, will be of great advantage. In both, clearness and precision are most essential qualities. The man who by seeking embellishment hazards confusion, is greatly mistaken in what constitutes good writing. The meaning ought never to be mistaken. Indeed the readers should never be obliged to search for it. The writer should always express himself so clearly as to make it impossible to misunderstand him. He should be comprehended without an effort.

The first step towards writing and speaking clearly is to think clearly. Let the subject be perfectly understood, and a man will soon find words to convey his meaning to others. Blair, whose lectures are greatly and justly admired, advises a practice well worthy of being observed. It is to take a page of some approved writer and read it over repeatedly until the matter, not the words, be fully impressed on the mind. Then write, in your own language, the same matter. A comparison of the one with the other will enable you to remark and correct your own defects. This course may be pursued after having made some progress in composition. In the commencement, the student ought carefully to reperuse what he has written, correct, in the first instance, every error of orthography and grammar. A mistake in either is unpardonable. Afterwards revise and improve the language.

I am pleased with both your pieces of composition. The subjects are well chosen and of the deepest interest. Happiness is pursued by all, though too many mistake the road by which the greatest good is to be successfully followed. Its abode is not always in the palace or the cottage. Its residence is the human heart, and its inseparable companion is a quiet conscience. Of this, Religion is the surest and safest foundation. The individual who turns his thoughts frequently to an omnipotent omniscient and all perfect being, who feels his dependence on, and his infinite obligations to that being will avoid that course of life which must harrow up the conscience.

My love to your mother & the family.

Your affectionate Grandfather,

J. Marshall.

BINNACLE.

To the Editor of The Nation:

Sir: Permit me through your columns to ask for information concerning the word *binnacle*, which was referred to in your issue of January 17, in the report of the meeting of the American Dialect Society. The facts as known to me are these: Along the two branches of the Delaware River, in Delaware County, N. Y., the word is in common use. John Burroughs, in his essay, "Pepacton," notes the word as one hitherto unknown to him, and writes it "binocle." I am informed by a surveyor of thirty years' experience in that region that the word is used frequently in deeds as a landmark, and that the first syllable is often spelled *ben*. Along the Susquehanna River, above Unadilla, N. Y., the word is known. At Bouck's Island, in the town of Fulton, Schoharie County, the smaller channel of the Schoharie running back of the island has always been called the "bennakill."

In the regions just named the word always refers to a body of water, and has some one or all of the following meanings: water diverted from its natural course for use as a water-power; a lesser river channel, often isolated from the main stream when the water is low; an inlet into the river flat, aside from the main current, or, as Burroughs says, "a still, miry place at the head of a big eddy."

The derivation that has been suggested, if it be the true one, entitles the word to a place by the side of *vly* and *clove* as a legacy of the early Dutch hunters and settlers in the Catskill region. Binnacle is a compound word of Dutch origin, and should be written *binnekill*. The word *kill* in the sense of stream is found frequently along both sides of the Hudson, for some distance up the Mohawk, and in Ulster, Greene, Schoharie, Delaware, and Orange Counties, to say nothing of occasional occurrences of it along the whole course of the Delaware River. The first part of the word is probably the Dutch *binnen*, meaning "inner." A parallel word is found in Ulster County, where, near the village of Binnewater, there is a chain of five lakes bearing the names First Binnewater, Second Binnewater, etc. Perhaps some one who is well acquainted with that region can furnish additional evidence as to the use of *binne*.

Although the main facts concerning the word in question are certain, it is worth while to gather a larger amount of material for the sake of determining how widely the word is used, and what variety of meanings it bears. In behalf of the American Dialect Society, I ask that any readers of the *Nation* who are able to contribute facts in point would kindly communicate with me. One may reasonably look for the occurrence of this word in those regions where *kill* is in use. It is hoped that this request will appeal not only to philologists, but to geographers and geologists who are familiar with the Catskill region, and to historical students who have consulted the land grants and deeds of the early Dutch settlers.

Yours very truly, Edward Fitch.

Hamilton College, Clinton, N. Y.,
January 28, 1901.

INTELLIGENCE IN THE CLIPPINGS BUSINESS.

To the Editor of The Nation:

Sir: The Secretary of the American Economic Association has a contract with a well-known press-clippings bureau to supply notices of that organization and of its publications. He recently received from the bureau a magazine article of forty-odd pages entitled, "The Scope of Sociology." Apparently the article overran a signature of the periodical by a single page, and the bureau dutifully procured a handproof of that page. Examination of the matter thus forwarded reveals the following passage as the sole reason for sending the clipping to the American Economic Association:

"We would distinguish four phases which human association on a large scale presents:

"(1.) Biologic association.
"(2.) Economic association.
"(3.) Civic association.
"(4.) Ethic association."

C. H. H.

Ithaca, N. Y.

Notes.

E. P. Dutton & Co. will shortly publish a 'Life of Joseph Chamberlain,' by N. Mureel Morris, and 'Lord Rosebery: His Life and Speeches,' by Thomas F. G. Coates.

'War Impressions: Being a Record in Color' (by a new process), by Mortimer Menpes, is Macmillan's latest promised contribution to the history of hostilities in South Africa.

'The Rise of the Bookplate,' by W. G. Bowdoin, is announced by A. Wessels Company.

Fleming H. Revell Company have in press a 'Narrative of the Events of a Journey across China into Tibet,' by Dr. Susie C. Rijnhart, and 'Early Christianity,' by Prof. Herbert L. Willett.

An autobiographic 'Book of Reminiscences,' largely humorous and anecdotic, by Mrs. E. D. Gillespie, a descendant of Franklin, is soon to be issued by J. B. Lippincott Co.

The 'Cabin and Plantation Songs as Sung by the Hampton Students' (Putnams) obeys the current law of "Expansion" by issuance in a third edition embracing forty-four additional songs, but Hawaii, Japan and China, and Turkey are laid under contribution to the extent of eleven pages. Remote, if less remote, from cabin or plantation is also the "Grace before Meat at Hampton"; but the collection is avowedly representative of song at Gen. Armstrong's famous and deserving school.

One of the most attractive editions of the 'Divine Comedy' is that lately issued by the Oxford University Press (New York: Henry Frowde), in a single duodecimo volume of 557 pages, printed generously on thick paper and bound in simple blue cloth. Dr. Moore's text of 1894 has been reproduced without note or comment, but he has made a few changes, verbal and in the punctuation. Mr. Paget Toynbee, on his part, has supplied an index, chiefly of proper names, but not wholly, as the title-page suggests. During the coming year, it appears, we are to have a supplementary volume of critical, historical, and literary annotations by the Rev. H. F. Tozer.

An ingenuous little book, by Frances Fenton Sanborn, comes to us from the Pacific Coast, with the title, 'About Dante and his Beloved Florence' (San Francisco: The Whitaker & Ray Co.). Not wholly without method, and the fruit of personal travel in Italy, it is still a medley of simple narrative and abundant quotation in prose and verse from poets and essayists on Dante, and a blind typography enhances the confusion. There are a number of mostly stock illustrations. As a whole, the volume is likely to fulfil the compiler's aim to interest the quite uninformed.

The seventh volume of Dr. Guy Carleton Lee's sumptuous edition of 'The World's Orators' (G. P. Putnam's Sons) is entitled Part II. of the "Orators of England." The orators selected are Erskine, Canning, Mackintosh, Peel, Macaulay, Brougham, Lytton, Beaconsfield, Bright, and Gladstone. There are portraits of all of them, some of them quite as striking as their speeches. As to the latter, what is most striking is the absence of the quality which, in common parlance, is called "impassioned eloquence." The most effective of them consist mainly of calm, sensible reasoning; and they are

therefore almost as fresh as when they were first delivered.

Professor Toller's 'Outlines of the History of the English Language' (Macmillan) is, in many respects, excellent, and should be welcomed by the teacher and the student. The introductory chapter on the changes of form and meaning in words, with happy illustrations; the review of the Latin element in Old English; the account of the Old English poetic diction; the description of the sounds and inflections of Old English; and the sketch of the changes in these and other matters which have produced the English of later times, are among the sections that call for high praise. Nor, despite their precision of statement, can they be considered too difficult. The attempt to give an easy and untechnical exposition of "Grimm's Law" is, from the nature of the case, less successful. It is to be regretted that the author borrows his classification of Indo-European and Teutonic languages from Sweet, rather than from Brugmann or Streitberg; and that, for the classes of strong verbs, he has invented a new arbitrary order, which is neither the received one, nor that of Sweet, nor yet that of Skeat. The book also encourages the mistaken notion that, by reason of its large borrowed element, English differs from other languages in nature, and not merely in degree, thereby constituting a unique specimen of hybrid. In his Old English quotations, Professor Toller sometimes marks the long vowels (as on p. 127), and sometimes leaves them unmarked (as on p. 126, opposite). There is no index. These objections, however, are outweighed by the positive merits of the book. If accompanied by a considerably greater amount of reading than its own illustrative selections afford, it should prove of great service to college classes.

The publication of 'A Short History of French Literature,' by L. E. Kastner and H. G. Atkins (Henry Holt), will be welcome to teacher and student alike, for the volume presents, in some three hundred pages, a more than usually accurate and complete survey of its subject from the earliest times to the present day. We must note, however, that, as in other histories of the same type, the authors were at times driven into extreme compression; thus, in the first forty pages the reader is brought at a hand-gallop down to the sixteenth century. Corresponding summariness of judgment may also be expected, even where greater amplitude of treatment leaves an opportunity for precision of detail. To say, for instance (p. 367), that Balzac "cannot paint . . . an honest man or a virtuous woman" is to ignore 'Le Médecin de Campagne,' the Baroness Hulot of 'La Cousine Bette,' and 'Eugénie Grandet.' We also note that, if discussion of Decadence and Symbolism implies mention of such men as Moréas and Viélé-Griffin, no treatment of Romanticism should omit Victor de Laprade.

'Winsome Womanhood,' by Margaret Sangster (Revell), is precisely what its name and its honored author's name lead one to expect. Wise, kind, sane, religious in matter; in manner, lucent syrup tinct with cinnamon. If our girls and women would follow its counsels, they would be more reasonable, healthy, and cheerfully devout; if they should imitate and, as imitators always do, exaggerate, the softer side of its literary style, we should tremble. "Ah, dear girls, be happy, be sweet, be good"; but please, dear girls, do not say "attent," which if Scriptural is archaic; be "vicarious" by all means, since we read that "the house-mistress" and especially "the editor" ought to be, but please do not call it so. A vicar by any other name would read as sweet. We pay Mrs. Sangster the tribute of believing that she has admirers ready to turn imitators, and we should wish their footsteps planted in those of her paths where faring further they would fare better and not worse.

The subject of Charles M. Barrows's privately printed 'Suggestion instead of Medicine' (Boston) is of great practical and philosophical importance, but the present writer contributes little that is new with regard to it, unless certain very crude theories about the frontal and occipital lobes of the brain and their nutrition deserve to be classified in that way.

In spite of the immense advance that has been made in the art and science of medicine, there was never a time when distrust of the long-established methods of the doctor was more in order than now, or when "nature cures" of one sort or another were more in favor. Unfortunately, although this critical state of mind has its eminently good side, the conclusions to which it leads are often more ill-balanced and extravagant than those for which they are substituted. The conviction that one has a mission to destroy false idols furnishes the will and zeal to write a vigorous book, but not the calmness to write a well-balanced one. We do—some of us—eat too much, too fast, too early, and too late, and the doctors, for fear of starving their patients, and in distrust of the *vis medicatrix naturæ*, stuff them and dose them too, to their injury. Yet fasting cures, too, count their victims, and Dr. Mitchell's rest-cure with "overfeeding" counts its successes. Dr. Edward Hooker Dewey's 'No-Breakfast Plan and the Fasting Cure' (Meadville, Pa.) goes to extremes, but contains, also, much that is true for those for whom it is true. A generous fast has its use, as well as a generous feast, and rarely does the mischief with which it is credited by those who have never tried it.

'The Human Hair: Its Care and Preservation,' by J. R. Stitson, M.Sc. (New York: The Maple Publishing Co.), is a sensible non-medical treatise on the care of the hair and scalp, and of the general health, diet, etc., as bearing on that subject. The author, in his preface, disclaims any desire to encroach on the legitimate field of the physician, but it is always a question whether the narrow path of semi-professionalism can be successfully trodden. Domestic remedies are useful in simple cases, but who except a trained physician can say with authority whether our own case is really simple or not? The care of the hair is treated not only from the hygienic standpoint, but also from the social or cosmetic, and evidently on a basis of experience and good sense.

'Clinical Studies in Vice and in Insanity,' by George R. Wilson, M.D., Medical Superintendent of Mavisbank Asylum (Macmillan), is one of the books upon the much-discussed subjects of which it treats that the lay reader may peruse with interest and profit. One does not find in it the critical, measured, text-book discussion of the subjects indicated, but instead of it a keen and thoroughly human detailed study of cases, such as reminds one of the remarkable work done in a similar line by the French psychologist Janet, except that, in the present work, the analyses are not pushed so far, and, relatively speaking, are clinical and social rather than technically scientific in their tendencies. Conscientious original contributions of this sort by an experienced and intelligent observer are always valuable and deserving of study. The reader may not agree wholly with the writer's views, but he cannot fail to be stimulated, and in the present instance he is likely to be both interested and entertained.

Several recent publications of the Deutscher Kolonial-Verlag ('Tropische Agricultur'; 'Viehzucht und Bodencultur in Südwestafrika'; 'Der Deutsche Export nach den Tropen') speak for thorough German method as applied to problems of recognized difficulty. The first two treatises are written by settlers who attempt to give new arrivals the benefit of their own experience. Clothing, tools, transport, fertilization of the soil, management of cattle-herds, treatment of native labor—these and other subjects are discussed in plain and simple terms that any one can understand. The seamy side is prominent—one notes remarks on land-purchase which are peculiarly enlightening as to the failure of Germany to divert emigration to Southwest Africa. The emigrant has to deal with speculative companies, undergo heavy expense while awaiting their action, and then runs great risk of finding himself no more than the disillusioned possessor of several barren sand-hills. The author is no pessimist, but he frankly admits that $100 will hardly cover expenses of the delay alone. He, however, expects Southwest Africa to take rank with the Cape and West Australia as a cattle-raising land. The story of trade with the colonies does not contribute anything of value to those who assert that trade follows the flag; trade seems rather to follow the English. German progress is slow and intermittent, and Imperial subventions quite the order; things are yet "in their beginnings." Germany admits that her possessions are, on the whole, distinctly second-class, but she points with legitimate race pride to German tenacity and its past achievements in the face of odds.

Mr. A. P. C. Griffin, chief of the division of bibliography of the Library of Congress, has issued a second edition of his list of books and periodical articles relating to colonization and kindred subjects. The present edition is more exhaustive than the first, containing the more recent publications and forming a respectable booklet of 156 pages. The purchase of a valuable collection of Dutch publications on colonies is announced. This places the National Library far ahead of almost all university libraries, except that of Yale and possibly a few others, in opportunity for research work on these reliable original sources. Mr. Griffin's list forms a good working bibliography, but is far from complete; conspicuous omissions of important contributions occur here and there, but will doubtless be remedied in succeeding editions.

The leading article in the January number of the *National Geographic Magazine*, which begins its twelfth volume with a new and attractive cover and general make-up, is on the influence of submarine cables upon military and naval supremacy. Taking for a text, as it were, the fact that the accidental non-delivery of two cable mes-

sages to Admiral Cervera "undoubtedly largely changed the whole history of the Spanish-American war," the author, Capt. G. O. Squier, United States Army, proceeds to show "that the very foundation of successful naval strategy is efficient and exclusively controlled communications, and the lack of them more serious than inferior ships." A description of the cable system of Great Britain is followed by a sketch of that proposed for this country, which he estimates would cost at the most $30,000,000. "For the expense of three or four first-class battle-ships," he concludes, "the United States can provide herself with the most powerful means known for extending and preserving her commercial influence and for the speedy pacification and civilization of the people who have recently come under her control, and can secure a strategic advantage—military, naval, and political—which is necessary to her position as a world Power." There is, also, an account of the Indians of southern Patagonia, with illustrations, in which the fact is noted that, with the coming of the horse, the bow and arrow seem to have been given up for the bolas. Mr. A. P. Davis summarizes the principal questions submitted to arbitration in regard to the location of the boundary between Nicaragua and Costa Rica, and there is a condensed statement of the engineering problems presented by the Nicaragua Canal. Mr. C. A. Schott of the Coast Survey treats of its recent contributions to our knowledge of the earth's size and shape.

From Meyer Bros. & Co., No. 26 West Thirty-third Street, we receive six numbers of *Figaro Illustré*, summarizing with text and pictures the several exhibits of Russia, Italy, Germany, Austria, Holland, and Sweden at the late Paris Exposition. Of these, we have found the first two particularly interesting, and perhaps for the statuary as much as for anything, but we can mention only Bernstamm's statue of Rubinstein, and Biondi's group of the Saturnalia. There are numerous colored plates besides the ordinary halftones.

The same firm adds two notable contributions to the history of the war in South Africa. One is a quarto brochure of thirty-two pages, consisting of photographic scenes exclusively from the Boer side, with descriptive legend for each; and portraits of all the patriot leaders. It is of French provenance, and is entitled 'Vaincre ou Mourir: La Guerre au Transvaal.' Nothing in it is grimmer than the "cartoucherie de soldat," decorated with buttons, appellations, and other ornaments taken from the fallen English—almost scalp-locks. The other, 'Kruger le Grand et John Bull le Petit,' is a biting series of cartoons by Caran d'Ache, of which the cover shows Kruger's stolid burgher face in the foreground, while, in the middle distance, John Bull, hampered by ball and chain, is vainly endeavoring to net the butterfly De Wet. Humor, pathos, and satire are admirably mingled by this master, as in the examples of British reconnoissance, when a mountain is located by personal collision, and a plain by the scout's fall over a precipice; the cavalryman lugging off his accoutrements on the giving out of the 100,000th horse; or the Boer offering to his prisoner soup in place of "the Queen's chocolate," while his farmstead is being fired behind his back by a mounted Briton. Chamberlain is depicted before the rising of the curtain as showman of something that does not come to pass, while "Business is business!" represents "Tommy" ticketed all over with Chamberlain family labels for every article worn or used.

A geological and geographical excursion to Iceland, Greenland, and Labrador is planned for the coming summer, under the direction of Dr. R. A. Daly of the department of geology and geography, Harvard University. Scientists taking part may pursue independent studies. The inclusive fee for membership is $500.

The Philippine Information Society of Boston, of which Mr. L. K. Fuller, No. 12 Otis Place, Boston, is Secretary, has published three pamphlets, which "will be sent, free of cost, to any one sending the name of his Congressman, stamps to cover postage" (two cents for each pamphlet), and his address. But only one set will be sent to one address.

We learn too late of the death of Dr. Fitzedward Hall on Friday last, in England, to take a proper notice of this event this week. As "F. H.," he has been known to our readers for many years. His departure will be keenly felt in Dr. Murray's Scriptorium, to which the Oxford English Dictionary's proofs daily returned from Marlesford laden with the spoil of probably the most extensive word-reading ever undertaken by any man. Dr. Hall was born at Troy, N. Y., in 1825, and graduated from Harvard in 1846.

—Vols. lxix. and lxx. of the 'Jesuit Relations' (Cleveland: Burrows Brothers Co.) recall two events which proved of the utmost consequence to missionary effort among the American Indians: first, the final duel of English and French for the mastery of the continent, and, secondly, the overthrow of the Jesuit order. Concerning the latter occurrence, one may say that the Jesuits were expelled from France and the French possessions some years before Clement XIV. issued the brief, *Dominus ac Redemptor*, which suppressed the whole society (1773). In April and August of 1762, the Parlement of Paris issued edicts which had the effect of closing the Jesuit colleges, and although Louis XV. did not confirm the action of the lawyers until November, 1764, the order was practically defunct in France from the moment when the Paris Parlement declared against it. One of the documents in vol. lxx. is an account by François Watrin of the circumstances which attended the banishment from Louisiana. By a decree of July 9, 1763, the superior council of that colony condemned the Jesuits to an even worse punishment than they had received at home. Their slaves were sold at auction for the benefit of the King; the Capuchins received the sacred vessels and other church furniture which they had owned; their chapel became private property, and the new owner decided to pull it down. Watrin sadly describes its dismantled state. "The pictures had been taken away, the shelves of the altar had been thrown down, the linings of the ornaments had been given to negresses decried for their evil lives, and a large crucifix, which had stood above the altar, and the chandeliers, were found placed above a cupboard in a house whose reputation was not good. To see the marks of spoliation in the chapel, one might have thought that it was the enemies of the Catholic religion who had caused it." Such was one scene in the departure of the Jesuits from a country upon which they had lavished so much energy and life.

—The other subject to which we referred above, namely, the French and Indian war, is illustrated in this series by a piece of great celebrity—Roubaud's contribution to the 'Lettres Édifiantes.' Herein the massacre at Fort William Henry is described with all its frightful details. Roubaud has a poor reputation for personal honesty. After the fall of Quebec, he truckled to the English without gaining their confidence. However, his letter is a prime authority for the most devilish tragedy in all Indian warfare. The Abenakis, who belonged to the missionary's own flock, receive a certain amount of commendation because they were not cannibals! These volumes also contain several documents which are valuable for the social and economic history of New France in the last days of the Old Régime.

—After the brilliant stage success of "L'Aiglon," it seems almost superfluous to dwell on the undeniable dramatic qualities which captured an artfully stimulated public, eager for something less tawdry than the nightly spectacles that have so long

"Tainted the stage for some small snip of gain."

The epic proportions of the Napoleonic story, set off by their contrast with the trivialities of court life and the fluttering impotence of a stripling, are still capable of holding audiences, even though these may not be exclusively French. It is not so much the pathetic conditions which life has imposed on the central personage as the constant suggestion of a mighty influence in the background, that gives to this drama its insistent theatrical effect. Add to this the vivid play of a multitude of clearly drawn characters, heightened by a skilful use of situations which escape from being too cheaply melodramatic by the very ingenuity and intensity of their presentation, and immediate triumph is secured. The tardy appearance of the play in book form (Brentano's) now gives the student leisure to note and study the principal grounds which may determine its claim to a permanent place in dramatic literature; for it seems hardly likely that, outside of France, *reprises* will be at all frequent. Setting aside, therefore, the construction of its plot, which suffers (particularly in the last two acts) from over-elaboration, we may be confident that "L'Aiglon" will yet live to be read for the enjoyment of its enduring historical interest, but still more because of the finish of its sustained poetical style. The technical handling of so painfully artificial a metre as the French Alexandrine here appears in its perfection, as shown in many quotable verses. We may note, as an example, the slow dragging effect of

"Les batailles sortaient en s'étirant les ailes,"

contrasted with the staccato movement in the speeches of *Flambeau* and the quarrel-scene of act iii., sc. 3. The work itself continues and applies the dramatic traditions of France, rather than suggests a new orientation or heralds a new era; for this very reason, it appeals to all who still preserve the conception of the drama as a coherent development—not as a succession of hazardous experiments.

—Readers of Prof. F. W. Maitland's recent books will have observed how greatly he has been influenced by the great Berlin

jurist, Otto Gierke. He has now at once shown his sense of obligation to his master, and rendered a considerable service to English-speaking students of political theory, by disinterring the section on "Die publicistischen Lehren des Mittelalters" from the third volume of 'Das deutsche Genossenschaftsrecht,' and translating it into English ('Political Theories of the Middle Ages'; Cambridge [Eng.]: University Press; New York: Macmillan). He has added an Introduction written with all his accustomed learning and wit, which will do a good deal to render more intelligible to us conceptions hitherto very foreign to English and American lawyers and publicists. Dr. Gierke's theme is the history of the legal doctrine of Corporation, and in especial the advent of that theory of the corporation as a "fictitious person" which drove out, in his opinion, the older and truer German doctrine of Fellowship (*Genossenschaft*). But, as Mr. Maitland points out, the discussion concerns much more than a merely legal definition: it goes to the very roots of political theory. What is the State, what the People, what the Public; have they "wills," and how are they related to the individuals who compose them?—in fact, all the issues involved in "contractual" or "organic" theories of society—are among the questions which necessarily present themselves. Gierke's text and Maitland's comment cannot in future be overlooked by the historian of political thought; nor ought it to be overlooked by "a sociology emulous of the physical sciences."

BOOKS ON ART.

Eighteenth-Century Color-Prints: An Essay on Certain Stipple Engravers and their Work in Color. Compiled, arranged, and written by Julia Frankau. With 51 pictures in monochrome and one in color. Macmillan. 1900.

Anthony Van Dyck: An Historical Study of his Life and Works. By Lionel Cust, F.S.A. London: George Bell & Sons; New York: Macmillan. 1900.

Chefs-d'œuvre of the Exposition Universelle, Parts 6 and 7. Philadelphia: George Barrie & Son.

Modern Pen-Drawings, European and American. Edited by Charles Holme. Special Winter Number of the *Studio.* 1900-1901.

The Origins of Art: A Psychological and Sociological Inquiry. By Yrjö Hirn, Lecturer on Æsthetic and Modern Literature at the University of Finland, Helsingfors. Macmillan. 1900.

Considerations on Painting: Lectures given in the year 1893 at the Metropolitan Museum of New York by John La Farge. Macmillan. 1901.

Giorgione. By Herbert Cook, M.A., F.S.A. London: George Bell & Sons; New York: Macmillan.

Four Great Venetians: An Account of the Lives and Works of Giorgione, Titian, Tintoretto, and *il Veronese.* By Frank Preston Stearns. Putnams. 1901.

Murillo: A Collection of Fifteen Pictures and a Portrait of the Painter, with introduction and interpretation by Estelle M. Hurll. Boston: Houghton, Mifflin & Co. 1901.

The author of 'Eighteenth-Century Color-Prints' has saved the reviewer the trouble of formulating a critical estimate of her work by doing it most frankly and admirably herself. "The subject of color-printing and its connection with stipple-engraving," she says, "needed for its proper elucidation an historian with a critical mind; and it has fallen into the hands of a mere collector with a taste for romance. Thus it is that certain stories have been told at too great length, certain facts, dates, and details have been dismissed with too little comment." To this there is little to add, except the excuse that, as the critical historian did not appear, the romantic collector had to do her best; and the comment that the gossipy lightness of Mrs. Frankau's style is not out of harmony with the somewhat frothy nature of the art she celebrates. There was much admirable painting produced in England in the eighteenth century, but little enough of it seems to have got itself translated by the stipple-engravers and color-printers. In the present volume, apart from two or three plates after Reynolds, the work is of the feebly pretty order associated with the names of Angelica Kauffmann and Bartolozzi—work which was vastly popular in its own day, and is now the object of what we think must prove a passing enthusiasm among collectors: work no more serious than the frivolous French illustrations of the period, and not a hundredth part so clever. Among Mrs. Frankau's "stories" the most interesting is that of Le Bon, who, though on a false route—as far as the evolution of the particular art under consideration is concerned—seems to have anticipated the scientific theories which underlie the color-printing of to-day. For his own time the fault of his process was that it needed a genius such as he seems to have been, to prepare the three plates from which the three primary colors were to be printed; to-day, photography has come in to do the work of the genius. The true eighteenth-century color-print was made at one impression from an ordinary stipple-engraved plate, and the printer needed only taste and plenty of time. The slowness of the process finally killed it.

In the edition before us, only one of the plates is printed in color, and how successful that one may be in its imitation of the original we cannot say, but it is certainly very pretty in a soft way. The more expensive edition, in which all the plates are colored, we have not seen. Two errors in the description of plates may be noted. There is a verse beneath pl. v., "Friendship," and none beneath pl. vi., "Contentment," which is the reverse of the statement in the text. Pl. xi. is called, in the text, "Lieut. George James Riddell," and the statement is made that "the writing engraver has distinguished himself on this plate by inscribing 'J. J. Riddell' instead of 'G. J. Riddell.'" As a matter of fact, the plate is inscribed "I. G. Riddell," and this form is followed in the list of illustrations.

Mr. Cust's 'Van Dyck,' like the book by Max Rooses, recently reviewed by us, is an outcome of the Antwerp exhibition of Van Dyck's works held in 1899. It is an even larger and more imposing volume than the other, and reproduces some sixty-odd pictures as against fifty, besides drawings and engravings not touched upon at all in the earlier publication. It does not confine itself to works exhibited at Antwerp, and is, therefore, in some respects, more representative of the sum of Van Dyck's production. Many works are, however, given in both volumes, and the balance of successful reproduction inclines now to the one and now to the other—perhaps a little oftener towards M. Rooses's. Mr. Cust's 'Life' is much longer and fuller than M. Rooses's 'Sketch,' but makes no pretence of original authority, and is frankly a compilation, while, of course, it cannot take the place of M. Rooses's careful notes on particular pictures. Mr. Cust's volume contains an elaborate catalogue of Van Dyck's works, but its arrangement by subject, especially in the case of the portraits, detracts from its usefulness. Unless one remembers the name of the sitter, which is rarely the case, one has no clue as to where to look for any remembered picture.

Part 6 and a portion of Part 7 of the 'Chefs-d'œuvre of the Exposition Universelle' deal with the American section. In this publication the text is entirely subservient to the illustration, and the latter is far from satisfactory. The reproduction is fairly good, and some fine things are reproduced, notably St. Gaudens's 'Shaw Memorial,' but, on the whole, the selection of works is inadequate and disappointing. There may be, and probably are, very good reasons why this or that is omitted, but the final result is to give no conception of the recognized merit of the collection. In painting, for instance, no work is given by either of the recipients of the medals of honor, and only two works by any of the gold medallists are reproduced—one of them very small, and the other cut down and altered in shape.

The *Studio's* special winter number is a stout volume in paper covers containing a vast number of pen-drawings, mostly recent, of various provenance, many good, some indifferent, and none positively bad. The methods exemplified are very various, from the most purely decorative to the most realistic, and from the baldly simple style adapted to newspaper work to a delicacy of handling that must have made reproduction exceedingly difficult. Altogether, the young student of illustration will here find a bewildering variety of models for imitation. The text, by several hands, is of a perfunctory and uninteresting sort.

Very different from these books of pictures is Professor Hirn's volume, which has no pictures at all, and which scarcely deals with pictures, concerning itself, in so far as it touches upon concrete works of art, mainly with the songs, dances, and pantomimes of primitive peoples. It is impossible in this place for us to attempt more than a summary of Professor Hirn's conclusions. He divides his inquiry into two parts, the first being an effort to find what is the original "art impulse," the thing which leads men to care for and to produce art of any kind; and the second, an endeavor to trace the actual origin of several of the arts as apart from the general art impulse. He points out that no pure work of art has ever existed, and that the impulse towards art, whatever it be, has in each of the arts been combined with other needs and other impulses, and that therefore any historic examination into primitive art will not answer the question as to the art impulse itself, but that this inquiry must needs be purely theoretical. He then considers and dismisses as inadequate and not sufficiently universal such proposed causes of art activity as the instinct of imi-

tation, the desire of pleasing, and the play impulse, finally deciding that the only sufficiently universal instinct to account for art is the impulse to express emotion for the sake of communicating or enhancing it. This is, of course, the foundation of Tolstoy's theory; and Professor Hirn, like Tolstoy, seems to us to be in danger of error through too great neglect of the element of form, which Tolstoy altogether neglects and Hirn considers as of minor importance, while to us it seems of the essence of art. He is, however, saved from the extravagances of Tolstoy by the second part of his inquiry, where he shows that, while the impulse to expression seizes upon various material and makes it artistic by rendering it the vehicle of emotion, yet the material itself—the specific art rather than art in general—has always owed its origin to some other need of man's nature. "The Concrete Origins of Art" are discussed by the historical method in a series of chapters on "Art and Information," "Historical Art," "Animal Display," "Art and Sexual Selection," "The Origins of Self-Decoration," "Erotic Art," "Art and Work," "Art and War," and "Art and Magic," and we are shown how many purposes art subserves, and how many elements are and must be contained in the work of art other than the purely artistic one. Finally, the relation between theory and practice is happily stated in a concluding paragraph, which is in marked contrast to the deliverances of some other professors of aesthetics. "The author on his part," says Professor Hirn, "has thought that such investigation into an important and typical human energy must be of interest at least, if not of value. But upon the practical question it is his personal opinion that the loss would be greater than the gain if theories and judgments based upon philosophical considerations were allowed to influence either the production or the enjoyment of art." The book is learned, ingenious, and modest, and is marked by an excellence of English style quite astonishing in the work of a foreigner.

There is nothing new to say at this time of day about Mr. La Farge's 'Considerations on Painting.' The true feeling, the subtle and somewhat elusive thought, the lack of dogmatism and even of very definite statement, and the delightful style, which mark these lectures and have given them their abiding charm, are all well known, and we have nothing to add to the comments upon them that were made in these columns on the book's first appearance. It is encouraging to the lover of art and literature that a new edition should be called for.

In the preface to the latest of the "Great Masters" Series, Mr. Cook remarks: "Unlike most famous artists, Giorgione has not yet found a modern biographer. The whole trend of recent criticism has, in his case, been to destroy and not to fulfil. Yet signs are not wanting that the disintegrating process is at an end, and that we have reached the point where reconstruction may be attempted." One is inclined to wonder whether this is not true of art criticism in general, and whether this book may not mark the beginning of a reaction against the extreme school of destructive criticism. In the case of Giorgione, this criticism had gone so far that that artist seemed in danger of being snuffed out like a candle. As to his life, modern research had only shown that he had no right to the name of Barbarelli, and that he died of the plague and not of heartbreak; while of his works only three remained altogether uncontested. And yet, after all, such a man existed and attained a great reputation and must have painted some pictures. Was it not a *reductio ad absurdum* that criticism should have arrived at the assignment of some of the most beautiful and admittedly Giorgionesque pictures in existence to this or that imitator, named or guessed at, while the original artist was left with next to no baggage at all? Mr. Cook has proceeded on the basis of the probability that Giorgione must have produced more work than has ever been known by his name rather than less; that it is more probable, other things being equal, that a strongly Giorgionesque picture is by him than that it is not; and that he is more likely sometimes to have fallen below his best than were second-rate or unknown men to rise infinitely above theirs. On these considerations he restores to Giorgione many pictures which had been taken from him by one or another critic, and then proceeds to tip the balance the other way by ascribing to Giorgione certain other works which have been attributed to Titian and other artists, some of them ever since the time of Vasari. The result is at first a little startling, but it must be admitted that the author has generally a good, or at least a plausible, reason to assign for his transfers, and that they are all of pictures which have always been considered anomalous and strongly Giorgionesque, if not by Giorgione. One cannot deny a certain temerity in his judgments, but, on the whole, he is perhaps more nearly right than the extremists on the other side, and he certainly seems to have reconstructed a possible Giorgione with a conceivable chronology of works and evolution of style.

'Four Venetian Painters' is not so bad a book as the same author's 'Midsummer of Italian Art,' which we were obliged to review somewhat severely upon the appearance of its second edition last year, but it is marked by too much of the carelessness, not to say recklessness, of that volume to make it a safe or trustworthy authority on matters of fact, while the author's interpretation of the art and artists of Venice from the intellectual side does not seem to us sufficiently new or important to offset this weakness.

Miss Hurll's 'Murillo' is much like the other little books she has contributed to the "Riverside Art Series" and seems to call for no especial criticism.

RECENT ASTRONOMICAL WORKS.

Elements of Astronomy. By Simon Newcomb, Ph.D., LL.D. American Book Company. 1900.

The Royal Observatory, Greenwich: A Glance at Its History and Work. By E. Walter Maunder, F.R.A.S. London. 1900.

Observations of Circumpolar Variables During the Years 1889-1899. By Oliver C. Wendell. [Annals of the Astronomical Observatory of Harvard College, vol. xxxvii., part i.] Cambridge. 1900.

Professor Newcomb has made an attractive little book of his 'Elements,' without, as he says, "making a very serious addition to the curriculum of the high school or college." So simple and elementary and without detail is it that it can hardly be said to have any competitors at present in the field. But, although attractive, it has not the easy style and graceful lucidity of Professor Newcomb's 'Popular Astronomy,' his first astronomical work, now more than twenty years old; nor can the new 'Elements' be said to be strictly up to its date. In general, the illustrations are well chosen, helpful, and carefully executed; but it seems an unnecessary oversight of the artist to have drawn the spheres shaded as if mere disks. In the frontispiece, Jupiter and Venus are wrongly drawn; p. 102, the zodiacal light is an unfortunate failure; p. 128, no letters appear in the cut to correspond with the text; p. 164, the shadow of Jupiter's satellite is much too large; p. 181, the comet's orbit would be nearer the truth if it did not approach to coincidence with the sun's centre. These inaccuracies, however, of rather secondary importance, are not matched by any in the text worthy of note, except that (p. 99) recent determinations indicate a large correction to the old value of 1° F. rise of temperature in descending within the earth; (p. 102), the gegenschein (why "*near* the zodiac"?) is by no means *exactly* opposite the sun; p. 160, the statement as to the size of the largest asteroids needs a large modification if the most recent measures of Ceres by Barnard are accepted. Printers' errors are but few; p. 191, planet*a* for planet*es;* p. 196, ξ Ursæ Majoris for ζ. The nebular hypothesis, by no means difficult to make interesting to juvenile pupils, is dismissed with but the slenderest reference—eleven lines only. The solid facts of astronomical history, briefly related, are appropriately leavened by pictures of the six astronomers, from Copernicus to Herschel, whom every one would easily acknowledge to be the most famous; and the book concludes with a few very telling paragraphs on "astronomical work at the present time," all in Professor Newcomb's happiest vein.

Of double the size is Mr. Maunder's book on the Royal Observatory at Greenwich—a subject singularly neglected by writers of descriptive astronomy in the past. This excellent work is most appropriately devoid of all technicality of statement and expression, and its publishers (the Religious Tract Society of London) ought to be able to place it in hundreds of libraries, both here and in England. Its attractive features are exceptional—a frontispiece of Flamsteed, the first Astronomer Royal, reproduced from the portrait in his 'Historia Cœlestis,' and numerous illustrations from old prints and original photographs. These add a quaint flavor, which all scholarly readers will especially appreciate, thanking the painstaking author for the great trouble their collection must have cost him. Very satisfactory are the portraits of all the seven astronomers royal following Flamsteed, of whom the most famous are Halley, Bradley, and the late Sir George Airy. That of the Rev. Nathaniel Bliss, who succeeded Bradley, possesses a very curious interest, because of its reproduction from an engraving on an old pewter flagon. Bliss was also professor of astronomy at Oxford, and his periwig is arched round with this appropriate inscription, "This sure is Bliss, if Bliss on earth there be."

Mr. Maunder has done a worthy service in directing attention, as needs to be done over and over again, to the wholly wrong ideas

of people in general regarding this greatest of national astronomical institutions.

"Greenwich observatory was originally founded, and has been maintained to the present day, for a strictly practical purpose. . . . The astronomer has, perhaps, more than any man, to give the keenest attention to minute practical details. His life, on the one side, approximates to that of the engineer; on the other, to that of the accountant. The professional astronomer has hardly anything to do with the 'show places' of the sky. . . . As to discoveries, these lie no more within the scope of our national observatory than do geographical discoveries within that of the captain and officers of an ocean liner."

While the first and foremost province of the observatory is that of assistance to the royal navy and the merchant marine in the very practical and indispensable art of navigation, which Mr. Maunder explains with lucid brevity, nevertheless, all the more modern expansions of its field of work are abundantly and carefully dealt with, so that the lay reader gets a most excellent idea of the why and wherefore of official astronomy to-day. Exceptionally full of interest is Mr. Maunder's history of the founding of the observatory by Charles II. in 1675, and of the initiation by Flamsteed, when but twenty-nine, of its priceless observations of the heavenly bodies which have constituted the basis of exact modern astronomy. "In 1674 Flamsteed became more intimate with Newton, the occasion which led to this acquaintanceship being the amusing one that his assistance was asked by Newton, who had found himself unable to adjust a microscope, having forgotten its object-glass—not the only instance of the great mathematician's absent-mindedness." A strange spectacle, it seems to us—this servant of the Government, with a high-sounding official position, but with a salary "so insufficient that he naturally regarded himself as absolute owner of his own work," his chief source of income being his private pupils in mathematics and astronomy, no less than 140 in number. Interestingly related is the unpleasantness between Newton and Flamsteed growing out of the lunar observations which Newton demanded.

The successor of Flamsteed was Halley, who was so thoroughly acquainted with the heavens that "if a star were displaced in the globe he would presently find it out." He had a wide conception of the duties of his post, and spent nearly two years at St. Helena, making a catalogue of standard stars in the southern hemisphere of the sky. But for Halley, the 'Principia' of Newton might never have seen the light, and for this alone he has earned the highest claim to gratitude.

Passing over the gifted Bradley, third Astronomer Royal, and his brilliant discovery of aberration of the stars, Maskelyne, the fifth, and his foundation of the Nautical Almanac; Pond, the sixth, a born observer of the highest accuracy, we reach a comparatively recent date, and the strenuous administration of Sir George Airy. Appointed in 1835, he proposed almost at once the creation of the magnetic and meteorological department of the observatory; and this was followed in 1873 by the formation of the department of solar photography, and later by the addition of the spectroscope. Accurate evaluations of numerous longitudes occupied much of Airy's time, and his determination of the increase of gravity in descending deep mines was undertaken in the famous Harton colliery, near South Shields. Also, he was confidential adviser of the Government in a vast number of subjects—lighthouses, railways, standard weights and measures, drainage and bridges. Airy's love of method and order was proverbial, and carried often to such extremes that his friend Dr. Morgan said that "if Airy wiped his pen on a piece of blotting paper, he would duly endorse it with the date and particulars of its use, and file it away among his papers." But a huge amount of work was accomplished in the forty-six years of his office, and he retired in 1881, at the age of eighty, full of honors from the most eminent societies of all nations.

Airy was succeeded by Mr. Christie, the present incumbent, who has still farther augmented the labors of the Observatory by adding two new departments and several new buildings, housing many of the most powerful instruments in England; indeed, three-quarters of the present Observatory has been added during the nineteen years of his incumbency. Roughly half of Mr. Maunder's able volume is devoted to these buildings, their elaborate arrangements, and to the clear description and ample illustration of the ceaseless researches going on in the different departments. All are treated and their work elucidated without error of statement, not to say with that mastery begotten of intimate acquaintance, and so entertainingly withal as to lead us to rank 'The Royal Observatory of Greenwich' high among the popular astronomical books of the year.

Professor Pickering has again increased the indebtedness of astronomers to his capable direction of the Harvard Observatory by publishing, as the first part of vol. xxxvii. of the 'Annals' of the Observatory, an eleven-year series of observations of the stars situate near the north pole of the heavens whose light is subject to fluctuations. They have been prepared for publication by Assistant Prof. Oliver C. Wendell, and the results of his discussion are graphically presented in a series of plates showing with great clearness and accuracy the curves that represent the well-marked variations. During the past six years, 1889 to 1894 inclusive, nearly all the observations were made by Professor Wendell and Mr. Reed; but during the four subsequent years the work was carried on by Mr. Seagrave, who courteously communicated his results to the Observatory, and later by Miss Cannon of the Observatory staff. The method of observation is known as that instituted by Argelander, and the stars were watched carefully, not only at their epochs of greatest brightness, but also at their feeblest as well. Besides this, the very decided additional advantage is that all the results have been compared with a uniform scale of brightness, viz., that of the well-known meridian photometer of Professor Pickering's invention. Many points of technical rather than general interest are brought into prominence by this timely monograph, which forms a most important addition to the literature of the circumpolar variable stars. A bibliography of these objects and of those of like nature in the entire sky is now in progress of preparation for later issue *in extenso* as a future volume of the 'Annals.'

An Englishwoman's Love-Letters. Doubleday, Page & Co. 1900.

The trick of anonymity, which is obviously necessary to give such compositions an air of verisimilitude, has scored, in the case of these 'Letters,' a striking success. The internal evidence, from the circumstantiality of place, family relations, ages and the like, has spurred the liveliness of conjecture, and secured an immortality of several months to a book that, on its bare merits, might have fallen flat. This is the sort of *succès de mystère* that, a few years since, fell to 'Amitié Amoureuse'—with a difference. That was a really clever set of letters, in which the reluctant transitions from friendship to love and back again to friendship were handled with sincerity and passion. The French writer let herself go, whereas the Englishwoman of these 'Letters,' with their profuse quotations, their elaborate metaphors, their academic discussions, only puts off the *Précieuse* on her deathbed.

Mrs. Meynell is credited by gossips with their authorship—falsely, according to the *Academy*. The scene is certainly laid in her favorite Wales; and, the writer having used the same prescription as Mrs. Meynell for the composition and mixing of her metaphor, "sows them with the whole sack" in the style of the 'Colour of Life.' The fiancé, a young Oxonian aged twenty-one, complains at the ninth letter that the lady's metaphors make him giddy. This is her reply:

"Your curses simply fly back to roost. Where do you pigeon-hole them? In a pie? (I mean to write now until I have made you as giddy as a dancing Dervish!) *Your* letters are much more like blackbirds; and I have a pie of them here, twenty-four at least; and when I open it they sing 'Chewee, Chewee, Chewee' in the most scared way." And again: "There's a foot gone over my grave. The angel of the resurrection with his mouth pursed fast to his trumpet!—nothing else than the gallop-a-gallop of your horse—it sounds like a kettle boiling over!"

Is this the language of passion in English county families of the present period? His eyes are "cupboards of vision," her heart is "a tree in the wind," her happiness is "a watchman on the lookout"; her coachman touches his hat "to show that the news brimmed in his body"; her sorrow is "a kite that I pull with my heart-strings." Will any reader believe that an Englishwoman aged twenty-two writes to her lover in the following strain: "To the sun of love the clouds that cover absence must look like white flowers in the green fields of earth, or like doves hovering; and he reaches down and strokes them with his warm beams, making all their feathers like gold"?

This was certainly a very unusual young woman, too rare and too precious for an ordinary young man, who, as we gather, wore a gray suit, shot rabbits, went to Oxford, and must read one of these letters every day, though he had ridden the seven miles that sundered the pair in the desperate hope of evading it. "With all its blushes stale, it is rouged up again and sent off the moment your back is turned. No, better! is slipped into your pocket, and carried home to yourself by yourself!" On a foreign tour, she treats him to descriptions of "divine crumbs of Gozzoli," of "street architecture whose effect is of an iron hand which gives you a buffet in

the face," and to countless preciosities that must have paralyzed his young brain, to say nothing of his heart. When finally, without a word of explanation, he has broken the engagement, her literary style greatly improves, and there is sincere pathos in the last series of letters destined for his eye only after her death. His conduct, which may seem natural enough to the cynic, is another of the mysteries that have helped to float the book. We doubt whether the author had evolved in her own mind a motive sufficiently strong to excuse this youth, whom the preface makes out to be *sans reproche*, from riding over for the last time to give a word of consolation to the woman who was dying of his desertion.

The general tone of the letters is far too sophisticated, too blasé, even for the modern young woman of twenty-two. We have, throughout, the point of view of a woman of mature years, for whom, as for Mrs. Browning, love-letters and the art of love-making are an experiment of later life. Finally, it is incredible that a woman of any age should, in the first days of her engagement, indulge in the plain-spokenness of p. 42.

Richelieu and the Growth of the French Power. By James Breck Perkins, LL.D. G. P. Putnam's Sons. 1900.

This is a volume in the "Heroes of the Nations" series, and therefore does not come into comparison with such detailed studies of Richelieu as the works of M. Hanotaux and the Vicomte Georges d'Avenel. Mr. Perkins apparently regrets that the scheme of the series prevents him from using footnotes for the citation of authorities, but we shall not question his statement that "the present work is based upon an examination of original sources of information." His previous writings on France in the seventeenth and eighteenth centuries have made it unnecessary for him to establish the credit of a popular sketch by giving the page of every memoir from which he quotes. Most of the anecdotes with which the book abounds are taken directly from their first setting, and it is no part of Mr. Perkins's design to meddle with moot questions of administration or diplomacy. Yet we have noticed a cautiousness of temper which may spring from inability to cite the exact evidence. Thus, apropos of Saint-Simon's part in the Day of Dupes, Mr. Perkins observes: "*It is said* that Louis's favourite, Saint-Simon, . . . advised him to send for the Cardinal." And later, when speaking of Father Joseph's part in the Diet of Regensburg, he says: "Father Joseph attended the council where this was decided upon, and *it is said* his insidious advice had much to do with Wallenstein's dismissal." The same anxiety to be on the safe side appears in other places, and illustrates an unwillingness to set down what is not well ascertained. However, Mr. Perkins is a little careless when giving the modern equivalent of the livre. For instance, p. 221, he calls five hundred thousand livres the equivalent of "half a million dollars in our day." But on p. 244 he writes: "We find one teacher receiving sixty livres, or twelve dollars, a year."

Mr. Perkins keeps close to the Cardinal's character, and is not drawn off into writing the history of France during his age. This is well, but we think he might have given a fuller account of French diplomacy, since so much of Richelieu's success came from clever combinations. He hardly touches on the Valtelline question, the War of the Mantuan Succession, and the part of France in the Diet of Regensburg, while subjects like the negotiation of the treaty of Altmark and Charnacé's subsequent efforts at Stockholm are altogether omitted. We quite understand Mr. Perkins's motive in keeping these foreign complications out of sight, but the skill of Richelieu in securing allies and playing off enemies against each other was so great that it deserves considerable prominence.

The political element, though by no means eliminated, is held in subjection to the personal, and this arrangement leads Mr. Perkins to criticise certain foibles which the political biographer might easily pass over. Nor does he praise the fruits of Richelieu's public policy without reserve. M. Ernest Denis, in speaking of the European situation at the Peace of Westphalia, says: "Comme à l'époque capétienne, comme à la Révolution, la gloire de la France coïncidait avec un progrès sensible de l'humanité." Any glory which France gained at Westphalia she owed to Richelieu, and he must, therefore, according to the idea of M. Denis, have done something for humanity. Mr. Perkins's encomium is more moderate, as may be seen from his closing sentence. "It is doubtful whether the French people were any happier at the end of Richelieu's administration than at its beginning, but, beyond question, France was a more powerful state." The military successes of the Cardinal's closing years do not blind Mr. Perkins to the misery which the nation suffered under his very inadequate scheme of domestic government. Furthermore, we know from 'France under Louis XV.' what our author thinks of the way in which the power of the Crown was utilized one hundred years after Richelieu's death.

The strong traits of Richelieu's personality are so well understood that no writer can do more than place them in relief. His shortcomings are less clearly understood. The severity with which he punished plotters should not be remembered against him, but Mr. Perkins also recalls the unedifying aspect of his disposition—his love of display, the intensity of his pride, and his craving for literary fame when he possessed no real talent. We omit avarice from the list, for, although Richelieu became rich during his term of power, Mr. Perkins, measuring him by the standard of Mazarin, Fouquet, Louvois, and Choiseul, finds him comparatively clean in his methods. On the other hand, he can sound a note of optimism when comparing Richelieu with the modern premier: "If Richelieu used his power to accumulate wealth, he should be judged by the standard of his age, but it is pleasant to believe that in our day so great a statesman would be content with fame as the reward for his labors; even if the desire for gain is equally strong, the force of opinion now restrains most public men from becoming rich at the public expense."

Mr. Perkins has not forgotten the nature of his audience and permitted his pages to become dull. His style is very direct and anecdotal.

John Brown. By William Elsey Connelley. Topeka, Kansas: Crane & Co. 1900.

This book cannot fail to be a great disappointment to those who have so long hoped against hope for a clear, impartial, and critical history of John Brown. The author is at least the seventh biographer of his hero, having been preceded by Redpath, Webb, Sanborn, Von Holst, Hinton, and Chamberlain, besides Victor Hugo and other European commentators. When we consider that two of these biographies include respectively 752 and 645 pages, it is evident that mere quantity of matter is no longer the main desideratum in Brown memoirs, especially when, as in the present case, a large part of the book consists of long quotations from predecessors. The author would seem to have every advantage of position, being a resident of Topeka and a director of the Kansas State Historical Society, whose collections are celebrated throughout the Union for their copiousness and value. He is announced as being about to edit, with Col. J. H. Hinton, a volume of 'John Brown Papers,' based largely on these collections. Hence he could hardly publish anything on the subject without giving some later information or correcting some errors of detail. Such meritorious passages, however, occur but rarely in the present volume, so far as our observation has extended; and the predominant impression made by it is not only that of a profuse and verbose style, but of an entire absence of that historic calmness and justice which is now the first desideratum in any Kansas writer. Its whole tone, in short, is that of 1856 instead of 1900.

An obvious illustration of this tone can easily be given. In all civil-war or even mere border warfare there are pretty sure to be made, on each side, bitter charges of personal assaults committed by the other side upon women. These rumors usually dwindle very much on later investigation, at least among English-speaking races, and often disappear entirely. Our civil war, for instance, was remarkable for almost complete absence of such outrages. In Kansas such rumors abounded, and were made as freely against Lane's Rough Riders as against the "border-ruffians." Mr. John Spear, President of the Kansas State Historical Society, takes especial pains to acquit Lane of all such charges (Kansas Hist. Coll. vi., 305); and he attributes even to Missourians only rudeness of speech, but not personal violence. Nor is any reference made to any such charge by Mr. Noble L. Prentiss in his historic address on the "Women of Kansas" at the quarter-centennial celebration in 1886, where it could scarcely have been omitted had such atrocities been still recognized as facts. Now comes Mr. Connelley, writing at the very end of the century, and lavishly revives the old charges nearly fifty years after their alleged occurrence. He talks of "hundreds of well-authenticated accounts of the cruelties practised by this horde of ruffians, some of them too shocking and disgusting to relate or to be accredited if told" (p. 157). Why does he not, then, at least give the reader accredited facts in regard to some of the milder ones? On looking for his authorities, we find absolutely none alleged, except a single writer, John H. Gihon (pp. 175-6), who himself names but a single instance, and that without citing authorities, of what he defines only vaguely

as "savage brutality" (Gihon, p. 98). But even this book was written as long ago as 1857, at the very height of the Kansas excitement, was published originally with the title, 'Gov. Geary's Administration in Kansas, with a Complete History of the Territory until July, 1857,' and was reissued a little later, with a new title-page, but otherwise unaltered, as 'Gihon's History of Kansas.' It was, in fact, little more than a partisan pamphlet, issued by a former secretary of Gov. Geary. Surely, it is a sufficient condemnation of Mr. Connelley's standard of historical research that, with the whole resources of the State Historical Society to draw upon, he has to go back nearly half a century to such a production, multiplies Gihon's one alleged instance into multitudes, and leaves the matter there. For what, then, does the Historical Society exist if not to provide material to supersede the hastily written and vehement materials of the "Border Ruffian" period? Will the time never come to treat the history of Kansas like that of any other State, according to modern historical methods? What with Professor Spring on the one side and Mr. Connelley on the other, we seem as far as ever from that desirable consummation.

Surveys, Historic and Economic. By W. J. Ashley. Longmans, Green & Co. 1900.

This collection of essays and reviews will be appreciated by students of economic history, if not by the general, to whom the technicalities of its scholarship may make it caviare. With few exceptions, all these papers have been printed in different reviews and journals during the last eleven years, several of the book-reviews having appeared in our columns. When five and forty essays are collected in one volume, it is not easy to characterize it as a whole; but those familiar with Professor Ashley's work do not need to be told that it is scholarly, and that his style is polished without being labored. Disregarding the shorter papers, the author suggests that the others fall into several groups. Two of the longest deal with the economic relations between England and her American colonies between 1660 and 1760, and explain the nature of the colonial trade during that period. In the same general direction are the papers on the history of economic opinion, in one of which the origin of the policy of free trade is attributed to the Tories. The most elaborate and the most technical of the other essays are classed as "Mediæval Agrarian" and "Mediæval Urban." Along these lines the fighting has been hard, and Professor Ashley is in the foremost of the fray; but the controversy is too purely archæological to be of general interest. It is proper to state, however, that Professor Ashley maintains that social evolution cannot be understood by those holding incorrect views of mediæval land-tenure and the extent of serfdom.

Throughout these essays, and those on British colonial policy, the author frankly expresses his protectionist theories. He has, he scarcely needs to tell us, "a penchant for things mediæval," and likes to persuade himself that the virtuous professions of the guilds which the supporters of the "American" system of tariffs repeat, with their tongues in their cheeks, were sincere. He thinks the Prussian bureaucracy "one of the noblest creations in the history of civilization"—an opinion which seems to need revision in the light of recent disclosures in Berlin. To American readers, the argument that the colonies were really benefited by the British laws regulating their trade and manufactures is the most interesting matter in the book; and it seems to be, from the protectionist point of view, conclusive. It is a cardinal point in this doctrine that the true way in which to "build up" the industries of a country is for its rulers to undertake their direction; and the contention that the British colonial policy was not only benevolent, but also beneficent, is no more paradoxical than many claims that are generally accepted to-day.

Through the Yukon Gold Diggings: A Narrative of Personal Travel. By Josiah Edward Spurr. Boston: Eastern Publishing Co. 1900.

This entertainingly written book of nearly 300 pages, by a member of the United States Geological Survey, author also of an exact report on the "Geology of the Yukon Gold District," while it deals with the region that was broadly involved in the gold excitement of 1896-97, can hardly be considered to be a contribution to Klondike literature. It virtually ignores in its entirety the particular territory that became world-famous for gold-producing, and leaves unwritten the "camp" that was at once the picture and spirit of the new enterprise of the north. At the time of Mr. Spurr's journey down the Yukon, "a village of probably two hundred Indians, but no white men," occupied the site of the present Dawson, with its eight or ten thousand inhabitants. "The Indians were living in log-cabins; on the shore, numbers of narrow and shallow birch canoes were drawn up, very graceful and delicate in shape, and marvellously light, weighing only about thirty pounds, but very difficult for any one but an Indian to manœuvre." This is practically the full portrait that is presented of the Klondike region, except for the statement touching the Klondike River, that, "on account of the large number of salmon who turn aside to enter the stream here, the Indians called it Thron-duc, or *fish-water.*"

The chapters treating of the gold diggings on the American side of the "boundary"—those of "Forty Mile," "Birch Creek," and "Mynook"—contribute nothing to our knowledge of the tract in which they are situated, nor do they enlighten the reader on the general subject of gold-mining. The author, in the preparation of his work, appears to have determined to eliminate as far as possible all presentation of consequential facts, and to confine himself to a narrative of reminiscent experiences. These, as related, are hardly numerous enough or sufficiently exciting even for a booklet, and it is to Mr. Spurr's credit that he has not enlarged upon them to the extent of making them look big or important.

BOOKS OF THE WEEK.

Bates, S. A. Genealogy of the Descendants of Elder Edward Bates of Weymouth. South Braintree (Mass.): Frank A. Bates. $1.25.

IMPORTANT BOOKS ON THE NAVY.

THE FRIGATE CONSTITUTION:

THE CENTRAL FIGURE OF THE NAVY UNDER SAIL.

By IRA N. HOLLIS, Professor of Engineering at Harvard University. With many Illustrations. 12mo, $1.50.

"It may be doubted whether any ship of war ever held so prominent a position in the hearts of the people of any country as 'Old Ironsides' has held and in fact still holds, and it may be doubted if any vessel so heartily warranted this affection. Standing as the highest type, 'the central figure,' as the author calls her, of our navy under sail, eminently successful in every struggle into which she entered, the first means of giving us a national pride and of teaching foreign respect for American arms, the Constitution richly deserved all of the affection which went out toward her. . . . The history of this frigate is always interesting. As Prof. Hollis tells it, it is absorbing."—*Harvard Bulletin*, Cambridge, Mass.

THE MONITOR AND THE NAVY UNDER STEAM

By FRANK M. BENNETT, Lieutenant U. S. Navy. Fully Illustrated. 12mo, $1.50.

"Free from unnecessary technicalities, and details not essential in the telling of a concise story of the progressive inventions, the book is informing and of real interest. Episodes in the career of the Monitor lend a dramatic flavor. The volume is fully illustrated and carries the story of the Navy through the events of the Spanish war to the arrival of the victorious fleet in New York Harbor."—*Brooklyn Eagle.*

DORCHESTER Mass

RECENT PUBLICATIONS.

The Private Life of King Edward VII.

(Prince of Wales 1841-1901).

By a Member of the Royal Household.

One volume, 12mo, illustrated, $1.50.

ADVANCE NOTICES:

"While the book gives a narrative that is intimate and personal in character, it does not descend to vulgar trivialities. It is a book which will be found of unusual interest."—BROOKLYN EAGLE.

"This sketch of the intimate life of England's new Sovereign is presented with much sympathy and with great discretion. It brings the reader into close relationship with the man, showing him where he has touched the public heart, recounting at close range his life at Sandringham, in the country, at Marlborough House, as a student, observer and churchman, as a husband and father, as the arbiter of fashion and the patron of the race-track."—NEW YORK TIMES.

THIS BOOK IS UNIFORM WITH

The Private Life of the Queen.

By a Member of the Royal Household.

12mo, illustrated, $1.50.

"We can commend the book with the highest praise to all readers."—THE LIVING CHURCH.

Mrs. Clyde.

By JULIEN GORDON, author of "A Puritan Pagan."

One Vol., 12mo, Cloth, $1.50.

MRS. CLYDE attained three editions the first month, and the orders outstripped the supply! The critics were complimentary:

"MRS CLYDE is worth reading. It is a strong novel of the material school, vigorously worded, clear in its pictures of persons and scenes, liberal in epigram, and clever in generalization."—NEW YORK WORLD.

"It all makes a story of exceeding interest, with now and then some delicious moments."—NEW YORK HERALD.

"Nowhere does interest in the story flag."—CHICAGO CHRONICLE.

A History of Chinese Literature.

By HERBERT A. GILES, A.M., LL.D., Professor of Chinese in the University of Cambridge.

One vol., 12mo, $1.50.

It will surprise most readers to learn from Dr. Giles's fascinating volume that for more than two thousand years the Chinese have been writing poetry full of exquisite sentiment and intense love of nature. Many of their emperors were poets and wits. Their novels and plays are full of interest. The moral tone of their literature is pure and lofty. Dr. Giles gives examples of works never before translated.

"An exquisitely written as well as excitingly brilliant and captivating romance."—*Constitution.*

THE MACMILLAN COMPANY, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, FEBRUARY 14, 1901.

The Week.

A mythical, peripatetic Cuban republic our Imperialists were all wild to recognize any time from 1896 to 1898. Its famed capital, Cubitas, does not now figure in our own United States census of Cuba, though this covers the very smallest towns and aldeas. The Cuban republic of those days was an entity up a tree, or on a mule's back; *we* had scruples—unpatriotic, of course—about recognizing it. The Imperialists would have recognized it out of hand, though they could not even see it. Well, now we have an actual Cuban republic in the making, certified to by our own Military Governor as the product of a people "now ready to proceed to the establishment of a general government which shall assume and exercise sovereignty, jurisdiction, and control over the island." One would have expected the Imperialists to fall over each other with enthusiasm in recognizing such a Cuban republic. But no; they begin to mutter strange suspicions about a "mob in Havana," about the "good Cubans," the "real Cubans," not wanting a republic, and so on. Any one can see how impossible it is to please such inconstant minds. We fear that we shall have to give up trying.

What is the use of all this beating about the bush to find reasons for not keeping our promise to Cuba? She is too weak to force us to observe good faith, and that ought to be sufficient. To wriggle and squirm in order to make out some semblance of justification for perjuring ourselves will only land us in such contradictions as mark the floundering of the *Tribune*. We reproduce in parallel columns what it said about the Teller resolution on April 19, 1898, and what it said about it on February 6, 1901:

"The resolutions may not be the best that human wisdom could have devised, and they may not altogether please everybody. . . . Now that they are at last enacted, they will be accepted and supported *loyally by all the people, as an essential and highly important part of the law of the land.*"—*Tribune*, April 19, 1898.

"If, then, the Teller resolution respecting Cuban independence were an error, it would be neither *wise nor just to persist in maintaining it.* The course of prudence and honor would lie in frankly admitting the error, and in atoning for it by doing now the thing which should have been done at the outset."—*Tribune*, February 6, 1901.

Standing in the centre of the Republican side of the House of Representatives on Saturday, Mr. Brown of Ohio boldly condemned the Philippine policy of the Administration. According to the report in the New York *Tribune*, many Republican Congressmen congratulated him at the close of his speech. Very many of the members of the party throughout the country will openly applaud his course; very many more will in their hearts approve it. The resolution proposed by Mr. Brown declares it to be the purpose of the United States, in retaining possession of the Philippine Islands, to aid the inhabitants, when they submit to the authority of the United States, in establishing a free government, and, when that has been accomplished, to relinquish authority in those islands. Mr. Brown urged that, in all fairness, this purpose should be at once declared. He pleaded earnestly against a colonial policy, as violating principles which we have cherished as the very life of free government. He pointed out that Congress has never yet announced to the Filipinos what this nation proposes to do with them. The President has demanded unconditional surrender; Congress, urged Mr. Brown, should promise them freedom. As a party measure, he contended, such a promise would be expedient. The moment is opportune. Our Government is strong enough to make the declaration without having its motives questioned by friend or foe. To continue our present course is, to apply the language used by Mr. Brown in reference to breaking our promise to the Cubans, "the climax of greed, without one spark of conscience. It is the acme of avarice, without a single redeeming feature. It is the doctrine of a freebooter of the world. It is the code of a pirate of all the seas."

Congressman Babcock of Wisconsin has introduced a bill to repeal all duties on iron and steel and their products except a few specialties of a highly finished character. Mr. Babcock is Chairman of the Republican Congressional Committee and a member of the Committee of Ways and Means. He has been moved to take this step by the proposed steel combination of which the newspapers have been full during the past week or two, and which is now evidently approaching completion. Mr. Babcock is quoted in a newspaper interview as saying that he believes that this is the only relief Congress can give to consumers from the exactions of the combination, that he has consulted a great many members of Congress in reference to his bill, that they have all agreed with him, and that he believes it will receive the support of nine-tenths of the members of the House. He does not expect it to pass at this session, however, the remaining time being so short. He adds:

"My bill does not touch raw iron ore, nor does it touch manufactured goods in which the labor is the greater part of the product. It takes the duty off items in schedule C of the Dingley Tariff Act, such as structural iron, steel billets, steel rails, and wire-rods. The tariffs on most of these articles have been changed from time to time to foster and build up infant industries. These infant industries have become now one of the most colossal combinations in the country. This legislation is directly in line with Republican efforts to control Trusts at the last session of Congress, and has the endorsement of members of the National Republican Committee."

Question may be raised as to the details of Mr. Babcock's bill, especially the clause omitting iron ore. It is not likely that Congress will pass, or the country sanction, a measure which puts a duty on the raw material of an industry while admitting the finished product free. That is a side issue, however. It is a matter of immense significance that an attack upon the tariff has started in an influential Republican quarter. Here we may hopefully look for relief from the more than mediæval policy embodied in the Dingley act. Nor could we expect real relief from any other quarter. The Democrats are too much disorganized by differences on the money question, on Bryanism and Populism, to make any effective movement for tariff reform. But when the Republicans make such a movement it will be irresistible. The combinations will not be able to offer any effective opposition to the Babcock bill; and if this one passes, others will follow until every monopolized article is placed on the free list. How much effect this movement may have on the prices of the articles in the domestic market can be learned only by experiment. The steel combine, and all the rest of them, will charge the highest prices they can get, both at home and abroad. This is the law of trade. They habitually sell at lower rates in Europe than in America, being enabled to do so by the tariff. It is no new phenomenon. It was done by the producers of copper thirty years ago, and the tariff was arranged with full knowledge that they might do so. That system must come to an end, and the end will come soon if Chairman Babcock is in earnest in pushing his bill. The need of any protective duties on iron and steel passed away long ago.

The Democratic Senators are to be commended for the vigor and spirit they have thrown into the anti-subsidy fight, so that, with the assistance of eight or ten Republicans, they have forced the abandonment of night sessions. Senator Jones of Arkansas gave notice that he and his friends would fight the bill day and night to the end of the session, and would require the supporters of it to have a quorum on hand all the time. Mr. Jones was ably seconded by Senators Teller, Clay, Bacon, Turner, and Berry. A good deal of talking was done by

Republicans also, especially by Chandler and Nelson, who did not speak on the Subsidy Bill at all, but used up time and thus gave the avowed opponents of the measure a chance to rest. The remarks of Senator Aldrich during the same night session ought to encourage the Democrats to keep up the fight, and were perhaps intended to do so. "We understand perfectly well," he said, "that you can kill this bill. There is no question about that. If Senators sitting on the other side of the chamber desire to take the responsibility, they can kill every measure now before Congress under the rules of the Senate," etc. That was a notable hint: "Don't nail his ears to the pump." We presume that Senator Jones understood it. We hope that he and his colleagues will appreciate the situation, and see that here is an opportunity to pull themselves together and make their party strong once more by rendering a real service to the country —a service which the independent voters throughout the country will not fail to remember in the time to come.

The Chicago *Tribune* continues its collection and compilation of editorial opinions on the Ship-Subsidy Bill. The responses from Ohio are thirteen for the Hanna-Payne bill, and sixteen against it. The veteran T. F. Mack of the Sandusky *Register* writes that the bill is vicious in principle, and that it is not demanded by business conditions. He adds that it is not in harmony with the St. Louis platform. Turning to the latter document, we find that Mr. Mack is quite right. The St. Louis platform endorses discriminating duties in favor of American ships, the product of American labor employed in American shipyards, and has not a word in favor of subsidies. Nor does the Philadelphia platform of last year endorse the policy of subsidies. It says that "the national defence and naval efficiency of this country supply a compelling reason for legislation which will enable us to recover our former place among the trade-carrying fleets of the world." There is not a word here inconsistent with the St. Louis platform; therefore, the one must be interpreted in a way to harmonize with the other. That there was a conspiracy to set aside the policy of discriminating duties in favor of subsidies from the Treasury is quite probable. We all remember the splutter that Gen. Grosvenor had with our Mr. Quigg after the Philadelphia Convention adjourned. Grosvenor accused Quigg of altering this plank of the platform after it had been agreed upon by the Committee. He knew that this must be so because he (Grosvenor), although not a member of the Committee himself, had had the right plank in his hands, and, after submitting it to competent persons (probably Hanna, Frye, and Griscom), had handed it to the Chairman of the Committee (Senator Fairbanks) for insertion in the proper place. As the Grosvenor plank did not appear in the platform reported to the Convention, he naturally inferred that Quigg, as Secretary of the Committee, had burked it. Quigg replied that he had done nothing of the kind. He had reported accurately and truthfully the platform adopted by the Committee. Nor did Grosvenor ever find a member of the Committee to deny Quigg's statement. The quotations we have made from the two platforms seem to fully justify the statements made by Senators Allison and Spooner in their colloquy with Senator Morgan, that the Subsidy Bill is not a Republican party measure.

Senators Allison and Hale made some remarks last Thursday on the increase of the appropriation bills, which ought to arrest the attention of all thinking persons both in and out of Congress. Mr. Allison drew attention to the fact that the public expenses for the ensuing year would reach $780,000,000, being some $40,000,000 more than last year. Mr. Hale remarked that, a few years ago, everybody was shocked to find that the expenses had reached one billion dollars for a single Congress, lasting two years. It was evident, he said, that we were rapidly approaching a billion-dollar *session*. He pointed sorrowfully to the fact that our military budget for the coming year, including pensions, would reach $400,000,000, being double that of any European Power. The entire expenditures of the Government, including postal service, in 1892, were only $413,000,000, and now, after a lapse of only ten years, our expenditure for war purposes, *in time of peace*, nearly reaches that sum. The Pension Bill alone calls for $145,000,000, against $139,000,000 in 1899; and this takes place thirty-six years after the close of the civil war. It would seem as though the American republic was no longer capable of controlling itself. The two Senators who made these explanations are members of the Committee on Appropriations. They are at the head of the procession, yet they are not able to stop the movement. The crowd behind is pushing them to the edge of a precipice. "We have not found any place yet," said Mr. Hale, "where we could cut off anything."

Three of President McKinley's nominations of general officers on Tuesday week are utterly inexcusable from the army point of view, viz., those of Gen. Frederick Dent Grant, Dr. Leonard Wood, and Capt. J. Franklin Bell. Gen. Grant's sole claim to distinction is the fact that he is the son of his father. Graduated from West Point in 1871 (near the bottom of his class), he served on his father's and on Gen. Sherman's staff until 1881, when he returned to civil life. His work in the Philippines has been in no respect noteworthy, and such merit as it has had is due solely to efficient subordinates. His appointment is practically one from civil life, and places him over thousands of officers in every way better fitted in experience and training for the position. We do not believe that any other service in the world would reward an army doctor with the rank of a brigadier-general because of military duty comprising, in all, eight weeks in the command of a volunteer cavalry regiment. Whatever may have been Gen. Wood's services in Santiago and Cuba, they have been civilian, diplomatic, and administrative, and have in no way fitted him for the military position to which he is now appointed. This is the price paid by the President for Gen. Wood's declination of the office of President of the District of Columbia Railways. We have yet to hear of an officer who does not regard this advancement as a slap at the service, and a premium upon military ignorance and incapacity. Gen. Bell is at least a West Pointer, and an able and efficient soldier. The injustice in his case is that he is jumped over 1,032 officers of longer service, when a staff majority would have been sufficient reward. The advancement of these three men will outweigh in most army officers' eyes the excellence of the other selections.

Our tactful American way of requesting foreign Ministers to come to a public festivity, in order to celebrate the humiliation of their own people, was again gracefully exhibited in the cordial invitation to Wu Ting Fang to be present at the banquet in honor of Gen. Otis on Thursday night. That officer had, by military order, fixed a stigma upon the Chinese race. He had practically rated them as a less desirable class than the very Katipunan miscreants whom he was trying to kill in the Philippines. All this the organizers of the dinner to Gen. Otis had forgotten, or were willing to overlook, but Minister Wu neither had forgotten nor would he overlook. His polite letter of declination was so deft a rebuke of unconscious bad manners that its very recipients read it out in public without perceiving, apparently, that it was really in resentment of an insult. The affair recalls the equally gracious invitation to the Spanish Minister to go to Chicago on "Dewey Day," to take part in the public rejoicings over the slaughter of his countrymen. For inimitable *savoir-faire* this gave us a reputation so great that the incident of Thursday night cannot heighten it. It must be hard for a genial man like Minister Wu to be punctilious with such a naïve set; but he evidently considers it his duty to expound etiquette to us as well as Christianity.

By far the most interesting contribution to the discussion over last year's

British trade is contained in the searching analysis, made by the London *Economist*, of the question how much of the gain was due to larger quantities, and how much to increased values. In the matter of merchandise imports, results were clear enough. After deducting reëxports, there was a substantial increase both in quantity and in prices. Turning the *Economist's* values into American money, it appears that the imports of 1900, even if average prices had remained unchanged from the preceding year, would still have been worth $28,175,000 more than the total of 1899. With the higher prices—especially for cotton—actual value of the imports was of course immensely increased; the *Economist* estimates the enhancement on price account alone at $174,530,000. The fact remains, however, that the import trade of the year was much larger, not only in value but in quantity, and that the increase, reckoned by quantity alone, was twice as great as the increase of 1899 over 1898.

But the *Economist's* analyzed figures on the export trade bring a much more interesting conclusion. They prove not only that higher prices (notably of coal) are responsible for the $125,000,000 increase in 1900's exports, but that, without this rise in prices, Great Britain's outward trade last year would have shown heavy decrease. The *Economist's* figures prove that, if all the exports of 1900 had been sent out at the average values of a year before, there would have been a shrinkage for the year of no less than $80,000,000, as compared with a gain of $42,600,000, on the same basis of reckoning, during 1899. The result of the whole inquiry undertaken by the *Economist* is that, while on the face of the Board of Trade returns Great Britain's total over-sea trade last year increased $318,000,000, the whole of this gain and more was due to increased prices. At the valuations of the year before, the total foreign trade, imports and exports combined, would have fallen £16,484,000, or $82,420,000, below 1899.

Sir Edward Clarke, the brilliant lawyer and distinguished Conservative member of Parliament who broke with his party on the Boer war, now publicly blames Lord Roberts for demanding unconditional surrender when Gen. Botha asked for terms. All that has happened since—the prolongation of hostilities at such frightful cost of suffering and life on both sides—Sir Edward attributes to the lack of a policy of generous conciliation at that critical juncture. But, of course, this is only another way of blaming the Government. Gen. Roberts must have made the reply to Botha under instructions. It was then the rôle of Chamberlain to be very stern and unyielding, and to compel the Boers to surrender abjectly in order to make up for the humiliations they had inflicted upon him. Even now he announces that there will be no change of policy. The unsatisfactory conditions in South Africa threaten to become as "chronic" as Gen. MacArthur says they do in the Philippines, but, of course, the only thing for a powerful Government to do is to keep right on butting its head against a stone wall. Great men can afford to be conciliatory; it is only the little men trying to act as though they were great, who stand upon their dignity and make the country smart for their foolish pride of consistency.

Some striking comparisons are made by M. Jules Roche in an article in the Paris *Figaro* on population in the nineteenth century. There is little resemblance between the Europe of 1801 and the Europe of to-day. The names of the larger states are the same, but they describe very different entities. The population was 175,000,000 in 1801; it has increased to 392,000,000. The population of France in the former year, with its new and, as M. Roche patriotically calls them, natural frontiers, was 33,000,000; "superior in number, in cohesion, in vigor, to every other nation except Russia." Russia itself had but 36,000,000, mostly uncivilized. The United Kingdom had only 16,000,000. The old German Empire, which was then but a political expression, having crumbled before the arms of France, contained in its three hundred constituent states but 25,000,000 of inhabitants. Austria and Hungary had as many. There was no Italy; the kingdom of Sardinia had less than three millions, the States of the Church the same, the kingdom of Naples almost five millions, the grand duchy of Tuscany one million. France represented in itself one-fifth of Europe, and held in almost every respect the first place. On this side of the Atlantic, our country, with its five million inhabitants, was the only one whose population was known.

To a Frenchman the changes of the century are especially startling. France, with contracted limits, has but 38,000,000 of people. Even within these limits the population of 1801 was 26,000,000, so that the increase, at best, has been but 12,000,000. Instead of numbering the fifth part of Europe, the French are now but a tenth; England has 41,000,000 people; the new German Empire has 56,000,000; Austria has 45,000,000; Russia perhaps 135,000,000; even Italy has 32,000,000, and is increasing, while France is stationary. It is unnecessary to refer to the changes that have taken place in the Americas. A hundred years ago "active humanity" numbered less than 200,000,000, of whom the French were one-sixth, and in every way powerful and pre-eminent. Now the progressive peoples number 800,000,000, and it is not only in numbers that the French are surpassed. Nevertheless, in the "real superiorities" the French people are not backward. As M. Roche concludes, the subjugation of the forces of nature, to which the increase in human population is due, owes nothing to arms, to Emperors, to legislatures, to governments. The true potentates have been the men of inventive genius, of devotion to science, whose discoveries and whose energies have renovated the earth, and knit its remote parts together. They have made greater changes than "all the princes, all the conquests, all the foundations, and all the falls of kingdoms and empires." In this noble domain of ideas, mere numbers do not count, and France, "si elle sait penser," may again take the first place. Certainly the first step toward regaining her lost position will be to recognize the truth of this maxim, which involves the abandonment of military glory as an ideal.

Not that the Italian Ministry has fallen, but that it has stood so long, is surprising; and now that the expected has happened, and Signor Saracco and his colleagues are actually out, it is chiefly the manner of their expulsion that is interesting. Like that of his predecessor, Pelloux, Saracco's fall is due to labor troubles. Everything comes back to that in Italy. His resignation, however, was caused by no vigorous policy of his own, but by a mere parliamentary accident. His Government, since the assembling of Parliament, had gone slowly and cautiously along the way of opportunism, until an alarming strike at Genoa forced it to take a resolute position. It appeared that the strike, like the bread riots of three years ago, was chiefly political, and fomented by the Socialists of the local Board of Labor. So the Government dismissed the Board, ordering a new election. When a meeting of ten thousand workmen elected to the new Board eight members of the old, in defiance of the Government decree, the Government found itself in a most awkward situation—compelled either to pursue a losing warfare or to accept an ignominious rebuff. Meanwhile the strike had subsided, almost by magic, and the Government decided to let well alone. The day of reckoning in Parliament was not long delayed. The dissolution of the Genoese Board of Labor, loudly decried as an act of tyranny, consolidated the Radical Left against the Ministry; the failure to dissolve the second Board, again, was regarded as a sign of cowardice by the Conservative Right. Both friends and enemies of the Government joined in the vote of "no confidence" that led to the resignation of the Ministry.

"LEST WE FORGET."

The infamy of a broken promise is in direct proportion to the solemnity and particularity of its original affirmation, and to the frequency and fervor with which it has been reaffirmed. It is, therefore, a most wholesome and needed thing, at this time when our rulers are preparing to violate the pledge they gave to Cuba and the world, to remind ourselves just what and how binding the vow was which the Administration would now make us repudiate.

The language of the Teller resolution, adopted by Congress on April 18, 1898, was most carefully chosen. In addition to the somewhat vague clause declaring that "the people of the Island of Cuba are, and of right ought to be, free and independent," it went on specifically to recite:

> "The United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

If anybody is needed to explain the scope of words so precise, Senator Teller must be admitted to be the highest authority. He drew the resolution, he pressed it to enactment, he knows better than any other what were its intent and effect. His explanation, given at the very time, was as follows:

> "Mr. President, I want the Senate . . . to say to the world, in the *most emphatic manner possible*, that we do not intend in any way or manner to derive benefit from this intervention. Spain is too weak and too poor to pay indemnity. I want the Senate to say that *we do not intend to take that island;* that, whatever we may do as to some other islands, as to this island, the great bone of contention, we do not intend to take it. . . . I propose . . . to *make it clear to the world* that it shall not be said by any European Government, when we go out to make battle for the liberty and freedom of Cuban patriots, that we are doing it for the purpose of aggrandizement for ourselves or the *increasing of our territorial holdings.*"

This is contemporary interpretation of the highest and most unescapable significance. If anything were needed to clinch it, we might cite a little colloquy which took place between Senator Cockrell and Senator Allison on the day after the joint resolution was passed. The former had questioned the real purpose of the President to establish a free and independent Cuba; but Mr. Allison closed his mouth by citing the sweeping language of the Teller resolution. And Senator Spooner argued with his customary force that, when we said "independent" Cuba, we meant a Cuba independent not only of Spain and all European Powers, but of the United States as well. Nor in the whole debate in those excited days was there a single objection made in Congress to the Teller resolution. No man dared to mutter against it. Both Houses talked of nothing but our "high and holy" purpose to free Cuba and make her independent. Senators Frye and Gallinger and the others who now say that they never approved of the Teller resolution, took precious good care at the time to keep their doubts to themselves. The votes against the joint resolution—as in the House by Messrs. Boutelle, Johnson, and McCall—were given in opposition to the whole war policy, not at all in dislike of the Teller resolution. So far as the record and contemporaneous evidence show, that declaration of national purpose was made by the united voice of the American Congress and people. No country could bind itself by a more solemn covenant.

Surely, it is not necessary to argue this to Republicans. Their own highest party tribunal, the National Convention, set forth the exact truth in its platform of last year, when it said that the promise made to Cuba was uttered *"in the same voice by which war was declared."* The platform added: "To the letter this pledge will be performed." The case could not be better put. If there was any sanction to our declaration of war, it extended to our undertaking to keep our hands off Cuba after Spain was driven out. The declaration of war against Mexico, falsely reciting that the Mexicans were the aggressors, has been stigmatized as war with "superadded falsehood." It is evident that the phrase which the Republican party is inviting the future historian to use of the war against Spain, is, war with superadded perjury.

President McKinley is now represented as saying that he "always disapproved" the Teller resolution. Possibly; but he has, at any rate, committed himself in the most explicit way to its binding character. In his letter of acceptance, last year, he referred to our "sacred guarantees to the people of Cuba." There might be some possibility of an agile man dodging on that language, but the most elastic and shifty could not get away from the terms held by the President in his annual message to Congress in 1899. He therein referred to the joint resolution promising Cuba, on the part of the United States, "to leave the government and control of the island to its people," and added:

> *"The pledge contained in this resolution is of the highest honorable obligation, and must be sacredly kept."*

Are we to show ourselves a nation of false-swearers? Is our national good faith to be made a sneer and a hissing in all the world? If not, it is time that the President, that Secretary Root, that a Republican Congress, left off talking about the need of exacting guarantees from Cuba before we grant her even a crippled independence. All that must come later. Our relations to Cuba must all be determined by negotiation with an unfettered Government of Cuba. It would be better for the President to go to war with Cuba and conquer her fairly and squarely, than to try to cheat and overreach her, while blackening the American name in the act. War is an awful evil; but perjury by a mighty people is worse. We might better be beaten in a great battle, lose all our ships, have our commerce swept from the seas, see famine stalk through the land, than be made to appear, as we should be if the Administration's avowed purpose is executed, a nation as false as a rope of sand, whose plighted faith sits as lightly upon it as dicers' oaths.

OUR PHILIPPINE BALANCE-SHEET.

Last week brought the completion of two years since the ratification of the Treaty of Paris enabled President McKinley to add certain "gems and glories of the tropic seas," as he proudly called them, to the national domain. Americans are a thrifty and prudent people, unless all proverbs lie, and should be ready to strike a balance of our Philippine business up to date. The first account would relate purely to the money investment, and the return thus far had would stand as follows:

WILLIAM McKINLEY IN ACCOUNT WITH THE UNITED STATES.

Dr.		*Cr.*	
To one archipelago.	$20,000,000	By two years' exports to Philippines, say $3,200,000, profit on which at 12 per cent. is	$384,000
To benevolently assimilating the same, 730 days, at $750,000 a day	547,000,000		
To expenses able negotiators Paris Treaty	222,000		
To two islands which able negotiators thought they had bought	100,000		
	$567,322,000		
	384,000		
Profit and loss	$566,938,000		

Evidently "there are millions in" the islands; but they are so far "in" that it may be doubted if we ever get them out.

Charles Sumner said that President Grant's scheme to annex San Domingo was but a plan to "buy a bloody lawsuit." President McKinley bought of Spain a still bloodier insurrection. The cost of the islands in terms of flesh and blood and misery should furnish the next page of our Philippine account. But here it is hard to be exact. We know, it is true, that 711 American soldiers have been killed outright in the Philippines, that 446 have died of wounds, and 2,184 of disease; but no figures can set forth the story of ruined health, crippled bodies, and maimed lives which always lies behind the official returns of casualties. Then where are we to reckon in the 30,000 Filipinos whose lives have been taken? Are they a set-off to our own losses? But they are subjects of the United States, and the Supreme Court may decide that they are our fellow-citizens. However, we will be generous and allow the Imperialists to put the slaughtered Filipinos on the credit side of the account. We

will also give them the slain or starved women and children, the looted homes, the smoking towns, the waste fields. It is hard to see just where the pecuniary or moral profit of all this comes in, but, such as it is, the Imperialists are entitled to it.

A correct Philippine balance-sheet would also show the respective profit and loss in the moral and political sphere. Figures and values cannot, in this part of the statement, be sharply defined; but the two sides of the account would stand something like this:

LOSS.	GAIN.
Confidence and admiration of oppressed peoples.	Applause of arbitrary and oppressive rulers.
Gratitude of struggling republics.	Thanks of republic-destroyers.
Watchwords of liberty.	Shibboleths of Empire.
Peaceful expansion.	Criminal aggression.
Ideals of the fathers.	Toys of the nursery.
Reverence for the Constitution.	Trust in force.
The party of moral ideas.	The party of the pocket-book.

Again we leave it to the Imperialists to say on which side the balance is. From what we know of them, we are sure. however, that, as Thomas Fuller always made the praise and glory of God come out in the conclusion, no matter what his premises, so they can infer glory and greatness and goodness where others are able to see only shame and contempt.

Any prudent business concern "writes off for depreciation," or wear and tear of plant, from time to time. We are bound to do the same in looking into the actual status of our Philippine investment. One of our most valuable pieces of machinery, for example, "the consent of the governed," is hopelessly rusted and broken down. We can never use it again, and should strike it from our list of assets. It is obvious, too, that we shall have to get something to put in the place of the old Constitution, which is plainly obsolete. "No taxation without representation" has served us long, but the really up-to-date government plants have now introduced "Tax according to your own sweet will" in its place, and we shall have to adopt that style. Our stock of national consistency and good faith is clearly so much depreciated that it would not be honest bookkeeping to carry it any longer at par. On the other hand, our stock of false pretences, hypocritical professions, and silly boasting has been enormously increased by our two years in the Philippines, and if we can only get the world to take it at its nominal value, we may yet be able to lift our eyes from the ground and look the nations in the face again.

TENDENCIES IN STATE LEGISLATION.

The New York State Library has for some years made it a practice to collate and classify the statutes passed by the Legislatures of all the States. The compilation for the year 1900 has lately been published, and it is possible to derive from its contents some idea of the causes operating generally upon the law-making powers. There is certainly no lack of material. The number of new laws here summarized is 1,469, and the number of Constitutional amendments voted on is 38; while there have been 52 decisions of the courts declaring statutes unconstitutional. The State Librarian declares in his preface that States which do not study their neighbors' methods of government are as sure to lag behind as is the manufacturer who does not study his competitor's methods of production. The analogy would be more perfect were the products of legislation furnished according to the law of supply and demand; but it does not follow because a law is passed that the community desires it. We must admit, however, that legislation is, to a certain extent, a marketable commodity, and that those who want a law can often get it by paying for it. Nor is competition between States altogether unknown, for the State of Delaware has recently overbid New Jersey in the liberality of its incorporation laws, and the State of New York is considering what offers it can make in this direction.

But upon examination of the statutes here gathered we find, on the whole, surprisingly little deliberate imitation. It would be hardly too much to say that every Legislature goes its own way, without displaying any consciousness of the existence of similar bodies. Many of our legislators are lawyers; but very few lawyers know much about the legislation of any State except that wherein they practise, and those who have such knowledge keep out of politics, and are therefore kept out of the Legislature. Some years ago a number of lawyers in different States combined for the purpose of securing something like uniformity in certain branches of legislation affecting the general business interests of the country, and they succeeded in procuring some legislative recognition. The field was certainly a promising one; but we search the volume before us in vain for any evidence that the movement is still in existence. We fear that the evidence rather indicates that a bad law is more likely to be copied than a good one. Thus, Iowa has followed the example of Ohio in rewarding informers for getting personal property on the tax lists, and Ohio has followed that of New York in forbidding the employment of workmen by Governmental bodies, or contractors therewith, for more than eight hours a day; although the "prevailing rate-of-wages" feature has not yet been adopted.

Such similarity in legislation as exists appears to be due to public opinion manifesting itself broadly throughout the country, or to the efforts of reformers working to introduce their measures in every State. The outcry against "Trusts" has recently subsided, and we find that only in Mississippi was legislation against them attempted. The same is true of "department stores"; the only statute against them, that of Missouri, has been declared unconstitutional A like fate befell the Rhode Island statute against "Trading stamps"; but statutes against them in several other States are still on the books. In Missouri the attempt has been made, although it has failed wherever it has been tried, to tax mortgages by treating them as interests in real property; the owner of the property being assessed only on his equity of redemption, but allowed to pay the tax of the mortgagee, who cannot make any contract throwing it back on the borrower. This statute, it is safe to say, will be repealed very soon. In general there appears to be less hostility displayed toward corporations, although their liabilities are increased in a number of ways. Probably the most onerous requirement made of railroads is that of Massachusetts, which prescribes "workmen's trains" with nominal rates of fare in the region about Boston. The competition of the electric lines has been so severe as to diminish the local passenger business of the railways; and to compel them to sell commutation tickets for distances not exceeding fifteen miles at a rate not exceeding $3 a mile a year, is a severe blow. Massachusetts has also commanded the street railways to transport scholars to and from school at half rates. Like Massachusetts, Iowa and New Jersey have authorized the transportation of children to and from the higher public schools at the public expense.

A number of States show a disposition to regulate party caucuses, to perfect the Australian ballot system, and to introduce voting by machinery. Equally marked is the growth of the movement to promote the establishment of public libraries by State subvention, Iowa leading the way, and one or two of the Southern States being aroused to action. Not a few of the States have passed laws for the improvement of highways, the influence of the bicyclist proving still potent in some cases, and the importance of wide wagon tires being recognized. Massachusetts, however, is still alone in the systematic construction of State roads, a policy of very doubtful expediency. But aid is granted by several States to local bodies that undertake such improvements. Here, as well as in many other directions, we observe the steady enlargement of the "police power," manifested in the establishment of commissions, the raising of salaries, the regulation of employments, and the extension of supervision. There has not been much "labor" legislation, and, as usual, some of it has been declared un-

constitutional. There has been a marked increase in the pension legislation in favor of the Confederate veterans, and the heroes of the Spanish war have been generally favored. Nothing quite so bad has been done by any State as by Ohio, which has created an "Ohio soldiers' claims" office, for the purpose of preparing and collecting demands on the United States Treasury.

Few important changes have been made in substantive law, although the perfecting of administrative machinery always goes on. Slow but encouraging progress is observable in the laws regulating the treatment of the insane and of dependent and neglected children. There is occasional recognition of the importance of reformatory agencies and of separating young offenders from old. Little has been done to provide convicts with suitable employment, although their treatment is ameliorated in some of the Southern States. The system of release on parole has been adopted in Kentucky, persons convicted of murder being especially favored. The plan of committing first offenders to the charge of probation officers is growing in favor; but no State has ventured to adopt the "indeterminate sentence." On the whole, when we consider the activity of our legislators, the net results to civilization of their proceedings is disappointingly small. Nevertheless the losses can frequently be repaired hereafter, and many of the gains are permanent.

COPYRIGHT LAW AMENDMENT.

In his report on the results of the International Copyright Law, the Commissioner of Labor has brought together a variety of interesting and valuable suggestions in answer to his interrogation: In what respects do you think the law in question should be amended or changed?

That the abolition of the law is the best way to amend it, is the view of a couple of publishers, while a dozen or so profess themselves entirely satisfied with it, or sufficiently content to advise letting well alone. On the other hand, a large number of publishers give serious thought to the possible amendment of the present law; and the alterations proposed, as well as the names of those who suggest them, augur well for a growing appreciation of the equities involved in the protection of literary property and for the vitality of the International Copyright Law itself.

The opinions expressed regarding the stipulation of compulsory American manufacture in the case of books, first of all attract attention. A certain number of printers and publishers, directly or indirectly, indicate their approval of the provision of the act of March 3, 1891, requiring that copyright books shall be printed from type set within the limits of the United States; but only one of the older, well-known publishing firms—Lea Brothers & Co. of Philadelphia—is included. They contend that "the foresight and wisdom of the Typographical Unions of the country, backed by all other branches of organized labor, in insisting upon the manufacturing clause, have been clearly vindicated," and that but for this clause, workmen would have suffered to an untold extent. To offset this, a number of publishers—including such well-known firms as the American Book Co., Burrows Brothers Co., the De Vinne Co., D. C. Heath & Co., Henry Holt & Co., Little, Brown & Co., McClurg & Co., L. C. Page & Co., G. P. Putnam's Sons, and the F. A. Stokes Co.—assert that the stipulation has been of little or no use either to printers or to publishers, and that it should be done away with on the grounds (1) that it is no longer needed for the protection of printers, owing to composition being cheaper here than abroad, (2) that electrotyping is not only cheaper here but better, (3) that there is no sufficient advantage in the importation of English editions with the present duty, (4) that the tariff laws afford ample protection against the importation of sheets, (5) that the special tastes of American book-buyers can be trusted to compel manufacture here to meet requirements, (6) that it involves a wrong principle to compel the producer to do his manufacturing with one set of printers rather than another, (7) that instead of forcing books to be manufactured in this country, it really forces foreign books to get along without copyright protection, (8) that it is unjust to the book-buyer, (9) that it is a tax on the public, and (10) that it is an unfair exchange to receive unrestricted protection for our authors abroad and impose this onerous burden on foreign authors here. The weight both of numbers and of names is clearly on the side of doing away entirely with this restriction.

The requirement of American typesetting bears with peculiar hardship on the author whose work is in some language other than English—for example, Portuguese, Dutch, or Russian. He can hardly expect to sell an edition of his book in the United States large enough to justify resetting in the original, although a translation into English might not only be welcome but popular. But, under the law in force, the exclusive right of translation depends upon the production, not later than the day of publication abroad, of an edition of the original work produced from type set within the limits of the United States. This not only is manifestly unjust to the foreign author, but frequently proves a loss to the American publisher, who is debarred, by reason of this burdensome stipulation, from securing adequate protection for a sure-selling translation. The publishers, therefore, propose that, in the case of foreign books other than English, the law should be amended so that the authorized English translation of a foreign book, printed from type set within the limits of the United States, should be subject to copyright protection, to the exclusion of any unauthorized translation. Several of the publishers who urge this change (including D. Appleton & Co., Little, Brown & Co., and Charles Scribner's Sons) offer no condition as to change in the time of making deposit of copies, but Mr. George Haven Putnam argues, with justice, that a specified period of time, say twelve months from registration of title, should be allowed within which to produce the translation printed from type set within the limits of the United States, with the proviso that if, within that date, no authorized English version appeared, the right to produce the work in English should fall into the public domain. He also calls attention to the fact that such a provision would be in line with the arrangements in force under the Berne Convention. But it is to be observed that, by the provision of the amendments to that treaty adopted at Paris May 4, 1896, the author of any country of the International Copyright Union enjoys in the other countries of the Union the exclusive right of making or authorizing the translation of his work for the whole term of the copyright, and loses it only in case he shall not have made use of this right within a period of ten years from first publication of the original; in other words, he has a period of ten years, instead of one, in which to arrange for a translation.

The desirability of extending international relations as to copyright is expressed by several publishers, not only that we may deal equitably with foreign authors, but that we may secure for our own authors' work advantageous treatment everywhere abroad, through negotiation—as one publisher expresses it—"from the broad view point of international justice and equity." The advantage of the adhesion of the United States to the Berne Convention has manifestly been brought home to many of our publishers, and it is to be remembered that it is primarily the typesetting clause that prevents the entry of the United States into the International Copyright Union, thus debarring all American producers of literary, dramatic, musical, and artistic productions from the immense advantage of securing full protection for their productions in all countries of that Union, by merely complying with the requirements of our own copyright laws necessary to secure protection within the United States.

That provision of our copyright law

which requires as a prerequisite to copyright protection the deposit of copyright copies "not later than the day of publication thereof in this or any foreign country," is deprecated with general unanimity (only one publisher is for it), on the ground that the requirement is without apparent compensation to any one, and that it imposes a very heavy and unjust burden upon foreign authors, especially new authors, whose success with the public is still uncertain, and causes not only difficulties for American publishers, but often direct loss of valuable copyright privileges when unforeseen contingencies arise which prevent simultaneous publication. This stipulation has proved of unexpected difficulty and uncertainty in the case of serial publication, and the remedy proposed is a time allowance within which the deposits are to be made; the suggestions as to the period being sixty days, ninety days, six and twelve months, respectively, after date of publication abroad, or from two to three months or one year after preliminary registration of title in the United States Copyright Office.

The question of an equitable term of copyright is touched upon by several publishers, some of whom content themselves with indicating a desire for an extension of the present terms of protection, while two suggest the life of the author and thirty years; two the life of the author and fifty years; and three register their belief that the right should be enjoyed in perpetuity.

Several miscellaneous changes are suggested, ranging from the proposal to allow the temporary deposit of typewritten copies, to the taxing of the copyrights of foreign authors. Space prevents consideration of these various projects, but mention, at least, should be made of what is perhaps the most practical suggestion of all, concurred in by several publishers, namely, that all questions as to the amendment of the existing copyright laws shall be referred to a commission of experts, comprising representatives of all the several interests to be considered—producers of works of literature and art, publishers of books and works of art, at least one skilled copyright lawyer, and some one to act for the general public. To these should be added representatives of the interests of music-composers and playwrights. As Mr. G. H. Putnam truly says, "all existing copyright systems of the world excepting that of the United States have been the work of such commissions of experts"; and good sense dictates that the dangerous tinkering to which our copyright laws have been subjected for thirty years, should give place to this more rational method of treatment.

FITZEDWARD HALL.

The romance of a marvellously full and busy life, begun at Troy, N. Y., on March 21, 1825, and terminated on February 1, 1901, at Marlesford, in English Suffolk, had its origin in Dana's 'Two Years before the Mast.' One of five brothers, sons of Daniel Hall, a Vermonter by birth, had his head turned by that classic, and ran away to sea. Fitzedward, being the oldest of them, was sent after him, and for that purpose sailed from Boston in a merchantman for Calcutta in the spring of 1846. By the wrecking of the vessel off the mouth of the Ganges in September his destiny was fixed, for, not being able to return directly, as he had planned, he improved his enforced stay ashore by taking a few lessons in Hindustanî and Persian, and this ended by his resolving to study these languages (to which he added Bengalî and Sanskrit) thoroughly. Accordingly he spent three years in Calcutta, and there laid the foundations of his Oriental scholarship and life-work.

His schooling had been at Walpole, N. H., and at Poughkeepsie, N. Y., and he took the civil engineer's degree at the Troy Rensselaer Polytechnic Institute in 1842. Thence his father, a lawyer by profession, and himself a graduate of two colleges, Middlebury and Dartmouth, sent him to Harvard to join the class of the future Professors Child, Lane, and Norton. He was cut off from his Commencement by the sudden mission to India, and left bearing voluntary letters from President Everett to the Bishop of Calcutta and others. Up to this time his attention had been pretty equally divided between languages, mathematics, and natural sciences, including medicine. To his classmates at Harvard he seemed systematically to slight his studies, but he was an assiduous student of Romaic in an extra class under Professor Sophocles, and he prided himself on discovering the source of any English set for Greek exercise in the space of half an hour. In fact, from the age of fifteen he had been taking notes on English words and phrases, and this became the passion of his maturer years. Nor did he fail to profit by the English drill of "Potty" (Prof. Edward Tyrrel) Channing.

From Calcutta our American proceeded to Ghazeepoor on the Upper Ganges, tarrying five months, and to Benares, which he reached on January 16, 1850. Here, a month later, he received an unsolicited appointment, in the Government College, to a post which, in 1853, was converted into an Anglo-Sanskrit professorship. In July, 1855, he was transferred to Rajpootana, as Inspector of Public Instruction for Ajmere and Mairwara; in December, 1856, he was promoted to a like inspectorship for the Central Provinces, with his headquarters at Saugor. At the pestilential fort of this place he was shut up for nine months during the Sepoy mutiny, shared in the defence with a skill as a rifleman acquired in tiger-shooting, and volunteered for further service after the relief, as his educational charge was hopelessly demoralized. He now took a year and a half's vacation in England, France, and in his native country, which he reached in the autumn of 1859, returning to England for the Oxford degree of D.C.L. in 1860. In the spring of 1862 he bade good-bye to India, where he had amply earned his doctor's title by prolific writing in the Journal of the (Bengal) Asiatic Society, in Indian magazines, and in not less than a dozen printed volumes, to be continued after his establishment in England. Of these we gave some account in our notice of his seventieth birthday, in 1895, the year which witnessed the conferring upon him of Harvard's degree of LL.D. He was the first American to publish a Sanskrit text. His prodigious powers as a reader in Sanskrit were comparable to those displayed in English, and made him a most accomplished annotator of texts, while aiding him to resolve with singular penetration and success some of the complex problems of Hindu literary chronology.

His first home in England was in London, where he held the professorship of Sanskrit, Hindustanî, and Indian Jurisprudence in King's College, and the librarianship of the India Office. In 1864 he was appointed to the examinership in Hindustanî and Hindî in connection with the Civil-Service Commissioner; in 1880 in Sanskrit, succeeding Professors Max Müller and Cowell; about 1887 in English also. This employment he retained up to the time of his death. Meanwhile, in 1869, he removed to Marlesford, some eighty miles distant from the metropolis, and in this retreat he completed his edition of the 'Vishnupurâna' in six substantial volumes, costing eight years of steady labor. Half the matter in it was of his own contributing, much of it being Sanskrit, from works not yet edited, and the manuscripts quoted being his own. Now began those works on his mother-tongue which revealed his unrivalled store of accumulations, and made him known to his countrymen at large, while bringing him into sharp contact with sciolists and pretenders. Such were his 'Recent Exemplifications of False Philology' (1872), 'Modern English' (1873), 'On English Adjectives in -able, with Special Reference to Reliable' (1877); 'Doctor Indoctus' (1880), etc., etc.; and the numerous showings of his hand, so to speak, on various words and locutions, with which, under the modest signature of "F. H.," he for years enriched the columns of this journal, the *American Journal of Philology*, and other mediums.

Such scholarly activity, of which the outcome in 1888 was thirty-six volumes in the British Museum catalogue, written, translated, or edited by Dr. Hall, cannot fairly be appreciated without recalling his incessant note-taking, and the fact that he kept duplicates of nothing that he wrote, and that he had not even the aid of a copyist in his literary labors. But wonder grows when we consider the purely gratuitous burden assumed by him in his later years in the service of the Oxford English Dictionary and the parallel enterprise of the Dialect Dictionary. The instance was freshly afforded of a prophet not without honor save in his own country. In 1847 he had sent materials to Dr. Worcester for his Dictionary, and a large collection of words in 1861, many of which were embodied in the supplement; but no public acknowledgment was made of this aid. Some twenty years ago he offered to furnish Worcester's editor with ten thousand new words, but the offer was declined with scant courtesy, and Webster's editor was equally indifferent to it, though Dr. Hall's 'Recent Exemplifications' and 'Modern English' had been for a decade under their eyes—or

might have been! His disinterestedness was obliged to await the inception of the Philological Society's great enterprise, when he undertook to read and criticise without remuneration every proof-sheet of the 'New English Dictionary,' and supply fresh and indispensable quotations from his millionaire treasury, at the rate of two to three hundred a month, and at an outlay in time of six or eight hours daily. Dr. Murray, who never set eyes on his retiring colleague, has borne constant testimony to the pricelessness of his coöperation:

"His help to the Dictionary has been, and is, simply beyond expression; and it will be a sorrowful day for us when he leaves us. He has, indeed, made arrangements whereby his materials and many of his books shall come into my possession"—we quote from a private letter of 1894—"but that is a very slight affair; it is his own enormous memory, his richly stored brain, his knowledge how to utilize his own notes, and where to look for a word or phrase, that will be lost for ever. . . . He has looked upon the perfecting of the Dictionary as one of his great duties, and right nobly and magnificently he has worked at it. It has sometimes been thought that my references to his help partook of the language of exaggeration; I have always felt how inadequate they were to express what the Dictionary owes to him."

Professor Wright's 'Dialect Dictionary' appealed to Dr. Hall with peculiar force from his local attachment to Suffolk, whose dialect so frequently reminded him of the speech of New England, and with whose common people he mixed freely as a fellow-man and as a generous benefactor. Every one of the more than 2,200 Suffolkisms he contributed down to the end of M, he had heard himself. This labor went on *pari passu* with that for the Oxford Dictionary.

Dr. Hall certainly had thus a fair claim to pass for an Englishman apart from his appearance, which imposed upon strangers, his domicile, and his Government employment in a post for which the competition was very great, but from which he could never be dislodged. His last communication to this journal, however, was signed "Civis Americanus," a title of which he was very proud, though fate willed that he should never cast a vote even for President—neither for Cleveland, nor against Bryan. On the one hand, he paid the penalty of his great learning in rebuffs on the part of Englishmen who looked askance at a Yankee presuming to have something to teach them; on the other, of neglect on the part of Americans whom distance prevented from rating him at his true value. His polemical writing naturally made him enemies on both sides of the water, at the expense of his just reputation. But above all he came to reside in England in the midst of the civil war, when any American was liable in society to have his feelings wounded by heedless or malevolent remarks on his country, and he has himself related in our columns instances of such experiences in his own case. He quickly resolved to be no Englishman's guest for a single night. Though he had an exceptional acquaintance, for the last twenty years of his life, with rural England, following his rod, and indulged in the freest hospitality, he yet sat down to no one's table but his own. Needless to say that, from the moment he cast in his lot among Englishmen, he was always, as he wrote to the *Nation* in 1896, "prompt, and not seldom at the cost of rude handling, to defend my countrymen, their institutions, and their conduct, so far forth as I have thought them defensible." But it can hardly be doubted that he was supersensitive, and liable to take affront where none was intended.

All that he received from this journal in the way of honorarium he dispensed in charity. His largess in his own neighborhood could be reckoned in hundreds of pounds annually. He had married at Delhi in 1854 an Englishwoman, daughter of Lieut.-Col. Arthur Shuldham, of an ancient family with large connections; his sons were educated at English schools. He was the largest subscriber to the cost of the Dialect Dictionary. And still there stirred in him rather that transubstantiated English blood which flowed from his first ancestor, John Hall, who came to America from Coventry in 1630. His grandfather was from Cape Cod, served as a naval officer in the Revolutionary war, became a prisoner in England, was for seven years a judge of the Supreme Court of Vermont, and died in 1809. His father was a rich man, able to send four of his sons to Harvard. His mother, Anjinette Fitch, was the child of first cousins, grandchildren of Thomas Fitch, the penultimate Colonial Governor of Connecticut, and a descendant of one of three brothers, Essex men, all of them Puritan clergymen, and graduates of Cambridge University, England, who emigrated in 1637. On the college at Cambridge, Mass., his alma mater, Dr. Hall bestowed during his lifetime a thousand Oriental manuscripts, which cost him $10,000, and many of which are unique; besides quite as many correspondingly valuable books.

Dr. Hall possessed an extraordinary physique. Up to his seventieth year at least he walked two miles daily, in rain or shine, needing but half an hour for its accomplishment. Yet for half his life he was afflicted with chronic bronchitis. His digestion, however, remained perfect, and he favored it with a very simple diet. He weathered in 1894 a desperate attack of pleuro-pneumonia, which he expected would send him to the Woking crematorium; as of rheumatic fever in 1889, when he wrote, "So far, however, am I a genuine American that nothing dispirits me." "Zero or thereabouts," he wrote in 1891, "is still my supreme delight; as I have warm blood, and plenty of it." In his spacious house at Marlesford, with attractive grounds and a beautiful conservatory, one saw, in these latter years, a tall, big man with white beard, a bald head, thickly fringed about the lower part; somewhat stooping, but quick in his step and movements; hawk-eyed, and with a look of command; frank-spoken to the last degree; with a mania for flowers as for angling; conspicuously kindly of heart, and a power for good in his immediate vicinity. Of a Sunday afternoon neighbors were wont to assemble in his parlors for vocal music.

It remains, in taking leave of a character so interesting and lovable, whom we have been privileged to know somewhat intimately for a quarter of a century, and to whose friendship for this journal we must record our deep obligation, to say something of him as a writer. "Though I have lived away from America upwards of forty-six years," he wrote to the London *Academy*, in 1893, "I feel, to this hour, in writing English, that I am writing a foreign language, and that, if not incessantly on my guard, I am in peril of stumbling." Reviewing carefully that same year his printed writings in Indian magazines, "enough to make a good-sized volume," in 1850-'52, "I have," as he wrote us privately, "detected only one Americanism in the whole—'*at* the South' for '*in* the South.' Yet I never consulted any Englishman about my phraseology. Some day I may put on paper how it was that I succeeded in learning to write our language catholicly—*i. e.*, so as not to reveal my nationality." These confessions explain in part the apparent constraint of his diction, which was much enhanced by the very wealth of his vocabulary and by a too close and inflexible punctuation. Hence, his prose was apt to be difficult reading. Had he combined with his vast learning a light and playful style, he would not more effectually have strewn the field with the slain, but he would have made the process as delightful as it was edifying. As it is, his works are a permanent resource against the ignoramus and the charlatan who seek to make the English language into their own likeness.

A FEW THOUGHTS ON THE LIFE OF QUEEN VICTORIA.

LONDON, January 29, 1901.

Although the newspapers will have conveyed to every one in the United States the immense impression made in England, and, indeed, all over Europe, by the death of the Queen, they may not, perhaps, have fully explained exactly what it was in her character and career that won for her so much respect and affection from all classes, and made the grief at her loss so absolutely genuine. An outburst of regret naturally produces an outburst of praise; but the praise is so general and high-flown that the true and peculiar elements of excellence which deserved it are in danger, I will not say of being forgotten, but of being imperfectly realized. Two of these elements are worth dwelling on, for they give to the Queen's reign a unique significance which historians will note in days to come.

One is the part she has played in the development of the British Constitution. When she mounted the throne in 1837, only five years had elapsed since the great Reform Act. It was nothing less than a bloodless revolution, carried through by the regular forms of law. It shifted power from the landed aristocracy to the middle classes, relegated the House of Lords to a position of acknowledged inferiority, and materially changed the position of the Crown—not, of course, by changing its legal position, but by making the whole nation so unmistakably sovereign as to render it impossible for any future king to resume the policy of George the Third. Nevertheless, it was still quite uncertain what the position of the Crown would be, and how its dignity and its titular authority would be reconciled and made to harmonize with the actual control which the people, through the House of Commons, had now begun to exercise under William the Fourth, an honest sailor, little versed in history or politics. The requisite adjustment had not been made. It was left for Queen Victoria to make it. In her reign of nearly sixty-four years, she had ample opportunity, and she used that opportunity with extraordinary judgment, tact, and self-restraint. The British Constitution, as everybody knows, consists very largely in usages which are

not, and hardly could be, embodied in law, but which are observed because they have been observed, and because they are felt to be wholesome for the conduct of Government. When the Queen began her reign, these usages had not yet settled down into that altered form which the new conditions introduced by the Reform Act rendered necessary. It is she and her Ministers who have formed them; and, as she was a permanent quantity, while they came and went, her share has been the greatest in this work, so essential to the proper play of the organs of government.

Thus, it has become recognized that the Crown has the right to be informed of all the decisions taken by her Ministers before they are made public, and to see important dispatches before they are sent to be communicated to foreign Powers. The Crown is entitled to express its opinion to the Ministry upon these decisions or communications, and to remonstrate if it conceives that they are inexpedient. On the other hand, if the Ministry adhere to their view, it is the duty of the Crown to accept that view and to follow all such advice as they may tender; the responsibility, of course, lying with them alone. So the Crown must abstain from trying to influence Parliament, as George the Third tried to do and unfortunately succeeded in doing, and must even conceal its own private sentiments regarding current matters of political controversy. Nothing could have been more wise and more conducive to the public interest than the Queen's action in this matter. She often entertained decided views regarding questions at issue between the two political parties, but she never allowed these views to become known. They could not, of course, be kept altogether secret from the few who were behind the scenes in politics, but she herself did not disclose them; and it is to the credit of English statesmen of both parties that they never attempted in any way to use what they might happen to know for the purpose of influencing Parliament or the public. To have done so would no doubt have been a breach of duty, and the error might have recoiled upon whoever had so erred. Still, it is remarkable that this tacit rule of the Constitution should have been so carefully observed. And it ought further to be noted that the Queen never suffered her personal views of a political controversy to affect her private relations with her Ministers. She might have individual preferences for one or another—no human being can help having such preferences; but those preferences were not determined by the political opinions of the Ministers. She showed just as cordial a kindness to those who were engaged in advocating a policy which had not her own personal sympathy, as to those who were resisting that policy. It may be said that the interests of the monarchy prescribed such a course. That is true, but that does not lessen the credit due to a sovereign who not only discerned clearly what the Constitution required, but consistently refused to allow her political feelings to disturb her personal relations with those who served her.

Within the limits which have just been indicated, there was room for action by the Crown in the interests of the nation not as by way of interfering with the conduct of affairs by the responsible Ministry, but in cases where a suggestion could be made from a quarter standing above party, which might point a way out of embarrassments. Several times this is understood to have been done by the Queen, and always with happy results. She had the advantage of good confidential media of communication in her successive private secretaries, who were, of course, careful to keep themselves from political proclivities, and she chose them with great judgment. More than once, also, she is believed to have been able, with the approval of her Ministers, to make unofficial representations in foreign affairs; and that to the great benefit of European peace. These cases were, however, altogether exceptional, and are to be mentioned chiefly because they show the purposes which a monarchy may occasionally serve under a tactful monarch. Apart altogether from them, the conspicuous service which the Queen rendered was to establish a definite constitutional practice regarding the position of the Crown in the regular working of the Constitution. It is an inestimable service, and a service useful not only to England for the days to come, but also to the British self-governing colonies, in which the Governor holds towards the Ministerial Executive and towards the Legislature a position similar to that of the Crown at home; and even to those foreign countries which, like Holland, Belgium, and Italy, have reproduced, with more or less variation in details, the English Cabinet system.

The other point in which the life and reign of the Queen have a remarkable significance for history consists in what may be called the new reading she has given of the functions of a sovereign, the new aspect in which she has presented monarchy to the eyes of the world. She has made it more popular than it ever was before, not by leading the nation, not by public appeals, not by the exercise of brilliant talents (for when she took wise and useful action, the people knew nothing about it), not by pomp or display such as sometimes catches a nation's fancy, but by the example which she showed of the simple virtues of a wife, a mother, and a friend. She made her own private and personal life looked to by the nation as the pattern of what an English home should be. The popularity which was for a time enjoyed by George III. was largely due to the fact that he did to some extent do this. But the Queen did it with more geniality, with more sympathy, and over a longer course of years, while at the same time keeping herself, as George III. did not do, out of all the controversies of parties and sects. There have been able men and good men among the monarchs of England for the last eleven centuries, in as large proportion as in most kingdoms, but there have been very few amiable men, very few whose characters, taken apart from their abilities or their achievements, have recommended them to the affection of their people. One has almost to go back to the half-legendary King Alfred to find a sovereign who excited both personal respect and personal affection in the sense in which the Queen has excited it in England during the last thirty years. Nor were the four preceding Queens of England any happier in this respect than the kings, although a female sovereign may seem better fitted for the display of the qualities that win attachment. The two daughters of Henry VIII. had, in different ways, too much of their father in them; the two daughters of James II., though they did not inherit his particular faults, hardly reached the hearts of the people. It was reserved for Queen Victoria to show that the occupant of a throne may secure the affection of a nation by holding on a throne just that line of conduct which makes a man or a woman trusted and respected in private life, and by adding to straightforward good sense and good temper that power of feeling sympathy, and of expressing it in a natural, kindly, unpretending way, which touches the heart. The thing seems so simple that one wonders it has been so seldom done; but the fact that monarchs have so seldom done it shows how precious a gift it is. In this aspect, also, the Queen's reign deserves to be memorable. She leaves the monarchy not only, as was well said by Mr. Arthur Balfour, more valuable than ever before in respect of the functions it discharges towards the outlying dominions of England, but also stronger in the sentiments of the people than in the days when its constitutional authority was far more wide. And when one perceives the impression which has been made all over the world—and not least in the United States—by the departure of this venerable figure, which had come to seem almost part of the normal order of the world, the unexampled sorrow of England is no more than was due to one who had made herself the friend and mother of her people.

THE IRISH VIEW.

DUBLIN, January 26, 1901.

It was to be expected that Queen Victoria's death should call forth expressions of sincere regret in all quarters of the civilized world, except where her soldiers are engaged in conflict with a civilized people. It is scarcely realized how little, and why, it is so felt in one of the earliest conquests of her race, the one nearest to her centre of authority, by one of the only three peoples in her wide dominions whose arms are quartered on her standard, and whose cross is borne upon every flag officially flown in her honor.

The absence of genuine affection for her Majesty in the hearts of the vast majority of the Irish people and of sorrow for her death are not due to hardness of heart, want of chivalric feeling, or inherent separatist proclivities. It is all explicable. Her reign has not been to them a happy one. It is true that its conclusion leaves them—such as are in the country—in a happier condition than its opening found them. But this alteration of condition has been attained through ordeals to which the English or any other self-governing people would not have been subjected. It found them 8,000,000 in number; it leaves them 4,500,000. It found them three-tenths of the strength of the United Kingdom; it leaves them one-tenth. Victoria's signature has been attached to some thirty or forty acts of Parliament annulling for them alone ordinary Constitutional safeguards to liberty. She leaves them under such a one, perpetual in its provisions, by which her Viceroy can at any moment, by a stroke of his pen, suspend the liberty of the press, abolish trial by jury, and practically hold in abeyance habeas-corpus. Her initials have been placed most prominently before the eyes of tens of thousands of her Irish subjects upon writs evicting them from lands which they themselves had reclaimed. The associations through which the greater reforms whereon Ireland's present prosperity

mainly rests were suppressed by proclamations ending with "God save the Queen." In her name were imprisoned those by whose exertions such reforms were mainly accomplished.

Supposing necessary the apathy and delay that have distinguished her Parliament and people in the process of Irish reform, supposing unavoidable the treatment meted out to associations and leaders, all the more would a really great and sympathetic sovereign have exerted herself to lighten the pressure of the iron necessity of things upon a suffering and sorely tried people. Many were the occasions that offered when even a shred of personal sympathy might have allayed fevered passion and diverted the current of Irish thought into happier channels. No people would have been more amenable to such influences than the Irish. Such sympathy as has been from time to time officially communicated has been regulated strictly upon formal and Constitutional lines. If one-half the personal interest in their people occasionally shown within our time by Continental sovereigns during periods of calamity had been by her shown in Ireland's crises, feelings would be very different from what they are. For thirty-nine years she never visited Ireland, and then, last year, under circumstances which deprived her coming of all real grace—it was patently a move on the part of her advisers to encourage Irish enlistment in a war detested by a majority of the Irish people. Behind all this there was more. Her attitude was not alone wanting in sympathy. Within official circles it was known that she was accustomed to say to at least one Irish-born Minister: "You must not say you are Irish!" The reasons for her attitude towards Mr. Gladstone of late years could not be concealed.

Biographers have much to account for in establishing bad blood between peoples as between individuals. A system of united "undenominational" education was set up in Ireland seventy years ago, mainly under the tutelage of Archbishop Whately. Nothing has more contributed to the destruction of its undenominational character than the admission by the Archbishop in a letter (published by his biographer after his death) of his underlying expectation that the system would wean Ireland from Catholicism. So, in memoirs of Prince Albert, the Queen's *alter ego*, the Poles were declared by him to be "no more deserving of sympathy than the Irish," and of O'Connell's death it was he that wrote: "It is a befitting end to an agitator that, two years after he had stood before the world like a colossus, he should pass out of it unnoted, whereas a man of true worth cannot survive his reputation."* This last passage at least was penned during one of the darkest periods of Irish history, when all sympathy was called for, concerning a man deservedly held in the highest respect and deeply mourned by the Irish people.

An occasion such as the present brings into more than ordinary prominence the sad reality of Ireland's being still inhabited by two peoples whose political sympathies are wide apart. By the "loyal minority" the Queen is mourned, as far as outward appearances go, more deeply than upon the average she is mourned in England. There is with them no consciousness of there being an Ireland with separate experiences and feelings from England. They are in such respects more English than the English themselves. The wealth and culture and power are mainly in the hands of the minority; the voting strength in that of the majority. While the flags are half-mast high upon public buildings, and the blinds drawn in all establishments that depend upon the custom of the better classes, the Lord Mayor of Dublin has, by the vote of the corporation, lost his chance of a second term because he joined in an address to the Queen last spring. This divided feeling is deplorable. The minority want the love and respect of the masses. The masses suffer in not having the sympathy of the better-off and more cultured than themselves, and in not taking them as patterns and exemplars in many of the graces of life.

Few of us of the elder generation in Ireland would wish, even if we had the chance, to live through another reign of sixty years, if into it, for our country, were to be crowded such misery and heartburnings, such depopulation, such unnecessary desolations and upturnings as those through which we have lived in the course of the reign of Queen Victoria. D. B.

*The first of these two passages, often quoted, and never (so far as I have heard) repudiated, I have been unable, for the purposes of this writing, to trace. The second stands in Sir T. Martin's five-volume 'Life of the Prince Consort,' published by authority of the Queen.

LAW AND ORDER IN MONTENEGRO.

CAMBRIDGE, December, 1900.

The ancient and venerable tree of justice in front of the Prince of Montenegro's modest palace has fallen, or, to speak by the card, was blown down by a storm last year. Beneath its shade, the sovereign, in good old primitive fashion, has administered justice direct to his people, his word being final in legal as in so many other matters. The right of appeal to his ultimate judgment is freely taken; for, though but an amateur lawyer, his sense of justice is strong, and proves a valuable corrective to the somewhat partial and capricious rulings of the courts. That there should be any courts at all, worthy of the name, in a country not yet emerged from the military into the industrial stage, is noteworthy, however, and reflects the greatest credit on the ruler whose long reign has been such a striking example of a typical B. C. beneficent despotism in full working order at the end of the nineteenth century.

In perfecting the present system, his Highness Nicholas I., "Prince of Montenegro and the Berda," had, of course, some foundation upon which to build, and an interesting foundation it was. The up-to-date reader need hardly be reminded that Montenegro has earned the enthusiastic gratitude of Sir Henry Maine and the rest of the theorists, by preserving in singular purity the early Aryan institution of the House Community. In this the family, and not the individual, is, if the phrase may pass, the legal unit. The collective household owns the land, often mere pathetic scraps, tilled by its individual workers, and all their produce and earnings, even when made in a far country, go to the common fund. At the door of the family are laid the debts, torts, and crimes of each of its members—an ideal system for the rapid growth and artistic development of feuds and vendettas. A group of families traced from some common ancestor forms a brotherhood or clan, which has the communal ownership of forests and pastures. A group of clans make up the tribe (*plemé*), several of which usually compose a district (*nahia*), of which in the seventeenth century there were five, before the recent treaties nearly doubled the area of the country. Disputes within the family were naturally settled by the head of the house, perhaps assisted by the daily general assembly, in which every member of the family had a voice, but the elders really controlled. More extended controversies were taken before the tribal head-man (*kniez*), who to his multifarious duties obligingly added that of general arbitrator. But each was a law unto himself, and at best confined his attention to civil matters, considering such items as blood-feuds, border-raids, etc., quite outside his jurisdiction. Then as now, the final word in everything came from the *Vladika*, or Prince-Bishop-Commander, who, up to the middle of this century, combined in his person the headship of state, church, and army. There was, to be sure, from early times an hereditary "Civil Governor," but the title was decidedly a misnomer, for his duty was the supervision of the defences of the country; and in 1832, when the incumbent was discovered plotting treason, the office suddenly became extinct.

Strangely enough, the first steps towards modern law and order in Montenegro were taken by an impostor, one of the cleverest in history, Stephen the Little, who, pretending to be the murdered Czar Peter III., seized the reins of Government in 1767. He introduced the gentle but progressive art of road-making, took a census, established district courts, in which he thoughtfully prohibited business on Sundays, and came down extremely heavy on evil-doers. Theft he even punished with death; so that, tradition goes, a purse of gold and a silver-mounted pistol left as a test in the middle of the (only) road remained undisturbed for weeks.

The next notable improvement occurred in 1797, when "Saint" Peter, whose tiny chapel crowns the almost inaccessible heights of the Lovčen, superseded the purely traditional justice of the courts by a written code. This, with additions in 1803, comprised thirty-three articles. The influence of the neighboring Orient was strongly felt in them; only one related to real property, viz., that an individual owner of land wishing to sell must first offer it to the members of his family, and then to his neighbors, before looking further for a purchaser. This of course was merely declarative of the immemorial usage of the Croatian community system already spoken of. To this code of Peter I. the headmen swore to conform themselves, but it was a sore let and hindrance to their rule-of-thumb justice, and they soon regarded it so lightly that special judges had to be appointed to interpret and enforce its provisions.

Soon afterward, another inducement to godliness was afforded by the establishment of a regular police throughout the principality. It is rather curious to note here that the luxury of a regular standing army was not indulged in until five years ago, and even the rough "minute-men" organization, with captains of tens and of hundreds, did not come till 1853. The early "bobbies" of Montenegro confined themselves strictly to keeping the local and domestic peace. Little expeditions over the border against

the Turks, the hereditary foe, were not only winked at but even looked upon as rather beneficial than otherwise, affording at the same time a safety-valve for the unquenchable martial effervescence of the country, and an opportunity to keep one's hand in for the more serious operations of the desperate conflicts into which the tiny state has been almost unceasingly plunged for the defence of its cherished independence.

Peter II., who succeeded his uncle (for the succession up to 1851 was always from uncle to nephew, as the Prince-Bishop could not marry), tempering justice with mercy, drew up a schedule of fines for every offence, and enforced them by confiscating the law-breaker's most valued property, his weapons. He greatly diminished the causes of blood-feuds by ordering that capital punishment should never be performed by a single executioner, but by a firing-squad of assorted tribesmen. To him also is due the gloomy honor of constructing the first prison. His successor, Danilo II., drew up the Great Charter, of six articles. Herein he separated the religious headship from the other attributes of the sovereign and bestowed it upon a distinct archbishop, to be chosen, however, by the Government. The laws and customs existing were confirmed.

In 1855 he tried his hand at a new code, which continued in force till 1888. Though a considerable advance over that of Peter I., it contained some curious sections. No penalty, for instance, attached to a fatal assault following directly upon the provocation of a blow, while if the insulted party lay low and delayed his retort courteous, a subsequent killing was recognized as murder. Theft, which seems to be held in special abhorrence, was again the object of severe penalties, the more astonishing because the mountaineers are constitutionally honest, and have practically nothing in sight to steal. The judgeships were made elective, and any annoying arrogance of the bench was curbed by the imposition of a fine on a judge who insulted a suitor. Stress was laid on the equality of every citizen before the law, and the equal rights of all to hold office. This, though on its face an attack on the communal system, was perhaps only an amplification of the national motto, "Civil and religious liberty is the reward of valor."

After the treaty of Berlin, Prince Nicholas determined on the construction of a fresh code, and to that end secured the services of the very eminent publicist, Professor Bogosić of the University of Odessa. After a prolonged, minute, and scientific survey of the field, this gentleman determined on a plan unique in the history of modern codes. Recognizing the fact that, in spite of the laws already promulgated, the people still clung tenaciously to their traditional laws and customs, and doubtless influenced by the enormous historical interest of this oldest national statute-book, he deliberately set himself to codify it, with as few alterations as possible, so that the Montenegrins should have "a new code but not new laws." This was finally completed and promulgated in 1888; but, with all its concessions to popular prejudice, and in spite of its learned author's expressions of satisfaction with the manner in which it is interpreted in the lower courts, competent observers hint that it is more or less of a veneer, cited when its weight will clinch a decision, and somehow overlooked when not in accord with the inherited ideas of the judge. In short, the history of codes in Montenegro goes to show that you cannot "throw down" an Early Aryan Institution all at once, even with the aid of a Modern Scientist.

The present judicial organization is an intelligent modernizing of the traditional arrangements. The *nahie* now number ten, mostly composed of several *plemena*, each of which has a "captain" who is the judge of first instance. This gives nearly a hundred inferior courts, well distributed through the whole country. Appeals go up to the district court, situated in the principal town of each *nahia*. The "Great Court" (the Minister of Justice and four members appointed by the Prince), sits at Cettinje in the Old Palace, a squat, surly little semi-fortress in a walled square with big round bastions at the corners.

Close by stands the central prison, of one story, but resplendent in whitewash, with three rows of cells, which open (and apparently remain open) into a central courtyard. It does not seem overcrowded. Crimes of violence are almost unknown. Robbery, as has been stated, is foreign to the native nature. Chastity is a national virtue. In five years there have been imposed but two death-penalties. A witness, however, is imprisoned if he neglects to obey the oral summons of the court. It is surprising how soon a "wanted" individual can be produced, even from the most distant parts of the country. The boundaries are as well policed as the capital, and, in the words of a resident, "not a fly can move anywhere without the Prince's knowing it." The prisoners enjoy a good deal of freedom. With the slack of their heavy leg-chains pulled up by a cord from the belt, they not only leave their cells, but emerge from the main gate and promenade a sort of parade ground outside, where, chatting with friends and amusing themselves cheerfully, they form a picturesque addition to the town.

The scene in the court-room is even more striking. If you can get the trick of breathing the peculiarly "racy" atmosphere, where ventilation is evidently sniffed at, you can quite enjoy yourself. The dense crowd of spectators at the bottom of the long narrow room is in itself a fine study. Every one wears the highly interesting national costume right up to the little red and black "pill-box" cap, which is ubiquitous, worn by men, women, and children alike. Inside the rail there seems to be a normal state of excitement. Talk as loud and as often as possible, and always interrupt everybody, is evidently the first rule of procedure. At times one would almost think the Dreyfus trial had been somehow translated from Rennes to Cettinje. As a matter of fact, the general run of cases consists of small commercial disputes, for your Montenegrin is a thrifty soul, and follows his florins and kreutzers as keenly as a Yankee his dollars and cents. The handling of witnesses is a delicate matter. There is a Celtic strain in the national character that crops out in a tendency to exaggeration and agreeable misstatement, to which generations of strategic warfare have added a crafty indirectness, while a fierce pride and an extremely sensitive dignity do not tend to make things easier. At the upper end of the room, under an execrable crayon portrait of the Prince, is the judges' table. They are hale and hearty old fellows, whose importance is easily seen from their attire, even more brilliant than the usual dress of the country. They give no written opinions, and are consequently not overburdened by citations or precedents. Indeed, their decisions are apt to be affected not only by the state of the weather and their digestions, but by the rank and influence of the claimant. So we fall back on the Prince, as usual, and we cannot wonder at the passionate devotion in which he is everywhere held when we see how he shepherds his people through all their tribulations, and not least through the pitfalls of the law. But after a visit to the court-room we understand why he preferred to dispense his judgments out in the open, beneath the shade of the ancient tree of justice.

SAMUEL F. BATCHELDER.

Correspondence.

STANFORD UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of January 31 I find a letter of rather paternal advice to would-be candidates for positions at Stanford University. My first impression was one of amusement, it suggesting the salutary truth embodied in the homely old English proverb, "Proffred servyce stynketh." My final impression, however, was one of indignation, and of astonishment at the spirit of the letter, at its officious attitude and its tone, at its logic, and at its "historical method." After a strong warning, and a good deal of rather disagreeable innuendo, after such strong statements as the one which declares "the acceptance of a Stanford position in the highest degree indecorous," the writer closes with a "however," and the confession that "the evidence of the case is not yet accessible." As an historical scholar, I am accustomed to get the evidence first and to give my verdict afterwards, and not to begin by giving judgment and end with a doubt about its basis.

As you opened your columns to this officious "warning," I trust you will be glad to publish a word from another quarter. Let me then reply; and I do this not as an older member of the Stanford faculty, but as an academic scholar of European training, who has taught at a German university (Leipzig) before he was called to Stanford, and a man with full opportunities for observation, a man who flatters himself that he knows pretty well what university freedom means in the Old World as well as the New. Let me state emphatically that *I* have never found academic freedom endangered here in any department, in any direction, in any degree. To me (and, as I stated above, I have been a quiet observer of this and other American universities) Stanford has always appeared a very stronghold of *liberty* (*not license*), and I think the character of its President as well as that of the greater part of its faculty should be a sufficient guarantee to younger men that no impairment of academic liberty is at all likely to occur.

The "Evidence of the Ross Case," and the evidence from both sides, has recently been gathered and weighed by a special committee of Stanford alumni, carefully and calmly—a committee, let me add, the ma-

jority of which had at first been deceived by the newspaper and other gossip, and believed that "the right of free speech had been restricted at the University"; and the result of this investigation is that "the action of Mrs. Stanford (representing the Board of Trustees) in asking the dismissal of Professor Ross involved no infringement of free speech." So the paternal advice in your columns may have been extremely well meant (it professes to have been given "very unwillingly"), but it is unwarranted, not in accordance with the actual facts, and unfriendly as well as unwise.

Having found so much fault with the article in question, I am glad to state that I heartily agree with the author in one point, and that is the counsel (as wise as it is old) to would-be candidates "to be quite sure that they know what they are about"!—Yours truly, EWALD FLÜGEL.

STANFORD UNIVERSITY, February 5, 1901.

TO THE EDITOR OF THE NATION:

SIR: In view of the communications which have appeared in the *Nation* relative to the recent affairs at Stanford University, I wish to ask that the following report and statement be published. The report is taken from the *Daily Palo Alto* (January 29), one of the student publications:

The committee appointed by the San Francisco alumni to interview the parties concerned in the Ross affair and obtain, if possible, the confidential facts in the matter, made its report at a meeting of the alumni last Saturday night [January 26]. The men of the committee have seen every one they believed could give information in the matter, members of the University and outsiders, about twelve in all, and have received the confidence of both sides of the case, gathering a mass of testimony on which they have been at work for over two months. The committee confined itself strictly to the principle involved in Mrs. Stanford's action, and her motives have been carefully analyzed. Its decision is given additional weight by the admitted fact that when the committee was appointed, a majority of its members believed that the right of free speech had been restricted in the University. The report is as follows:

"Your committee elected at the meeting of the association held November 20, 1900, to ascertain the confidential and other reasons for Dr. Ross's enforced resignation begs leave to report:

" 'That inasmuch as those interviewed, on both sides, have stipulated that the detailed information received should be treated as confidential, your committee is able to report only the ultimate facts.

" 'These are as follows:

" 'First—Mrs. Stanford shared in the opinion general in university circles in 1896 that Dr. Ross's pamphlet entitled "An Honest Dollar," illustrated by political cartoons, signed by him as "Professor of Economics in the Leland Stanford Jr. University," and published and circulated by one of the political parties during the campaign of that year, was undignified in its form and manner of treatment, and that it was unwise in the point of the time and manner of its publication, because jeopardizing the University's right to a reputation for political non-partisanship. This incident, together with Dr. Ross's general conduct throughout that campaign, was deemed by Mrs. Stanford a symptom of unfitness for the responsible position of head of the economics department of the University.

" 'Second—The justness of the criticism then expressed must be deemed to be conceded by Dr. Ross, since it has been admitted by him to your committee that he would not again pursue the same course under similar circumstances.

" 'Third—Your committee is unable to find that Mrs. Stanford's objection arose because Dr. Ross's opinion differed from her own, since it is in evidence that she had at that time no opinion upon either side of the particular financial theories then in issue, and since she has not abandoned her objection to his conduct in the campaign of 1896, although his views upon the silver question thereafter radically changed.

" 'Fourth—That from December, 1896, when Dr. Ross's chair was changed from economics to social science, until the time of his dismissal his position in the University was probational.

" 'Fifth—That the want of confidence engendered by the incidents of 1896 was never removed from Mrs. Stanford's mind, but was accentuated by other incidents impairing her faith in his good taste and discretion. Among these your committee has found: The use of slang in his public and classroom lectures, brought to her attention by friends present, and by lampoons in the college annuals, and reports that his classroom lectures contained references derogatory to her deceased husband.

" 'Sixth—Your committee has been unable to find any evidence that Mrs. Stanford ever took exceptions to Dr. Ross's economic teachings.

" 'Seventh—That her ultimate demand for his resignation was not due to opinions expressed in his speeches on "Coolie Immigration" and the "Twentieth Century City," but was because she deemed that her original estimate had proven correct, and that he was redisplaying, after three years of trial, those qualities found objectionable in the instance of her original action.

" 'In passing upon the question whether Mrs. Stanford's action involved any abridgment of the right of free speech, your committee has considered very carefully the published statement of Dr. Ross, and the proofs upon which it is founded. In deliberating upon these, however, your committee has been unable to escape the force of the following facts:

" 'First—Dr. Ross was not in the position of one able to remain in the University who chose to resign, but of one who, willing to remain, was forced to resign. His statement, therefore, necessarily attempted to tell Mrs. Stanford's reasons for forcing him out and not his own for going; hence it cannot have the probative force of his own reasons for his own acts.

" 'Second—Dr. Ross's statement ignores the criticism arising from his conduct during the campaign of 1896; notwithstanding that he knew at the time of publishing his statement that it was one of the operative reasons for his dismissal.

" 'Third—The established fact that Dr. Ross desired to remain at Stanford, notwithstanding Mrs. Stanford's criticism, is inconsistent with the theory that he really regarded those criticisms as involving any abridgment of his right of free speech.

" 'Fourth—The admission of Dr. Ross to your committee that he would not regard a university rule against the participation in politics by a university professor of economics during the progress of a political campaign as impairing the proper right of academic freedom, disposes of his contention that the criticism of his conduct in 1896 is capable of that construction.

" 'From the foregoing facts and upon the testimony as a whole, your committee concludes that the action of Mrs. Stanford in asking the dismissal of Dr. Ross involved no infringement of the right of free speech.' "

Prof. Morton A. Aldrich resigned immediately upon the withdrawal of Dr. Ross, and before all the facts of the case could possibly have been known to him. If I mistake not, it was on the morning following the announcement of Dr. Ross's withdrawal that Dr. Howard criticised the action and the motives of the University management before his students. The facts were not then forthcoming for a judicial consideration of the matter, and the time was not conducive to a dispassionate judgment. It is without doubt quite true that soon after this Dr. Jordan informed Dr. Howard that he did not wish him to resign, and that he should not ask for his resignation unless Mrs. Stanford demanded it. But it seems to me quite probable that, upon further consideration, it was seen that such an action could not be allowed to stand—that by its silence the University management could not give its sanction to such a breach of propriety. At least we have the word of Dr. Jordan and Dr. Branner that Mrs. Stanford knew nothing of Dr. Howard's resignation until after it had taken place. On January 10 Dr. Howard was asked for an apology or his resignation. He resigned.

Three other members of the faculty also resigned. One of them acknowledged that he had been considering the severance of his connection with the University for more than a year, for personal reasons; the other two acknowledged that they were largely influenced by their personal friendship for Dr. Howard. So the merits of the controversy were not the sole factors in these cases.

Great as is the loss to the University of Dr. Howard, there can be only one side to the question of his action. That side has been stated clearly by Dr. Branner, who, as the acting President, accepted the last three resignations. In a communication to the *Daily Palo Alto*, Dr. Branner said:

"It would appear, from many of the statements heard and seen of late, that the position of this University with reference to the conduct, privileges, and opinions of members of its faculty is totally different from that of any other institution in this country. I recognize the fact that every one connected with or interested in the institution is entitled to know what principles govern its management. Permit me to clear away the fog that seems to have gathered round the subject, and so to state the University's position that I trust there can be no possible misunderstanding it.

"The question at issue in the case of Dr. Howard is simply this: Are the professors in this institution at liberty to arraign the University management in the presence of their classes? If such a liberty is looked upon as academic freedom, then I beg to say once for all that such freedom (if that be the word) is not and will not be tolerated in this institution so long as it is under its present management. There is nothing new about this position; it is no new policy, but it has been assumed from the outset that every one recognized the utter impossibility of university existence under any other condition. There are here, as there are elsewhere, proper channels through which all disagreements can be adjusted without overstepping the bounds of official courtesy and propriety. Where affairs which concern the faculty or the students, either directly or indirectly, either individually or collectively, require or seem to require modification of any kind, it is the duty and the pleasure of the President to hear and consider every complaint and every suggestion, and every one acquainted with him knows that no man is more accessible than President Jordan."

There are still some one hundred and forty members of the Stanford faculty left, and though it may be true that some of them have been restrained from resigning their positions because of inadequate financial means, there are many who are not so unfortunately situated, and who have given not only a silent support to the University throughout the recent troubles, but open support. It seems to me that the balance of testimony is decidedly in favor of the University administration. ALUMNUS.

February 5, 1901.

ACADEMIC SOLIDARITY.

To the Editor of The Nation:

Sir: Allow me to add another illustration to your discussion on the lack of solidarity among university professors. In the February number of the *Cosmopolitan* magazine appeared an article on "Scientific Joy," signed with the full name of a professor of Columbia University. The object of it is to hold up to public ridicule an experimental study of the pleasant emotions, carried on in the Harvard Psychological Laboratory. A student, Mr. D., asked certain students how they should feel if they should get large sums of money, and their descriptions of their joy were recorded. These records of an imaginary joy are made to furnish amusement for the gallery, and adorned with a grotesque illustration in black and white. But the wildly humorous article finally becomes serious:

"These three valuable facts were discovered by the psychologists of Harvard University after the long and interesting series of experiments. . . . Experiments like this, conducted gravely in the laboratories of the oldest of American universities, watched over and recorded by learned men, and published for the information of the world at large, serve as an illustration of how much sheer tomfoolery is permitted to encroach upon and to discredit our university training," etc., etc.

The facts are these: (1.) D.'s paper on Joy was, as the *Cosmopolitan* writer knows, not published as a Harvard paper, but as a doctor's thesis of Columbia University, and accepted for the degree by the faculty to which the author himself belongs.

(2.) The only experiments which D. describes in his Columbia thesis as "carried out in the Psychological Laboratory of Harvard throughout the college year 1895-6 and 1897-98" have nothing whatever to do with that imaginary bank-account, but deal solely with "involuntary motor reactions to pleasant and unpleasant stimuli," the stimuli being not dollar bills but colored lights, tactual stimulations, odors, and sounds. The whole extensive investigation was scientific and important, and I gladly take the responsibility for the thousands of experiments included therein. These the *Cosmopolitan* does not mention at all.

(3.) The ridiculed record on imaginative financial joy was in no way a part of D.'s university work; no instructor had any responsibility for it or any previous knowledge of it, and if some students of the Psychological Laboratory took part in it, it was their private amusement. The whole thing, which is said to have filled "the best part of a year," was probably carried out in less than two hours. When D. told me later about it, I referred to it laughingly as an absurdity. On the other hand, I found it quite correct that my friend Cattell of Columbia accepted the thesis as it stands, since this useless little private inquiry of D.'s is fully balanced by the real scientific value of the scholarly experiments which D. made for two years under my direction at Harvard, and for one year under Professor Cattell in Columbia.

We have thus the fact that a Columbia professor finds in a Columbia thesis the valuable scientific work which a man has carried on for two years at Harvard, and a few objectionable private inquiries which he made while he was a student there. He ignores the entire serious work of those two years, and implies that the impromptu side-inquiry was the whole paper. He ignores the private character of that episode, and pretends that such objectionable inquiries can form here at Harvard the chief part of the official occupation of a student of psychology; he ignores the relation of the publication to his own university, and makes the reader believe that it was published under the responsibility of a Harvard professor. And while this misbehavior of the Harvard professor has to him "a very serious side," he uses to expose it not a serious paper where discussion is possible, but the *Cosmopolitan*, where the earnest address to the director of the Harvard Psychological Laboratory is accompanied by the funny picture of an idiotic professor. If a "colleague" can so conduct himself and can sign his full name, thus evidently feeling that he need not fear the overwhelming indignation of the academic public, then the ideas of professional honor among university men must indeed be still deplorably undeveloped.

Hugo Münsterberg.

Harvard University, February 6, 1901.

INTERCOLLEGIATE DEBATING.

To the Editor of The Nation:

Sir: In the *Nation* for January 31 attention was called to an "unverified rumor" that, in some colleges, students preparing for intercollegiate debating contests are receiving an undue amount of assistance from members of the faculty. The writer deplores the element of unfairness thus introduced into such contests, and ends by calling for an authoritative statement from colleges interested, defining their position in the matter.

That faculty coaching, where it exceeds the help that may legitimately be given to students engaged in any investigation outside their regular college work, is an unmitigated evil, there can of course be no question. Undoubtedly it is in the highest degree pernicious to the best interests of intercollegiate debating. While not caring to hazard an opinion as to the prevalence of this abuse, I would merely call attention to the fact that it is not the only abuse, nor by any means the worst of those which the friends of fair debating deprecate. Another of these abuses, which it seems to me so far eclipses in its deleterious influence that mentioned by your former correspondent as to make the evil of faculty coaching appear relatively insignificant, deserves at least passing notice. I refer to the form of subsidizing which obtains in many institutions, by which the debaters are given credit for work done in preparation for the debate. By such a system, these institutions make no distinction between work done in preparing for a debating contest and that done by men pursuing the regular courses of the college curriculum. Nor is this the worst feature of such a system. The credit allowed for such work is, at least in several colleges of the middle West, out of all proportion to its educational value. I speak only of that which has come under my personal observation when I say that in one of these "colleges" credit is given to the men who compose the team for no less than four hours per week, and to those who enter the preliminary contest, but who are not finally chosen to represent the college in the intercollegiate contest, two hours per week, during the half year in which the debate occurs. In another of these institutions, the conditions are the same, except that, in the case of the four men finally chosen to represent the college, six hours per week are credited instead of four. In this connection it is to be noted that the preparation for the debate occupies, at most, only two months.

The unfairness resultant upon such a system is at once manifest. Once entered upon, it follows logically that if the faculty is to allow work done in preparation for a debate to count towards the obtaining of a degree, the members of the faculty must exercise a careful supervision over that preparation. Hence it becomes apparent that the evil of faculty coaching is herein necessarily involved. Moreover, since this custom of subsidizing is not universal, fair competition between a college which practises it and one which does not countenance it, becomes impossible. How can students who are doing a full amount of work outside their preparation for the debate compete on equal terms with men two-fifths of whose required work has been remitted?

Clearly the time is ripe, as your correspondent suggests, for "an authoritative statement as to the actual practice of the institutions represented in intercollegiate debates." A Friend of Fair Debating.

BUCKLE AND TONGUE.

To the Editor of The Nation:

Sir: The expression "make strap and buckle meet," used in the article on "The Proposed Bank Tax," in No. 1857 of the *Nation*, recalls to my mind an expression of the same idea which has, for many years, been current in the eastern part of North Carolina. This expression is, "to make buckle and tongue meet," the tongue being the leather strap which is caught by the buckle. G. S. W.

February 6, 1901.

SAMUEL SWARTWOUT.

To the Editor of The Nation:

Sir: In your article entitled "Tammany in History" in the *Nation* of February 7, 1901, you charge, and no doubt very justly, many frauds to Tammany Hall. In one point, however, you greatly err, viz., in stating that "Sachem Swartwout," meaning, I presume, Mr. Samuel Swartwout, received unjustly $1,250,000. Though I had the honor and pleasure of knowing Mr. Swartwout only as a lad may know an elderly gentleman, I have been in the position of knowing somewhat about his private life. A more truly honorable, honest man probably never lived in this country. He had, however, the great misfortune of always having about him men who pretended to be his friends, for their own purposes. When, as Collector of the Port of New York, he was accused of embezzling large sums, he had not received one dollar. He wished to stand up and demand a fair investigation. This, however, his "friends" did not permit. He was persuaded to go to Europe, and leave the United States Government to do as it saw fit. Naturally, there was nothing for it to do but to take judgment by default.

Later he went to the Secretary of the Treasury and told him that he (Mr. Swartwout) had property of which the Government knew nothing nor could ascertain any-

thing, but which he would surrender if a fair trial were granted to him. The property was accepted, but the trial never granted. Thus has Mr. Swartwout's name been handed down as of one who had defrauded his country. His wife, whom I remember well, told me that, when returning from Europe, she was not allowed by her husband even to enter free of duty the shawl which she was at the time actually wearing.

In justice to one who has no descendants to defend his name, kindly correct the error as far as you can, and thus oblige

Very faithfully yours,

JOHN HENRY LIVINGSTON.

CLERMONT, N. Y., February 9, 1901.

[Our correspondent will not object to our making a brief extract from Swartwout's letter to Jesse Hoyt (March 14, 1829) when both were seeking office of Jackson, Swartwout with his eye on the collectorship. We cite Parton's Jackson, vol iii., p. 211.—ED. NATION.]

"I hold to your doctrine fully, that no d—d rascal who made use of his office or its profits for the purpose of keeping Mr. Adams in and General Jackson out of power, is entitled to the least lenity or mercy, save that of hanging. So we think both alike on that head. Whether or not I shall get anything in the general scramble for plunder, remains to be proven; but I rather guess I shall. What it will be is not yet so certain; perhaps keeper of the Bergen lighthouse. . . . I know Mr. Ingham slightly, and would recommend you to push like a devil if you expect anything from that quarter. I can do you no good in any quarter of the world. . . . I've got the bots, the fet-lock, hip-joint, gravel, halt, and founders; and I assure you if I can only keep my own legs, I shall do well; but I'm darned if I can carry any weight with me."

Notes.

Hales, special correspondent of the London *Daily News;* '"The Shop"; The Story of the Royal Military Academy,' by Capt. Guggisberg, R. E.; 'Chinese Pictures: Notes on Photographs Made in China,' by Mrs. J. F. Bishop; and an 'Encyclopædia of the Game of Whist,' by Sir William Cusack-Smith.

M. F. Mansfield & Co., who are soon to issue the first number of a *Book-Plate Quarterly,* have in press 'Recollections of a Georgia Loyalist,' by Elizabeth Lichtenstein Johnston, edited by the Rev. Arthur Wentworth Eaton; 'New Glimpses of Poe,' by Prof. James A. Harrison of the University of Virginia; 'Stevensoniana Series'; 'First Visit to England,' a reprint from Emerson's 'English Traits,' with portraits of Wordsworth, Coleridge, Landor, Carlyle, and others; and 'An Englishman's Love Letters.'

'The Painters of Florence,' by Julia Cartwright (Mrs. Ady), will be published directly by E. P. Dutton & Co.

Brentano's have nearly ready 'Our Fate and the Zodiac,' by Margaret Mayo, and 'The Story of Sarah,' by Miss Foster.

A quarto of 150 pages consisting of selections from Marcus Aurelius, Bacon, and Franklin will form the next luxurious product of the Cranbrook Press, Detroit, Mich.

Orders for the 'Mega Lexikon' of the Greek Languge, a work based on Liddell & Scott, but filling four large quarto volumes, of which the first is set down for April, will be placed with advantage before March 15 with Lemcke & Buechner, No. 812 Broadway, as after that date the price will be enhanced by nearly fifty per cent. The preparation of the work is complete.

Tycho Brahe, as is well known, during his stay at Wandsbeck in 1598, superintended the printing of an especial edition of his celebrated work entitled 'Astronomiæ Instauratæ Mechanica.' It was done in his own office by Philip von Ohr, and is now extremely rare; Dr. Dreyer, in his recently issued Life of Tycho, mentioning but four copies as known to be extant—two at Copenhagen, one in the British Museum, and one at Prague. To these a fifth must be added, which is to be found in the library of the Royal Academy of Sciences at Stockholm—a copy in splendid binding, and which was doubtless presented by its distinguished author to some royal personage of that day. As compared with the very inferior edition printed in 1602 by Hulzius at Nuremberg, the Stockholm copy is one of great beauty; and the Royal Academy, in anticipation of the coming tercentenary of Tycho's death, on October 24, is already printing a facsimile edition, neatly photolithographed from the original. Would-be subscribers to this important work should communicate with Dr. B. Hasselberg, Fellow of the Royal Academy, Stockholm, before March 15; the price of it has been fixed at £2. Tycho is recognized the world over as the founder of modern practical astronomy, and a special committee of the Academy is arranging a celebration of the day by a festival session. The publication of his 'Astronomiæ' on this occasion will form a lasting memorial that will be appreciated by astronomers everywhere.

The thin quarto volume, 'The Shakspere Country, Illustrated,' by John Leyland (London: George Newnes; New York: Scribners), is not remarkable for literary skill or flavor, but contains an attractive assortment of photographic and other depictions of scenery and persons relating to Stratford, Warwick, and Kenilworth; with Shakspere, his houses and associations, for the central interest. The work recommends itself to Americans further by views not only of the American memorial fountain at Stratford, of Washington Irving's room at the Red Horse Inn, of the John Harvard house, but also of Sulgrave Manor-house, the ancient home of the Washingtons, and of Sulgrave Church, which holds the headless effigy of Laurence Washington (died 1564).

Modern chemists foresee a time when science shall be able so to condense the nutritious properties of aliments that a single capsule will contain a dinner, and a traveller may carry a week's rations in his waistcoat pocket. Publishers have already achieved something of the sort in the numerous anthologies and chrestomathies that profess to give us the essences of all literatures distilled into a few duodecimos. We are not implying disapproval, but simply note the fact. The "Warwick Library" devotes each volume to illustrating some special form of English Literature; that before us—'English Satires,' by Oliphant Smeaton (London: Blackie & Son; New York: Scribners)—containing representative extracts from the satirists from Chaucer and Langland to Browning and Thackeray, preceded by a well-written introduction. A few errors of consequence occur. For instance, the line in Donne's fourth satire, "Mine? As you see, I have but one," is printed, "Mine, eyes you see, I have but one." The last sentence in Johnson's famous letter to Lord Chesterfield is stultified (as usual) by the use of a full stop instead of a comma after "exultation."

Dr. Joyce has given us another of his charming handbooks concerning Ireland, 'A Reading-Book in Irish History' (Longmans). Young and old alike will be interested by it. Prose and poetry intermingle pleasantly. Views of fairy hills, raths, castles, and churches, alternate with cuts of weapons and implements. From shadowy mythical times we are led on to the end of the fifteenth century. The xlixth and last chapter is "On Ancient Irish Music," and difficulties likely to suggest themselves to the minds of young people are explained in a few pages of notes. We do not often find within the limits of 212 openly printed small-sized pages so much of solid information pleasantly imparted. Beyond self-respecting love of country, no bias, political or religious, shows itself.

We are always hearing something new. According to Mr. T. Dunbar Ingram ('A Critical Examination of Irish History,' 2 vols., Longmans), "The sensitiveness of the English conscience is wonderful, even pathetic. It is for ever seeking reasons for self-depreciation and self-condemnation. An Englishman is [A. D. 1900] no longer right in his own eyes, and self-confidence has deserted his breast. Doubtful of his own uprightness and bewailing his shortcomings, he calls in question the conduct and policy of his forefathers. . . . In his humility and self-denunciation, he is willing to forget that he is come of a people who have ever been distinguished by their piety, integrity, humanity," etc., etc. Especially concerning Ireland it appears that many evil-disposed persons (prominent among whom is one William H. Lecky) have of late years contributed to this morbid conscientiousness and undue self-depreciation. Mr. Ingram (we must not confuse him with the author of 'Who Fears to Speak of '98?') has lent himself to the task of reëstablishing English self-respect. He proves, to his own satisfaction at least, that England's treatment of Ireland has been "all that's honest, honorable, and fair"; that Sir John Temple little if at all exaggerates the horrors of "The Barbarous Cruelties and Bloody Massacres" of 1641, and that the Irish Parliament of 1782 was "the most worthless and incompetent assembly that ever misgoverned a country." Such volumes as these have their use. We may scarcely care to add them to our private libraries; but they set us thinking concerning the bases of our ordinary historical beliefs. And these, from the pen of one of the leaders of the Irish ascendancy Protestant minority, through the spirit that animates every line, go far to explain the underlying reasons of an Irish question being ever present with us.

The '*Times* History of the War in South Africa' is likely to be the most elaborate undertaking in the field. The Scribners, as representatives of Sampson Low, Marston & Co., London, send us the first volume of the projected five. It is to be hoped that the unhappy struggle will have become matter of history before the fifth appears. The work is a compilation for which L. S.

Amery, fellow of All Souls, Oxford, assumes the editorial responsibility. The present volume treats Anglo-Boer relations to the beginning of the war. In tone, the book is moderate, and, while naturally pro-British, fairly impartial. The editor sees the moral obliquity of Rhodes the mining director, Rhodes the Premier, and Rhodes of the Chartered Company balancing interests at the cost of a war, but reaches the somewhat inconsequential conclusion that while all that Mr. Rhodes did was "unjustifiable," it was nowise inconsistent with honor. The actual firebrand was Dr. Jameson, the editor feels; Rhodes would have kept him "banked" till a more opportune time. The bulky volume, in its plain, red-cloth binding, is fitter for the shelves or study-table than for the hand. A map of South Africa folds into a pocket inside the front cover. There are numerous photogravure portraits, including a most picturesque plate of nine of the Boer generals in the war of 1881. Mr. Chamberlain's familiar portrait, though the author holds him absolutely blameless in the Jameson affair and relatively so throughout, comes to the fore very properly, those who believe him the evil genius of the whole unhappy business will maintain.

There is something disinterested in a childless man betaking himself to genealogical researches for the family name, and Mr. Rowland Rowell of Manchester, N. H., is entitled to so much praise for his 'Biographical Sketch of Samuel Rowell, and Notices of Some of his Descendants,' 1754-1898. It is otherwise, however, a meritorious labor, being quite unpretentious, and furnishing nearly seventy portraits (mostly but not all of Rowell blood), which fix the standing of the connection at a glance. It is a New England tribe of the middle class, with few notabilities, two of the best known being the late Mrs. Elizabeth Thompson, the philanthropist, and George P. Rowell of advertising fame. The genealogy begins with the author's great-grandfather, Samuel Rowell, of New Hampshire (1754-1830), a remarkable type of Revolutionary soldier, who served from Bunker Hill to Valley Forge and Quebec; a son of his enlisted in the war of 1812, and the third generation participated freely in the civil war. Samuel's wife was a great-granddaughter of Hannah Duston, celebrated in the history of Indian warfare and massacre. The early notices in this volume are readable, and reflect the familiar New England life of the time.

Three figures stand out prominently in the almost skeleton 'Genealogy of the Descendants of Edward Bates of Weymouth, Mass.' (South Baintree, Mass.: Frank A. Bates) —one the substantial founder of the family (1605-1686) from near Boston in Lincolnshire, whose will is given *in extenso;* the others Joshua Bates, the banker, of the house of Barings, and virtual founder of the Boston Public Library, and Samuel Austin Bates, who began the present work. Collateral descent here receives no attention, else we might have had the Weston sisters, nieces of Joshua Bates, commemorated (his elder sister Nancy having married Warren Weston). Among this remarkable group of women was Maria (Mrs. Henry Grafton Chapman), whose indispensable services to the anti-slavery cause are known to every reader of the Life of Garrison. She was also the friend and biographer of Harriet Martineau.

A very pretty thin volume, 'A Sketch of the Munro Clan' (Boston: George H. Ellis), is a light abstract, by James Phinney Munroe, of the late Alexander Mackenzie's 'History of the Munros' (1897), with some general account of the clan and its distinguished members, but more especially with a view to that William Munro who was the direct ancestor of all who have borne his name in Lexington, Mass. Visitors to that historic town have pointed out to them Munroe's Tavern, now a private residence, which became a hospital for the British wounded on the fateful April day in 1775. It was built in 1695 by William Munro of the second generation. The founder was made prisoner in the battle of Worcester in 1651, and deported to this country, landing in Boston. His descendants (he was twice married) have been numerous, with a liberal proportion of men of worth and prominence. Mr. J. P. Munroe penitentially adds a letter purporting to describe Washington's visit to Lexington in 1789, which he constructed in a true antiquarian spirit, but which has frequently been cited, to his annoyance, as an original contemporary document.

'Reservoirs for Irrigation, Water-Power, and Domestic Water-Supply,' by James Dix Schuyler (Wiley & Sons), is a large octavo of 414 pages, with 51 plates and maps, which treats mainly of water-works west of the Rocky Mountains. Owing to the high rate of interest in that region, engineers have been obliged to reduce the cost of plants to a minimum, and, in consequence, many novel and bold features of construction have there originated. Dams of loose rock with timber or concrete faces to prevent leakage, embankments made by causing the water of creeks to carry and deposit earth, and some masonry structures of unusual proportions are described in the book. The author has been prominently identified with hydraulic work on the Pacific Slope, and much of the matter of the volume has been collected by him for publication in the reports of the United States Geological Survey. This bureau is agitating and advocating plans whereby the Government shall not only build storage-reservoirs and irrigation works, but also carry on the business of operation and administration of such plants. The author is a strong advocate of this doubtful policy, for which, indeed, there seems to be little Constitutional warrant, and he even goes so far as to recommend that private capital should not be permitted to build reservoirs except under the most rigid Governmental supervision.

'The Cement Industry' (New York: The *Engineering Record*) contains detailed descriptions of eighteen cement manufactories in this country, with shorter accounts of sixteen plants in Europe. During the decade ending with 1900, the manufacture of Portland hydraulic cement in the United States increased more than ten-fold, owing to the introduction of horizontal rotary kilns, in place of the former vertical stationary kilns. In 1892 our total consumption of Portland cement was less than three million barrels, of which nearly eighty per cent. was imported; in 1899 the consumption exceeded seven million barrels, of which only thirty per cent. was imported. Of natural hydraulic cement the consumption has been quite uniform at about seven or eight million barrels per year. Cement, mortar, and concrete are now used to such an extent that perhaps the present century may become known as an age of concrete as the last half-century was an age of steel. Iron and steel bridges have but a short life in consequence of wear and corrosion, but stone and concrete bridges are largely unaffected by atmospheric influences, and have a solidity which is lacking in metal structures.

Volume iv. of the 'Text-Book of the Embryology of Invertebrates,' by Dr. E. Korschelt and Dr. K. Heider, translated from the German by Matilda Bernard, revised and edited with additional notes by Martin F. Woodward (London: Swan Sonnenschein & Co.; New York: Macmillan), contains the Amphineura, Lamellibranchia, Solenoconcha, Gastropoda, Cephalopoda, Tunicata, and Cephalochorda, and completes one of the most important publications on the invertebrata. Translating and editing have been carefully done, and, though some years have passed since the appearance of the German edition, the work has been brought tolerably well up to date by means of additional notes, especially so in the section relating to the mollusca, the author's specialty. The text is rendered much as left by the authors, and in the case of conclusions that have been modified by recent works the student is referred to the notes. The entire work is one of the utmost value to such as study or teach the subjects traversed. The authors have been careful, so far as possible, to bring the facts into prominence, without committing themselves too far with regard to theories or speculations. Their cautious treatment of theoretical matters may be illustrated by the final statement of this volume, concerning forms of invertebrates from which the vertebrates are supposed by some to have been derived. The origin of the vertebrates is lost in the obscurity of forms unknown to us.

The southern universities of France, Grenoble, Aix, Montpellier, and other towns are engaged in an interesting movement to foster the study of Italian, with a view to the culture of French students, and with the more ambitious intention of removing, by better knowledge, the mutual misunderstandings between the nations. One expression of this movement is a school edition of Ariosto by Prof. Raymond Bonafus of the University of Aix. It follows the sensible programme of the "Collection Dejob," of which it is the latest volume. An introduction of some sixty pages sets forth the life and literary significance of the poet; abundant notes explain textual difficulties, obscure allusions, etc., or warn the young reader to stop and think a bit ("de lire moins vite, de réfléchir") over passages the special beauty of which might escape him; finally, the links between the extracts are supplied in terse prose narrative. Thus something that is tedious and more that is scabrous is represented by the editor's decorous prose. The 'Orlando Furioso,' so treated, covers 276 pages; the 'Satires,' and two of the comedies even, are similarly represented by extract. The utility of the book for advanced classes in Italian is evident; the older reader will probably prefer to deal with a complete text and be his own extractor and expurgator.

In a brief tribute to the memory of Friedrich Nietzsche, "So solltet ihr Nietzsche verstehen" (in the *Beilage zur Allgemeinen Zeitung* for January 5), Frau Prof. Wanda Bartels tells of her and her husband's chance acquaintance with the famous thinker during a sojourn in Venice. She dwells

upon the contrast of his own modest reserve and unassuming ways with those of the blustering youths who flaunt in public as his followers and believers in his "system"; for he had no system, and "did not write to teach the immmature, but to free his own soul." Frau Bartels's protest calls to mind the more weighty and truly enlightening utterances of another personal friend of Nietzsche, Prof. Paul Deussen of Kiel, who, writing in the *Wiener Rundschau* for October 15, on the "Truth about Friedrich Nietzsche," discusses with great clearness the two cardinal points of Nietzsche's doctrine, viz., the *Uebermensch* and the *ewige Wiederkehr*, or eternal repetition of the world-process. The former, Professor Deussen holds, is an ideal of humanity which, in essential points, coincides with the Christ of the Church; and when Nietzsche insists that the man within us must be overcome in order that the *Uebermensch* may arise, he preaches what all great moralists and religious teachers have preached. Nietzsche errs in his conception of the nature of the "negation of the will" and in substituting genius for morality (or the intellect for the will) as the means of attaining to an ideal humanity.

It is a matter of no slight interest to all students and admirers of the great Swabian poets that the construction of the long contemplated Schiller-Archiv in Marbach is at last to be carried to completion. According to a communication from Stuttgart to the *Frankfurter Zeitung*, the general committee of the Swabian Schiller-Verein met on December 29 for final action on the recommendations of the special commission on the construction of the building. The recommendations of this committee are, in brief, that the plans submitted by the successful firm of Eisenlohr & Weigle in the prize competition be accepted with slight modification, and that the construction of the building be begun at once. The association already owns the necessary land, and has in its treasury some 220,000 marks available for construction. The old Schiller monument is to remain in its present position, and, in fact, the new plans are to be completed with as little change in the old surroundings as is necessary. The total cost of the new structure is estimated at about 212,000 marks. The general committee adopted all the recommendations of the commission on construction, and work will be begun immediately. It is hoped that the building will be completed by the summer of 1902. Among the delegates present at the meeting was the Baroness Mathilde von Schiller, widow of the poet's grandson.

Sophus Schandorph, who died at his home in Frederiksberg, near Copenhagen, on January 1, 1901, was perhaps the most thoroughly Danish of the Scandinavian authors of this generation. No one else has had so firm a grasp on the Danish peasantry of Seeland. In his personality as well as in his writings he typified the genial southern nature, which is in so striking contrast to the fjeld seriousness of the Norwegian. Schandorph was born at Ringsted, May 4, 1837. After studying theology, which he soon found was not to his taste, he devoted himself to Romance philology, taking the doctor's degree for a dissertation on the Italian writers Gozzi and Goldoni. For several years he gave lessons in French and Italian in Copenhagen. But as his reputation as a writer of fiction gradually increased after the appearance of his first important book, 'From the Province,' 1876, which showed the strong influence of the new school of Brandes, he gradually gave his attention more and more to pure literature. In 1880 he received a fixed stipend from the Government, and from that time until shortly before his death his literary productiveness was uninterrupted. Schandorph excelled in a broad, sympathetic treatment of two main types, the peasant and the provincial town folk. In his limitations as well as in his excellences he suggests Dickens: his attempts to depict Copenhagen high life resulted chiefly in caricatures. Among his most successful books may be mentioned 'Without Centre' (1878), 'The Story of Thomas Friis' (1881), his longest novel, and 'The Old Apothecary Shop' (1885). Special mention should be made of his short stories, whose frequent coarseness is relieved only by their exquisite humor and robustness. His last novel, published less than a year before his death, was 'Helga.'

—The *Atlantic* for February has an article by Goldwin Smith, on Lord Rosebery's "Last Phase of Napoleon," which is a good deal better than the book itself. Lord Rosebery, in his boyish way, discusses the question whether Napoleon was a "good" man, and, remarks that he was not a Wilberforce, nor a St. Francis, nor a Washington, nor a Marcus Aurelius; what he says really shows that the true question is, not whether Napoleon was good, but how bad he was. The sum of our knowledge on this subject is that he was, as Mr. Smith says, "utterly unscrupulous," and stuck at nothing to accomplish his end. We must confess that, to our minds, the interest of the "last phase" of Napoleon is much impaired by the fact that an atmosphere of lies envelops it as a fog. John Fiske contributes some agreeable reminiscences of Huxley, at whose house he was a constant visitor and on terms of friendly intimacy. The article gives a clear account of the contributions of Huxley to science, and ranks him as a biological discoverer, in the department of classification, "foremost among the successors of the mighty Cuvier." The classification of animal genera is, through his contributions, wholly different from what it was before his time. J. K. Paulding has a paper, called "A Plea for New York," in which he urges us to "love her if we can," for "if we cannot, there is danger lest, lacking soil in which to spread our roots, we end by withering in those higher attributes that bring to bloom in the individual the blossom of the race." We doubt very much whether this consideration is operative in many minds, or whether it is worth while to bother ourselves very much as to whether we love our metropolis or not. From this article and also from one on "The Essence of American Humor" a foreigner would infer that we are still thinking too much about ourselves to be entirely unprovincial. As a matter of fact, New York, like other capitals, is loved most warmly by those on whom she showers honors and distinction, and helps to rise in the world. The toughs of whom she makes mayors, the bosses who are enabled by law to enrich themselves at her expense, the runners in the "red-light" district, are enthusiastic for New York, and violently resent all disparagement of her. But it is not for this class that Mr. Paulding writes.

—"Humor and Pathos of the Savings Bank," by Richard Boughton, is the title of the leading illustrated article in the *Century*. Mr. Boughton's estimate is that two-thirds of the depositors in savings-banks are weekly wage-earners—a fact which throws an interesting light on the perpetually renewed attempt to tax them in some way or other. A theory cultivated by politicians on the lookout for new sources of revenue is, that there are in these banks millions of "unclaimed deposits," which should by rights "revert" to the State. Mr. Boughton shows that there is no such fund. A legislative committee which, years ago, investigated the matter, reported that out of $65,000,000 on deposit, less than $90,000 was open to the suspicion of being unclaimed; at present the deposits alleged to be unclaimed are perhaps $1,500,000 out of $1,000,000,000. But even this sum is not really "unclaimed"; it belongs to depositors who, for some reason, have confidence that money once in a savings bank can always be found there. One case is mentioned of a depositor who called for his money for the first time some seventy years after it had been deposited. Jonas Stadling, in another illustrated article, gives an account of "The People at the Top of the World," whose acquaintance he made in connection with the search for Andrée. The search expedition to which this paper, and one to follow, relate was Nordenskiöld's promoted by the Geographical Society of Stockholm. Mr. Stadling and his companions proceeded overland to Yakutsk, and thence sailed down the Lena to its mouth, where the present narrative begins. The Lena delta is not the most interesting part of the globe, but the human drama goes on there. At Bulun, a village of forty houses, lives Sannikoff, of whom the local saying is, "God in heaven, the Czar in St. Petersburg, and Sannikoff in Bulun." The poor natives, by means of advances of money or otherwise, are kept in debt to the merchants, who treat them as slaves. Amelia Gere Mason, author of 'Women of the French Salons,' contributes a lively paper called "Is Sentiment Declining?" Sentiment is such a very comprehensive term that we crave a definition before we can say whether it is declining. "Intellectualized emotion," "emotion precipitated as it were in pretty crystals by the fancy," are quotations here given from Lowell; "the imagination of the heart" is added by the writer of this paper—all of which is pretty, but elusive. Perhaps on the whole, as with wit and humor, it is better to let definition alone. We all know, or ought to know, what sentiment is when we meet with it, whether in life or literature, and few will quarrel with the main idea of the paper, viz., that while our grandfathers and grandmothers cultivated it—overmuch, perhaps—we are strenuously endeavoring to expel it. Our resources for this purpose are endless. "Realism," violence, brutality, sensationalism, strenuousness, all play their part, and, last but not least, the so-called humor of the "cynic devil" whom Kipling has observed lurking about.

—*Harper's* contains an article by Sidney Whitman, on Franz von Lenbach, illustrated by interesting reproductions of his portraits of Bismarck, Leo XIII., and Gladstone. Mr. Whitman is one of the few English writers of the present day who care enough about Germany to be able to fall

into the German way of looking at things. It seems that Lenbach's objection to Gladstone was that he had no humor, and was a sort of lay priest. He quotes Döllinger as saying (apropos of the English statesman's ravenous zeal in acquisition) that after the two had talked politics and theology from six o'clock until two o'clock in the morning, he, Döllinger, went to the library to fetch a book which had some bearing on the conversation. Coming back after a few minutes, Gladstone was found deep in the study of another book which he had pulled out of his pocket while waiting, "so as not to waste time." The view taken of him here supplements that to be found in Huxley's memoirs. Those who like other people's love-letters are in luck just now. Those of Bismarck are added by this magazine to Victor Hugo's. They are selected, translated, and annotated by Marrion Wilcox, and illustrated by portraits of Bismarck and Johanna von Puttkamer, whom he married. They are characteristic of the man, and at the opposite pole from the romantic effusions of Hugo, as also, by the way, from the erotically commonplace 'Love-Letters of an Englishwoman.' The correspondence opens with two letters: one, full of penitence for the errors of his wasted youth, to his fiancée; the other, designed to propitiate his prospective father-in-law, is devoted to religion. Bismarck had been, it seems, a skeptic, or agnostic, in such matters, and had placed his reliance on conscience as a guide; but this attitude of mind produced "disconsolate depression," until in Moritz Blanckenburg he first found a friend (apparently also a confidant) through whom he acquired faith. He admits that he has felt this emotion only for two months, but evidently thinks, and rightly, that his suit has, under these circumstances, better prospects of success than it would otherwise have possessed. Mr. Howells, in the "Easy Chair," has some more reflections on American manners, in which he expresses the opinion that, but for the great "American joke," and the humor it fosters, "our vulgarities might some time be too much for us." He instances a "Trilby Social" lately held in New Jersey, at which a ladies' foot auction was held, each pair being shown beneath a curtain, and auctioned off to members of the church; the proceeds being devoted to paying the church debt.

—*Scribner's* has several articles of interest. Henry Norman's fourth instalment of his "Russia of To-day" brings him to Bokhara, as yet not Russianized. The Amir, it seems, is still able to celebrate his visits to his capital by having the throats of a dozen prisoners cut in the open bazaar; the Russian resident lives in a little foreign quarter, ten miles away. Merely as a railway, Mr. Norman thinks the Trans-Caspian line is in no way extraordinary, for it presents no difficulties, the only engineering exploit being the bridge over the Oxus. What we say of the civilizing influence of England in the East is exactly what Mr. Norman says of that of Russia. Russian authority means "peace, safety, and civilization." He thinks it probable that, for the sake of getting decent government, the Bokharans may rebel against their present ruler, though just now in the capital the natives regard any foreigner with a contempt and hatred which they take little pains to hide. An out-of-the-way paper on "The Sense of Nonsense," by Carolyn Wells, collects many examples of the nonsense verse of which our day and generation has produced so much. Of course, 'Alice in Wonderland' affords the most splendid and luminous examples, but there are many others. From 'Mother Goose' to the 'Bab Ballads' there is a pleasant by-path of absurdity running along by the side of the great literary high road. George Horton has a second paper on "Modern Athens," with good illustrations. This writer gives a picture of life in Athens evidently the result of much observation. Whether intentionally or not, he conveys the impression that he is not one of those who doubt whether the Greek of to-day has any real Greek blood in his veins. At any rate, there are features of resemblance. In a population of two millions there are over eight thousand priests, and in the army there is one officer to every twelve men. There is a "modern Aristophanes" who edits a satirical weekly. Ernest C. Peixotto has an article (illustrated by himself) on Carcassonne and Albi, the former a place strangely neglected by tourists; and Mrs. Gilbert contributes the first part of her "Stage Reminiscences," which are sure to attract attention.

—It is related of Whittier by his biographer that in later life he destroyed every procurable copy of his 'Legends of New England,' published in 1831, paying even five dollars for the privilege of burning it. It is also a fact that, long before he could have any "literary remains," he carefully destroyed a mass of correspondence that might have been of much value to the historian. Both these actions savored alike of secretiveness and of repentance, and they make it probable that were he now alive he would be buying up the recent limited edition of 'Whittier as a Politician' (Boston: Charles E. Goodspeed). This thin volume, elegantly printed (with a good portrait and one facsimile) at the Riverside Press, has, as its excuse for being, a small number of hitherto unpublished letters to Elizur Wright, one of the ablest of the early abolition leaders, and, like Whittier, attached to the political movement which—with other causes—produced the memorable schism in the anti-slavery ranks in 1840. Some of this correspondence would have helped garnish a little Mr. Pickard's Life of Whittier, and supplied a date or two, but it cannot be thought of sufficient consequence to warrant a book. On the discovery of another handful of autographs, we are in danger of being treated to another volume. Mr. Pickard's annotations go but little beyond the letters, and are not free from statements concerning Whittier's relation to the purely moral anti-slavery movement likely to mislead. This is especially true of the woman question, his own share in which was as taxable with "shocking mismanagement" as was that of his political associates in Massachusetts, in Elizur Wright's own phraseology. Mr. Pickard should not have left his readers ignorant of the fact that the "woman question" was raised by those who, in Garrison's language, were for "*requiring women to be silent* in anti-slavery conventions, when their consciences demand that they should speak." That Whittier was not proud of the retrospect in this particular, is more than certain. Mr. Pickard errs in ranking Whittier and Wright as the youngest members of the convention that founded the American Anti-Slavery Society.

—The close of the century brought the concluding part, Green-Gyzzarn, of the fourth volume of the 'Oxford Dictionary' (H. Frowde), with Mr. Henry Bradley at the helm. Every page of this volume (as of every other) he gratefully acknowledges to have been enriched in particular by the "continued and unremitting labor of Mr. Fitzedward Hall, D. C. L.," with "new and valuable quotations"; and this alone would make the grand dictionary an international product, in which Americans can take their proper pride. The letter G stands apart as devoid of words with prepositional or adverbial prefixes. A few other compounds, in *gym-*, *gyn-*, *gymno-* (*gym* invariably pronounced *jim*, except in the case of the German *gymnasium*), occur at the close. Preference is given to "guerrilla" over "guerilla"; also to "grey" over "gray," as being more frequent in English use, and, in fact, it here takes the place of the latter in the alphabetic arrangement. The origin of the "grey" of "greyhound" is etymologically indeterminable. The lawyers' "greenbag," we learn, has in course of time turned blue; while Greenland's name is a *lucus a non*, being chosen by the discoverer in 986 "because it would induce settlers to go there if the land had a good name." Under "greenback" is a citation from Longfellow's Life; and whereas *Punch's* laureate, in the day of 'Hiawatha,' finding the poet's cognomen "awkward for the metre," wrote it as "Protracted Fellow," the Dictionary deems the contraction "Longf." sufficiently clear to the English-speaking world. "I guess," as an Americanism, cuts no great figure here. The section devoted to it opens with a quotation from Locke, in 1692—"Once in Four and Twenty Hours, I think, is enough; and no Body, I guess, will think it too much"—and ends with one from Howells's 'Silas Lapham.' The Dutch form of "groat" shows that the Dutch coin circulated in England before home minting began. "Grippe," a form preferred to "grip," is first met with in 1776, when " an epidemic cold seems to have spread itself from London to Barcelona. In passing through this kingdom [France], it has obtained the name of 'grippe,' a term significant enough from the nature of its attack on the throat." Noteworthy is the fact that the fine-art senses of "group" antedate all others in English—1695 (Dryden) for graphic and plastic representation, 1727 for music, 1731 for architecture, 1736 for things, 1748 for persons. FitzGerald's East Anglian nautical phrase, "to smell the ground" (of a ship that slackens speed as the water shallows under her), is not overlooked, but its metaphorical employment in the very passage quoted is not discriminated. He repeats it, with reference to his failing health, in a letter to Mrs. Kemble of October 4, 1875, and adds: "But I remain while above Ground," etc.

—We cannot pause to jubilate over the completion of volume iv., for Dr. Murray is forging ahead with volume v. (H—K), and his quarterly contribution takes him from Invalid to Jew. All the *iso-* compounds are here, and nearly as numerous as those in Greek itself; and with regard to the great suffix *-ize* we have the authoritative decision that as this suffix, whatever the element to which it is added, "is in its origin the Greek -ιζειν, Latin *-izare;* and as the pronunciation is also with *z*, there is no rea-

son why in English the special French spelling [*-iser*] should be followed in opposition to that which is at once etymological and phonetic." Under "irenicon" it is remarked that the *e* is short in American and some English dictionaries, but that the regular Academic pronunciation makes it long. American influence has been felt in the case of "ironclad," which in 1866 displaced the official English term for armored vessels, though it had been heard in England before our civil war. We miss Mr. Seward's proverbial *"irrepressible* conflict," which was a half-battle word in our political history. Mr. Beecher's "true inwardness" is belated by a couple of years in being cited only from the *Tribune* of April, 1877; nor is it referred to its author. Under "invention" we should have liked to see Dryden's "The first happiness of the poet's imagination is properly invention, or finding of the thought," capped by Keats's (letter to Benjamin Bailey, October 8, 1817) "Invention, which I take to be the Polar Star of Poetry, as Fancy is the Sails, and Imagination the rudder"—a triple definition worthy to be snatched by the lexicographer. The J section of our vocabulary contains no word of Old English origin except where it stands, rarely, for an earlier *ch*. A mass of exotics, it typifies admirably the glory of the English tongue in its all-embracing hospitality. The letter itself, whether capital or lower-case, does not occur in the Bible of 1611, nor in the text of the Shakspere Folio of 1623.

GENERAL COX'S MEMOIRS.

Military Reminiscences of the Civil War. By Jacob Dolson Cox, A.M., LL.D., formerly Major-General Commanding the Twenty-third Corps. Two volumes, pp. 549, 596. Charles Scribner's Sons. 1900.

Of the generals of the war for the Union, none was more competent to leave behind him as a legacy to his countrymen a historic memorial of great events in which he was an active and distinguished figure than Gen. Cox, whose untimely death in midsummer last is still fresh in the minds of our readers. He was one of the small number of civilians who transferred to the military duties to which he was assigned by the Governor of Ohio at the very first outbreak of war, the habits and tastes of the scholar. These he maintained to the end of his army career with the same diligence and enthusiasm which he applied to the professional studies of peace; and his steady rise in rank, though constantly hindered by influences which pushed men to the front through considerations often quite foreign to their soldierly, intellectual, or moral desert, was attained by sheer force of ability and character. A rather unfriendly biographer (unfriendly because irritated by the spirit of independence in politics which Cox preserved) paid him the reluctant tribute of saying that he was the most many-sided man in the army; and that, on the day of his muster-out, he stood higher in the esteem of the Government and the country than he had on any previous day throughout the war.

Schofield, in recommending, in the fall of 1864, the confirmation of Cox's nomination to be Major-General, which Gen. McClellan had urged immediately after Antietam, but which had failed, for reasons involving officers like Buford, Schofield, Horatio G. Wright, and William F. Smith, said, in his praise: "I have never seen a more able and efficient division commander"; and Sherman declared him to be one of his division commanders "of marked courage, capacity, and merit, qualified to a separate command." His services covered a wide and varied field, from West Virginia to the Army of the Potomac, during the campaign of South Mountain and Antietam; from East Tennessee to Atlanta; then in the battles before Nashville, which destroyed Hood's army; and, at last, with Schofield, from Wilmington, N. C., in coöperation with Sherman's march, in time to be present at the surrender of Johnston, and to have temporary charge of the department in which the surrendered forces lingered in their sudden transition from war to peace.

Possessed of an attractive literary style, which he had shown as well in numerous pamphlets and addresses upon science and civic problems as in several monographs upon men and epochs of the civil war, he brought to these Reminiscences, the absorbing avocation of many recent years, the philosophic imagination which raises them above a bare chronicle of notable events, or a personal record chiefly pleasing to those who have shared the same experiences, and entitles them to a place among historic views of the character and conduct of our armies which enlighten and guide our countrymen for future crises of national life. In the beginning we find Cox and Garfield fellow-members of the Ohio Legislature, and room-mates, in the anxious winter of 1860-'61, when the Southern States were passing their ordinances of secession. When Sumter was fired upon, both were ready, with a deep sense of the gravity of affairs, to dedicate their powers to the coming war. They listened to an address of Stephen A. Douglas to a sober multitude gathered under the balcony of a Columbus hotel, when he cast his lot, without reservation, with the cause of the Union; and together, as they went back to their boarding-house, they discussed the probable duration and effects of that storm whose overhanging cloud appalled all witnesses. Garfield insisted that Cox was too frail of body to meet the hardships of warfare, while for himself he prophesied a capability of braving all possible privations. As it actually happened, Garfield was compelled to leave the service at the end of 1863 from constitutional physical weakness, while Cox continued to the close of the war with unfailing vigor.

Cox was already a brigadier-general of the Ohio militia, a high-sounding title with no corresponding responsibilities, for the entire organized forces of men having any familiarity with arms consisted of two or three holiday companies. But, anticipating that the rank might soon carry obligation, he had read Jomini and other military masters, in their original tongues, for he was a good linguist, and, while in command of the first assemblage of regiments at Camp Dennison, he continued his careful study of every standard treatise of the science of war upon which he could lay hold. McClellan and Rosecrans were among the first officers appointed by the sagacious Gov. Dennison, and were immediately put in charge of the Ohio volunteers; and with these, from the first, Cox kept up an intimate friendship which did not blind him, as time went on, to the peculiarities which later brought these officers to disaster.

The forces of secession were early directed into West Virginia for the purpose of holding that country of slavery-hating mountaineers to their allegiance to the Southern Confederacy. Thither Cox, under McClellan and Rosecrans, led his brigade, and there were witnessed the first exploits of several well-known commanders upon both sides—Lee, Wise, and Floyd among the Confederates; and there, too, were the first successes of the Union arms, upon whose fame, much exaggerated when the echoes of the fights reached Washington, McClellan and Rosecrans were borne to high places. Gen. Cox says of McClellan that, comparing his sonorous bulletins to the War Department with his unassuming modesty in contact with his associates in camp, he seemed two antipodal types of men. The affair of Rich Mountain, about a week before Bull Run, in which the Confederates under Garnett and Pegram were dispersed, was the direct cause, at least in popular imagination, of McClellan's summons to the command of the armies of the nation, although the combat was ill managed, and such credit as attached to the Union arms was due to the under officers, who made a long détour over mountain paths to cut off the enemy's communications; for McClellan, who had elaborately planned surrounding his adversaries, did nothing in front, and showed the same characteristics which were laid to his charge by his critics to the end of his career—the same overestimate of the enemy, the same hesitancy to throw in his whole force when he knew his subordinates were engaged.

These mountain regions were in many respects an admirable school of the green soldier, in daring, self-reliance, and patience under inevitable privations and pains; and Gen. Cox's descriptions of the adventurous life amidst some of the most imposing and picturesque scenery of the country are attractive bits of narrative. Of both this fastness of West Virginia and that of East Tennessee, in many features like it, we know of no account so adequate in showing their relation to the general conduct of the war. Sherman could see no sensible reason for supporting an army in East Tennessee—"East Tennessee is my horror!"; but the political and humane reasons which Gen. Cox sets forth with much cogency as those which actuated Lincoln in his eagerness not to leave the loyalists there to guerrilla mercies, make it evident that the war could not always be conducted upon purely military grounds. It was also a defence of the lives and liberties of the families of those who were in battle-line far from home—men who had made far greater sacrifices for patriotism than were borne by the average enlisted man.

It was while this army was yet suffering intensely from lack of rations and clothing, with most of its draught animals dead or dying, and in a period of zero cold such as at rare intervals sweeps down into the valley of the Holston, and while the Washington authorities, skeptical of there being any special difficulties in the way of winter operations, were impatiently urging upon Burnside to drive the Confederates from the country, that Grant came to the ground to observe the situation. He quickly perceived that there had been no exaggeration of the impossibilities of movement until the men were fed and clothed; but, to make sure

of the entire conditions, he undertook the return journey by the way of Cumberland Gap, the weather being still bitter and the roads of the worst character. His report to Washington resulted in a respite of worrying orders from Halleck, and in vigorous steps for supplying and reinforcing the enfeebled forces. Of Burnside's conduct during this winter our author speaks with the most ardent praise. That General showed a tenacity of purpose, a fertility of resource, a magnetism over his troops, which demonstrated that, in a less depressing and exacting position than that of head of the Army of the Potomac, he had great soldierly gifts. To a vindication of Burnside's conduct at Antietam, where Cox commanded the Ninth Corps while Burnside led the left wing of the army, there is given an interesting chapter. McClellan and Burnside were upon terms of frank comradeship down to this time; and after the battle they still kept up a semblance of the old familiarity, but some malign influence caused McClellan on the morning of the battle to send to Burnside an *unsigned* reprimand of the severest sort for delays in the disposition of his corps, the day before, September 16. Gen. Burnside promptly showed that the delays had been due to specific orders of McClellan's staff. The lack of an official signature imparts to this document an element of inexplicable mystery considering its unusual and unwarranted spirit.

Cox's comments upon McClellan's conduct of this campaign are, like his judgments all through the Reminiscences, in the kindest and most judicial temper. They have especial value as the estimate of an observer who then, and for a long time after, shared the almost universal affection, bordering upon reverence, which McClellan inspired in his command. Looking over the campaign in the light of the later printed War Records, and recalling the impressions forced upon him at the time, Cox thinks it plain that McClellan displayed to an extreme his persistent infirmity, the excess of caution resembling irresolution, in not pushing the advance of his army while yet the enemy was divided, and, when the battle was hot, tardily and insufficiently reinforcing his hard beset lines when the Confederates were stripping their columns at other points to overwhelm their adversary at the point of attack. The chief paralyzing influence upon McClellan's judgment, then and through the Peninsular campaign, was that which had affected him at Rich Mountain—the extravagant exaggeration of the numbers opposing him. Other commanders learned at an early period of their experience to determine the enemy's strength by ascertaining from prisoners and deserters the names of the organizations in their front, and calculating upon the probable average numbers of such organizations the aggregate force which they had to meet. While McClellan was before Richmond in the summer of 1862, Gen. Meigs, at Washington, collating his information from newspapers and other sources, judged that Lee had about one hundred and fifty regiments, which, at the maximum field strength of each, would give him 105,000 infantry, or, at the more probable estimate, allowing for the wear and tear of service, 60,000. Gen. Webb has, since the war, compiled Lee's numbers from the official Confederate documents, and the result is between 70,000 and 80,000 infantry. But then, as at Antietam, McClellan, relying upon the worse than worthless, because often apparently malicious, misinformation of his secret-service officers, insisted that Lee had an army double his own. At the utmost, Lee at Antietam had 75,000 men—probably many less; while McClellan had 87,000. These enormous delusions as to the resistance which he must meet rendered impracticable all agreement between the General and the Administration; for, yield to his demands for reinforcements as much as the War Department would, McClellan straightway imagined a corresponding increase of his opponent's resources.

Leaving this old controversial matter which the published War Records have conclusively settled to the complete demolition of many of the reasonings in justification of the dragging operations of the Army of the Potomac in 1861-2, we turn to a most suggestive discussion of the relative merits of West Point officers and those of education among the volunteers. The impression has prevailed, and has seemed to be warranted by the fact, that the successful military leaders of the war were graduates of the Military Academy, that the West Point education was the true shaping force of the eventual suppression of the Rebellion. But the conditions of admission to the Academy were far lighter than to the average college fitting-school. Cadets like Grant, Sheridan, and a host of others entered with less than the average common-school education, for Grant had never seen an algebra till his appointment to the Academy; and the results attained after the four years' course put the graduate upon the level, as to scholarship, of a sophomore at Harvard or Yale. And in the respect of training in the command of men, even Sherman never rose during his cadetship above the rank of a sergeant, and few cadets reached a captain's place. From their graduation, the majority went to frontier posts, where they seldom saw a library, and where there was an utter absence of intellectual stimulus; therefore, no reading or discussion of scientific treatises of the conduct of armies. There is, indeed, says Gen. Cox, something of value in the habit of mind formed in actual service, even if this be on a petty scale; but, on the other hand, there was brought to the war in 1861 a temper of slavish reverence for the established usages of the old régime which made many a regular officer slow to stubbornness in recognizing the new conditions, unlike those of any previous war, which now had to be met—the inevitable improvements in tactics, in the modes of discipline, in armaments, in transportation, and in hospitals. All this learning the bright educated volunteer—and there were a great many whose abilities eventually asserted themselves for high commands in face of the not illegitimate belief at headquarters that regulars could most safely be intrusted with leadership—could as quickly acquire as the West Point graduate; often he was a much more apt and docile pupil of experience; and it was actual experience, apart from that rare native endowment which distinguishes all sorts of born leadership, which brought out the personal qualities of clear perception of the simple facts to be dealt with, the decisive will to deal with them, and the entire self-possession in critical moments of danger which are the main features of successful generalship, more important than any technical knowledge gained in the schools. As compared with Halleck, Grant was destitute of scholarship, but he had the personal qualities which made him ready, as Halleck was not, to assume responsibility when it was laid upon him; and there were scores of volunteer officers who made far more brilliant successes when the opportunity came than could have been in the power of a large portion of regulars whose names encumbered the lists of generals, to the exclusion, under the laws limiting the appointments to the highest grades, of those whom the heads of armies would have been glad to set in responsible places. Could there have been a systematic and impartial sifting of officers from time to time, among both the regulars and the volunteers, eliminating those who had plainly failed; and could the baneful influence of political intrigue with the appointing civil administrations have been prevented—such as, for example, once caused the nomination to be major-generals of two men whom Sherman had just relieved from lower commands (and the experience could undoubtedly be paralleled in other departments)—the war would have been sooner ended and its military lessons been more profitable for the illumination of students the world over. Among volunteer regiments drilled by college-bred or militia-trained officers, there were in a large number of cases as efficient troops for all occasions as any which any American or European army has ever shown. "Wherefore," concludes Gen. Cox, "I have no hesitation in adding that our army as a whole would have been improved if the distinction between regular and volunteer had been abolished, and, after the first beginnings, a freer competition to even the highest commands been open to all."

Of the Atlanta campaign and of the operations before Nashville, Gen. Cox has already written separate accounts, so that although what is here said with regard to those campaigns is full of interest, it contains less that is fresh and new than is to be found in the portions of the books to which we have especially called attention. It may be well to observe, however, that in the battle of Franklin, in November, 1864, whose conduct fell to Gen. Cox, the Confederate losses in general officers were among the greatest for any combat of the war; although, in the nation's absorption in Sherman's march to the sea and in the siege of Petersburg, the significance and bloodiness of this affair were largely lost sight of.

When Sherman was emerging from his plunge into the swamps of South Carolina, Schofield's columns (in which Cox led the Twenty-third Corps, transferred from Tennessee), marching from Wilmington, N. C., swept away the interposing Confederates, and joined Sherman at Raleigh. Here Cox witnessed the surrender of Johnston, and in this vicinity he remained for a time in command of the department, while the bewildered people were getting fitted to their new political relations. Here his soldiers had the novel business of helping to adjust domestic problems, for the freedwomen not only refused to cook for their old mistresses, but took possession, as of their own property, of the outside kitchens containing the culinary utensils, and the soldiers had to assert the rights of the lawful owners to their sole means for the preparation of meals. So, too, it was curious to notice the wondering interest with which the just discharged Confederate soldiers watched the formal and, to many of them, unwonted,

ceremonies of parades and guard-mountings of the select Union regiment designated to guard the remnants of Confederate Government property. So long as the muskets, horses, and other valuables of the dying Confederacy were under their own officers, the rank and file of the Southerners felt free to help themselves; but, when placed under the care of Union sentinels, these articles were punctiliously respected.

Gen. Cox had the fortune, from first to last, to meet on terms of intimacy a large number of Union leaders, and the impressions of the characteristic excellences and defects of those who soon fell out of public regard, as well as of those who steadily grew in reputation, form one of the many attractive features of these Reminiscences. Of the most distinguished of these generals, Cox was nearest drawn to Sherman, whose acquaintance he made upon the campaign to Atlanta, but whose deeper nature he learned to appreciate in the painful period of the controversy with Stanton and Halleck, over his settlement of the terms of surrender with Johnston. Of Sherman, Cox wrote: "In him the combination of intellectual insight with fertility of invention, and with force of will in execution, was of the highest order, and I soon acquired an undoubting conviction that of all men I had met he was the one to whose leadership in war I would commit my own life and the lives of my men with complete confidence."

RECENT ANTHOLOGIES, AT HOME AND ABROAD.

Mr. Quiller-Couch's 'Oxford Book of English Verse, 1250 to 1900' (Frowde), is one of those books, always rather exasperating to Americans, in which an English compiler well read in the poetry of his own land is gracious enough to include a few samples of the poetry of other lands of which he knows very little. Such mixed anthologies, where they are necessary, can be best prepared by Americans, for the obvious reason that cultivated Americans habitually know something of England by personal observation, whereas few among cultivated Englishmen have ever set eyes on America. Genius is, of course, universal in its quality, but since the atmosphere of poetry is largely local, it follows that the types of character and influences of external nature belonging to a foreign country cannot be known as a reader knows his own land; and the untravelled stranger often misses the finest and profoundest qualities of the poetry he professes to judge, and fails to be impressed by what should teach him most. Hence we find Mr. Quiller-Couch, a faithful lecturer on classics at Oxford, and a good yachtsman, publishing a book of English verse which has twice as many selections from Wilfred Scawen Blunt as from Ralph Waldo Emerson; and which tranquilly offers us two poems by Richard Le Gallienne, set against one each by Longfellow and Whittier, and none by Lowell or Holmes. For the English part of the anthology—which is, of course, under such conditions, the substantial and important part—this manual is as good as other such books, perhaps better; and at any rate far surpasses the second volume of Palgrave's 'Golden Treasury,' which was so sad a falling off from the first, but in which, it will be remembered, Palgrave was wise enough to abandon his original project of including American poets.

A book of incomparably more thought and seriousness than that of Mr. Quiller-Couch is 'A Treasury of Irish Poetry in the English Tongue,' edited by Stopford A. Brooke and T. W. Rolleston (Macmillan). Here, it is to be observed, we have in the very title a recognition that there may be poetry in the English tongue outside of the English nation. Even as to this book, we have, from the American point of view, some local criticism to offer, since the editors make no mention, among previous Irish anthologies, of that of Connolly (New York, 1887), which is the largest yet printed, although not the most critical in tone. What is quite surprising is that the book should absolutely omit all mention of Boyle O'Reilly, a fact the more remarkable as it includes his friend and fellow-Fenian, Richard Dwyer Joyce, who resided, like O'Reilly, in Boston, and published his own poems first in America, where he was, however, far less known and less popular than his friend. Even Mr. Quiller-Couch has room for O'Reilly, though he naturally prints his name wrong, giving it as Boyd instead of Boyle. A few special omissions also surprise us in this Irish anthology, as that of Thomas Davis's "Ballad of Fontenoy," of the fine poem of "Avondu" by Callanan, and of two superb ballads of "The Seven Whistlers" and "The Doom-Bar" by Alice E. Gillington, included in Mrs. Sharp's 'Lyra Celtica.' Nor can we quite approve the slighting way in which the editors speak of Father Prout's "Bells of Shandon," which is a bit of singular natural melody, and especially dear to every American who has listened for those chimes while sailing up from Queenstown to Cork on "the pleasant waters of the River Lee."

The present work gives less than some other collections in the way of the very earliest Irish poetry, yet it goes back to Callanan and Drennan, and comes down to the latest contemporary writers, of course including that fine poet Yeats, and not forgetting Mr. A. P. Graves, of whom a capital story is told (p. 380). He was once informed, it seems, by a young man at a London club that there was no one now living who could write really good and racy Irish songs, "such songs, for instance, as 'Father O'Flynn,'" a song which happened to have been written by Mr. Graves himself. It is one, by the way, which will always seem delightful to any one who has heard it sung by a cheery and mellow-voiced Irish priest. It is only Irish humor, after all, that can rise to the very heights of fun without a word of coarseness. This, and all the other Irish traits, are worked out with exquisite refinement of criticism in this work by a variety of critics, of whom Yeats is easily the best, and who leave the lover of really ideal poetry in the renewed conviction that it is Ireland, and not England, which represents, in song, the pure imagination and even the spiritual life.

That American poetry can be well handled in a foreign land, when not mixed with any other verse, is well vindicated by the new and enlarged edition of 'The Treasury of American Sacred Song,' by the Rev. William Garrett Horder (Frowde). This book affords on the whole a manual better fulfilling its purpose than any American work of the kind, and all the more from the fact that it is not a mere hymn-book, but simply a collection of serious and thoughtful verse, selected with singular felicity and annotated with remarkable correctness. Mr. Horder is, it is understood, a dissenting minister in the suburbs of London, and he has had the active coöperation of the Rev. Richard Wilton, rector of Londesborough and canon of York, who furnishes a prefatory sonnet for the book, thus bringing it in a manner into undoubted ecclesiastical society.

'Poets and Poetry of Indiana, 1800 to 1900,' compiled by Benjamin S. Parker and Enos B. Heiney (Silver, Burdett & Co.), is an honest and only too miscellaneous collection of poems from that Western State which claims for itself a larger proportion of authors than any other. There is, of course, a good deal of commonplace in the book; it includes a great many of those elementary forms of verse in which the same jingling line constantly recurs, often closing with some ringing or pensive personal name, as Ben Bolt or Lily Dale. Other poems tend inevitably to the Poesque form, where the close of the verse duplicates itself with what Poe was wont to dignify as a repetend. The biographical notes are pitched on that scale of exaggeration which describes 'Ben Hur' as a work of genius, and its author as "one of the most splendid figures of our epoch"; yet a State may justly be proud which claims for itself the talent of James Whitcomb Riley, Forceythe Wilson, Maurice Thompson, Robert Underwood Johnson, and John Hay. The world may be relied upon to effect the needed work of repression wherever fame is exaggerated, and, moreover, this book introduces some comparatively new poets, such as Evaleen Stein, whose fine poem of "The Marshes" (p. 204) would alone be enough to make a reputation.

An admirable book of selections is the 'Anthology of French Poetry' (tenth to nineteenth centuries), by Henry Carrington, M.A., Dean of Bocking (Frowde). It is rare to find in an Englishman that delicacy of touch which can translate a French lyric poem, and it is vain to pretend that the verses of Victor Hugo and Béranger do not lose a great deal in Dean Carrington's hands. His translations are not, for instance, nearly so good as those of Longfellow, who certainly had a very exceptional gift in that direction; and we have seen much better manuscript versions of his twelfth-century authors. This is one of his neatest and best, from a rondel by Charles d'Orléans (p. 74):

Shall it be so?
Shall I be thine?
Strife I resign
On bended knee.

To this one plea
Thine ear incline;
Shall it so be?
Shall I be thine?

Envy may see
My faith I plight,
My dear delight;
Let us agree;
Shall it so be?
Shall I be thine?

'Lullabys [*sic*] and Baby Songs,' collected by Adelaide L. J. Gosset (Dutton), contains a fairly good selection, including many unfamiliar poems, chiefly from Irish sources; the only American contribution being Eugene Field's "Garden and Cradle." The illustrations, by Eva Roos, are commonly good, so far as the babies' faces are concerned, but are in other respects unfortunate, the mothers usually looking dismal rather than joyous, and the angels' wings in the frontispiece having the air of fashionable winter wraps.

Democracy and Empire. With Studies of their Psychological, Economic, and Moral Foundations. By Franklin Henry Giddings. Macmillan. 1900. Pp. x, 363.

Professor Giddings has thought it well to remind his readers that the papers collected in the present volume are not miscellaneous contributions, but "logically related parts of a whole"; but we fear that most of those who go through the book will have difficulty in recognizing the unity which the author asserts exists. 'Democracy and Empire' is a volume of papers and addresses on a considerable variety of social, economic, and political subjects, ranging from "The Psychology of Society," "The Ethical Motive," "The Costs of Progress," and "Industrial Democracy," to "Public Revenue and Civic Virtue," "The Shadow and Substance of Republican Government," and "Some Results of the Freedom of Women." So far as the title of the volume is concerned, the only papers which seem to bear very directly upon it, or, indeed, to give it much point, are those on "The Democratic Empire," "The Destinies of Democracy," "Imperialism," and "The Ideals of Nations." Most of the papers have already seen the light, either in print or on the platform.

While the somewhat miscellaneous contents of Professor Giddings's book makes any detailed discussion of it impracticable, it seems fair to take the author at his word, and assume that it is the idea suggested by the title which he wishes particularly to impress. Whatever else the volume is or is not, it is certain to be regarded, and has indeed already been heralded, as in large part a defence of "expansion," though not, of course, of Expansion solely in the restricted sense in which the term has lately come to be used in this country. What Professor Giddings would show is that democracy, in the broad sense of the word, is, from its nature, bound to spread more and more in the world, and that a democratic state must expect to see its boundaries enlarging, and the sphere of its influence widening, with the lapse of years. "Empire," in the broad and general sense, democracy is bound to usher in, and to oppose or bewail the fact is only to put one's self in unintelligent and unavailing opposition to natural law. Democracy, to be sure, is ever changing its external aspect, as it absorbs the various influences, political, economic, and social, which from time to time arise; but to possess the earth, to establish itself as the ultimate type of national life, is its constant trend. There are dangers, of course—among them, and much the most important, being popular ignorance and indifference, economic greed, political corruption, and unwise legislation; but the heart of democracy is sound, and its aims must in the end prevail.

If we ask as to the precise nature of this democracy which is to wax more and more, we are told that its essential characteristic is "ethical likemindedness." Ethical likemindedness, according to Professor Giddings,

> "consists in a common loyalty to the common judgment and will, in a common willingness to share a common destiny, and in a common conviction of the priceless value of individual, religious, and local liberty. Given mental and moral agreement in these particulars, and a nation of any territorial extent, of any admixture of blood, of interests, of religions, can wax strong, generation by generation, while yet becoming more free and more diversified in its social organization" (pp. 10, 11).

It is by this principle that we are to explain "the wonderful phenomenon of the democratic empire." There follows as a corollary the further proposition—

> "that, when a nation makes itself the nucleus of an empire, step by step extending its sway over distant lands and peoples successively annexed, it can continue to be democratic; it can become, decade after decade, more democratic; it can even permit its colonies or dependencies to be democratic, while at the same time maintaining a strong imperial government for purposes of a common defence; all on the one inviolable condition that, *as it lengthens the reach of government, it must curtail the functions of government.* The small local community, homogeneous in nearly every respect—in blood, in traditions, in beliefs, in interests—may successfully conduct a local or municipal government of highly diversified functions. . . . But a national government, if it would respect liberty while maintaining political cohesion, must leave most of these functions to local communities or to voluntary enterprise. An imperial government must be yet more general, if it is not to suppress freedom and the democratic spirit. It must confine itself practically to three things, namely: the imperial defence, the suppression of conflict between one part of the empire and another, and insistence that local administration shall come up to a certain standard in its protection of life and property, and in its respect for enlightenment. Doing these things and only these, it can leave each component part of the empire to evolve its own law and its own administration in its own way—to become, in short, as democratic as the spirit and the experience of the people will permit" (p. 11).

We have given space to the foregoing passages because they contain, in concise and forcible language, the proposition around which Professor Giddings has evidently intended to construct his book. As to the theory therein propounded, we make a single observation. While "ethical likemindedness" is an obvious prerequisite of a well-knit state, the practical questions of "empire" are of a different sort. It is the diversity of material interests, and the differing degrees of civilization, which test the wisdom and skill of rulers, and test it the more because these divergencies of standard may exist coincidently with much "ethical likemindedness." "Common loyalty to the common judgment and will," too, easy enough of attainment within narrow territorial limits, is a very different matter when applied to the empires known to history, if for no other reason than the practical impossibility of getting, save in times of crisis, any clear expression of the "common judgment and will." The trouble, as it seems to us, lies in theorizing about a democratic empire as one would theorize about a relatively small and homogeneous community, and forgetting the disturbance which increased area, unequal civilization, diversity of material interests, and especially love of political freedom have never failed to introduce.

Those who, whether attracted to the theoretical presentation or not, look to Professor Giddings's book for clear light on our present national perplexities, are likely, we fear, to have some difficulty in finding it. There is plenty of keen observation as to what a democratic people ought in general to do, but the clinching application to our own day is wanting. Professor Giddings does little to counteract the notion that empire, in the conventional sense of rule over subject or dependent people, is what the world not only is coming to, but ought to come to. The function of weak races in the development of civilization is a subject to which he, in common with most students of sociology, pays scant attention. He is convinced—as who is not?—that a superior civilization is bound to triumph over an inferior one, and that the nation which cannot maintain itself in the struggle for survival must go to the wall; but he is not equally decided in pointing out how often the course of empire has been marked out by greed and selfishness, paved with sounding phrases and pious ejaculations, and strewn with the remains of shattered political morality. We could certainly wish that Professor Giddings—than whom no American scholar has thought more persistently along these lines—had found room in his pages for some very clear and specific warning against the false notion of national progress which is now being flaunted in the faces of honest and intelligent American citizens, and for protest against parading our recent achievements as though there were something sacred and Providential about them.

The reason for this lack is partly to be found, we think, in a characteristic of Professor Giddings's thinking, which reviewers of his earlier writings have already pointed out. With all his painstakingness and wealth of orderly information, he does not constantly keep his feet on the earth. Accepting the doctrine that sociology is merely a description of society, he is, nevertheless, prone to wander off into the cloudland of philosophical speculation. What he has to say in these flights is often, where one can feel reasonably sure of having grasped it, highly stimulating and suggestive; but to most readers it must be undeniably vague. On the other hand, Professor Giddings has in a high degree the gift of style, and is able to present the fruits of his studies in singularly attractive dress; and most of the papers in 'Democracy and Empire' are likely, by their literary qualities, to delight many readers whose net impression of their significance will be somewhat dim.

Le Règne de Louis IV. d'Outre-Mer. Par Ph. Lauer. [Le 127e fascicule de la Bibliothèque de l'École des Hautes-Études.] Paris: Émile Bouillon. 1900.

The aim of M. Lauer in this study of the later Carolingian period is to determine the bare facts which can be accepted with confidence. The difficulties of the case are twofold. In the first place, the authorities are meagre; and, secondly, the historians of our own century have written in a tone of confidence where they should have used extreme caution. Among contemporary annalists, M. Lauer assigns the highest rank to Flodoard of Reims, who, apart from historical composition, is known to mediævalists as the most copious Latin poet of the tenth century. The four books of Richer's History, discovered by Pertz in 1833, have been freely used by recent students, but M. Lauer considers that they possess little independent weight. He holds a poor opinion, also, of Rodulfus Glaber and Dudo of St. Quentin. His main source is Flodoard, and if he gleans isolated statements from a wide range of literature and charters, he seldom strays far from the pages of the priest of Reims. In a bibliography of over two hundred titles the one authority may be said to balance all the rest.

"Un grand nombre de faits ne nous sont connus que par les Annales [de Flodoard], et, sans les indications sûres qu'on y trouve, une histoire du règne de Louis d'Outre-Mer ne consisterait guère que dans un tissu de légendes."

While the body of genuine information is thus meagre, modern knowledge has been vitiated by the careless and rash dogmatism of celebrated authors like Thierry, Michelet, and Guizot. Thierry, the worst sinner of the three, was guilty of errors in his 'Lettres sur l'Histoire de France' which have been followed ever since. For instance, he sees in Hugues le Grand, the leader of the nobles against Louis d'Outre-Mer, a champion of national sentiment against Germany, whereas that prince showed the utmost readiness to join Otto I. whenever such a combination would weaken Louis, his own suzerain. Hugues even went the length of making himself the vassal of Otto, and put all northern France under German control. Guizot, too, has erred in exalting the patriotism of the Robertian duke at this juncture. M. Lauer has found much to decipher and much to rectify.

The reign of Louis d'Outre-Mer has at least a double interest: that which springs from the problem of the king's character when taken as representative of the expiring Carolingian line, and that which centres around the contest between crown and nobles. The struggle of Louis with his feudatories may at first sight seem like other phases of a well-known mediæval condition, but it gains distinction from the period in which it was waged. In the ninth century the great states of modern Europe were shaped, and accordingly the efforts of the crown in the tenth century to maintain a dignified position may be connected with the dawning of national self-consciousness. Royalty, despite its imperfect resources, represented the desire for racial union which triumphant feudalism could not altogether destroy. During the age of Louis d'Outre-Mer the vassals on the whole had the best of the duel, although the Church pronounced excommunication against Hugues le Grand. But the institution of monarchy survived, and maintained the continuity of its claims.

Almost every one of the Carolingian kings or emperors had his nickname, and that of Louis IV. is the most picturesque. Similarly, his career contains the elements of novelty, adventure, and strife against tremendous odds. M. Lauer has given a brief epitome of his position when brought from the court of Athelstan, and a criticism of the manner in which he acquitted himself: "Fils d'un roi qui était mort en prison, il est rapellé, à quinze ans, de l'étranger, où il a été emmené par sa mère fugitive. A dix-huit ans il entreprend la conquête de la Lorraine. A dix-neuf ans il tient tête à une ligue formidable composée des plus puissants seigneurs de France et du roi de Germanie. Il a comme adversaires: Hugues le Grand, duc de France, Herbert II., comte de Vermandois, le geôlier de son pere, Arnould le Vieux ou le Grand, le 'riche' marquis de Flandre, Guillaume de Longue-Épée, duc de Normandie, et enfin Otton Ier le Grand, roi de Germanie, plus tard empereur." It is no paradox that the later Carolingians were made of far better stuff than the later Merovingians, but the researches of M. Lauer confirm one's admiration of that wonderful [illegible] which for three centuries, from the battle of Testry to the accession of Hugh Capet, remained at the head of all families in western Europe. As for Louis d'Outre-Mer, he not only did the best which it was possible to do for the kingdom of Laon, but he actually preserved the political existence of the Carolingians for fifty years, transmitting the monarchy to his son in a considerably improved condition.

M. Lauer's essay has won him the diploma of the École des Hautes-Études, with the official approval of a board which consisted of the lamented Arthur Giry, MM. G. Monod and F. Lot. It is a bit of faithful investigation, and will in no way lower the reputation of the learned series to which it belongs.

The Biography of a Baby. Millicent W. Shinn. Houghton, Mifflin & Co. 1900.

It would be hard to find, among the wealth of books that the Christmas season brought, one more charming than this biography of a baby. Miss Shinn has already published a series of memoirs giving in strictly scientific form the results of her year-long study of her sister's child—a contribution to the subject which is exceeded in importance by none of the numerous volumes on infant psychology that have in late years seen the light. But in this book Miss Shinn has thrown away the scientific style, and started in afresh to work up her material in literary form. In this task she has succeeded in a remarkable degree; the book is a good example of the extent to which pure science can be subjugated to the uses of the plain man—or woman—who must have literary charm to sugar-coat his pill of knowledge.

The book is full of very acute observations, and exhibits a real genius in interpreting all the signs of the baby's slowly developing mental life. The plot of it, as Miss Shinn says at the beginning, turns mainly upon the formation of the two great associations—that of the muscle sense (or sense of motion) with sight, and that of the muscle sense with touch; and again of the recombination of these pairs with each other. A particularly interesting and illuminating chapter is that devoted to the first dawning of the function of speech. For months the child had been pouring out strings of meaningless syllables, in joy or sorrow, with countless inflections and changes—such intelligent remarks as "Ne-ne-oom-boo," "Ga-boo-ng"—and certain favored syllables over and over, such as "Dă-dă-dă." At the end of the tenth month her watchers began to suspect that there was a faint consistency in the use of several of the sounds; it began to seem that something like "Dă!" was often uttered when the little one threw out her hand in pointing, or exulted in getting to her feet; that "Nă-nă-nă" was separating itself out as a wail of unwillingness and protest, and "Mă-mă-mă! as a whimper of discontent and loneliness and desire of attention, while a favorite old murmur of "M-gm" or "Ng-gng" recurred so often when something disappeared from sight that it seemed to be very like an echo of the phrase frequently heard, "All gone!"

"Week by week the note-book showed 'Dă!' growing into the regular expression of discovering and pointing out; 'Nă-nă-nă' into that of refusal; 'Mă-mă-mă,' which soon became 'Mom-mom-mom,' into that of a special sort of wanting which slowly gathered itself about the mother in particular; and 'M-gâ' or 'Gng,' used as loosely as it was pronounced, for all sorts of disappearances, absences, failures. The idea of disappearance—of the thing now seen, now gone—seems to take strong hold on babies very early. I have known [besides that of Preyer's boy] several other cases. . . . In all this we see quite clearly the first steps in language-making. I do not think that these first words were echoes of our words 'There!' and 'No!' and 'mamma'; it was only slowly, and after the baby was a year old, that they came into unison with these words of ours. It is more likely that we have here a natural cry of pointing out, a natural negative, a natural expression of baby need and dependence, which give us a hint of the origin of our own words. . . .

"The baby begins slowly to turn some of his commonest chattering sounds to special uses—not to carry thought to other people, but as mere exclamations to relieve his own mind. It was just twice within her first year that our baby turned to me when some one left the room, looked in my face and said, 'Gong!' At all other times it was simply murmured to herself. And most of the exclamations express a mood rather than a real idea; they are half way between mere cries and words proper. Even when there is plainly an idea, as in 'All gone,' it is a big vague blur of an idea, slowly taking form in the little mind, as the blurs of light and dark slowly outlined themselves into objects before the little eyes months before."

For the right bringing up of the baby there is the constant admonition that it must be allowed to handle and to tumble about countless sorts of things; that its ceaseless activities must not be thwarted; that "goodness" does not consist, for it, as the mother too often thinks, in letting things alone. The function of a grandmother, who has leisure and patience to guide the baby, safe from injury, through its tireless, perilous investigation, is of great importance. But, in fine, this is a book which, whether for pleasure or for profit, no mother—and no psychologist—can afford to be without.

Squirrels and Other Fur-bearers. By John Burroughs. Boston: Houghton, Mifflin & Co. 12mo, pp. 149, illustrated.

Mr. Burroughs is an essayist rather than a naturalist, yet anything he writes on natural history is sure to be interesting. One thoroughly enjoys reading about his animals even though never quite able to banish the feeling that they have not told what they should, that they are at a distance, out of the window, off on the hillside, up in the tall trees, or down in the deep holes, while their doings are being traced in the study, on the porch, or in the hammock. The other fur-bearers are woodchucks, hares, muskrats, skunks, foxes, weasels, raccoons, porcupines, opossums, and mice. All are illustrated in somewhat high colors after Audubon. To some extent the author's methods of study are indicated by his questions regarding birds: whether they have an extra sense that we have not, or how do they manage to act as by a single impulse when the flock is started or is soaring aloft? Closer to the keen-witted children of nature, he might have seen that the alertness and quickness in following prey serve equally well to keep distance, direction, and rate with the other members of the flock; he might have heard the signals, hardly more than whispers, that start the covey, as one bird, like an explosion into the air, and change the course as it flies. Possibly other senses of the author are in keeping with that which could not detect the odor of the opossum, or was not affected by a scent of hare, opossum, and skunk under the study

floor. The chapter on the "Rabbit and the Hare" recalls the fact that the rabbit properly so called is a native of Europe, from North Africa to Scotland, introduced in the Falklands and in Australia, while the species called rabbit by this author is probably one of the cottontails, more of a hare than a rabbit. The "life of fear" many animals are supposed to lead is in all likelihood no more distressing than that of many human beings who profess to enjoy ill health, or who are ever on the lookout for danger from accident or design, from what they breathe, drink, eat, or wear, from indigestion, rheumatism, colds, and fevers, from the malignant germs of all the known diseases, the terrible burglar lying in wait to chloroform, strangle, club, stab, and shoot, or from ghosts.

The World of the Great Forest: How Animals, Birds, Reptiles, Insects Talk, Think, Work, and Live. By Paul Du Chaillu. Charles Scribner's Sons. 8vo, pp. 323, illustrated.

An improvement in the subtitle of this volume may be made by the substitution of mammals for the word animals. Whether relating to the more easily observed or the more difficult and rare, from the limits of the book it should not be expected that the notices are at all complete. Some are very short, others are longer, none of them long enough, yet together they give a tolerably fair impression of the inside life of the region. Evidence is abundant that the notes were gathered at first hand, in the woods, by the author. In greater part the insects, reptiles, birds, and mammals (the last including species of the pangolin, porcupine, ichneumon, civet, gazelle, wild boar, leopard, jackal, hippopotamus, elephant, monkey, ape, gorilla, and a race of the dwarf human beings) are made to do the talking, and it is through their conversations we are informed of their thoughts and habits as understood by our present authority. They are introduced by their aboriginal names, and to avoid confusion the English name is added. Scientific names would have much enhanced the value. A few of the stories suffer so from incompleteness as to give wrong ideas. Probably in making the story of the wasp and the spider the observations were not carried far enough; the wasp is said to have bitten at the back of the spider's neck until the prey seemed benumbed, when the legs were bitten off and the body carried away to be eaten at leisure. No mention of stinging is made, but by the wasps we know the prey is usually stung in one of the nerve centres, and, thus stupefied, is carried off to be stowed in the nests with the eggs as food for the young. In the case of the "Ipi, or giant Ant-eater," a pangolin or manis, one of the scaly ant-eaters, one might conclude that the claws are used only in construction of the burrow, and that the prey was of ants found running about on foraging expeditions; but the more common idea is that the manidæ use their strong claws to tear open the nests and runways of the insects as well as to make the retreat. A chapter on the well-known Johanna, a "nshiego," one of the chimpanzees, and Ntchiko, a "nkengo," one of the apes, follows that on the "obongos, or dwarfs." Originality of matter and peculiarities of style contribute to make this work effective and easy to remember.

BOOKS OF THE WEEK.

An English Miscellany: Presented to Dr. Furnivall in Honor of his Seventy-fifth Birthday. Henry Frowde. 21s.

JUST PUBLISHED.

Johnston's High School History of the United States

With Maps, Plans and Illustrations. Being a revision of the author's "History of the United States for Schools." Revised and continued by Prof. WILLIAM MACDONALD of Bowdoin. xvii-612 pp., 12mo, $1.25 *net*.

The present volume has been brought through the Spanish War to McKinley's second election in 1900 and materially enlarged. As far as practicable the late Prof. Johnston's text has been preserved, and great care has been taken to maintain in all new matter the characteristics and principles of his original book. Political matters and the account of the Colonial period have been expanded. Each chapter has been supplied with topics for further study, and with a brief bibliography, supplemented by critical comments. Many of the maps have been taken over from the *Shorter History*, and nearly all the portraits are new. According to the report of the Committee on College Entrance Requirements of the National Educational Association, which tabulates the returns from 65 colleges, "selected (*a*) to cover all sections of the country, (*b*) to include all types," 28 colleges specify text-books in United States History. Out of this number 20 colleges (including Harvard, Columbia, Princeton, Johns Hopkins, Massachusetts Institute of Technology, Vassar, and the State Universities of Michigan, Wisconsin, Iowa, Minnesota, Illinois, and Ohio) recommend "Johnston's History of the United States for Schools," and it is named *exclusively* four times as often as any other.

Houghton, Mifflin & Co.'s New Books

THE NEW EPOCH FOR FAITH

By GEORGE A. GORDON, D.D., author of "The Christ of To-Day," "The Witness to Immortality," etc. 12mo, $1.50.

This book is an uncommonly fresh and valid contribution to the best kind of modern religious literature. It is an interpretation of the religious conditions of to-day from the point of view of a progressive thinker. Dr. Gordon assumes as clearly true that the direction of religious development for the past twenty years has been toward a freer and fuller faith. His work, while carefully discriminating, is nobly optimistic, and is written with remarkable literary power and charm.

JONATHAN EDWARDS

A Retrospect: being the Addresses delivered in connection with the Unveiling of a Memorial in the First Church of Christ in Northampton, Massachusetts, on the 150th anniversary of his dismissal from the pastorate of that Church. Edited by H. NORMAN GARDINER, Professor of Philosophy in Smith College, Chairman of Edwards Memorial Committee. With portraits of Edwards and his Wife, and a picture of the Tablet representing Edwards as preaching. 12mo, $1.25.

This book includes Addresses by Prof. A. V. G. Allen of Cambridge, Prof. Egbert C. Smyth of Andover, Rev. Dr. Gordon of Boston, Rev. Dr. Rose of Northampton, and Prof. Gardiner, the editor.

SAM LOVEL'S BOY

By ROWLAND E. ROBINSON, author of "Uncle Lisha's Outing," "A Danvis Pioneer," etc. 16mo, $1.25.

Sam Lovel is a well-known hero of Mr. Robinson's. The present story tells of his son from the time when Gran'ther Hill assisted at naming him until he entered the Union army. It describes how Uncle Lisha initiated him into the mysteries of Nature-lore and trained him to fish and hunt. The story is very well told and is full of humor.

Educational.

DELAWARE, Wilmington, Franklin Street.

THE MISSES HEBB'S
Boarding and Day School for Girls. Students are prepared for college.

MARYLAND, Baltimore, 122 and 124 W. Franklin St.

EDGE WORTH BOARDING and DAY School for Girls—38th year will begin September 27, 1900. Mrs. H. P. LEFEBVRE, Principal. Miss E. D. HUNTLEY, Associate Principal.

MARYLAND, Catonsville.

ST. TIMOTHY'S SCHOOL for Girls re-opens Sept. 20, 1900. Prepares for College. Heads of School, Miss M. C. CARTER, Miss S. R. CARTER.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School.
Address the Dean,
SAMUEL C. BENNETT.

MISS ANABLE'S Boarding and Day School for Girls. Established in 1848. Circular on application. Opened Sept. 27. 1350 Pine St., Phila., Pa

MISS REYNOLDS' School, 66 W. 45th St., New York.—Special students admitted to regular classes. A few young girls received into the family.

National Cathedral School for Girls

The Rt. Rev. Henry Yates Satterlee, D.D., LL.D., President of the Board of Trustees.

Fireproof building, the gift of Mrs. Hearst. Park of 30 acres overlooking the National Capital. Unrivalled advantages in Music. Large, well-equipped Studio. Preparation for College. Individual teaching in every grade. Modern gymnasium. Tennis, basket ball and golf. Miss BANGS and Miss WHITON, Principals, Mount St. Alban, Washington, D. C.

Royal Victoria College,
McGILL UNIVERSITY,
MONTREAL.

A residential College for the Women Students of McGill University. For conditions of entrance, scholarships, courses, degrees, terms of residence, and other particulars, address THE WARDEN, Royal Victoria College, Montreal.

Rogers Hall School
For girls of all ages. Endowed.
Mrs. E. P. UNDERHILL, M. A., Prin., Lowell, Mass.

Teachers, etc.

A POLYTECHNIC GRADUATE (B. Sc.) of 7 years' experience in Normal school work desires a position (Normal school in an Eastern State preferred) to teach by laboratory methods chemistry, mineralogy, geology, and manual training (including mechanical drawing). Also understands library work. Satisfactory references. Address "BACHELOR OF SCIENCE," P. O. Box 245, Worcester, Mass.

I WISH TO COMMUNICATE WITH citizens of means in a city or a prosperous town (North, South, or West) where a school under private or corporate management and of liberal scope is desired. Address "YALE '76," care of *Nation*.

*POSITION AS PRINCIPAL OR VICE-*Principal wanted by a Yale graduate. Address "SUCCESSFUL EXPERIENCE," care of the *Nation*.

HARVARD COLLEGE.—Preparation by experienced tutor. M. LEN. KING, A.B. (Harvard), 1158 Mass. Ave., Cambridge, Mass. Telephone.

School Agencies.

THE FISK TEACHERS' AGENCIES.
EVERETT O. FISK & CO., Proprietors.
4 Ashburton Place, Boston; 1505 Pa. Ave., Washington; 156 Fifth Ave., New York; 414 Cent. Bld., Minneapolis; 533 Cooper Bldg., Denver; 4 Evans Bldg., Oskaloosa; 203 Mich. Blvd., Chicago; 525 Stims'n Bk, Los Angeles; 420 Parrott Building, San Francisco.

ALBANY TEACHERS' AGENCY, 81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Rents and sells School Property. HARLAN P. FRENCH, Proprietor.

SCHERMERHORN Teachers' Agency, Recommends best schools, tutors, governesses. HUYSSOON & ROCKWELL, Mgrs., 3 E. 14th St., N. Y.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and tells you about them **that** is something, but if it is asked to recommend a teacher and recommends you, that is more. Ours **Recommends**
C. W. BARDEEN, Syracuse, N.Y.

Travel.

GOING ABROAD on a BICYCLE TRIP? Send for "Bicycling Notes for Tourists Abroad."

LEYLAND LINE
EVERY WEDNESDAY, BOSTON to LIVERPOOL

1st cabin, **$40, $45 upwards,** depending on steamer. Splendid steamers "Devonian" (new), 11,000 tons, Mch. 1; "Cestrian," 9,000 tons, Mch. 7; "Winifredian" (new), 10,500 tons, March 13.

F. O. HOUGHTON & CO., Gen'l Agents, 115 State Street, Boston.

Southern Europe.

Small private party will sail March 30 by steamship "Werra," for Southern Spain, Italy, Switzerland, Paris and London. Cost, all expenses included, $485.

For itineraries and references, send to

Thomas Y. Crowell & Co.'s New Publications

THE HEIRESS OF THE FOREST

A Romance of Old Anjou, by ELEANOR C. PRICE, author of "In the Lion's Mouth," "Brown Robin," etc. One vol., 12mo, 382 pp., cloth. $1.50.

ANY one who begins this fascinating story of life two hundred years ago will not readily stop till the last page is read. "The Heiress of the Forest" will take its place as one of the best novels of the day, both from the standpoint of historic fiction and from that of pure romance.

THE JEW IN LONDON

A study of racial character and present-day conditions, by C. RUSSELL and H. S. LEWIS, with an introduction by Canon BARNETT, and a preface by the Right Hon. JAMES BRYCE. Vol. XVII. "Crowell's Library of Economics"; 238 pp., 12mo. $1.50.

HARVEST-TIDE

A book of verses by Sir LEWIS MORRIS, author of "The Epic of Hades," etc. Printed at the Merrymount Press. One vol., 12mo, 168 pp., cloth, gilt top. $1.25.

"THE Epic of Hades" has made Sir Lewis Morris's name widely known throughout this country, and "Harvest-Tide" will be warmly welcomed.

THE RELIGIOUS SPIRIT IN THE POETS

By the Right Rev. WILLIAM BOYD CARPENTER, D.D., Bishop of Ripon, author of "Permanent Elements of Religion," etc. One vol., 12mo, 247 pp., cloth, gilt top. $1.50.

HERO-PATRIOTS OF THE NINETEENTH CENTURY

By EDGAR SANDERSON, M.A., author of "History of the World," etc. One vol., 12mo, xiii. x 329 pp., eight full-page portraits, cloth. $1.50.

IN seven thrilling chapters Mr. Sanderson recounts the exploits of more than a dozen patriotic soldiers. Even in describing the vicissitudes of Garibaldi he weaves in new material, and is so enthusiastic in his admiration for gallantry and success that he kindles the reader's imagination and thoroughly wins his sympathy.

VIRGIN SAINTS AND MARTYRS

By the Rev. S. BARING-GOULD, author of "Lives of the Saints," etc. One vol., 12mo, 400 pp., 18 full-page illustrations, cloth. $1.50.

It is a distinct addition to theological biography.

ABRAHAM LINCOLN

By the Honorable JOSEPH H. CHOATE. One vol., 12mo, 38 pp. 35 cts.

THIS is the authorized version of the inaugural address delivered by the American Ambassador at the Court of St. James, before the Edinburgh Philosophical Institution on November 13, 1900. It is a consummate eulogy of the martyred President, a noble defence of Democracy, and is to be commended to patriotic Americans.

QUESTIONS OF EMPIRE

By LORD ROSEBERY. One vol., 12mo, 35 pp. 35 cents.

LORD ROSEBERY'S Rectorial address was delivered before the students of the University of Glasgow on the 16th of November, 1900. It is, perhaps, the most solemn and significant presentation of the duties of Imperialism ever delivered. There is the fearlessness of the prophet and the sanguine expectation that God is the ruler of men's destinies. It is a message to manhood the world over.

For sale by all booksellers, or sent, postpaid, on receipt of price.

RECENTLY PUBLISHED

AMERICA: PICTURESQUE AND DESCRIPTIVE

By Joel Cook, Author of "England: Picturesque and Descriptive," etc. Illustrated with Seventy-five Photogravures from Original Negatives.

3 volumes, crown 8vo, cloth, full gilt, gilt top, with cloth jackets and in a cloth box, list price..... $7.50

The Nation says: "The author has trimmed his sails very successfully, and produced a work which is much more interesting than the bare statement of the plan would lead one to expect. We have found the text both entertaining, instructive, and well-written, the illustrations unusually good, and the get up of the book, including a very full index, all that could reasonably be asked."

PALESTINE: THE HOLY LAND

By John Fulton, D.D.

Crown 8vo, cloth, gilt, gilt top, with 30 full-page photogravures and maps, list price.....$3.00

In our regular **PHOTOGRAVURE SERIES**, uniform with Cook's "America," "England," etc. It will fill a want that has long existed for a readable and compact as well as comprehensive volume upon the Holy Land. Dr. Fulton's reputation as a Biblical scholar insures the value of the book, and his terse and attractive writing makes a very readable book.

IN THE PALE

Stories and Legends of the Russian Jews. By HENRY ILIOWIZI. Illustrated.

12mo, cloth, list price.....$1.25

THE WEIRD ORIENT

By Henry Iliowizi, Author of "In the Pale." Illustrated with a photogravure and half-tones.

12mo, decorative cloth, list price..... $1.50

These are Eastern tales, gathered by the author during a lengthy residence in the Orient, and contain some new and striking legends that have never before found their way into print. Among them is a curious and very ancient version of the legend of the Wandering Jew, that will be entirely new to the reader, although some slight allusions to it are to be found in the Koran.

"The tales have all that fascination that Eastern literature has upon the Western mind, and those readers who have forgotten their realistic surroundings in the 'Arabian Nights' will be glad to meet with this book." *Literary World* (London).

RICHARD HENRY STODDARD says: "Readers are not likely to require any guarantee of their authenticity, which is unmistakable, they reveal such knowledge of early Jewish and Moslem traditions and superstitions."

"An exceedingly brilliant book."—*N. O. Picayune.* "Interesting, poetical and fascinating."—*Boston Globe.* "The book is well illustrated. The legends are in themselves of unusual interest, and are set in beautiful language."—*Evening Telegraph*, Philadelphia.

FAITHS OF FAMOUS MEN

By John Kenyon Kilbourn, D.D.

Large crown 8vo, cloth, gilt top, list price.....$2.00

This important work comprises, in their own words, the religious views of the most distinguished scientists, statesmen, philosophers, rulers, authors, generals, business men, liberal thinkers, leaders of religious denominations, etc., etc. These have been taken from published works, from letters, and in some few instances—as with ex-President Cleveland, who personally wrote what he wished included; or the Rev. Dr. Storrs, who, before his death, selected what he wished to represent him—the selections have been made by the writers themselves.

HENRY T. COATES & CO., Publishers, Philadelphia

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Wildfowler in Scotland

By JOHN GUILLE MILLAIS, F.Z.S., Etc.

Author of "A Breath from the Veldt," "British Deer and Their Horns," Etc.

With a Frontispiece in Photogravure after a Drawing by Sir J. E. Millais, Bart., P.R.A. 8 Photogravure Plates, 2 Colored Plates, and 50 Illustrations from the Author's Drawings and from Photographs

Royal 4to, $12.00

"Ever since the age of nine, when I first began collecting British birds in real earnest, I have made a special study of the pursuit and natural history of the wildfowl that frequent our coasts. In the first instance I was only armed with that enemy of law and order—the catapult; but, two years later, on becoming the possessor of a small 20-bore, my first trips after seabirds were made to the estuaries of the Eden and the Tay. The freedom and unconventionality of the sport fired my youthful imagination and love of adventure, and since those early days I have spent much time in wandering up and down the Northern coasts wherever sport or rare creatures were to be found. In the present volume I have endeavored to set forth the first results of my experiences. The work deals entirely with the pursuit of ducks found in Scottish waters; and I hope in future volumes to deal exhaustively with the natural history of these ducks and their changes of plumage."—AUTHOR'S INTRODUCTION.

American Teachers' Series

Edited by JAMES E. RUSSELL, Ph.D., Dean of Teachers' College (Columbia University).

THE TEACHING OF LATIN AND GREEK IN THE SECONDARY SCHOOL

By CHARLES E. BENNETT, Professor of Latin in Cornell University, and GEORGE P. BRISTOL, Professor of Greek in Cornell University. Crown 8vo, 350 pages, with a colored Map, Bibliographies and Index, $1.50. [*Just ready*

The "American Teachers' Series," the first volume of which is nearly ready, will review the principal subjects of the Secondary School curriculum. The purpose is to discuss the educational value of each subject, the reasons for including it in the curriculum, the selection and arrangement of materials in the course, the essential features of class instruction, and the various helps which are available for teachers' use. The books are not intended to correct faults of ignorant teaching; they are not offered as manuals of infallible methods. They are designed as contributions to the professional knowledge necessary in Secondary education, and are addressed to teachers of liberal culture and special scholarship who are seeking to make their knowledge more useful to their pupils and their pupils more useful to the State.

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 21, 1901.

The Week.

The Senate has had its fling, and, its play spell now being over, has determined to attend strictly to business during the brief remainder of the session. Thus we see again how the old Senatorial hands, with their knowledge of the rules and customs, and with their confidence of getting the whip-hand in the end, have, when it becomes necessary to pass the bills to keep the Government alive, got control of the situation finally, as they always do. "Yes, little Mark," Senator Allison has been practically saying all these weeks past, "play with your Subsidy Bill and amuse yourself." But when bedtime comes—that is, when the Senate really has to get down to business—the dear boy has to take away his toys and go to the nursery, leaving the grown-ups a clear field. It is the old story over again of real Government business coming in at the critical moment, which its managers had long foreseen, to put an end to the schemes of private raiders of the Treasury.

Just as the need of an extra session of Congress grows less apparent, with the promise of either an amicable settlement of the Cuban question or its dragging along into midsummer or autumn, there is a suspicious warming to the idea on the part of Republicans who still favor the Shipping-Subsidy Bill. They begin to have grave doubts about the President's ability to cut his way through the Philippine jungle and the Cuban chapparal without the aid of Congress. They had not desired an extra session, but if the good of the country demands it, why, they must submit. This resigned frame of mind falls in too pat with the failure of the Subsidy Bill to appear entirely like the patience of martyrs. An extra session called to consider Cuban and Philippine problems might easily get tired of dealing with those large questions, and turn for relief to the more agreeable task of voting money out of the Treasury to pay Hanna's campaign debts. That this is distinctly contemplated, our private information from Washington leads us to believe. But we do not believe the plot will succeed. It would be too barefaced a way of putting through a barefaced swindle. Nothing would more certainly unite and revivify the Democratic party, just as it would rend the Republican party in twain. The President knows this—no man better—and it is not likely, therefore, that he will lend any effective aid to this last desperate shift of the baffled subsidy schemers.

Gen. Wood's cool pocketing of the Committee of the Cuban Constitutional Convention, and his carrying it off to Batabano for a two days' "rest" with him, are not without significance. During this secret session the General will use every means at his disposal to bring the Committee to see that it is its duty to grant just as many "assurances as to the stability of the Cuban republic" as Mr. McKinley desires. And the General, with his well-known diplomacy, backed by all the offices at his disposal and his unlimited control of the Cuban Treasury, is a negotiator not to be sneered at. It is altogether likely that he will come out on top in the discussion, and that the Committee will grant everything he wishes. But the Cubans should realize that admitting the camel's head into the tent means the inevitable entrance of his body; that the right of intervention in the foreign relations and fiscal affairs of the island is but a move towards the unworkable and unhappy relationship of Egypt to Turkey and the Transvaal to England. It would be without doubt a long step towards annexation and Statehood.

The Republicans had a glorious time in the House of Representatives on Thursday over the matter of Government deposits in national banks. It should be observed, in order to understand the controversy, that the Treasury Department is not only authorized by law, but also compelled by financial considerations, to keep a large part of its funds on deposit with the banks. The banks deposit ample collateral security, and the public money is thus even safer in their charge than it would be in the national Treasury. The banks are, for this purpose, practically branches of the Treasury Department, and there is no impropriety whatever in their applying for Government deposits, provided they do so on financial grounds. The Democrats, however, have attempted to show that deposits were solicited and granted for political reasons, and the Republicans resorted to the *tu-quoque* argument with overwhelming effect. Letters were read which had been written by Democratic leaders under a Democratic Administration, asking that certain banks be made Government depositories because of the political associations of their managers. One of these letters recommended a certain bank as "exclusively Democratic in its management," and another referred to a banker as "a liberal contributor." The effect of these letters was, of course, to make the critical attitude of the Democrats appear highly ridiculous.

The tactical success of the Republicans, however, was won by dubious means. The letters which they produced were obtained from the files of the Treasury Department without the authority of Congress. The Executive Department has frequently declined to produce documents at the request of House or Senate, both under Democratic and under Republican Administrations; but in this case the Administration voluntarily furnished these documents for the use of its partisans. Mr. Hopkins, who read the letters, said that he obtained them from "officials at the Secretary's office," but refused to tell who these officials were. He declared that he produced them for the laudable purpose of showing up the hypocrisy and cant on the Democratic side of the House. No one supposes that a Democratic Representative could obtain letters from the Department files for the purpose of showing up Republican hypocrisy and cant. The Administration has thus taken a position which makes fair fighting between the parties in Congress impossible. To gain a trifling success, it has sacrificed an important principle. The precedent is a bad one, and when the Democrats come into power they may use it to expose Republican hypocrisy and cant with overwhelming effect.

Again our January foreign trade reports announce that all previous records of export balances for the month have been surpassed. In view of the large part played by our foreign credits in the financial situation, the significance of the fact is obvious. The rise of our annual outward trade balance in 1897 and 1898 to figures then unprecedented was due to two main causes—an almost unprecedented decrease in our merchandise imports, and enormous sales of grain, at high prices, to famine-stricken Europe. By 1899, however, the excess of exports over imports was smaller by $144,000,000 than that of 1898. But no sooner had agricultural exports fallen off than an extraordinary increase of manufactured exports set in. This movement, in turn, slackened towards last year's close, but in the total export figures the reaction was hardly noticeable, for a European "cotton famine" led to a demand for American cotton of such volume and at such prices that the total shipments of this product alone in 1900 ran $123,000,000 beyond 1899.

The second stage of this remarkable cotton movement has now been reached. In amount the shipments are rapidly falling off, though prices still rule high. But, as if to emphasize our unique in-

ternational position, shipments of grain and provisions to Europe are again growing extremely heavy. For January our breadstuffs exports increased $6,500,000 over a year ago, and provisions $5,000,000. With the increase of nearly $9,000,000 in cotton exports, the month's entire outward trade runs $18,600,000 over January, 1900. Reckoning in the decrease of imports, we have an excess of exports for the month larger by $25,000,000 than in 1899, and much the largest ever reached in the period. So long as such conditions prevail, it will be difficult to shake American financial strength. It is as true now as it was ten years ago that there are scores of offsets to our merchandise balance, and that the monthly excess of exports is far from measuring exactly the increase of Europe's debt to America. But the point of importance is, that the merchandise balance is increasing while the offsets remain stationary.

It is slow work, raising that $10,000,000 a year of revenue out of cabin passengers from Europe, which Mr. Dingley promised when his tariff bill was passed. In the year 1899 the number of such passengers arriving in New York was about 107,000, and the amount extracted from them was $276,000, or about $2.60 apiece. In 1900 the number rose to nearly 138,000, but they paid duties amounting to less than $251,000, or about $1.80 each. Their dutiable effects decreased in value from $697,525 in 1899 to $637,192 in 1900. What is even more remarkable, this tendency was very marked during the early part of 1900, but was suddenly reversed during the closing months of the year. In February, for example, although several hundred more passengers arrived than in 1899, the duties diminished 48 per cent., and in May, when the excess of passengers was two thousand, the revenue fell off more than $11,000. But in November the receipts doubled, and in December they were 56 per cent. more than in 1899. This fact does not harmonize with the cheerful theory that passengers have given up their iniquitous practice of buying things abroad which the protectionists mean to have them buy at home. Why should there be such grievous backsliding in November and December, were that the case? It does harmonize with the theory that the inspectors can be induced to pass baggage when they do not think they are watched. As the present law, in its horror of bribery, inflicts the same punishment on those who give and those who take bribes, we are not likely to have the situation explained; but the officers of the Treasury blandly assure the public that, whatever the results, it is their constant endeavor to bring the service up to the highest state of efficiency.

The Honolulu *Republican* does not find everything beautiful in the workings of imperial government. Hawaii, of course, enjoyed the advantages of the United States census, and so far as an increase of 45,000 in population since 1896 was concerned, nothing but gratification was expressed. It was observed, however, that the census bulletin omitted to give any information about the nativity of the inhabitants, a matter about which curiosity is naturally very active in those islands. It was so intense, in fact, as to lead the *Republican* to make inquiry of the Census Bureau at Washington, only to find that it had no figures ready for publication. Not to be baffled, the *Republican* made its own investigations, and found reason to believe that the figures had been intentionally suppressed. It seems that during the so-called interregnum, from August 12, 1898, to June 14, 1900, no less than 40,000 "contract laborers" were imported from Japan. In 1896 there were 19,382 Chinese and 22,329 Japanese in Hawaii. There are now about 27,000 of the former and 62,000 of the latter, or 89,000 out of a total population of 154,000. Certainly in "anticipatory importations" the Hawaiian planters have outdone our wool-manufacturers. In this case it would have been highly inconvenient to have the Constitution follow the flag, except at a very respectful distance.

The Pittsburgh "ripper" bill passed the State Senate of Pennsylvania on Wednesday week. It is called a ripper because it rips the city government of Pittsburgh into shoestrings. It abolishes the office of Mayor, and removes the Mayors of both Pittsburgh and Allegheny City. It creates the office of City Recorder, who shall be the chief executive officer, and shall be appointed by the Governor of the State to hold office until April, 1903. It removes from office the police magistrates appointed by the present Mayor, and authorizes the Recorder to appoint others in their stead. The Recorder is authorized also to remove from office the directors of the Department of Public Works, of Safety, and of Charities; also the assessors and collectors of taxes, and the Sinking Fund Commissioners, and to appoint their successors. All this is done, says the Pittsburgh *Times*, to punish the city for its want of subserviency to Matthew Stanley Quay. This seems a very strange exemplification of a republican form of government. It prompts the inquiry whether this kind of civil liberty would probably be acceptable to the Cubans and the Filipinos if they were allowed to choose for themselves. The Pittsburgh *Times* has no doubt that the House will pass the bill, but it hopes that Gov. Stone will veto it.

The country has watched with interest, and we fear with levity, the progress of the women's crusade against the drinking places in Kansas. Certainly the humorous features of the episode are striking, and we are too easy-going a people to take most things seriously if it is possible to dismiss them with a jest. Moreover, under the law of Kansas, there is no doubt that places where strong drink is sold are nuisances. They are public, and may be private nuisances. The common law provides several remedies for nuisances, and they may in some cases be abated by private persons, just as in certain cases private persons may make arrests. But it is also a principle of the common law that the general right to abate a public nuisance does not go so far as to permit acts that cause a breach of the peace. And in abating private nuisances care must be taken to do no more damage than is necessary for their removal. Conceding the right of the public to abate the drinking places as nuisances, it is evident that the Kansas mobs have exceeded this right. They have not only proceeded so as to cause a breach of the peace, but they have also broken the peace themselves and committed unnecessary damage. They have, because the law was violated, themselves violated the law. They justify their action, so far as they care to justify it, by declaring that the authorities charged with enforcing the law have failed to enforce it. This is exactly the ground on which the mobs in the Southern and other States justify their proceedings when they put to death persons suspected of crime. But it is obvious that the recognition of this principle would be fatal to the preservation of order. It leads us straight back to the régime of private vengeance, the suppression of which has been one of the greatest triumphs of civilization. The situation in Kansas is the result of enacting laws which the machinery of justice is not competent to enforce.

Justice Brewer did a public service in calling attention at Yale on Monday to the growing frequency of lynchings, which, he said, have almost "become a habit of the American people." While willing to find some reason for the origin of the practice in the frequent delays of the law and reversals of judgment, he pointed out that we must rise to a higher plane of civilization, or peace and order and the country's good name will suffer. As a matter of fact, our reputation has already suffered the world over, and will continue to do so as long as such shocking affairs as the burning of a negro in Justice Brewer's own State of Kansas go unpunished. If the slow machinery of the law is responsible for the origin of the lynching fever, its failure to convict those who rob it of its sole prerogative of administering justice only adds fuel to the

fire, and leads to the development of the lawless spirit along saloon-smashing lines. Justice Brewer is confident that "when public sentiment is aroused so as to feel that the safety of the community demands the prosecution" of the offenders, court procedure will be altered, and lynch law will gradually disappear. But one of the functions of our courts is to help to arouse and maintain public sentiment against crime, and a few successful prosecutions of lynchers as murderers, even if slow, not only will tend to break up the practice, but will invariably create the proper public sentiment against it, for which we may otherwise wait indefinitely. Familiarity with illegal practices tends, the world over, to deaden moral objections to them, and not to create them.

The Mayor's message vetoing the Police Bill is a document worthy of the chief magistrate of a great city. It is so devoid of the characteristics which have made the personality of Robert A. Van Wyck offensive and contemptible, that the public will inevitably suspect somebody else to be the author. Whoever may have composed it, it merits hearty praise as an unanswerable indictment of the partisan measure which the Republicans are forcing through at Albany—for, of course, not the slightest attention will be paid to the protest by the Legislature or the Governor. That the bill is a barefaced attempt to evade the Constitution of the State is made perfectly clear. The pending bill provides that the single Police Commissioner shall be appointed by the Mayor for a term of five years, but that he may be arbitrarily removed by the Governor at any moment. Practically, therefore, this officer will hold his place at the pleasure of the Governor. But it would not do to say so in the bill, because the Constitution expressly provides that when the duration of any office is not provided by the Constitution, it may be declared by law, and, if not so declared, the office shall be held during the pleasure of the authority making the appointment. The principle underlying all the Constitutional provisions on the subject is, that local officials shall either be elected by the people of such localities or appointed by local authorities designated for the purpose by the Legislature. Section 2 of article x. makes express provision to this end, the plain object being to secure to localities freedom from such interference with the power of appointment as is proposed in the Police Bill. While this measure nominally gives the power of appointment to the Mayor, it renders such power of no effect by empowering the Governor to remove the Mayor's appointee whenever he chooses. The spirit of the fundamental law is clearly violated, if not, indeed, its letter. The Court of Appeals has rendered more than one decision which indicates that it must hold the Police Bill unconstitutional. In the latest decision of this sort, rendered within a year, the court held that "the Legislature is expressly authorized to designate the local authority who shall appoint local officers, and it is impliedly prohibited from doing more than that, or from placing limitations on that power of appointment. Every positive direction contains an implication against anything contrary to it, or which would frustrate or disappoint the purpose of that provision."

There is something that appeals to the imagination in a concert of American Powers against that scourge of the Americas—the yellow fever. At the third session of the Pan-American Medical Congress, recently held at Havana, Dr. Wilde, a well-known specialist of Buenos Ayres, introduced a resolution for the formation of an international committee which should formulate a plan of common action for the control of yellow fever, and its suppression as an epidemic. Dr. Wilde showed by the experience of his own country that such common action was practicable and the end attainable. After the epidemic of 1871, the Argentine Republic, Eastern Uruguay, and Brazil entered into a sanitary convention, and the result of their combined sanitary and prophylactic measures has been that none but isolated cases have since appeared on the coast covered by the alliance. With a few years' vigilance and with common action, Dr. Wilde believes that yellow fever, as an epidemic, may be as absolutely controlled as smallpox is and malaria is likely to be. The experience of the English in making the former pesthole Kingston a healthy city, and our own good beginnings in Havana, show what elementary sanitation will do to improve existing conditions.

Count von Waldersee's threat of renewed military operations in China on a large scale may come from the diplomat in him rather than the soldier. A great deal of diplomatic fencing is going on in Pekin, and this may be only Waldersee's ripost to a thrust by the Chinese plenipotentiaries. Certainly, if seriously intended, the project cannot be too severely condemned. We know now what horrors attend the march of foreign troops in China; how the natives are driven to fury or despair; how the mounting cost of these expeditions, to be charged upon the Chinese Treasury, makes the ruin and partition of the empire the more inevitable; and how all the professions with which the Christian nations went to China would be given the lie by such a military incursion into the interior. The United States, it is clear, can take no part in a piratical raid of this nature. We have not the troops there to serve Waldersee's ends, and the Administration has given notice that it disapproves, on principle, of this or any similar expedition.

It is a nice point in Parliamentary practice and privilege on which the English Government saw their majority nearly wiped out on Monday. Ministers have always been entitled to have notice of questions which they are to be asked in the House of Commons, yet they have never before refused to answer additional questions arising on the spot out of their own answers. But now Mr. Balfour declares that the Government, after "careful consideration," have determined to make a departure by a new rule that no Minister or Under-Secretary shall be, as it were, cross-examined. He will answer the questions on the paper, but if any member is dissatisfied with the reply, or wants to know something more about the subject, it will be necessary to give notice of new inquiries. This innovation was plainly resented by the Commons, and so unmistakable a warning was given to the Ministry that it is already hinted that they will abandon their purpose. In England, at any rate, it is still considered "but just, the many-headed beast should know." It is only an American President who can lock up information, refuse all requests for light, and then, after having steadily denied to Congress the data for forming an opinion, can throw himself incontinently upon Congressional wisdom for rescue from his predicament.

Last year's Italian census shows gratifying increases in population and birth-rate. Whereas the estimated population was 31,000,000, 35,000,000 turns out to be the actual figure, and this in spite of a loss by emigration during the past twenty years of 5,000,000. The ratio of increase is high, approaching four-fifths of 1 per cent. a year. The increase since the last census, that of 1881, is nearly 7,000,000, or 25 per cent. This increase is due to improvement in public sanitation and the consequent lessening of infant mortality. It may not be generally known that the Italian medical schools are among the best in the world, and that the Italians have developed a singular capacity for hospital organization and management. The Government has also undertaken or sanctioned great movements for sanitary reform. By introducing a good water supply, closing the old wells, and flushing the streets, Naples was raised in twenty years from the position of one of the world's unhealthiest cities to that of one of the healthiest. The case is typical, and when the present unfortunate confusion of politics and finance is cast up against the Italian kingdom, this positive betterment of vital conditions should be remembered to its credit.

THE RUSSIAN TARIFF IMBROGLIO.

The news that Russia has put a prohibitory duty on the importation of American iron and steel products and machinery comes as a stunning surprise in the midst of other remarkable events connected with that industry. The reason for this action is that the Treasury Department at Washington believes that Russia grants an export bounty on beet sugar, and therefore imposes a countervailing duty on imports of that article from Russia, equal to such bounty, as required by the Dingley act. The fact appears to be that Russia levies a tax on beet sugar consumed at home, but remits the tax on sugar exported to foreign countries. She contends that this is not an export bounty, and so far she is right We allow distilled spirits to be exported without paying the internal-revenue tax. We allow drawbacks of duties on many other articles of export, including refined sugar, but nobody has ever considered these drawbacks as bounties. They are intended merely to give our producers an equal chance in foreign markets, and so long as they do no more, the word bounty is not applicable to them. If Russia has merely refrained from imposing her internal-revenue tax on sugar exported, our Government has committed a stupendous error in putting an extra duty on her sugar.

M. de Witte has replied by dealing us the heaviest blow possible. The suddenness and severity of it show that he believes he has justice on his side. Russia is prospectively the largest foreign market for our iron and steel products. We supply her with steel rails and locomotives, dynamos, and an endless variety of machinery. We are building cruisers for her navy. Her empire is the largest undeveloped region in the world occupied by civilized men. Hence, her future market is the largest one in sight. Moreover, it is a market on both oceans, and the one on the Pacific is destined to be the greater of the two. Very likely Mantchuria will be added to it soon. Until a week or ten days ago our relations with Russia were extremely pleasant. We had coöperated with her in China. She had been our distinctive ally there. We had come to an understanding with her as to the policy of the "open door." We had joined her heartily in the Hague conference. The expressions of friendship on both sides were cordial and genuine, and on the side of Russia almost effusive. Now our traditional friend deals us the hardest blow we have received in the way of trade reprisals since the war of 1812.

As the correspondence has not yet been published, we must speak under reserve, yet there are some facts floating on the surface of the dispatches from St. Petersburg and Washington which call for comment. It is said, for example, that M. de Witte has been too hasty; that if he had waited till our General Appraisers and perhaps our Circuit Court and Supreme Court could pass upon the case, our Treasury ruling would, in all probability, have been set aside and the trouble avoided. It is true that no case has yet come before the tribunals. None could arise until after the Treasury ruling had been made, and a consignment of sugar had been entered at one of our ports and refused admittance at the ordinary rate of duty. A year or two might then elapse before a final decision would be reached. The idea that a foreign Government should draw distinctions between different departments of our Government, and wait to see whether the Executive is overruled by the judiciary, is rather whimsical. It becomes more so when we reflect that it is not the sale of a little more or a little less sugar that concerns Russia, but what she regards as an affront. We have refused to accept her averment that she is not paying a bounty on her exports. We have decided either that she is not telling the truth, or that she does not know the true meaning of the word bounty, and we have acted on that presumption by putting an extra tax on her sugar. She replies by a tax in kind on our iron and steel. The blow we get is by so much worse than the one we struck, and perhaps it will be a good lesson for us. Perhaps it is best we should learn that two can play at that game.

A tariff war between two countries is foolishness at best. Between two friendly nations it is an abomination. Between the United States and Russia it would have been unimaginable ten days ago. Its consequences are likely to be disastrous all around. It has given a fresh impetus to the project of a European Customs League against the United States. Such a league, if formed, would probably be as short-lived as Napoleon Bonaparte's Continental system against England, but it would inflict great losses on us while it lasted, and might lead to something worse than commercial warfare. Enmities begotten by trade easily grow into national hatred, and are sure to do so if sharpened by a sense of injustice. We trust that Congress will not adjourn without taking some steps toward a readjustment of our good relations with Russia, since it appears that Secretary Gage has no intention of rescinding or modifying his own order. A telegram to the Philadelphia *North American* reports him as saying:

"I shall make no new move until there has been a judicial decision on my order. That can be had from the Board of Appraisers two weeks after the first cargo of Russian sugar is landed in this country, if the importers will take an appeal. The Treasury Department wants no delay. It is anxious for a speedy decision. In placing the additional duty on beet-sugar I was acting not as a judicial officer. The law specifically makes it the duty of the Secretary of the Treasury to place a countervailing duty or tariff on imports whenever it is found that the export of those imports is being encouraged by bounty, either direct or indirect."

He added, according to the same report, that in his belief the Russians could not get along without some of the American articles against which M. de Witte's decree is levelled, and that they would have to buy them at higher prices. This thought will not improve the temper of the Russian Minister when he hears of it.

CAPITALIZING EXTRAVAGANCE.

Most of the Congressional alarm and lamenting over swollen public expenditures is beside the mark. Senators with hands all adrip with extravagance of their own, reproach others for wanting to do what they themselves have already done. That is neither edifying nor convincing. Nor does it advance the cause of economy, which, like charity, begins at home. As little are we profited by charges and proof that the minority party is just as extravagant, just as eager to fasten its own little local jobs upon the Treasury, as the party in control of the Government. The pot may be perfectly justified in calling the kettle black; but it is the pot which is responsible, and which will be smashed if an overtaxed people ever takes to looking about for an object of vengeance. Republicans may taunt and expose Democrats to their hearts' content; but if there is inexcusable extravagance, and if anybody is to be held to stern account for it, the Republican party will be the sole sufferer, as it is really the sole offender. Under party government no other result is possible or desirable.

One reason why the party responsible for the Government is less able, if not less willing, than it used to be to keep down appropriations, has often been pointed out in these columns. Our system does not lend itself to rigid financial control. Unlike all other governments in the world, the American has no man, or committee of men, to make up a yearly budget, to determine income and fix outgoes. Our method is a happy-go-lucky plan of allowing one set of men to make laws for revenue, another to frame bills for expenditures. That we have not gone to smash under such chaotic management is due partly to our traditional good fortune, partly to our expanding wealth—which has operated in the same way that robust health enables a man to order his life recklessly, for a time—and partly to the fact that we have had a rough system of financial control. But this has been badly broken down.

At the close of the civil war the Committee on Ways and Means had charge of all the appropriation bills as well as the revenue bills. That was something like a budget-framing body. Then came the creation of the Committee on Appropriations, to take sole charge of

outgo as the Ways and Means Committee did of income. What this meant in the days when Samuel J. Randall was Chairman of the Appropriations Committee, everybody whose memory goes back to 1874-76 will recall. But, under malign influences, the House has been induced, from time to time, to scatter the annual appropriation bills among thirteen or fourteen different committees, each intent on log-rolling its own measure up to the top notch, and with no firm and centralized control existing longer anywhere. Responsibility has thus been dissipated, and so have the funds. Chairman Cannon may still protest that it is his main business not to make appropriations, but to prevent their being made, and Senator Allison may warn and protest; but effective control has largely escaped from them, and their complaints are unheeded. Some day Congress will see this hugger-mugger system driving us straight to national bankruptcy, and will be compelled to set up a responsible government in financial matters—something that we are now alone among the nations in not having.

One serious aspect of national extravagance is commonly overlooked. People do not see how one spendthrift Congress makes the next one almost inevitably as prodigal. The reason is that the extravagant legislation fixes a permanent charge on the Treasury. No step backward, is the rule. There was loud outcry against a "billion-dollar Congress"; but its successor was able to save little or nothing. Now we are rapidly approaching a billion-dollar session, and no dam for the rising flood is in sight. Each succeeding Congress inherits a legacy of extravagance from its predecessor. Its own hands are partly tied by anterior legislation committing the Government to continuing appropriations for this and that scheme, this and that enlargement of the public service and creation of new offices. It is this which makes retrenchment so difficult, if not practically impossible. To abolish places, to consolidate offices, to cut down regular expenses—why, this is almost treason, from the party point of view. It is flat villany in the minds of men whose sinecures are threatened. So that extravagance always tends to perpetuate itself. The lavish appropriations of one Congress become a kind of annual interest charge which must be paid upon a capitalized extravagance.

A common fallacy in all this business is the urging of an analogy from private life. Congress will economize, it is said, when it has to, just as a man will when his income is cut in two. We are now in the presence of an overflowing Treasury; there will be a surplus after all the bills are paid; the country is prosperous; no one complains of taxes—so what are you afraid of? When the lean years come, the appropriations will be lean. A man gives up his carriage and his box at the opera in hard times, and Congress will do the same. Ah, but Congress's coachman will simply refuse to be discharged. The federated coachmen all over the country—*i. e.*, the officeholders—will prove stronger than Congress. They will tell it that it has brought them into the world, and now it must fill their mouths. What, will Congress be worse than an infidel, and not provide for its own? It is not merely in war expenses that Congress has been lavish. Every appropriation bill has been increased, new offices created, new entering wedges driven, a permanent charge on the Treasury laid in many a swollen item. The point is that flush times are setting a pace which will have to be kept up in the lean times. If economy is disregarded now, it will be declared impossible then. It is easy enough to let the jinn of extravagance *out* of the bottle, but to get him back in again—that is the labor. Thus we see that the evil which an extravagant Congress does lives after it; and the good, if good there be, is interred with its bones.

CHAIRMAN BABCOCK'S BILL.

Chairman Babcock's bill to put iron and steel on the free list of the tariff has had little effect on the market quotations of shares in the combination, or intended combination, of the large producers of those articles. Of course, the possible effects of changes in the tariff was one of the elements which the promoters of the combination must have had in their minds. They must have foreseen that the work they were doing would have a considerable effect upon the public temper, that it would create popular resentment, and that it might prove too strong a dose for even the Republican party to swallow. Nobody who deals with millions of dollars fails to take account of all the chances. In this case the figures mount up to hundreds of millions, and it is inconceivable that the managers did not contemplate the possibility of such a measure as Chairman Babcock's passing Congress at an early day, if the consolidation of interests should really take place.

With them it was simply a question of dollars and cents. Would the total profits be greater with free competition at home and tariff protection against foreigners, or with "community of interest" at home and free trade with the external world? If the proposed combination is made, it will be made because the managers believe that they can afford to accept free trade rather than risk the competition of the Carnegie plant in the manufacture of tubes, sheets, and the other specialties which the latter was about to turn its attention to. The Carnegie Company has hitherto served the purposes of general competition in the production of steel in its many varieties, not actual but potential. It has not pursued an aggressive policy, but, being in a position to do so, and having kept its hands free, it has seemed to protect the public against the evils of monopoly.

The situation, however, was one that could not be maintained for ever. The various combinations (Federal Steel, American Steel and Wire, National Tube, and what not) were liable each to encroach upon the territory claimed by the others, and upon that claimed by the Carnegie Company. Moreover, there was no way to keep other people from starting steel works and encroaching upon all of them. It was a condition of unstable equilibrium from which Mr. Carnegie, now past sixty years of age, was perhaps justified in withdrawing, although a younger man might have found glory as well as profit in continuing in active business, remaining independent, and being known as the greatest manufacturer in the world.

The terms upon which Mr. Carnegie takes himself out of the competitive field are not known to the public, but we may be sure that those who buy him out believe that they can make money by taking his works and the Babcock bill into the bargain. They can undersell both English and German steel-producers in foreign markets. Therefore they cannot be harmed in the domestic market by importations of steel from abroad. Nor will the Babcock bill entirely prevent them from charging higher prices to American than to foreign consumers. There will still be a margin in their favor due to ocean and inland freight charges, commissions, and interest. The Babcock bill will put a limit to the amount they can charge to consumers at home, but they will still be able to exact something more than the law of free competition would give them. Moreover, they cannot wholly stifle domestic competition unless they can monopolize the raw materials of manufacture. New tube works, for example, are about starting at Zanesville, Ohio, independent of the National Tube Company.

The Babcock bill has come forward so suddenly that the Republican politicians have not been able to make up their minds what to do about it. Ex-Attorney-General Miller, a member of President Harrison's Cabinet, is quoted as saying in an interview at Chicago on Wednesday of last week:

> "There was a time when the protective tariff was absolutely necessary to the growth of the struggling industries of this country, but it would require a little stretch of the imagination to class the great Trusts or combinations of capital in manufacturing lines of to-day with the 'infant industries' of twenty years ago. The bad feature in the protection of such Trusts is their treatment of the home market. They are so strong and vigorous in their battle for a share of the world's trade, that they can go abroad into the markets of Europe and the Orient and underbid foreign manufacturers. This is where the injustice comes

in, and it is due entirely to the tariff that prohibits foreign manufacturers from entering our market. This state of affairs is very favorable for the home manufacturer, but decidedly unfavorable for the home consumer. All of the Trusts probably could not be reached through the repeal of the protective tariff, but the majority could, and it is the belief of many that the repeal of the Dingley Tariff Law on at least a number of articles would go a long way to solve the Trust question."

These are bold words for a prominent Republican statesman, but they are true ones, and they will find many echoes before the next Congressional elections. The tariff-protected Trusts have stretched the bow to the breaking-point, and the Republican politicians will find themselves in difficulties if they allow the Democrats to raise this issue against them. It is not impossible that the elections of 1890 may repeat themselves, when only 87 Republicans were elected in a House of 332 members, and when William McKinley himself lost his seat.

THE NEW SPANISH CRISIS.

It may be true that a watched revolution never boils, but the signs of social and political disturbance in Spain have become too thick and threatening to be lightly dismissed. The real wonder is that a fresh Spanish revolution has not occurred before now. By the mere law of averages, it is long overdue. That the country is now on the verge of the long-deferred catastrophe is openly asserted by that veteran Spanish Republican and ex-President of the Spanish Republic of 1873, Señor Pi y Margall. He has, it is true, many times before predicted a revolution which did not come off. That is part of his business. Yet it is likely that this steady prophet of the same event will some day be right—just as the dummy clock of a jeweller's sign-post will indicate the correct time twice in the twenty-four hours. At any rate, we cannot shut our eyes to the strong and complex forces and motives which are making against the stability of the present Spanish régime. "Bad government," was Macaulay's short and easy way of describing the causes of Spain's woful decline. But what are the significant particulars wrapped up in this vague general? Why should the apparently natural and inoffensive marriage of the Princess of Asturias to Don Carlos de Bourbon be made the occasion of seditious cries and violent outbreaks in capital and provinces alike? Just how does this event link itself with and exemplify "bad government"?

The explanation commonly given is that the royal bridegroom is tarred with Carlism. His father, the Count of Caserta, is a Carlist by both profession and practice—both word and sword (*palabra y espada*), as the Spanish say. He has actually been in arms against the reigning dynasty. But this is not the whole story. Carlism, as such, is not so immensely unpopular in Spain. The Church has been openly for it, and probably is for it now in its secret heart. To set up a Legitimist monarch, if the thing could be managed deftly, would not convulse Spain. The real trouble is, we think, that the husband of the Princess is a Bourbon of the reactionary type. This Sicilian and Neapolitan branch of the family is inbred on both sides, so that the young Don Carlos, who may become King Consort of Spain, is a Bourbon *pur sang*. To Spanish apprehensions this means of the type of Isabella, and of the retrograde style of government which led the country to rise in successful revolution in 1867. It is the return of the narrow, bigoted, Ultramontane Bourbons which excited Spain sees threatened in the royal nuptials. The fear is no doubt heightened by the apparently well-founded rumors of the fragile health of the young King, who may not live to reign.

This connection of cause and effect also makes intelligible the sudden access of popular hatred of the Jesuits. The occasion seized for manifestation of mob fury was, oddly enough, the production of a play by Galdós, probably the most popular, and in many respects the foremost, of living Spanish writers. His new drama seems to have had a decided anti-sacerdotal *Tendenz*, and fell in so aptly with the prevailing passions of the day that it became a kind of touchstone of popular feeling. Galdós is a typical Spaniard in his attitude towards the Church. In his novels, 'Doña Perfecta' and 'La Familia de Leon Roch,' for example, he has painted Catholic priests and the common conception of religion with honest realism, and shown, as have the other novelists of contemporary Spain, better than a formal treatise could, the strange mixture of regard and abhorrence with which the run of men in Spain confront the Church. What most excites their dislike and dread is the political activity, especially in an Ultramontane sense, of the bishops and clergy; and it is evidently because of a revived suspicion of this sort that the present agitations are given so distinct an anti-clerical bias.

The commercial and industrial classes have grievances of their own. Taxation presses heavily on all kinds of property. The United Chambers of Commerce of the Peninsula have, again and again, appealed to the Government for retrenchment and reform, for cutting down the army, for burying the remains of a useless navy, and for a more rational system of taxation. Small response has been made. The few reforms attempted by the Ministry have been throttled in the Cortes. The collection of taxes has been forcibly resisted in various parts of the kingdom, with the result that martial law has been proclaimed and the taxpayers forced to settle *manu militari*. This has naturally aroused fierce resentment, especially in Barcelona—indeed, throughout all Catalonia—a hotbed of Republicanism as it is a hive of industry. The Catalans, in fact, have gone so far as to talk of cutting loose from Spain and setting up a government of their own, or else seeking annexation to France. This may come to nothing, but it certainly will accentuate the hostility to Spain which has always been observable in this Mediterranean province. "All aboard for Spain," De Amicis reported to be the common cry in the Barcelona railway station, to show how foreign a country the natives regarded that of which Madrid is the capital. A recent traveller recounts multiplying signs of the disgust of Catalans with their Spanish nationality.

Behind all this stands the Republican agitation, and, above all, the army. A soldier is usually the *deus ex machina* in Spain, and the soldier to whom we now have to look is our old friend Gen. Weyler, at present Captain-General of Madrid. It was a predecessor in that office who, Cromwell fashion, turned the Deputies out of doors in 1874, and made Alfonso King. The significant feature of the present military situation is that Weyler has openly professed Republican sympathies, and within a twelvemonth said in his place in the Senate that the troubles in Catalonia might yet be made the means of "regenerating" the country. Of course, the only regeneration likely to be had from his hands would be a military dictatorship, with one Valeriano Weyler undertaking the part which Marshal Prim played in 1868.

THE MANUSCRIPTS OF THE CONDÉ MUSEUM.—II.

PARIS, January 31, 1901.

One of the finest manuscripts in existence—the finest, certainly, as an artistic work existing at Chantilly—is that numbered 63 in the precious catalogue just published. It is the "Horæ" of the Duke de Berry, a small folio with a red morocco binding, bearing the arms of Spinola and Serra. The Duke d'Aumale kept this volume in a box mounted with a silver plaque made by Wechte. The Duke left Twickenham in December, 1855, to pay a visit to his mother, Queen Marie Amélie, who was staying at the time for her health at Nervi, near Genoa. Panizzi had spoken to him of a fine manuscript which had been mentioned to him by a friend in Turin, and was deposited at the time in a school for young ladies at the Villa Pallavicini, in a suburb of Genoa. It belonged to the Baron Felix di Margherita of Turin, who found it in the heritage of Jean Baptiste Serra. "A rapid inspection," writes the Duke d'Aumale, "enabled me to appreciate the beauty, the style, the originality of the miniatures and of all the decoration. I recognized the portrait of the Prince, his arms, the castle of Vincennes." There were some very serious competitors for this admirable work. Thanks to Panizzi, the Duke had the preference; he had to pay only 18,000

francs for this volume, which would now, at a public sale, be valued at a very great price.

"This book," says the Duke d'Aumale, "occupies a great place in the history of art; I venture to say that it has no rival. . . . I have shown it to very learned and delicate critics—first, to Antonio Panizzi, who organized the British Museum; to Dr. Waagen of the Berlin Museum; they two were the first to see it, and, after them, the most competent of all judges, my eminent colleague, Léopold Delisle, the head of the National Library."

The Duke de Berry was a son of King John, who was so long a prisoner in England. He was born at the Hôtel de Nesle, in Paris, in 1340, and was buried in the Holy Chapel of Bourges, which he built. He did not play a brilliant part in the wars of his time, and his political action was not very honorable; but arts and letters never had a more enlightened protector. One knows all the edifices which he constructed and all the collections which he assembled. His manuscripts are the finest ornaments of our public collections; they have all been described. The Chantilly library possesses six of them—the "Horæ"; a volume of the 'City of God'; the 'Ethics' of Aristotle; the Second Decade of Livy; the 'Properties of Things' (in French), by Bartholomew Anglicus; 'Gace de la Buigne' (in French). Jean de Berry left no son; his daughter Bonne was married in 1372 to Amédée le Roux, first Duke of Savoy, and became a widow in 1391. She came back to France, and was married to the Count d'Armagnac, and died at Carlat in 1435. After the death of Jean de Berry, an inventory was made, in which the fine manuscript of the "Horæ" is entered in these words: "Item, en une layette plusieurs cayers d'unes tres riches heures que faisaient Pol [Paul Limbourg] et ses frères, tres richement historiez et enluminez." This inventory was made for the execution of the testament, and is now kept in the Sainte-Geneviève Library near the Pantheon.

The manuscript, left to the granddaughter of the Duke de Berry, was unfinished at his death; it was completed in Italy, where it remained for four hundred years, in Savoy and Montferrat. It entered into the house of the famous captain and banker Spinola, whose arms were put on a morocco binding in the eighteenth century. Afterwards the arms of Spinola (the spina) were surmounted by the arms of Serra; and finally the Duke d'Aumale bought it from the Marchese J. B. Serra. Some of the large miniatures, which cover whole pages, deserve especial mention. One of them represents the Duke de Berry sitting, according to tradition, "his back to the fire, his face to the table"; he wears a fur cap, a long blue gown lined with fur and embroidered with gold. He is seated under a high canopy of red silk, covered with escutcheons bearing the French arms, with swans and wounded bears. These bears were a peculiar ornament in the books of Jean de Berry; they were, says the tradition, in remembrance of a hunt during which a lady called Ursina was wounded. These arms and emblems are repeated in the borders of the tapestries which decorate the room and form pictures in themselves, with warriors, castles, battles of horsemen, unfolded banners. In the front of the scene are a number of valets and retainers, with dogs (as in the famous picture of Paul Veronese). Their costumes are varied and very picturesque. A chamberlain, with his wand and his chain, presents to the Duke a personage who might be taken, with his red mantle, for a cardinal, and who seems to thank the Duke for the honor paid him. Is it a cardinal or a pilgrim? It certainly is a portrait, painted from life. In the background are several lords and squires, warming themselves before a fire which burns in a stone chimney. The head of the Duke is protected from the fire by a screen. The whole scene is full of animation; if the figures were life-size, it would form a magnificent picture. The coloring is so fresh that you would think it of yesterday, so harmonious that it is a pleasure to the eye.

Through the whole of the volume, the arms of Berry and the emblems, swans and bears, recur constantly, in an infinitv of combinations and forms. Sometimes there are only three *fleurs de lys*, and sometimes they are what we call *en nombre*—that is to say, in any number. This peculiarity would suffice to fix the age of the work; it is the time when the arms of France were transformed, at the end of the fourteenth century and the beginning of the fifteenth. The initial miniature is followed by a calendar. The twelve pages devoted to the twelve months are extremely remarkable. They represent, indeed, the rural works which are characteristic of the seasons of the year, but they all have backgrounds which possess an historical character. Two of them represent the dwellings of the Capetian Kings in Paris, the "Logis du Roi" and the Louvre—the old Louvre of Charles V., with its numerous towers and pointed roofs, the wall which surrounded the huge central edifice, with its turrets and ditches; and before this wall the Seine, the Pré-aux-Clercs, and fields with laborers engaged in mowing. This scene is a real picture; its details are charming, the color and the drawing are both admirable. The coloring is very light, and, I may say, airy; it has a delicate transparency, and differs from the heavy, dark, and massive coloring of so many ordinary ancient manuscripts. The old "Logis du Roi" is to-day our Palais de Justice; we see in the Berry manuscript its inner façade, of which no trace is now left; in the background are the two towers of the Conciergerie, with the Sainte-Chapelle, which remain to this day among the finest features of our capital. These two pages, which have an invaluable precision and are real historical monuments, serve for the months of October and June.

The month of March shows us laborers pruning the vineyards before the vast fortress of Lusignan on the river Vienne. The fairy Mélusine, in the shape of a golden dragon, glides through the air to join her husband Raymondin. The castle of Lusignan was the birthplace of the Plantagents and of the La Rochefoucaulds. In July we have the castle of Poitiers, with its three towers and its dependencies, behind cornfields filled with laborers. In September the rural scene takes place before the castle of Bicêtre; in December we witness a hunt in the forest of Vincennes. Dogs and huntsmen are seen around a boar; above the forest of old oaks, whose leaves, already yellow, form a sort of roof, rise the seven square towers round the donjon. This miniature, one of the finest in the volume, has been, like some others, exactly copied in the celebrated Grimani manuscript at Venice. The painter who decorated this latter manuscript must have seen the Berry manuscript in the library of the Princes of Savoy and Montferrat. Some miniatures of the Berry manuscript have also been imitated in a book kept in the Royal Library at Brussels, known, among bibliophiles, by the name of the "Hennessy Horæ," and attributed to Simon Bening. It is probably through some intermediate copies that Bening had knowledge of these pictures. We have to mention, also, as relating to the life of Jean de Berry, two other pages—the Presentation, representing the Virgin, as a child, ascending the steps of a temple which has the façade of the Cathedral of Bourges; and the Temptation, showing Christ and Satan on a rock. Here the foreground shows the castle of Mehun-sur-Yèvre, where the Duke kept his treasury. The castle of Étampes has been recognized in the miniature of the month of August by the Count de Beauchamp. Several other edifices of the time may be recognized later.

I have dwelt only upon the miniatures which, by the representation of old castles, have an historical character. Much would have to be said of those having only a religious character. They are, in the opinion of all who have artistic feeling, simply masterpieces. They show a power of imagination in the artist seldom found in the productions of a time when all the religious representations had a traditional character. Some of them strongly remind one of the famous fresco painted by Taddeo Gaddi on the walls of the Baroncelli chapel at Santa-Croce in Florence.

GERHART HAUPTMANN'S RETURN TO NATURALISM.

CAMBRIDGE, MASS., February 9, 1901.

About a year ago, in speaking of Gerhart Hauptmann's "Fuhrmann Henschel," I expressed in these columns the hope that Hauptmann's return to the uncompromising naturalism of his earliest works, as manifested in that drama, would prove to be only a transient phase in his development; that his next serious production would again lead us to the heights of existence reached in "Die Versunkene Glocke"; would show the poet once more journeying towards the promised land of ideal art. In a way, this hope has been sadly disappointed. "Michael Kramer," his latest drama, is altogether of a piece with his first revolutionary outbursts of indignation at social corruption. Like "Vor Sonnenaufgang" and "Das Friedensfest," it reveals a world of atrocious vulgarity, foulness, and vice; and, like these earlier productions, it forces upon us the question: How is it possible that a poet of such refinement of moral feeling, such delicacy of imagination, and such exquisite lightness of artistic touch, should, after all, seem by preference to wallow in the mire of social misery and moral degradation?

Is this, then, really the life led by the typical German of to-day? These unhappy and unintelligent marriages, these capricious and masterful parents, these rebellious and disloyal children, these swaggering men and these graceless women, this stupidly arrogant cavalierdom, this petty and self-seeking bureaucracy, this universal indecency, lust, and debauchery—that is Germany, that is what we were fond of calling the land of idealism, the land of intellectual aristocracy, the land of pure and loving family life? If

it is, we can only pray that the sins of the present generation may not be visited upon our children and our children's children; for if they were, the future could bring nothing but national disintegration and degeneracy. However this may be, we cannot but deplore the fact that a genius like Hauptmann's should have been condemned to live in surroundings which have imparted even to his noblest creations a fatal germ of morbidness and gloom; which have forced him, too, like so many inferior men, into the class of writers of whom a contemporary epigrammatist (Renaud, in his 'Poetische Auslese') truthfully says—

"Das heissen sie heute die Welt verstehn:
Statt der Rose die Blattlaus sehn"—

and which have deceived him into thinking that the painful and the tragic are identical terms.

What is the action in this latest drama of his, "Michael Kramer"? One might say, there is no action at all; there is only a situation, a calamitous family situation. The father, old Kramer himself, is a painter, a man of ardent convictions, but apparently mediocre talent. His convictions have been inherited by his daughter, who, however, is a singularly ungraceful person. His talents have been transmitted to his son, who, however, is a moral wretch. Add to this that Kramer has no inner relation whatever with his wife, a hopelessly humdrum and unintelligent person—and the necessary ingredients for family misery are at hand. The father, with stubborn tenacity, devotes himself to his art—so much so that he lives almost exclusively in his studio, apart from the family; the son, with equal consistency, wastes his vitality by lounging about in doubtful resorts, and his brain substance in intercourse with waitresses and chorus girls. The mother limits her activity to taking the son's part whenever the father's indignation at his conduct becomes particularly violent. The daughter bears the burden of the whole family. The end, of course, is the son's suicide, borne by the father with the exaltation of a man brought face to face with eternity.

No one would deny, I suppose, that a theme like this might form a proper subject for dramatic art. A number of conflicts arising from it may be imagined which would be genuinely tragic. If we were made to see the struggle in the son's breast between his artistic striving and his baser appetites; if we were made to feel that a noble nature was here, in spite of brave resistance, dragged down by sin and lust, until at last suicide was found to be the only escape, the only way in which moral freedom could assert itself, we should follow this struggle with that mixture of painful and pleasurable sensations which, according to Volkelt, constitutes the tragic emotion. And the same would be the case if the conflict between father and son were emphasized and carefully delineated; if we saw two principles clashing with each other—paternal authority on the one hand, self-assertion of the individual on the other, each confident of its right, each subversive of the other. Or, finally, if the conflict were confined to the father's breast; if we saw him at variance with himself, experiencing in his own soul the contrast between the old, autocratic view of life and the new demands of freer humanity, as represented by his son; if we were made to understand how impossible it was for him to overcome this contrast, and how he was thus bound to plunge both himself and his son into ruin—this also would be a truly tragic sight.

It would be preposterous to assume for a moment that a master like Hauptmann should not have thought of these various conflicts. Indeed, he has indicated traces of them himself throughout his drama; but he has only indicated them. With full deliberation, he pushes all these tragic conflicts into the background, and concentrates our attention upon the unqualifiedly painful, the loathsome spectacle of the moral wretchedness into which the son has at length sunk. In reading these scenes we feel as though we were observing a case of progressive paralysis of the brain. Hardly a symptom of this most hideous of mental diseases are we spared. All the profane language, all the sexual excitement, all the vile hallucinations characteristic of this wretched state, are brought before us; and, in addition to this, there is forced upon us with awful distinctness a sight of those unspeakably vulgar surroundings, the bawling and carousing restaurant-life of "respectable" society, in which this particular victim of modern city profligacy has lost his soul. In all this there is no false touch, there is no exaggeration, there is nothing but truth to life; there is consequently, technically speaking, perfect art. But I must confess, if this is art, I, for one, prefer a life in the desert, where there is no art, but plenty of air and plenty of sky.

And yet this latest drama of Hauptmann's, like all his works, has something of that inspiring quality which only true genius can give. Here, as in "Fuhrmann Henschel," there stands out at least one figure which compensates us for all the surrounding vulgarity. In "Fuhrmann Henschel" it was the figure of the honest Silesian peasant-teamster, craving to shake off the feeling of guilt, craving to atone for the violation of a promise given to his dying wife, and thus standing unwittingly all by himself as the instinctive upholder of a moral principle. Here, it is the brooding, choleric old Michael Kramer. Like Henschel, he is encompassed by nothing but foulness and vice. In his own family he has nothing but disappointment. His son, from whose artistic genius he had hoped for the consummation denied to himself, he sees sink into utter moral disintegration. But all the more steadfastly does the old man cling to the ideals of his art; in his work he finds his religion; his studio becomes to him the holy of holies; here he consecrates himself; here he wrestles and strives through lonely hours, lonely days, lonely years; here it becomes clear to him that the true artist is the true ascetic and the true anchorite. And thus he acquires the moral strength which enables him to bear the most cruel blow, the ignominious suicide of his son, not only without flinching, but with true elevation and grandeur of soul. Death now appears to him as the great fulfiller and sanctifier; and, as he stands by the outstretched lifeless form of his son, he sees in his pale face a glow of triumph and attainment. "What did these fools know of him—these sticks and blocks in human form? What did they know of him and me and our struggles? They have hunted him to death; they have killed him like a dog. That is past now. 'Tis well that he lies there; 'tis well; 'tis well. Let me tell you, Death has been slandered; that is the greatest wrong in the world. Death is the fairest form of Life; 'tis the masterwork of Love, the Eternal."

Hauptmann's art seems to me like a wondrous flower, blossoming in lonely beauty upon a hideous, pestilential pool. Would not this flower blossom all the more beautifully if it were transplanted to a healthy soil? Would not, in other words, the poet Hauptmann appeal all the more strongly to our æsthetic instincts if, instead of the abnormal and the diseased, he offered us types of the universally and harmoniously human?

KUNO FRANCKE.

THE CAUCASUS MOUNTAINS.

VLADIKAVKAS, November 7, 1901.

For a distance of 700 miles, extending from the Sea of Azov to the Caspian Sea, the Caucasus Mountains present an almost impassable barrier between Europe and Asia. In the range there are as many as six peaks which are higher than Mt. Blanc, Elbruz being 18,526 feet; while for 130 miles in the central part there is no pass less than 10,000 feet high. Indeed, so continuous and rugged is the chain that until recently it has been well-nigh impossible to cross it anywhere except along the shore of the Caspian Sea. Yet the entire width of the chain averages less than 100 miles. From the earliest times, however, what is now known as the Dariel Pass, but which was called by Pliny the Caucasian Gates, has been occasionally used. This crosses the range near its central portion, between Tiflis on the south and Vladikavkas on the north. Upon the final conquest of the country by the Russians, forty years ago, they built a splendid military road over this pass, so that now one is able to enjoy the unrivalled scenery with no hazard and with the least possible amount of fatigue. A brief account of our trip across the pass will furnish the best idea one can give of the condition of the country and of the explanation it affords of the history of the people.

We were in Tiflis on the morning of the 5th of November. It was later in the season than we had hoped to make the passage, but we had to take the risks of the weather, which, though cloudy, was not particularly threatening. In order to control our movements to better advantage, we did not take the ordinary diligence, but engaged a phaeton, which would easily accommodate two persons and a small amount of baggage. This was to be drawn by four horses, which, with their drivers, were changed about every twelve miles. An imposing, well-armed Circassian, however, was to accompany us the entire distance (112 miles) as conductor. For this outfit we paid twenty-four dollars. The toll and tips along the way, however, brought the entire expense up to thirty dollars. For the first twelve miles we followed up the Kura River, parallel to the railway, where are still some ruins of the ancient capital of Georgia, to Mshit. Here we left the main valley and turned up the Aragwa, having attained a level of 1,500 feet above the sea, but only 200 feet above Tiflis. The ten miles to the next small station carried us up to 2,000 feet. The third ten miles, however, brought us to an elevation of nearly 3,000 feet, and to Dushet, a flourishing town of 3,500 inhabitants. Here, too,

was a ruined castle of an ancient Georgian prince. So far the scenery had not been remarkable, but we had encountered, near Dushet, our first evidence of glacial action. This was a beautiful circular lake, about a mile in diameter, surrounded by a wide gravel plain of glacial origin. In short, it was what we call in America a kettle-hole. A glacier had evidently come down to this point from the central elevations of the range, many miles to the northwest. But it is evident that there was in former times, as now, no general extension of glaciers over the region, for we saw no more evidences whatever of glacial action during our entire trip.

In crossing the moraine, we had left the immediate valley of the Aragwa, but in the next twelve miles returned to it at a somewhat lower level at the interesting little village of Ananur, where the ruins of two ancient forts reminded us of the military aspect of the whole country which had characterized it for thousands of years. The next two stages took us up a gorge of rapidly increasing depth to Mletz, whose elevation is 4,800 feet. But on either side of us were many snow-clad peaks rising from 5,000 to 6,000 feet higher, and the flanks of these mountains up to 6,000 feet above the sea were dotted with hamlets and ruined fortresses, while for 1,000 feet higher the fields had been cultivated, and the stacks of grain and hay were thick upon them, awaiting the process of being slid down the steep slopes to the dwellings and threshing-floors below. As there had been a slight fall of snow, the inhabitants were busy there gathering in their crops, but so far off were they that they looked like diminutive ants on gigantic ant-hills.

The sun had already gone down, and we put up with several other parties at the spacious station-house, ready to start early in the morning. We had now come considerably more than half the entire distance, but had by no means completed the ascent. The clouds which had partly covered the mountain tops, by lending mystery, had enhanced rather than dulled the beauty of the scene. The morning dawned beautifully, and at seven o'clock we set out upon the most rapid portion of the ascent. In the next ten miles we ascended 2,600 feet, but by such a zig-zag line that we were scarcely two miles in a straight line from our starting-place. We were now above the clouds, and saw their upper surface lighted by the bright rays of the morning sun. We were also on an extensive and comparatively level area produced by a broad flow of basalt which, in former geological ages, had poured out from some neighboring vent and levelled up the irregularities already existing. There, also, at an absolute elevation of 7,000 feet, were flourishing villages and hamlets of low stone houses, covered with flat sod roofs, on which were crowded stacks of hay and grain. Everything was in slick, trim order, ready for the severe winter weather which was soon to burst upon them.

The second run this morning carried us over the summit, 7,940 feet above the sea, and down a few hundred feet to the picturesque village of Kobi. At the summit, the craggy peaks of Krestovoya Gora (mountain of the Cross) tower immediately above us 2,000 feet, while a little farther along Mt. Kasbek appears behind them, a few miles away, rising up 8,600 feet (800 feet higher than Mt. Blanc) still above us. The descent of the next 2,000 feet to the village of Kasbek was exciting beyond description. We did not need to crane our necks to see the scenery, for we repeatedly faced every point of the compass in our spiral course. The village, which began as a speck far below our feet, gradually enlarged with every turn; the mountain peaks grew higher and higher, and the hamlets on their sides more and more airy in their aspects; while occasional glimpses of the glaciers near the summit of Mt. Kasbek flashed out upon us as we whirled around the corners of our zig-zag track.

Sixteen hundred feet still further down we reach, by a road cut most of the way in the face of the precipice, the celebrated Pass of Dariel, where the mountains rise on each side 3,000 feet as nearly perpendicular as rocks can stand, and the river dashes through a gorge so narrow that in ancient times it is said to have been closed by a gate. The ruins of a castle which formerly defended it still frown down upon the throng of trains which now pass through it; while a new castle, marking the Russian era, is more useful as a summer resort than as a present defence. A few more turns and the gorge opens, so that we look out on the broad plains of Russia, with nothing but the rotundity of the earth and the density of the atmosphere to prevent our seeing the North Pole; so abruptly do the Caucasus Mountains rise out of the level country to the north.

But it has not been the scenery or the geology only which has occupied our thoughts. The pass has led us along the dividing line between some of the most thrilling scenes of modern history. Following along the flank of the mountain chain to the east of us for 200 miles is the home of the Lesghians whom the famous Shamyl aroused in opposition to the Russians, conducting a most remarkable defence upwards of twenty years. It was one of the most wonderful feats in all history that 200,000 or 300,000 mountaineers, with their limited resources, should thus hold at bay the mightiest military power of the world. But in crossing the mountain chain, and seeing the gorges to be traversed by an attacking army, and the precipitous walls to be stormed, the marvel is that the Russians were ever successful. In 1859, however, Shamyl's last and apparently impregnable fortress on Mount Ghunib was captured, and the hero with it. The tribes then submitted, and peace and prosperity have since reigned in place of fruitless warfare.

On the western end of the Caucasus an equally sanguinary combat was waged at the same time. This was with the Circassians proper. It was not until 1864 that they were conquered, but they did not take defeat with equanimity. They were largely Mohammedans, and, after defeat, emigrated to the number of 400,000 into Turkish territory, to add to the disturbing elements of that unfortunate empire. The country was left desolate, and has not yet fully recovered from the disastrous event. Henceforth the history of the Caucasus will be incorporated with that of the expanding Russian empire. However much this may interfere with the picturesqueness of the individual development of the people, there can be no doubt that it will enhance the general welfare. The grand highway over which we rode across the rugged mountain range is a type of the advantage which in many ways arises from the enlargement of nations as well as from that of corporations. G. FREDERICK WRIGHT.

Correspondence.

STANFORD AND LIBERTY.

TO THE EDITOR OF THE NATION:

SIR: Even they who have no need of it should thank Prof. W. J. Ashley for his kindly warning (No. 1857) to "the younger instructors in other American universities" to beware how they accept possible invitations to Stanford. I, at least, thank him for in some ways the most interesting contribution I have yet encountered in rather close following of the vicissitudes of guesswork in the given case. It is no desire of mine to detract from whatever influence this easily spared advice may have. Stanford has thus far managed to secure so many instructors as were needed, and may very possibly so continue. But, as rather nearer the scene, intimate with the facts, and not fighting windmills from newspaper gossip, I crave your indulgence for a statement of the case as it is. The more mature letter of Professor Lawton, suggesting, as it were, a Professors' Union, may pass with the remark that, even as waiters' unions are principally to bolster waiters who might very likely be discharged, and the waiter whom no one would think of discharging needs no organized labor at his back, so no incontestable college professor is in jeopardy. I have never known one to be dismissed about whom there was no doubt.

The removal of Professor Ross from Stanford had no relation to "academic freedom," plutocracy, Chinese labor, corporate influence, or Mrs. Stanford's "tyranny." Professor Ross's "opinions," "temperate" or intemperate, or even his veerings of opinion, had no more to do with the case than had the emotions of a willing witness in Cambridge. The sole issue has been one merely of academic morals and common sense. It may be that university men—who do not, I fancy, generically preach or practise devout reliance on "education by newspaper"—would do as well in the specific instance not to hasten too fast or too far on the same dubious data; and particularly, without knowing *which* newspaper. As a mere matter of fact, possibly with, possibly without, significance, the "Stanford scandal" had its birth in the dispatches of a newspaper whose sole owner was two years ago defeated for the United States Senatorship largely by the influence of Mrs. Stanford. At least, that was the public and notorious understanding upon this coast, while it is equally notorious that, for some reason, the said paper has been vindictive toward Mrs. Stanford, and for her sake toward the University.

Mrs. Stanford has been a moneyed person by no particular fault of hers. The millions her husband had not given to the University he left to her; and to convert them into such shape that she could give them all to the splendid and vital monument founded in memory of their only son cost her a protracted and rather bitter struggle with some of his associates, who thought so much money more useful in railroads than in colleges. Meantime, she pawned her jewels to keep the University uncrippled. I have no hesitation in believing that any man who, upon sufficient misinformation and unwittingly, may have furthered the rather

cruel and very absurd gossip of a case perverted to "punish" this devoted old woman, would flush hotly if he could be given to apprehend the precise truth about the whole case and all its details.

Professor Ross has nowhere for a moment pretended that his dismissal had anything to do with "free speech," or with any other of the boding omens supplied exclusively by his press exploiter and by the imagination of uninformed long-range sympathizers. Any who will procure and read his 1896 campaign pamphlet, "An Honest Dollar," may need no further interpreter as to the true reasons why the author does not retain his professorship at Stanford. One may fancy the event if that unfortunate deliverance, of "Coin" Harvey calibre and dignity, had sworn its paternity upon Cambridge—not as an individual responsibility, but as "By So-and-So, Professor of Economics in Harvard University"! It certainly cannot be felt that there was precipitation in dealing with the case. After friendly warning of the unfitness of that precise quality of taste in a professor, Professor Ross has had a friendly and patient probation of four years to enable him to come in step with the general balance, dignity, and loyalty which are so characteristic of the institution. A serious recrudescence of slang in classroom and public lectures, many indiscreetnesses, and a graver impropriety made further probation needless. The last straw was when he made openly what were understood by his students, the public, and Mrs. Stanford to be contemptuous attacks on her husband, the founder of the University. When the widow understood that—and it is not of evidence that Professor Ross has denied his intention—she asked as a personal matter that the dismissal, long discussed as probably not much longer evitable, be made immediately. That Professor Ross did not himself think his "academic liberty" in danger at Stanford, nor really deem the Stanford money so dishonorable as one might call it in the glow of exhorting undergraduates and labor mass-meetings, is perhaps adequately shown by the notorious fact that he still desired and attempted to retain his chair.

Professor Ashley has not even the warrant of newspaper gossip—on which his communication is at best founded—for the gratuitous statement that "Mrs. Stanford took the initiative . . . by the dismissal of Dr. Howard," etc. Nor yet of truth. Mrs. Stanford did not dismiss Dr. Howard, nor have anything to do with it. President Jordan did the dismissing, quite without aid, and for reasons and in correspondence now open property. The day after the curtain-raiser episode of Ross, Dr. Howard took the stage with an address to his class of which the spirit and scope may be inferred from the following words: "I do not worship Saint Market Street, I do not reverence Holy Standard Oil, nor do I doff my hat to the Celestial Six Companies." The only conceivable significance of his language would be that Dr. Howard found himself in (but superior to) a university whose control did perform these immoral genuflections to locally notorious corporate influences. The faculty and student body, however, declined to take seriously his dramatic refusal to make salaams which no one had asked of him or of them. They left him to say as a sadder Louis: "The Revolt, c'est moi." He was taken even less seriously when, failing to lead mutiny unto reform, he quietly settled back to his place in the unpurged régime. He did not resign. On the contrary, he retained his chair and its reasonable emolument ($4,500) so long as he could. Only after waiting two months for some expression of the change of heart which could justify this salaried participation in what the incumbent had denounced as unmanly and iniquitous, did President Jordan write a kind letter of surprise and regret that no such word had been forthcoming, and now requesting either apology or resignation. Dr. Howard in reply could see nothing which required explanation or apology, and tendered his resignation, preferably to take effect at the end of the academic year. He evidently was not afraid to expose himself for six months longer to the atmosphere of compound suppression and servility. President Jordan answered that the resignation might pend thus long if Dr. Howard felt that meantime he could give the University his "harmonious coöperation." Under this test, Dr. Howard reluctantly confessed judgment by yielding his place at once. Three minor men, whose action probably has some genuine relation of sympathy to the Ross-Howard drama, have tendered resignations which have been accepted without demur. And the play is ended.

To such as know universities East and West, there has been a quiet humor in much of the borrowing of trouble for the specific institution, wherein a probably unique freedom not only is striking in the whole "atmosphere," but is an organic provision of its economy. Stanford is the most richly endowed university in the world, with its matter of $26,000,000. It is not scanning the horizon for potential "angels." It has no rich persons to conciliate or cultivate. Senator Stanford is dead. His widow, now seventy-one, has given of the Stanford fortune all that he did not. She has now no more rod over the institution than the self-respect of honorable people in touch with the facts gladly tenders to the devoted, single-hearted, eminently sensible, and unmeddlesome Mother of the University. Neither are there politicians nor *ex-officio* regents to trim for. The foundation is self-reliant and complete, not a candidate for favors, financial or official, nor conditioning its progress upon them. Organically, it has a fortunate distinction in the fact that its whole nervous system centres in its own head, instead of being in part diverted to exterior ganglia of political, religious, or business "interests." None who know Dr. David Starr Jordan (and that must in a way mean none who keep pace with education) will seriously fear that the faculty he has created shall find at his hands injustice or narrowness. He may as confidently be expected to exercise the plenary power conferred upon him to secure equal justice to the student body in its right to dignified, competent, and creditable instructors. As to academic liberty, and the smaller question whether Professor Ross's Original Bryanism was accounted to him for unrighteousness (save in so far as concerns indiscretion and bad taste in the *manners* of his partisanship), it will, perhaps, be permitted me to suggest that, while there may have been other college presidents in the United States who felt fully free to outspeak so roundly, so thoroughly, and so weightily as Dr. Jordan did upon the ticklish theme of Imperialism, for instance, any such have eluded my observation. The student body of some 1,500 earnest young men and women, the faculty of about 120 very respectable persons, the alumni, and, so far as I know, all outside scholars familiar with the real facts, thoroughly endorse the presidential policy which means to maintain at Stanford that spirit of devotion, dignity, and sanity which in this remote quarter of the earth is deemed fit complement of learning.

Professor Ashley may safely doff his concern that "the work of the students should be interrupted." Nor is the cheerful philosophy with which he can feel that "there are worse things in American university life than the removal of a few score of students from one Californian institution to another" less gratuitous. There *are* worse things, but not in Stanford—nor these. The work is not interrupted; the students have not removed. The important fact that one parent has shifted his child from Stanford to Berkeley has been already telegraphed abroad. As to the modest proposition of "educating the Stanford administration to a higher conception of a university," I must leave that contract to the only gentleman who confesses his preparedness to undertake it. There are handsome possibilities in it. Aside from Jordan, such men as Branner, Kellogg, Anderson, and some scores of others, would doubtless prove apt and stimulant pupils under just the right instructor.

CHARLES F. LUMMIS.

LOS ANGELES, CAL., February 7, 1901.

PEACE AT PALO ALTO.

TO THE EDITOR OF THE NATION:

SIR: The report by a selected committee of Stanford alumni, as your last number shows, is accepted as final by the officers of the institution. On this authority, we know that one woman's decision that a certain man's opinions and manners were injudicious and offensive, assured the immediate decapitation of a department. The successive protest of four important instructors has had no result save their own departure and the fuller exhibition of absolute power. As for the President, his functions are executive indeed, not to say imperial. Like the princes of China to-day, the surviving heads of departments and the other scholarly men and women in Palo Alto may tranquilly complete their careers, until and unless either the titular chief of their own body, *or* the alien dictator, shall decree the instant *coup de grâce*. But neither edge of this two-handed engine at the classroom door waits for the other, if the executive "desires," or the proprietress "demands," an immediate exit. The alumni approve these disciplinary measures, apparently, and agree not to divulge the detailed facts confidentially submitted to them.

Clearly, this is a proprietary school, administered with admirable energy. If the entire student body has indeed been won back to hearty allegiance, the *esprit de corps* is really marvellous. We may be confident that no further insubordination will crop out. The San Francisco papers are delighted to find that an educational plant may be kept as well in hand as a department store.

The day I reached Berlin as a student, the undergraduates were giving a general ovation to Professor Mommsen. The great Prince von Bismarck, and the Prussian Government generally, had felt that Mommsen's activity in the Legislature and in print and speech, being sharply opposed to them, was

injudicious and offensive. But the attempt to discipline him failed utterly, only increasing his weighty influence on both sides the University gate. Professorial manners are —or were—brusque in Berlin. Discipline of the instructors is not even lax, but simply unthought of. But frankness and fearless truth-seeking abound. It was a daily experience to hear gruff old Kirchhoff denounce as unscholarly, out of date, ridiculous, theses which Curtius, the favorite of two emperors at least, was still maintaining in his lectures and books. The atmosphere was large enough for any amount of sharpest mutual criticism. Such an institution had a *national* power and usefulness. A Bismarck could not shake it.

At the other extreme, we all know of schools where young Episcopalians or Roman Catholics, Ethical-Culture disciples, or Seventh-Day Baptists are nurtured, while the beliefs of their parents are instilled into them as the only form of spiritual truth. Probably most men of earnest religious faith are so fully convinced of their own orthodoxy that they would gladly see all widely diverging creeds silenced at once and for ever, without troublesome discussion—and, indeed, political or economic devotees are by instinct little more tolerant.

Few of us desire to see denominational or other proprietary schools suppressed by law. We do hope to see them steadily decay until there shall utterly perish, in every man's mind, the delusion that he has discovered absolute truth, which should be inculcated, not further analyzed and discussed. The time should come when all educators will endeavor to open the mind, not to close it; to make youth critical and progressive, not self-satisfied and dogmatic; when they will bid us pursue truth, but never fancy we have captured and subjugated her.

Perhaps we have as yet no real University, though there are certain departments, like that of philosophy at Harvard, where strong men seem to be chosen because they diverge and disagree, not because they concur. Real universities should be, must be, few, because they must be large in every sense. If they are to develop, they must be differentiated as sharply as possible from proprietary schools. The latter should not even be allowed to bear the consecrated name of University. An individual's wealth may buy a tract or a building, but cannot own a nation, nor a University; for a nation or a University is dead when the existence of an owner for it is proved. One cannot be freeman and slave both.

WM. C. LAWTON.

BROOKLYN, February 14, 1901.

ACADEMIC SOLIDARITY.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted to write a few words in reply to Prof. Münsterberg's letter which was printed in your columns last week? This would hardly be necessary were it not that Prof. Münsterberg appears to have either misrepresented or misunderstood the facts upon which his criticism was based.

(1.) My article in the *Cosmopolitan* was in no sense of the word a review or a criticism of a Columbia doctor's dissertation. It dealt wholly with certain absurd experiments that had been made by persons connected with the Harvard Psychological Laboratory. The fact that these experiments were briefly described in a Columbia dissertation has no more pertinence than if they had been described in the *North American Review* or in the *Journal of Psychology*. They were carried on at Harvard; and it is pleasant to know that Prof. Münsterberg considers them "absurd," and that he himself was not responsible for them.

(2.) Prof. Münsterberg speaks of my "earnest address to the Director of the Harvard Psychological Laboratory" as being offensively joined to a wood-cut of an unintelligent-looking professor. As a matter of fact, my article contained no address, earnest or otherwise, to anybody; while as to the wood-cut, I never saw it or heard of it until that number of the magazine had appeared.

Prof. Münsterberg need not be troubled in his mind. "Academic solidarity" at Columbia is not so fragile and unreal a thing as to be shaken by a little fun from within, or even by the most ingenious misrepresentations of fact put forward from without.

HARRY THURSTON PECK.

COLUMBIA UNIVERSITY, February 18, 1901.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: My attention was recently called to a somewhat unusual misquotation and misinterpretation of a part of my 'History of the English Language' in an article by Professor Matthews in the February *Harper's*. I am sure that Professor Matthews will allow me to call public attention to the mistake, of course wholly unintentional on his part, lest others should be unnecessarily misled.

And, first, I suppose I must set down to typographical error the expression "synthetical combination," applied to the cleft infinitive and attributed to me. It is the more surprising that it escaped Professor Matthews's critical eye because, of course, he knows that "synthetical" would be the least appropriate word in the place. In fact, the opposite, "analytical," would have been quite exact in the ordinary sense of that term as applied to language. I wrote "syntactical" because I was not discussing the cleft infinitive in itself, but merely illustrating the effect of analogy on English syntax, of which it is an unusually good example.

The misinterpretation is somewhat more annoying because more serious in its implications. In using the split infinitive as an illustration of analogy in syntax, I threw in, quite incidentally, the expression "even now establishing itself" to imply the extent of the analogical influence. I had in mind spoken usage in addition to written, as frequently stated in the book, and corrected any chance of wrong impression, I thought, by saying in the next sentence that the split infinitive was used "sometimes even by the best writers." Professor Matthews quotes the incidental remark as if it were a direct assertion, and interprets it as if I had written "even now coming into use for the first time"—a sense which is hardly warranted by the ordinary or extraordinary meaning of the words. I may pass over without notice, I think, the implication of rather gross ignorance which this sense would carry, for I cannot believe many will read the book quoted and think me totally unacquainted with the ordinary discussions of this construction, past or present. It is enough to say that the split infinitive would have been of little value as an illustration of analogy if I had supposed it was now being used for the first time, instead of having its well-known ancient, though not quite honorable, lineage.

Worst of all, Professor Matthews has attributed to me an opinion which I have never held, and surely never expressed. He says, in effect, that I do not object to the use of the split infinitive in careful writing. In charity I suppose it may be assumed that Professor Matthews meant I did not object to it in that place in the book, or something of that sort. No apology seems to be necessary for trying to separate, as I purposely did in my book, the critic of style from the student of linguistic history, lest the two attitudes should involve confusion. Especially, as I was not discussing the split infinitive, there seemed no occasion for a rhetorical judgment. Yet chronicling a fact is quite different from approving a usage from the standpoint of style. If I had even a small sum for every split infinitive which I have objected to in college themes, my bank account would certainly rival that somewhat notorious one of a character in one of Professor Matthews's stories. But in expressing disapprobation of this usage, neither the rancor of the extreme purist nor the *laissez-faire* attitude of the leveller has seemed to me necessary. The principle I have relied on—and it seems the best answer to most of Professor Matthews's article—is the well-known one of avoidance of any expression which attracts attention to itself rather than to the thought conveyed. Call it economy of attention, or conservation of attention, which seems more exact, there is little danger of its seriously crippling creative genius. Professor Matthews himself approves this valuable principle in one part of his article, and no doubt often applies it, if, indeed, his charming style ever has a less perfect form than that which meets the public eye. But I have no desire to discuss a point in style. My only wish is to correct three errors regarding my book and myself which Professor Matthews has put into as many lines of his article.

OLIVER FARRAR EMERSON.

WESTERN RESERVE UNIVERSITY,
February 16, 1901.

PEPYS'S DIARY.

TO THE EDITOR OF THE NATION:

SIR: A few days ago a book agent, representing a subscription house, called upon me and offered a set of Wheatley's edition of Pepys's Diary in eighteen volumes, at prices ranging from about $50 in buckram binding to I don't know how much in "crushed levant." He unblushingly asserted that it was the "only complete" edition, and was imported from abroad by his firm.

As a caution to others who may be called upon in the same way, allow me to state that the only complete copyright edition of Pepys's Diary, edited by Wheatley, is published by the Macmillan Company, in nine volumes, at $1.50 a volume. The Macmillan Company sold 500 sets of the sheets, printed from their plates at the Norwood Press, to a subscription house for "extra illustrating," and this is the so-called "imported" edition which is being foisted off on an unsuspecting—or credulous—public in eighteen

volumes at a price anywhere from $3 a volume up.

I fear we are threatened with another questionable thing in the "Garnett Anthology." Is it not a reissue, with very slight changes, of another "anthology"? Perhaps some of your readers can throw light on this matter.—Very truly yours,

LOUIS N. WILSON, Librarian.

CLARK UNIVERSITY, WORCESTER, MASS., February 12, 1901.

Notes.

The first contribution to its chosen subject by the Bibliographical Society of Chicago will be a list, filling fifty pages, of 'Bibliographies of Bibliographies,' chronologically arranged with occasional notes and an index by Aksel G. S. Josephson, cataloguer at the John Crerar Library. Three hundred of the 500 copies printed will be put on sale at fifty cents each, and may be ordered of Carl B. Roden, Chicago Public Library.

In connection with Chatto & Windus, London, the A. Wessels Company will publish, early in March, 'Robert Louis Stevenson: A Life Study in Criticism,' by Mr. H. B. Baildon, an old schoolmate of Stevenson, at present lecturer on English literature in the University of Vienna.

In preparation at the Clarendon Press are 'Studies in History and Jurisprudence,' by the Right Hon. James Bryce; 'The Relations of History and Geography,' by H. B. George; 'An Antiquarian Companion to English History,' by F. P. Barnard; the seventh and eighth volumes of the late Thorold Rogers's 'History of Agriculture and Prices'; 'British Colonies and Protectorates,' by the late Sir Henry Jenkyns; 'Legislative Methods and Forms,' by Sir C. P. Ilbert; and 'The Civil and Criminal Procedure of Cicero's Time,' by A. H. J. Greenidge.

The revival of the story of the mutiny on the ship *Bounty* has just been followed by that of William Lay and Cyrus M. Hussey's 'Narrative of the Mutiny on board the Ship *Globe*, of Nantucket, in the Pacific Ocean, January, 1824, and the Journal of a Residence of Two Years on the Mulgrave Islands' (New York: The Abbey Press). The title-page, dedication, and copyright entry are reproduced in facsimile from the original edition of 1828 (New London). The tragic side of this mutiny surpasses in horror that of the *Bounty*, but in other respects the interest of the later event is much inferior to that of the earlier, and the account evinces little literary skill. The volume is a small one.

One of the most daring and enterprising of modern military movements has its record, for the benefit of professional soldiers, in the volume entitled 'Operations of Gen. Gurko's Advance Guard in 1877,' by Col. Epauchin of the Russian staff; the seventh in the Wolseley series of notable war memoirs of which Capt. Walter H. James is the editor, and Charles Scribner's Sons the American agents. The late Gen. Gurko was one of the ablest of recent Russian soldiers, and in the Russo-Turkish campaign of 1877 was given command of a moderate-sized mixed force of the three arms, with which to push ahead of the main army into Bulgaria, over the very difficult Balkan Mountains, so as to turn and hold the best passes of that range. His audacity in acting at a distance of a hundred miles from his base, the River Danube, had the effect of throwing the Turkish authorities at Constantinople into a panic, and dispersing the garrison of the vital Shipka Pass, whose control by Gurko opened the way, the next winter, for the victorious advance of the Russian army after the fall of Plevna. Northern Bulgaria is an exceedingly troublesome field of warfare, as it is reached from the north by only a few defiles, of which but two or three have practicable roads. The Russian raider carried his trains most successfully over precipices and across ravines whose passage by an army recalls, by favorable comparison, the more famous feats of Napoleon and Wellington. The artillery was let down from one crag to another by hand, and the entrance into the slightly less elevated lower country did not give much respite from exhausting labors by night and day; the impracticabilities of the roads being aggravated by tropical heat and scarcity of drinking water. Yet, guided by friendly natives, Gurko kept the Turkish troops in constant alarm, and beat them often until their superior numbers compelled him to fall back with but moderate losses.

We have already noticed volume i. of Dr. W. H. Allchin's 'Manual of Medicine' (Macmillan), one of the shorter, more concise treatises on general medicine, such as are very useful to the busy physician, and certainly one of excellent quality. It has, indeed, the defects common to all composite works, but as a rule the chapters are indicative of care and skill, and most of them are characterized (considering that they are not of great length) by an unusually thorough and practical utilization of the scientific information with regard to the various diseases as a basis of the clinical statements. Volume ii. treats of the diseases caused by parasites, the diseases determined by poisons, and the great group of general disorders of nutrition, including the diseases of the blood. There are twenty-one illustrations and two plates. The articles have been prepared by thirteen contributors.

Dr. H. J. Curtis, author of 'The Essentials of Practical Bacteriology' (Longmans, Green & Co.), has obviously had a training, both as student and as laboratory director, which amply qualifies him for the task he has undertaken. The subject is treated in too technical a manner to interest most non-professional readers, but the book is thoroughly well adapted for its stated purpose, and calls for none but favorable comment. The illustrations and general make-up are good, the price moderate, and the matter highly interesting.

The 'Transactions of the Congress of American Physicians and Surgeons' at its fifth triennial session held at Washington, D. C., May 1 and 2, 1900, published by the Congress, forms a volume not less rich than its predecessors. It contains seven papers, which, taken as a whole, present some of the most practical aspects of the subject of bacteriology in relation to medicine and health. This discussion represents what might be called the public work of the Congress sitting as a whole. The volume concludes with a thoughtful address on "The Sociological Status of the Physician," by Dr. Clarence J. Blake, a poem by Dr. S. Weir Mitchell, and an address by the President, Dr. Henry P. Bowditch, on "The Medical School of the Future." The subjects are all of public interest, and are treated in such a way as to make the reading of the book absorbingly interesting to every man of scientific bent, even though he cannot claim the right to set the initials of a scientific title after his name. If it is true that few people reach adult life without being doctors after a fashion, it is equally true that few should reach it without sufficient scientific training to enable them to appreciate what is being done for public hygiene by such men as these and the scientific communities which they represent.

We have not space to review now Carman F. Randolph's 'The Law and Policy of Annexation' (Longmans), of which we have received the advance sheets. It is safe, however, to say that it is a work which deserves and will receive general attention. It is written with special reference to the Philippines, and contains a separate chapter on the status of Cuba. Mr. Randolph has closely examined not merely the legal, but the political, moral, and commercial questions raised by the acquisition of the Philippines, and his conclusions cover the whole ground. They are (1) that constitutionally the Philippines are "not only within the United States in a general sense," but they are "not distinguished organically from the rest of our territory"; (2) that the Constitution applies to the Philippines; (3) that the courts are bound to see that life, liberty, and property are constitutionally protected there; (4) that the Executive cannot legislate for the Philippines, this being a matter for Congress; (5) that we can withdraw from the Philippines; (6) that we should do so. An appendix contains the Treaty of Paris and other documents bearing on the matters considered.

'Registering Title to Land' (Chicago: Callaghan & Co.) is a small treatise of 106 pages on the Torrens system, by Jacques Dumas, "procureur de la République at Rethel." It embodies M. Dumas's Storrs lectures at Yale on this subject in 1899-1900, and is interesting as showing that the merits of that system of land-title registration are attracting notice even beyond the limits of English-speaking countries. The book contains an outline of the existing system of registration in several countries; but the author apparently falls into one error which deserves attention because it is a very common one, and an obstacle in the way of the introduction of the reform. He says that "compulsion" is an essential feature of registration of title, and this, although on p. 33 he remarks that, under the original Torrens act, compulsion "applies only to land granted by the crown since the system was established." As a matter of fact, one great recommendation of the Torrens system is that it spreads only by the voluntary act of the owner of the land. He originally brings his property under the operation of the act, or not, as he pleases. There is nothing to induce him to do so except the inherent superiority of the new system over the old one.

'The Organization and Management of a Business Corporation,' by Thomas Conyngton (New York: The Ronald Press), is a convenient handbook, arranged with special reference to the laws of New York, New Jersey, Delaware, and West Virginia.

A very miscellaneous compendium is 'Fleurs des Poètes et des Prosateurs Français' ("Daily Thoughts from French

Authors"), prepared by Jeanne and Marguerite Bouvet (New York: William R. Jenkins). At the very beginning and end the calendar which determines the arrangement is borne in mind, and occasionally elsewhere; but on the whole the extracts are attached without pertinence to the daily date. Brunetière, Rod, Faguet, Rostand, Bourget, are some of the authors of the hour drawn upon for this anthology.

In his 'Neu-Guinea und der Bismarck-Archipel' (Berlin), Blum gives the German public and the world at large some insight into the political and economic conditions of these colonies of the Far East. Knowledge of such conditions has hitherto been the property of a small circle of interested parties, chiefly capitalists of the New Guinea Company. From Blum's treatise it appears that such great monopolies of exploitation, while they do not interpose the same difficulties as did their predecessors several centuries ago, are much less effective in developing virgin lands and in civilizing backward peoples. The New Guinea Company held an almost complete control of its field from 1885 to 1899, when the Imperial Government had to step in; its handling the tropical labor problem was decidedly unsatisfactory, and it failed to provide such indispensable advantages for a young colony as adequate transportation facilities. A vacillating policy, unduly controlled from Berlin, hampered the efforts of its best functionaries. Of these the late Von Hagen is extolled as the highest type. Comparisons are made with England's effective policy in the same island, under Sir W. MacGregor. The work of the various missions has been faithful, and in a measure successful, but there is little prospect of Christianizing the natives for many decades to come; they are both lazy and stupid. Industrial enterprises receive considerable detailed attention, as does the question of native and coolie labor; it looks as if the universally useful Chinese were to sustain their reputation here as elsewhere. Chapters on geographical and other scientific investigations in New Guinea close the volume, which is made more serviceable by the addition of a good bibliography.

A floating Exposition is advocated by the Hon. O. P. Austin, in the *National Geographic Magazine* for February, in the interests of our foreign commerce. It should consist of a small fleet of vessels filled with American goods and manned by a corps of experts. The route for a two years' voyage, in which the principal ports of the world would be visited, is suggested on an accompanying map. Some information might well have been given as to the success of a similar floating exposition planned by Austrian and Hungarian manufacturers in 1898. Dr. W. A. P. Martin, President of the Imperial University of China, assigns as the principal causes of the present crisis in that country political jealousy, religious antipathy, and "last, but not least, industrial competition." Some comparisons between the Chinese and Japanese are made by Com. H. Webster, as to their respective conservatism and progressiveness. With histories equally ancient, though Japan can boast that she has been ruled by one dynasty for twenty-five centuries, while China has had more than seven during that time, there are yet no architectural monuments of the past in Japan like the splendid bridges, gateways, and roads which constantly remind the traveller in China of a long-departed glory. The numerous charitable organizations of the Chinese, on the other hand, are contrasted with the comparative indifference of the Japanese to their poor; but the consideration with which woman is treated in Japan is unknown in China. The Japanese are intensely patriotic, and from the earliest times have been a fighting people. "In the eyes of the Chinaman, the soldier is a man defiled by blood," and is placed lowest in the social scale.

The valley of the Saône is the principal subject of the *Annales de Géographie* for January. A detailed description of the contour and natural divisions of its upper part is followed by a study of its hydrologic conditions with several tables, charts, and a map. There is also an examination of a theory as to the ancient course of the upper Moselle. A statement of Ritter's and Peschel's views as to what constitutes comparative geography, is followed by the advocacy of a new starting-point for seeking homologous conditions—the atmosphere and the hydrosphere. Among the minor contents is a description, with a map, of the new boundary between French Guiana and Brazil, as determined by the Federal Council of Switzerland, to whom the dispute was submitted for arbitration. The Brazilian interpretation of the terms of the treaty of 1713 is substantially sustained. A warning note is sounded in regard to the impending exhaustion of the wood used for industrial purposes if the present rate of consumption continues. Tables are given showing the forest areas of the principal countries, together with their annual importations and exportations. Great Britain, for instance, imports wood to the value of a little over $100,000,000, while the largest exporters are Sweden and Austria-Hungary. Attention is called to the probability that the tropical forests will not be found to be as rich in commercial woods as has been confidently expected.

A new Paris fashion monthly, *Les Modes*, reaches us through Manzi, Joyant & Co., No. 170 Fifth Avenue, as an illustrated "review of the arts applied to woman," with French text and numerous excellent plates (some colored) of reigning beauties and costumed models, examples of female portraiture (Boldini), specimens of fine jewelry, of modern furniture, etc. Society events form part of the chronicle.

The publisher of the Munich *Kunstwart* has recently begun issuing a series of "Meisterbilder," or reproductions of works of famous masters, which is noteworthy on account of its combined excellence and cheapness. Rembrandt's great etching "Christ Healing the Sick," three woodcuts by Albert Dürer, and two by Alfred Rethel ("Death as Friend" and "Death as Destroyer"), form the first six numbers. The leaves are of the uniform size of 14½ by 10½ inches, leaving a rather narrow margin for the plates. They are sold separately, in paper folders, with explanatory text by Ferdinand Avenarius, at twenty-five pfennigs, or about six cents. While the evident aim of the publication is to foster a love for good art among the masses, the plates are of sufficient merit to satisfy a more refined taste as well.

Hugo Helbing's *Monatsberichte* (Munich) for December contains, among other interesting reading-matter, an article (in French) on the radical changes made last year in the arrangement of the pictures in the Louvre, as already described in our columns by a correspondent. Of the seven plates in the number we mention a remarkably good reproduction of Van Dyck's painting of Saint Francis of Assisi, and one of Teniers's "Temptation of Saint Anthony," both from the private collection of Professor Frantz of Breslau, the well-known author of the 'History of Christian Painting.' This valuable collection is to be sold at auction some time in March. The *Folia Helbingiana* contains half-a-dozen illustrations of fine porcelain groups of Meissen and Vienna manufacture.

The *Korea Review* is the successor of the *Korean Repository*, which became defunct in 1897, after five very valuable volumes had been issued. Press of other duties compelled the editors to relinquish the work, but undoubtedly one of the elements contributing to its downfall was its not altogether felicitous handling of Korean politics. The *Korea Review* will have for its editor and manager Prof. Homer B. Hulbert, who will publish serially in its columns his history of Korea, on which he has been busy for years. Besides the monthly calendar of current events, there will be news of interest to foreigners, but affairs of political significance will be recorded without comment. One very attractive feature will be the attempt to answer all questions relative to Korea. The contributions of specialists will doubtless be, as in the *Repository*, of unique value. The first number is dated January 30. The subscription is two dollars a year, and a check or draft on any reputable bank will be received.

Ex-President Cleveland is chairman of a committee which is endeavoring to raise a fund of $100,000, to found at Washington and Lee University a chair of economics. Before the lamented President of that institution, the late William L. Wilson, assumed his office, no such chair existed in any Southern university. He accordingly established and largely supported out of his meagre salary one which it is now sought to endow and to distinguish with his name and in his memory. Upwards of $15,000 has been already subscribed. Mr. Herbert Welsh, No. 1305 Arch Street, Philadelphia, is secretary and treasurer of the fund.

In noticing the new issue of the International Webster's Dictionary, with its very extensive new Supplement, we greatly regret our erroneous assertion that not all the new chemical elements were contained in that work. This, to the discredit of our painstaking, is not so. Every one is there, down to xenon and victorium, and even the more than doubtful etherion, the discovery of which would have been so important had it only been true. We are indebted to the publishers for a very courteous letter exposing our mistake.

—The volume just issued by the State Historical Society of Wisconsin is the fifteenth in the series of its Collections, which began in 1846. It is surprising that so much original material can still be discovered illustrative of the region before it was thought of as a State. This last issue of five hundred pages is mainly concerned with the pre-Territorial stage of Wisconsin. Colonization there was peculiar, perhaps unique. The first colonists were not whites but Indians, removed thither by the United States, and planted on lands which it was believed would be uncoveted by whites or

beyond their reach. Six hundred of the natives were transported from New York alone, and well-nigh two hundred pages of the work before us relate to this colony during a quarter of a century. The reports from missionaries to a Scotland society which did much for their support are models, and show wise and tireless endeavors to civilize and Christianize the colonists, which would largely have succeeded had their wards been really beyond whites and whiskey. The report of an Indian agent in 1831 to the Secretary of War, now first printed, in answer to questions concerning "the quality and condition of the Territory," shows that this colonization policy was supposed to be not yet abandoned, while demonstrating that its failure was inevitable. The sixty pages by a woman in part descended from an Indian chief, and born at Mackinac, who in 1824 became the bride of the first lawyer resident in Wisconsin, set forth the ways of wilderness life, and the growth of Green Bay, the oldest town, with a winning archness no masculine pen could have equalled.

—The title of another article, "A Methodist Circuit-Rider's Horseback Tour from Pennsylvania to Wisconsin, 1835," is a ludicrous misnomer. The truth is, that the rider started from Meadville in his wagon drawn by two horses, drove them or others for which he swapped them when he needed fresh ones, throughout Ohio, Indiana, and Illinois, till, after forty days on the road, and within ten miles of Wisconsin, he writes, "I got my waggon into a barn and my harness into a loft to winter." This rider's notes by the way are as instructive as those of Dr. Dwight, which New Englanders now make so much of. He was the first of his order to enter the country north of the Wisconsin River. There are several minor articles, none without value, but the fifty pages comprising "the diary of one of the original colonists of New Glarus in 1845" is the supreme jewel of the collection. It confirms the dictum (of Dr. Johnson) that half a word fixed on the spot is worth a cartload of recollections. The writer, a tinker or tinner, made a journey which often recalls the pilgrimage Bunyan describes. The emigrants, 200 strong at the start, went down the Rhine, then by sail to Baltimore, by canal to Pittsburgh, thence to St. Louis, and, after a deathful delay, to Galena by steamer. Whatever befell during a hundred and twenty days is jotted down —in pencil, by the bye, and hence more perdurably as well as more fluently than if by pen—with an unconscious pathos which enables one to read between the lines and visualize everything. If small things may be compared to great, its plain tale should be called another *Mayflower* log. It portrays many analogous adventures. It is even superior to Bradford's 'Plymouth Plantation' because it was a veritable journal day by day of what each day brought forth, while Bradford says, "I first began these scribled writings aboute y^e^ year 1630," ten years after the great voyage. The Swiss manuscript, or a copy of it, at once went home with tidings to Canton Glarus, but the original is now on deposit in the Wisconsin Society's fireproof Library, and the translation now published was written by one who came as a small boy among the first-comers from Glarus.

—James Russell Lowell is reported to have said, in substance, that his admiration of Dante lured him into the little learning he possessed. We are not disposed to take this remark, or its implication, any too literally; but if the statement (omitting the modest adjective) had been strictly true, Lowell might still have been the master of an extraordinary erudition. The extent, variety, and diffusion of literature about Dante has probably never been so well exhibited as in the catalogue of the Cornell Dante collection, now completed by Mr. Theodore W. Koch. The first part was published in 1898, and contained a list of "Works by Dante," complete texts, selections, and translations in some thirty-five languages and dialects. The second part, which concludes the work, contains a list of "Works on Dante," with a supplement of titles recently added to the library, elaborate indexes, and an appendix on iconography. An introduction, giving some account of the history of the collection, is contributed by Mr. Willard Fiske, who presented the books to Cornell. The catalogue numbers about seven thousand titles, representing what is probably the largest special Dante library in the world. Some of the earliest and rarest editions of the poet, as might be expected, it has not been possible to obtain; but in all other departments the collection is remarkably complete, in spite of the fact that Mr. Fiske did not seriously begin his search for books on Dante until 1893. Mr. Koch deserves the most grateful recognition for his work upon the catalogue. This is not simply because he has brought together more titles than any other bibliographer of Dante; the credit for this belongs to Mr. Fiske, who collected the books. Mr. Koch should be praised rather for the enthusiasm and scholarly competence with which he has done his work. He set out from the first to make the catalogue something more than a finding-list to aid in the use of the library. He constantly supplied critical notes indicating the value of the various texts and treatises, or giving references to places where they had been reviewed and discussed. Then he drew up careful indexes of the subjects treated, and even of the passages in Dante's works which are commented upon in scattered articles of the collection. Finally, he spared no pains in his proof-reading, and attained a degree of correctness unusual in works of the sort. The result of these labors is the best Dante bibliography in existence, a book of the utmost value to many scholars who will never see the Cornell library.

—It is a satisfaction to note that the most important contributions to the bibliography of Dante have been made by two American scholars—Mr. William C. Lane, now University Librarian at Harvard, and Mr. Koch. Mr. Lane's catalogue of the Harvard Dante collection was published in 1890, and became immediately one of the chief books of reference on the subject. Mr. Fiske testifies that it was his most valuable guide in buying books for Cornell. Lists of accessions to the Harvard Library have been regularly printed in the reports of the Cambridge Dante Society, contributed chiefly by Mr. Lane. In the fifteenth report of the same society Mr. Koch published a paper on "Dante in America," with a careful list of works relating to the poet which had been written or published in this country. In the eighteenth report, now in press, he has a list of Danteana in American libraries, supplementing the Cornell collection, and he promises to prepare for later publication an additional list of Danteana to be gleaned from European libraries. By their combined labors, then, these gentlemen will have made a very complete survey of the field of Dante literature, and will have placed the scholars of America and Europe alike under great obligations.

—The institute for higher Government officials in session at Göttingen last month was an interesting innovation in German educational methods. For some time it has been felt that the rapid growth of Germany as a political and commercial world-power demanded a specially trained body of officials, and various attempts are being made to provide education which will help supply this demand. Several academies have already been opened or are projected for the purpose of training young men to fill administrative positions either in Government service or in commercial corporations. Göttingen is, however, the first university to take a hand in the movement. Its purpose—acting under the leadership of Prof. Gustav Cohn—is to provide advanced courses for officials already in the civil service, whose riper years and practical experience fit them for work which could not well be taken by mere beginners. In accordance with this general plan, special lectures were announced to run for ten days from January 8 to January 17. The Government coöperated to the extent of granting leaves of absence to officials who might wish to attend. Twelve members of the University faculties constituted the body of lecturers; the number of hours given by each lecturer varying from two to six. The general scope of the instruction was limited, as stated in the announcement, to "the political and allied sciences."

—Three groups may be made of the lectures given. The first dealt with economic subjects, and was headed by Professor Lexis, who treated of "Some Principles of National Economy." Professor Cohn supplemented these with lectures on taxation, and Professor von Seelhorst's course on Agriculture" dealt with economics rather than technology. A second group embraced courses dealing with law and administration. The venerable Professor Planck should be first named here. His lectures on "Some Problems of the Civil Law" explained such features of the new civil code as would be of most interest and importance to officials. "Although," writes a correspondent, "his sightless eyes necessitated his being led to and from the rostrum by a *famulus*, it was evident to his hearers that he needed no guide in his subject, and that his inward vision was still undimmed." Other courses were given by Professor Schoen on "Administrative Courts," and by Professor Lehmann on the "Legislation of Stein and Hardenberg." Important also were the lectures given by Prof. Hermann Wagner, who, though a geographer, found a subject pertinent to both economics and administrative law in "The German Colonies." The third group consisted of certain technical subjects likely to interest administrative officers, the most important being "Selected Chapters on Hygiene," expounded by the great sanitary authority, Von Esmarch, while other courses regarded

various phases of electrical, mechanical, and chemical technology. These, with addition of the inevitable course on Goethe, read by Professor Roethe, completed the programme for the ten-day session. The attendance was perhaps a trifle disappointing, in view of the fact that no tuition fee was exacted. About fifty persons registered, of whom half were Government officials, the remainder being members of the seminar, or other students at the University; but those most interested in the enterprise professed satisfaction with the results.

—Mr. R. Townsend Warner's 'Winchester' (Macmillan) is quite one of the best written in the series of "Hand-books to the Great Public Schools," and this is the more noticeable if, as we suppose, its author is still "in statu pupillari" at Oxford. It may be because Mr. Warner has so recently left Winchester himself that he has the courage to express the modest hope in his preface that "present Wykehamists may consider this book suitable for parents." To a Wykehamist, it seems (p. 187), parents are not even his "people"; they are only part of his "pitch-up"! Winchester is the mother of all the "public schools" of England, and, as Mr. Warner shows, she abides by the practice of a life in common more persistently than the younger foundations. The boarding-houses attached to the school are, accordingly, more like "the college," and less like private dwellings in their arrangements for sleep and study than the "houses" elsewhere. Winchester, again, has resisted the temptation to enlarge itself over much; and the seventy "scholars" are still one-sixth of the whole number of pupils. A "scholar" pays only £21 a year, and his scholarship is therefore worth very nearly £100 annually (p. 101). When it is explained that the scholars are selected by open competition among some ten times as many candidates, it is readily understood how it is that the scholars do so much to maintain the intellectual standards of the school. The book is adorned by forty-six pictures, many of them very pretty; and, if for this reason only, it may be commended to the notice of American headmasters and trustees who are trying to introduce beauty into school life in this country.

PHILLIPS BROOKS.

Life and Letters of Phillips Brooks. By Alexander V. G. Allen, Professor in the Episcopal Theological School in Cambridge. With Portraits and Illustrations. Two volumes. E. P. Dutton & Co. Pp. xiii, 650, 956.

This long-expected book affords a satisfactory explanation of the deferring of our hope from year to year. The materials were so abundant, the treatment is so full, and the signs of careful preparation are so evident at every stage, that the strange thing is that five years have proved sufficient to complete the work, which all the way has been an avocation from the habitual and exacting duties of a theological chair. For the two years intervening between the death of Phillips Brooks and Professor Allen's assumption of the work in 1895, the Rev. Arthur Brooks was engaged upon it. What it would have been if he had completed it, we have no basis of surmise. Certainly, something very different from the work as now presented, for it was nearly finished when its progress was interrupted by the writer's death, and not only has Professor Allen made the form entirely his own, but his first business was variously to enlarge the scope of his original sources. It is mainly because these have been so freely used in the way of direct quotation that the book reaches the bulk of 1,619 pages. A more heroic temper might have reduced these a third or more, but only at the expense of things which, knowing them, we should not like to spare. The second volume is uncomfortably large, and a three-volume form would have been better.

The attention given to the ancestral tree is rewarded by more fruit than generally falls to the biographer devoting himself to arboriculture in this particular form. Through both his parents Brooks was well allied. The Phillips family was notable for the heretical tendencies of some of its earlier representatives in Massachusetts and the extreme orthodoxy of the later. It was a great day for Phillips Brooks when Samuel Phillips of North Andover married Phœbe Foxcroft of Cambridge. These were his great-grandparents. From her he inherited his stature and his wonderful eyes. The husband was Judge Phillips, founder of Phillips Andover Academy. Phillips Brooks was under bonds to him and the uncle who founded Phillips Exeter Academy to show that interest in education which was one of his most characteristic traits. His connection with Wendell Phillips was through an earlier generation. Mrs. Edward Everett, Mrs. Charles Francis Adams, Mrs. N. L. Frothingham (mother of O. B. Frothingham), were his father's cousins. The father was a less distinguished merchant than his uncle, Peter C. Brooks, but less Philistine also than that worthy, who disliked Channing and Parker as about equally dangerous characters, while still he was a Unitarian after the strictest manner of the sect. So was Phillip Brooks's father at first, but his mother's Andover birth and training made her heart yearn for a more evangelical presentation of religion than that of Dr. N. L. Frothingham, Mr. Brooks's cousin, of the First Church in Boston. Brooks's Unitarian baptism was one of the sorrows of his critics when he was elevated to the bishopric. "Had water been used [if not, what?] and in the Triune name?" A new "hypothetical baptism" was suggested, and declined by the Bishop-elect with ill-concealed disgust. The religious differences of the parents were adjusted by a compromise which took them to the Episcopal Church when Phillips Brooks was about four years old. Both father and mother contribute interesting features to their son's continuous development—the father timidly conservative, and often anxious lest Phillips should be too radical in his politics; the mother intensely evangelical, and fearful lest he should fall short of the glory of her Andover forbears. Her piety was so effusive that it tended to check the genial current of young Brooks's soul when he was a student in Virginia, and for a time she got few answers to her letters. The most interesting, if not the most characteristic, of these is one denouncing the awful heresies of Bushnell.

His five years in the Latin School were singularly unprophetic of the coming man, even to his lack of interest in boyish games. The college chapter is extremely interesting as showing how much less Harvard had to give then (1851-1855) than now, and how much more Brooks got out of it than many do from the more elaborate machinery. He liked the classics and hated mathematics, but it was his voluntary reading that made these years effectual. His writing was far less remarkable, while he despised elocution and gave no promise of oratorical ability. Then, as later, his delivery was extremely rapid, and not deliberately so to correct a stammering habit, as one of many myths has told. Much of his reading was away from beaten tracks. Emerson influenced him little; Carlyle much more, especially his 'Heroes and Hero-Worship,' a prophetic intimation, while the defect of his quality is shown in his ultimate "contempt for 'Sartor Resartus' as a hollow and superficial cry." 'In Memoriam,' on the contrary, was one of his earliest delights—and one that never failed. Professor Allen finds in Brooks's college life some skeptical reactions from his mother's piety. But while these were not pronounced, it is certain that he showed no inclination to her evangelical fervor, and none to the profession which in the event he so amply justified and so splendidly adorned.

A painful episode, soon following his graduation, was his failure in the post of usher in the Boston Latin School. Professor Allen dwells on this so long that his elaboration would be excessive were it not that his failure meant so much to Brooks. It was so complete that the head-master, the redoubtable Francis Gardner, assured him that he would never succeed in anything. At the height of his fame, Gardner went to hear him preach, and took a sweet revenge on his success: he found nothing to praise in the sermon, but he criticised a point of grammar. The failure as a teacher was what hurt most, for the desire to be a teacher was in the young man's blood and bones. It remained there well nigh to the end. Hence his readiness to exchange his brilliant pulpit honors in Philadelphia for a professorship in a new theological school, and later his leaning to a professorship in the Episcopal Theological School in Cambridge, Mass., and to that vacated by the death of Dr. A. P. Peabody in Harvard College. Professor Allen regards his distaste for Boston during his early ministry as a survival of the chagrin of his Latin School experience, and his ultimate return to the city of his birth as showing something of the disposition of Achilles: "You shall know the difference now that I am back again." But in its first effects his failure stung him into brooding solitude and secret self-expression, the records of which are most remarkable. If they are not prophetic of the full-grown man, it is because they promise an intellectual greatness to which he did not attain. He went for advice to Dr. Walker, then President of Harvard, and President Eliot remembers his blanched and hard-drawn face as he came out from the interview. Dr. Walker had advised him to be a minister, and he had no drawing that way. He had thought of it as an unmanly profession, a surrender of the rich and teeming world. To the last a certain jealousy for his manhood as endangered by the insidious influence of his profession haunted him, and a jealousy of the Church as something smaller than the world, and even of religion as something smaller than humanity. Even when he went to Alexandria, Va., to study theology, it was with no fixed resolve to enter the ministry. The steps by which he came to this are so obscure that Professor Allen's care-

ful scrutiny has not availed to make them plain.

Professor Allen does not much exaggerate, if any, when he says, "Out of all the years of his life, the second year at Alexandria stands forth supreme. . . . The stamp of maturity and finality is on his work. He had come to full possession of himself in the greatness of his power." The last sentence may well give us pause, seeing that there was not yet on the horizon a cloud as big as a man's hand portending the great preacher, the master of the spoken word. But he never again had such opportunity for study, nor so drenched himself in a flood of books. Even more remarkable than his reading was the private expression of his growing thought, which had at this time a universality it did not have further on. It was singularly untheological, remarkably independent of those special doctrines which afterwards became the somewhat arbitrary vehicles of what he had for them to carry. Few, indeed, in the second year of his theological studies were the signs of the coming clergyman. The next year there were more of them.

At this time he was as efficient as the hibernating bear in the hoarding up of substance meant for future use. Of some score of texts and subjects on his list in 1859 he economized every one in his subsequent ministry. It was largely so with metaphors and similes, for which he always had the sharpest scent, jotting down other men's and hundreds of his own. Those who imagine that Phillips Brooks's method was that of an easy-going spontaneity will be completely disabused. To the apparent, and in some measure real, spontaneity there was a background of painstaking effort, of almost mechanical preparation. The great Boston sermons pre-existed in elaborate sketches, so many pages being assigned to one section after another. Moreover, he enriched his vocabulary by memorizing hundreds of hymns, and, during his theological course, his powers of expression by writing a poem every day. Many of these poems indicate that had he confined himself to verse he would have done well, though not so well as in his proper field.

His first settlement was sufficiently modest, but it was soon discovered that he had no ordinary gifts, and the Church of the Advent in Philadelphia was kept in continual anxiety lest it should lose the treasure it had found. Many temptations were resisted, but he succumbed to that of Holy Trinity in the same city when pressed a second time. His rectorship of this church from 1862 to 1869 was signalized by events and qualities that tempt one to regard it as the most honorable stage of his entire career. It coincided with the years of the great war and the miseries of the reconstruction period, and found him entirely equal to the exigencies of those stirring times. In his Boston year, after leaving Harvard, there is hardly a sign of interest in the anti-slavery conflict, then so sharp with incidents of outrage in Kansas and in Washington, where Sumner was feloniously assailed. Parker's tremendous anti-slavery preaching passed over him like a summer cloud without his special wonder; its thunder and lightning startled him into no faintest apprehension of the magnitude of the issues then at stake. Going to Virginia, he was pleasantly impressed by the Virginians, and with disgust and horror by their industrial conditions. When it was proposed to prevent the students from preaching to colored people, he took a manly part in the protest against such action. Strangely enough, however, the signs of his moral indignation grow less poignant as he becomes better acquainted with the local situation, not because this was getting less detestable to him, but because his absorption in his reading and meditation was so complete. It was the war that awakened him, as it did many others, to the enormity of slavery and pro-slavery politics and their danger to the republic. Henceforth, his warning trumpet gave no uncertain sound. Among Episcopal churches, his stood out, if not quite alone, with unique splendor. "The Episcopal Church during the war," says Professor Allen, "as for some years preceding, had become a house of refuge for those who disliked political preaching." At the General Convention in 1862, a bishop, preaching the opening sermon, declared that any mention of the war in the Convention would be "high treason against God." Nevertheless, the treason was risked to the extent of certain colorless resolutions on which Brooks commented: "It wasn't very interesting to see those old gentlemen putting their heads together to make some resolutions that would please the Union people and not hurt the feelings of the dear rebels." He wrote: "The shilly-shallying was disgraceful," but he was grateful for the slight concession made to loyalty. None was, however, made to liberty, and he took good care to make the necessary amendment in his own pulpit. He hailed with enthusiasm Lincoln's preliminary proclamation of September, 1862, and the grander one of 1863. When the war was over, he entered heartily into the work of the Freedmen's Bureau, and made himself its useful servant. He pleaded eloquently for the enfranchisement of the freedmen, and denounced the exclusion of negroes from the Philadelphia cars. In all these things he was going counter to the spirit of his church and to that of his father's prudent Whiggery, though the father was almost persuaded by his Thanksgiving sermon of 1863, "The Mercies of Reoccupation." Phillips Brooks was never more magnificent than when bearing these public testimonies to the character of slavery as the nation's greatest sin, "the blackest stain upon our country, and the cause of all the ruin and bloodshed and affliction that have been visited upon our land." But he made no mistake as to the courage necessary for such speech. He knew that it would have been fatal to him in any Episcopal church before the war, and even with the war in full career, for any preacher whose success was unassured. His boldness cost him valued friends, but others came to make their places good.

These aspects of Phillips Brooks's life are the more interesting because they contrast so vividly, if not painfully, with those of his Boston ministry, which began in 1869. Here he was no longer the reformer he had been in Philadelphia, but the parish minister and the ornament and inspiration of civic and social functions of all kinds. Professor Allen makes this distinction with insistent frankness, but without regret. It is true that the anti-slavery conflict was over and no other made a similar appeal. But it is also true that henceforth Mr. Brooks, while tossing now and then a lordly sop to this or that reform, joined himself definitely to none of those engaging public interest. And however it may be with some, others will feel the difference from his Philadelphia work as a distinct decline from a higher to a lower level. The building of Trinity Church, even with such an architect as Richardson, an architectural Brooks, touches these pages with a less potent charm than the young preacher's passionate devotion to the integrity of the Union and the emancipation and enfranchisement of the slave. The wonder will intrude what part he would have taken if his perfect prime had coincided with those stages of the anti-slavery conflict which led up to the war, and it cannot be justly doubted that such coincidence would have meant a great enhancement of his use and fame.

There were other differences between the Philadelphia and the Boston ministry, but as to the nature of them Dr. Weir Mitchell, who furnishes a delightful appreciation, and Professor Allen disagree. Dr. Mitchell thinks the Boston ministry the more intellectual ; Professor Allen thinks it the less so. Quite certainly it was less fervidly rhetorical, while still, as time went on, there was more emotional engagement on the part of the preacher with his thought. There was, too, less care for the felicities of expression. A more essential difference was involved in the fact that while, in Philadelphia, he was mainly bent on freshening the evangelical doctrines with an infusion of modern thought, in the seventies he was much concerned with the agnostic and destructive tendencies so characteristic of that decade. Professor Allen is disposed to exaggerate the importance of Brooks's dealing with these tendencies, and everywhere, we cannot but think, to exaggerate his philosophical, if not his intellectual, powers. Much interested in scientific and critical reading, he did not assimilate its characteristic quality. Science yielded him many symbols and illustrations without seriously affecting the substance of his thought, which in its essential character was always imaginative and poetic. It is significant that Maurice was his favorite theologian, and that Brooks's embracing of his cloudy thought insured a progeny of vague opinions. Fortunately, he did not, with most of the new orthodox, go much to Schleiermacher or Hegel, those encouragers of theological mystification. But Lotze's doctrine of the whole man, and not the exclusive intellect, as the organon of knowledge, found him extremely sympathetic. Here was excuse for thinking with his heart when he was tired of thinking with his head. It should be said that there is much more theological clearness in his addresses to his theological club, the Clericus, and in his letters and journals, than in his sermons. This was because his ideal sermon excluded the concrete and everything that could not be expressed in terms of poetry and the imagination. Even civil-service reform he must treat as imaged forth in Hebrew politics, and so obscure it to a degree that made the sermon far less practically effective than it might otherwise have been.

The conservatism of his theological temper brings out his liberality into strong relief. This was a grief to his friends of the more churchly kind; but Phillips Brooks was not churchly. If there was one thing that he cordially disliked, in any form, it was clericalism. The clericals will be sorely displeased with many of his references, in the freedom of his correspondence, to their

works and ways. They will be shocked at the specific levity with which he treats his episcopal clothes, and the ecclesiastical minutiæ to which he is expected to conform. Such violence did the habitual quiet of Trinity Church suffer when he first came to Boston that the sexton endeavored to discourage the desire to hear him by separating young men and women who came together; and "he expected me," said Brooks, "to approve the fiendish plan." Good Bishop Eastburn, who "did not wish to be saved in a crowd," betook himself to St. Paul's, where there were "seas of silence round each separate star." One of the most striking episodes of the later years was furnished by the attempt to change the name of the Protestant Episcopal Church so as to have it known as *the* Church *of* or *in* America. Brooks never struck out from the shoulder with directer manliness than in opposition to this stupendous foolishness, and nothing except personal sorrow ever afflicted him so painfully. For a time he despaired for the church he loved so much. Had the movement succeeded, he might have gone outside the camp, whatever the reproach. Another interesting episode was furnished by the change at Harvard from compulsory to voluntary prayers. Brooks was at first strongly opposed to the change, but afterwards supported it with all his might, declaring that he would not be one of the college chaplains under the old régime. There was no inconsistency; his conservative impulse spoke first and then his careful thought. His election to the bishopric of Massachusetts is evolved by his biographer with all its impossible details of clerical imbecility endeavoring to thwart a great popular admiration and affection, transcending all sectarian boundaries. The story of his untimely death is told with a simplicity too pathetic for our praise. The final and consecutive impression is that of a man whose heart was bigger than his frame; whose enthusiasm for humanity and universal life was without stint, and whose desire and passion to enamour others with his own conception of the dignity and glory of our common lot were a consuming fire.

ROBERTSON'S ENGLISH POLITICS.

An Introduction to English Politics. By John M. Robertson. London: Grant Richards; New York: New Amsterdam Book Company. 1900. Pp. xxvii, 515.

Whether its future is as "immense" as that of poetry, there is a well-grounded feeling that the expansion of historical interests and the development of specialization have given to history a greater claim upon the attention of thoughtful men, so that it is no longer regarded as a refuge for the intellectually destitute. The new school of historians cherish the ideal of history subjected to "that methodically analytical, distrustful, not too respectful turn of mind which is often mystically called the critical sense, but which is nothing else than an unconscious *habit* of criticism," to quote the words of Seignobos; an ideal, which, if realized, will destroy the present fluid condition of historical theory, and relieve us of those conventional, inadequate, and uninspiring books which have brought upon us the problem of History vs. Literature.

Such reflections are occasioned by looking into Mr. Robertson's book, which is a frank recognition (in the preface) of the influences at work in this direction; but how far his effort will contribute to the improvement of our methods of historical study, to what an extent it will satisfy us or leave us any less doubtful of the methods of investigation employed, is an entirely different matter. Lamentably needed as is a philosophy of history, no intellectual effort has been more inevitably discredited; Montesquieu's work reviving memories of men whose efforts in this field, like his own, have been all but forgotten. In the face of all this, we have a book which shows plainly that its author has not been in the least disconcerted by the fate of those who have gone before, but indeed enters upon the field with an assurance of knowledge, the fruit of "science." After paying his respects to those who have attempted to bring some of the apparent lessons of the past political history to bear on the problems of the present, Mr. Robertson attempts to disarm criticism by the plea that he has "not written for specialists, but for the purpose of qualifying the reader in some degree for the great but little-regarded task of framing his own political and sociological opinions." Against the "vacuous species of explanation," the "simple verbalist way," "the blatant patriot's sort," "the vitiating gospel of race," the discussion of sociological "theory in vacuo," and "obscurantist" generally, are his pages directed. "Only by perpetual analysis," he says, "can we hope to escape the snare of the pseudo-synthetic, the traps of rhetoric and exegetic fiction"; and what is the true synthesis? Simply that "axiom alike of inorganic physics and of biology, and a commonplace of human science— . . . the simple principle that all energy divides ostensibly into forces of attraction and repulsion"; and, finally, "the general law is that the forces of attraction and repulsion, as exhibited in human thought or feeling, run during the earlier stages of growth in channels which may be broadly regarded as animal; and that when altered political and social conditions partly or wholly close these channels, the biological forces open for themselves new ones." Materialists may steal a horse, while idealists may not look over the hedge. Mr. Robertson, with his physical analogies, expects to avoid the criticism he directs at others, and fails to see that he is as guilty as they in sacrificing history to symbolic notation. Irrespective of the crudely unscientific character of the "axiom," the proof that the social series is analogous to the physical series is lacking, and the author, with those he savagely criticises, must be content to lie under the imputation of resorting to "the vacuous species of explanation." As Brooks Adams with his "solar-energy" theory, so is this writer under the spell of an analogy which proves the tightening grasp of law as seen in the narrow stream of European civilization running through Greece and Rome to France and Germany.

In spite of a profession of objectivity, there is a wearisome, persistent identification of the Church with fraud, imposture, and sinister self-seeking, showing how polemical irritation can twist an acute intelligence into declaring that the Church was really the least valuable of the old institutions, "inasmuch as it wrought always more for the hindrance of progress and the sundering of communities than for advance and unification." This spirit is scarcely justifiable, in view of statements, made elsewhere, to the effect that, in the break-up of the old civilization, the Church gave to men of taste and culture both shelter and support, and "offered a field of ostensibly free intellectual activity, and so was for a time highly productive" (p. 168). Were Guizot and Taine, with all their polemical zeal, any more "vacuous" than Robertson, when he says that this "phenomenon was, of course, simply one of the passage of energy by the line of least resistance"?

Such work only contributes to the discredit of social studies. Though the appeal is made through sociology, the only result is the weakening of that study by the failure to recognize that physics is solely a conceptual description; and the salvation lies in discarding the entire group of crude analogies derived from biology and physics. The methods of the social sciences must be determined from their own problems, and their laws must be proved from their own evidence, before any analogy from physical science can have any weight. Mr. Robertson's failure lies in his inability to realize that analogies are useless in unexplored regions, and that a rehabilitated metaphysical category will not do for the corner-stone of a science.

Though his criticism of the older writers is often shrewd, if not new, there is the most unfortunate ignoring of the elementary conditions of historical study. To search history, ancient or mediæval (of which Mr. Robertson shows the conventional ignorance), with a controversial object, destroys the mental conditions which are necessary in order that the past may mirror itself on the mind in true outline and proportion. For instance, there is a criticism (p. 7) of Mr. Bryce for an exhibition of "mediæval science," because he says that "Rome had sacrificed domestic freedom that she might be the mistress of others." Continuing his unfavorable comments, Mr. Robertson says: "The 'she' of this passage I take to be as purely an imaginary entity as Phlogiston; and it is not easy to see how a method of explanation which in physical science is found, not so much barren as nocuous, can give any edification in the study of history"; while in his very next chapter he forgets all of this attack on "doctrinary extravagance," and falls himself to "cooking an intricate moral problem," illustrating his own inability to forget the old methods or realize the nullity of formulas. Until the study of transitional periods takes the place of the "critical epoch," we may confidently look for that fall-of-Rome state of mind into which our sociologist-historian is sure to glide when he investigates history with that climax of descriptive vagueness, the "consciousness of kind" theory, as his means of attaining true synthesis.

Inadequate as may be the present methods of treating politics, they represent more devotion to the spirit of science than do Mr. Robertson's five hundred pages. While he has classified and developed contradictions, his attempt at historic pyrrhonism has shown nothing but his reading, while those interested in his book may be left to discover for themselves whether he is but an addition to that list of later writers of whom he says: "They investigate many details, but reason feebly or timidly on general principles." We may be allowed to hope that, before the appearance of the

companion volume, the injustice done Douglas Galton in holding him responsible for the "crude view" underlying the argument in 'Hereditary Genius,' will be repaired; and that the intellectual congeniality between Giddings and Lester Ward may be realized as more apparent than real.

THE CRIMINAL CLASSES.

Pictures and Problems from London Police Courts. By Thomas Holmes. London: Edward Arnold. 1900.

The Powers that Prey. By Josiah Flynt and Francis Walton. McClure, Phillips & Co. 1900.

Notes of an Itinerant Policeman. By Josiah Flynt. Boston: L. C. Page & Co. 1900.

Mr. Thomas Holmes has held for many years the position of "Police Court Missionary" in London, an office which might well be recognized in every country as an essential feature of criminal jurisprudence. Occupying this position, he has been able to learn much more of the history and the character of the wretched people who appear in the police courts than is disclosed by the ordinary process of law. Such information is of course valuable for those who make a serious study of the causes of crime; but the style in which Mr. Holmes writes is rather too emotional to make his facts available for scientific purposes. In fact, his book is little more than a rambling narrative of his experiences with a certain number of degraded and unfortunate persons; pathetic, indeed, but on the whole pointless. We refer to it chiefly because it shows what progress has been made in improving the administration of the police courts of London, and because it suggests some contrasts unfavorable to our own systems.

About twelve years ago Mr. Justice Wills was the means of instituting a number of important reforms, with the result that, in Mr. Holmes's judgment, "everything that can be done for the comfort, refinement, and decency of the prisoners is now done" at all the London courts. "The moral atmosphere is vastly improved, but the physical is improved beyond knowledge." A matron attends at every court, and female prisoners not only are separated from those of the other sex, but are also classified in such a way as to prevent young girls from meeting the hardened offenders. In fact, every prisoner who desires it has a separate compartment, and the cells have walls of white glazed tiles, and are lofty, light, and well ventilated. "The tone of the police, too, is wonderfully raised, while the magistrates are not only humane, but also human, and in touch with the various agencies for the assistance of prisoners."

Such conditions can hardly be said to prevail in the great cities of this country, and there is much reason to fear that the tone of our police has been lowered rather than raised during recent years. Many of our police magistrates are inferior, both in abilities and in character, to those on the London bench. The causes of this are indicated, in a general way, by the two remaining books on our list, and are summarized in the one word, "politics." The control of the police is of great importance to the managers of our parties. They require it either to cheat, or to keep from being cheated, at elections; and they utilize it for numberless forms of negative and positive blackmail. They have systematized venality and made it a fine art. Some of them regard the criminal law as a means of obtaining revenue rather than of repressing crime. The innocent must pay to have the laws intended for their protection enforced; the guilty pay that the laws may not be enforced against them. Jugurtha's parting apostrophe to Rome might be repeated to the city of New York; and in the latter case the purchaser has actually been found.

The joint work of Messrs. Flynt and Walton may be characterized, to use one of its phrases, as "cynically and even degradingly veracious." Mr. Flynt appears to have contributed a measure of facts which Mr. Walton has embellished and expanded into sensational tales, not without literary skill. They are exciting pictures of the exploits of criminals and their prosecutors and persecutors, and are colored throughout with the assumption that rich and "respectable" men are engaged in predatory enterprises as evil and as criminal as burglary and the picking of pockets. There is truth enough in this to cause us to be uneasy for our future; for we can hardly deny that most of us are engaged so heartily in serving Mammon that we are tempted to condone the moral irregularities of our fellow-worshippers, provided they are successful.

The existence of a league between the police and the thieves is more soberly considered in Mr. Flynt's book. The proverb, Set a thief to catch a thief, has undeniably been exemplified many times in the history of the police, and it is easy to say that only those familiar with the ways and the personality of thieves are competent to detect them or to deter them. Few persons of fastidious morality would feel drawn to the occupation of thief-catcher, and such material must be utilized for the police as is available. In reply to this argument it may be urged that so long as crime is winked at and tolerated, so long will crime be a regular occupation. No doubt officers personally acquainted with the followers of this occupation can treat with them and hold them in check; but with a proper system of reformatories for the young, and with the indeterminate sentence for habitual criminals, the occupation might be practically suppressed. At present, as Mr. Flynt shows, the police in some cities tolerate the presence of dangerous criminals on condition that they prosecute their calling elsewhere. There is reason to believe that in some cases this toleration exists without such condition, and that the police actually receive a share of the spoils obtained by thieves. This system of "licensing" criminals is of course corrupting to the last degree.

Even where it does not exist, the police and the courts are often extremely inefficient. Every few days we read of the robbery of a bank in one of the central States, and the account given by Mr. Flynt of the "Lake Shore Push," or gang, explains these outrages. The Lake Shore Railroad is, or was, "worked" by a gang of desperadoes, as their exclusive property. They do not hesitate to exclude the ordinary tramp from their preserve, and murder him if he does not obey their commands. According to theory, government exists in order to prevent the depredations of such malefactors, but in practice the railroad companies need to maintain their own force of police if they are to save their property. Had they the coöperation of the regular police and the other agencies of government, they could easily put an end to the outrageous "tramp nuisance"; but they cannot depend on such coöperation.

Mr. Flynt maintains, however, that the railroad managers could accomplish much more than they do. They could prevent tramps from riding on their freight trains, breaking into their cars, and terrorizing their train hands. On one road five is the smallest number of tramps usually carried on a freight train, and it sometimes rises to one hundred. The train men do not dare to incur the hostility of these desperadoes, and they hardly venture to go over their trains at night. While it is the duty of government to put a stop to lawlessness, its incompetency justifies the railroad managers in taking the matter into their own hands. It is satisfactory to learn from Mr. Flynt that there is one railroad police organization which effectively guards the property committed to its charge. Not only are trespassers and thieves apprehended, but the whole property is patrolled with military system. The rabble which formerly infested the railroad has departed, the stealing of freight has diminished, and the expense of the police force has been reduced. Such work ought not to be a necessary feature of railroad operation; but with our government as it is, it becomes the duty as well as the interest of railroad men to prevent their lines from being "avenues of crime," by following the example set by the Pennsylvania Company.

Pompei: The City, Its Life and Art. By Pierre Gusman. Translated by Florence Simmonds and M. Jourdain. With 500 text illustrations and 12 coloured plates from drawings by the author. London: William Heinemann. 1900.

In 1894, 1896, and 1898 Pierre Gusman, a young French artist, spent many months in the fascinating Campanian city, and, soon becoming enamoured of it, devoted himself to filling his portfolios with paintings and drawings of what he saw in Pompei itself or in the Museum of Naples. Returning to Paris full of enthusiasm, he published in 1899 what he called, in his brief preface, a history of the Pompeians illustrated by themselves, and illustrated, we may add, with a richness which has never been exceeded in any work upon this much bewritten subject. The book was no collection of archæological dissertations, nor did it make any profession to be such; it was the honest attempt of an earnest young man to make Pompei live again in the light of what his own eyes had shown him and of what he had gleaned in a somewhat limited course of reading in the ordinary books. The result was what might have been expected. On the one hand, the illustrations deserved and have received high praise; on the other, the text, being made up rather of first impressions than of well-digested study, has met with much criticism, notably at the hands of the leading expert of things Pompeian, August Mau. The present volume is a well-made translation, with a few changes and some omissions, of the original French, and, having obviously been transcribed before the benefits of criticism could be had, it comprises the faults as well as the merits of the original.

The book consists of five parts. The first

presents a somewhat brief but trustworthy account of the destruction of the city and of the history of its excavation. Part second deals with the tombs, the temples, and various cults; part third, with the public buildings and recreations of the Pompeians; part fourth, with the streets, inscriptions, and industries; and part fifth, with the Græco-Roman house. The sixth, and by far the longest part (naturally so, considering the profession of the author) treats of architecture, painting, sculpture, and *objets d'art*. The volume ends with a wretchedly meagre index, but this is the fault of the translators, not of Gusman, who gave an extremely full one.

The illustrations are, as we have indicated, the best part of the whole, and of these the full-page plates are in their turn the most satisfactory. On these twelve plates are grouped thirty-two beautifully reproduced water-colors, including the interiors of two houses, examples of the four styles of wall decoration, the Stabian gate and the street that runs to it, several mosaics, and numerous wall-paintings—among them a dozen of the heads which, with Marriott, our author chooses to consider as portraits, a view that is utterly repudiated by Mau. Yet these very pictures are the most pleasing of all Gusman's work, and one can enjoy their artistic beauty without caring one whit whether the heads are those of real people or mere creations of the brush. Who cares whether the Pyrrha of Horace's prettiest *vers de société* ever lived otherwhere than in the poet's fantasy? Next in excellence to the heads come the examples of the four styles of wall-decoration, and here even Mau confesses that Gusman has been successful in reproducing the general impression, although at a sacrifice of some details. But as we understand this book, impressions are all that Gusman was seeking; details may be had by the dozen in photographs if one cares to study them. Certainly impressions are what one gets from the illustrations in the text, which (except for the drawings of sculpture, wherein Gusman is far from happy) are generally far superior as works of art to any drawings that are to be found in Mau's books. But by impressions we do not mean that Gusman has put into his pictures elements not to be found in the originals—far from it; nor was he trying, like those who drew for the 'Museo Borbonico,' to make pretty pictures out of nothing. Restoration and reconstruction he does not attempt; he draws what he sees, and ninety-nine out of a hundred visitors would see no more.

Indeed, if it comes to details, let anybody who happens to possess a photograph of the Apollo and the Python from the House of the Vetii compare it with Gusman's drawing on page 69; we warrant that his surprise will be great to find that the drawing, which at a casual glance seems rather a careless one, does actually not omit a single detail of the original, nor misrepresent any except the lower part of Apollo's lyre. The specialist in lyres may feel that a most important part of classical antiquity has been neglected; but, on the other hand, even he will rejoice with us in the absolute air of freshness which pervades all the illustrations in this volume. All were drawn by Gusman, and none of the familiar old fiftieth-hand woodcuts appear here. Let a *nunc dimittis* arise as we note that the Chinaman ladling out soup, the tragic poet's butler eavesdropping in the atrium, the brigand in his mysterious cloak confronted with the skeleton of his victim in the "House of Joseph II."—all these *deliciæ* of Mazois, Overbeck, and Mau are gone, and we trust for ever.

But what a pity that Gusman did not content himself with an album of pictures, or at least invite some archæologist to help him with the text of his book, if text he must have had, for it is brimful of errors—*il sent le novice d'une lieue*. Is this a decade in which to follow Clarac as an authority on Oscan, or worthy Père Garucci on the graffiti? Was it not glory enough to be the first to write, in a popular work, about the newly discovered temple of the Venus Pompeiana without adding to the mere description of the ruins an absurd and debasing account of the nature of that goddess? We give M. Gusman credit for one thing; he is not afraid to call a spade by its garden name, and he is the first popular writer who has written a chapter about the lupanaria of Pompei. But poor Princess Julia, the daughter of Augustus, had sins enough to answer for in all conscience before Gusman foisted upon her a slave-woman, Tyche, to fill at her court a vile office; for this is his interpretation of the inscription on the well-known bust found in Pompei. Why should anybody quote Lucretius who thinks that the poet's work is divided into *chapters*, or devote a page to the explanation of the Roman numeral signs when he fancies that M for thousand is a Greek letter, and that D for five hundred is derived from IↃ? To state that one-tenth of the population of Pompei *survived* the eruption is to give the number of those who *perished*, and the context shows that the error was no slip of the pen. The drawing of a soldier's helmet is a good drawing, and it was well enough to give us the picture of a Pompeian's skull; but to put the two together and to explain that the skull was found in the helmet, and that both belonged to the sentinel who died at his post near the Herculaneum Gate, shows that our author was too ready to swallow the tales of some waggish guide. No such sentinel was ever discovered, and there is no helmet in the museum which can be shown to have belonged to any skull there.

We say nothing of the many misprints in the text (for some of which, no doubt, the translators are responsible), nor of more serious errors to which Mau has already called attention; for example, Gusman's notion that fresco painting, properly so called, was very little known in Pompei. It must be obvious that, as a picture book, the work is in the main a success, but that little credit should be given to the novel doctrines advanced in the text.

LIFE AND LETTERS OF PHILLIPS BROOKS

By Alexander V. G. Allen. 2 vols, 8vo, 1,637 pages, with Portraits and Illustrations. Cloth, gilt top, in box, $7.50 net.

"It is the story of a noble life, nobly told, rich in examples from his own sermons, letters, and addresses."—Independent.

"A very notable contribution to the small class of really worthy American Biographies. . . . For a generation to come those who are qualifying themselves for the Christian ministry, of whatever name, must read this book."—Atlantic Monthly.

THE MORE ABUNDANT LIFE

Reading for each day in Lent, selected from the writings of Phillips Brooks. By W. M. L. Jay. 16mo, 250 pages, cloth, $1.25.

A MANUAL OF DEVOTION FOR LENT

By W. J. Knox Little, M.A. 12mo, 328 pages, cloth, gilt top, $1.50.

THE BARTERED BIRTHRIGHT

Forty Brief Expository Addresses on the Life of Jacob, for the Week Days of Lent. By the Rev. F. A. D. Launt, D.D. 12mo, 228 pages, gilt top, $1.50.

These are ten-minute addresses for Lent, and will be found very valuable for lay readers and overworked clergymen.

"They will hold the attention of the comparatively indifferent reader, and they will delight the earnest Christian of every school of thought."

A new volume in The Saintly Lives Series

ALFRED TENNYSON

By Robert F. Horton, D.D. 12mo, 336 pages. Illustrated, gilt top, $2.00.

"We would heartily recommend Mr. Horton's life of Tennyson to those who would have an intelligent appreciation of not only the poet and the poems, but the man himself. . . .

"One of the tenderest pages in this volume is that telling of the ideal married life which blessed the poet's home. As the bridegroom said long years after, 'The peace of God came into my life before the altar when I wedded her.' "—Boston Advertiser.

LORD ROSEBERY

HIS LIFE AND SPEECHES

By Thomas F. G. Coates In two large 8vo vols, (1,078 pages), handsomely bound, gilt top, $10 00. With full-page illustrations and portraits and two photogravure portraits.

The speeches are given by permission of the Earl of Rosebery and The Times.

JOSEPH CHAMBERLAIN

THE MAN AND THE STATESMAN

By N. Murrell Marris. In one large handsome 8vo vol., 500 pages, gilt top, $5.00 With 32 full-page illustrations and portraits and a photogravure portrait.

NEW EDITION, WITH INDEX.

LETTERS OF THOMAS EDWARD BROWN

Edited, with an Introductory Memoir, by Sidney T. Irwin. 2 vols, 8vo, in box, $4 00 net.

Mr. W. E. HENLEY contributes to The Pall Mall Magazine an appreciation of the late T. E. Brown, from which we quote the following:

"The 'Letters' have shown what manner of man Brown was—how personal, how many-sided, how humorous and intense, how rich in sentiment, yet how rich in farce; how brilliantly and variously lettered, and how unalterably humane; how strong in discipline, how quick with the defensive spirit, yet how riotously accidental, how beautifully unpedantic. Brown was ever so many things; scholar, talker, mimic, farceur, preacher, teacher, schoolmaster, musician, lover of nature, lover of man; yet of his very essence before all these differences, before the talker, or the mimic even, there was the man of letters, there was the artist in style."

Sent express paid on receipt of prices.

Two Books by

EUGENE SCHUYLER,

AUTHOR OF "PETER THE GREAT," "AMERICAN DIPLOMACY," ETC.

"The Memoir tells very simply the story of a life devoted to letters and to diplomatic service. Perhaps the most interesting part of the narrative is that which tells of Schuyler's notable service to humanity on the eve of the Turko-Russian war. . . . This alone would have justified the writing of the book, but there is also in its pages much of a gentler interest about Schuyler's reading and literary associations."—New York *Evening Post.*

With photogravure portrait. 8vo, $2.50 net.

Memoir and Essays

This volume includes a comprehensive memoir of Eugene Schuyler, by Evelyn Schuyler Schaeffer, and essays entitled "Count Leo Tolstoy Twenty Years Ago," "The Minnesota Heir of a Serbian King," and "The Lost Plant."

Uniform with the above. 8vo, $2.50 net.

Italian Influences.

Mr. Schuyler's long residence in Italy and his unusual equipment give distinction and value to this volume, which contains a score of essays on subjects connected with art and literary topics in Italy.

"The first volume includes a sympathetic memoir, by EVELYN SCHUYLER SCHAEFFER, a lengthy study of *Tolstoi*, and some miscellaneous papers. The second, entitled Italian Influences, includes Schuyler's studies upon '*Landor and Italy*,' '*Dickens in Genoa*,' '*Madame de Genlis on the Riviera*,' '*Shelley with Byron*,' '*George Sand in Italy*,' with many more whose titles are equally promising. The memoirs prove to be interesting reading, as they contain numerous letters which bear upon the various international crises during Mr. Schuyler's diplomatic service; while here and there we come upon a bit of literary criticism, or a glimpse of behind the scenes at some exalted personage, that is well worth quoting."—New York *Commercial Advertiser.*

Published by

CHARLES SCRIBNER'S SONS, *New York.*

THE Forty-first Annual Statement of **The Washington Life Insurance Company** advances the Company along the lines of real progress in every essential detail of its great and rapidly increasing business fully equal to any year in its history.

The solidity of the Company's invested assets, admitting of neither expansion nor contraction, but measured dollar for dollar by the severest standard of coin value, furnishes the best possible assurance of the intrinsic worth of its policies, and be they Life, Endowment, Combination or Gold Bond, they are always on a parity with the very best.

The Company has paid to policy-holders since organization, $35,537,705.76, and holds invested assets $16,178,374.49. Of the latter sum over a million one hundred and forty-two thousand dollars have been loaned to the holders of its policies. The sums paid to the insured, together with substantial securities held for their benefit, aggregate $51,716,080.25.

The business statement of the year summarized shows that the Company paid $1,913,716.97 to policy-holders. The record of the year also shows about $4,000,000 of insurance gained; notable gains in assets, in income, in surplus, and in volume of business. The amount insured being $61,083,689.00.

Its liberal and just treatment personally of individuals by prompt payment of claims, dividends and surrender values, abundantly sustains a reputation for which this Company has always been conspicuous.

The unhesitating readiness of The Washington to grant loans on its policies, has proved of incalculable value in preventing the loss of the insurance. The knowledge of these essential truths has convinced the public that good insurance may be had, and where to get it.

Extract from the report to Hon. Francis Hendricks, Supt. of Insurance of the State of New York, by the Chief Examiner, Hon. Isaac Vanderpoel:

NEW YORK, Dec. 20th, 1900.

SIR: I beg to report that the examination of THE WASHINGTON LIFE INSURANCE COMPANY of New York, made in pursuance of your appointment No. 1,368, has been completed. The examination contemplated the verification of the Company's Annual Statements to the Department since its last examination of the Company in 1892. The result of the examination showed the annual returns of the Company filed in the Insurance Department since the date last mentioned to be correct.

Respectfully submitted,
ISAAC VANDERPOEL,
Chief Examiner.

THE LONDON TIMES,
commenting on Mr. Stedman's
American Anthology,
remarks:

"Of his competence for that high duty there is no question. He is admittedly the best equipped of living American critics of poetry. He is very far from being a student of American poetry only, or mainly. His critical survey of the 'Victorian Poets' is a more adequate and complete account of that great matter than any Englishman has thought worth while to give. His 'Victorian Anthology' is a cyclopædia of modern English poetry edited with signal discretion and delicacy."

An American Anthology $3.00
A Victorian Anthology $2.50
Poets of America . . $2.25
Victorian Poets . . . $2.25
The Nature and Elements of Poetry . $1.50
Stedman's Poems . . $1.50

Senator Lodge

says of the new biography of

U. S. GRANT

By OWEN WISTER in the Beacon Biography Se ies:

"Th's is a most admirable biography of General Grant. Within the space allotted to him Mr. Wister has given a most striking picture of the man himself It required much art to draw on such a limited canvas so vivid a portrait. All the essential features are there, thrown into high relief, and it wi l give to many who have not the time to read larger works an opportunity to comprehend the character and qualities of the great soldier of the Civil War."

Pocket size, flexible cloth, 75 cents; in lambskin, $1.00, net.

Send for Circular about these BEACON BIOGRAPHIES.

Boston Herald—"One of the most refreshing love stories of modern fiction."

JOHN LANE, 251 5th Ave., New York

AN EDUCATIONAL DIRECTORY

I.—THE NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

BY HAMILTON W. MABIE. New edition in less expensive binding, etc. Cloth, 8vo, $3.50 net

"An illuminating and sympathetic record, full of literary charm and of quiet insight. It is for the lover of books even more than for the student; above all it is for the lover of Shakespeare, in its simplicity, its freedom from polemic."—*Publishers' Weekly.*

THE NEW NOVELS

GWENDOLEN OVERTON'S

THE HERITAGE OF UNREST

Cloth, $1.50

A strong story of life with the army on the frontier during the Indian outbreaks of the late seventies. It is especially interesting in that it describes conditions which can never recur and which should not be lost from our social and historical literature. It is a new and valuable note in American fiction.

The Life and Death of "RICHARD YEA-AND-NAY"

By MAURICE HEWLETT, author of "The Forest Lovers," etc., etc. Cloth, $1.50

"A work of fiction, rising far, far above all the novels of the year—of a good many years."—*The Bookman.*

A Love Story of Old Madrid

By F. MARION CRAWFORD, author of "Via Crucis," "Saracinesca," etc. Cloth, $1.50

"Bold and daring . . . dramatic, picturesque, and intensely interesting."—H. W. MABIE.

THE MACMILLAN COMPANY, 66 FIFTH AVENUE, NEW YORK

The Nation.

NEW YORK, THURSDAY, FEBRUARY 28, 1901.

The Week.

A crisis in the Cuban situation was reached with the signing of the Constitution by the delegates on Thursday, and the circumstances under which the action took place. Señor Cisneros, one of the most prominent members of the body, refused to sign the copy of the document which will be sent to Washington, and declared that "the United States Government has no right to pass upon it." Growing more indignant and less restrained, he shook his fist at the American newspaper men, as the delegates retired, and said: "The Americans are like the monkey. When the monkey closes its paw on a thing, it never wants to let go." To the remark of a fellow-delegate that "we are all Cubans," he replied, "Yes, when the time comes to fight the Americans, we will fight them together." Such is the humorous result of "the war for humanity" which we undertook three years ago with such earnest assurances of our devotion to the cause of a free and independent Cuba: general distrust of our sincerity among the people in whose behalf we interfered, and the open suggestion of another war for independence on the part of the Cubans, this time to secure freedom from what many of them consider the tyranny of the United States.

It soon appeared in the discussion in the Senate on Monday, that the Spooner amendment to the Army Appropriation Bill giving the President power to establish civil rule in the Philippines would cover authority for the Executive to dispose absolutely of public lands in the archipelago without allowing the natives any voice in the matter. Mr. Hoar put the situation, and the philosophy which underlies it, very clearly and forcibly when he said:

> "The leading bald proposal here is that the public lands and franchises of twelve millions of people shall be sold by Americans to Americans as upon the whole the best means of pacification. The best means of pacifying a man is for one foreigner to take and sell his property to another foreigner. And this is the method by which we are to teach the principles of liberty and self-government!"

Attempts are made to justify the grant of such vast powers over the Philippines to McKinley on the ground that Jefferson was invested with similar authority over the Louisiana Purchase and Jackson over Florida. Congressman Gaines of Tennessee has exposed the fallacy of this theory as to Jackson and Florida. Instead of surrendering power for an indefinite period, which Senator Morgan maintains could be reclaimed by Congress only through a two-thirds vote of both branches, the act of 1821 granted authority only until the first session of the next Congress. Moreover, Jackson, arbitrary as he is generally considered, refused to enforce the law longer than from June to October, and upon returning home, after setting up a government as best he could, condemned the act in these emphatic terms:

> "I am clothed with powers which no one under a republic ought to possess, and which I trust will never be again given to any man. Nothing will give me more happiness than to learn that Congress, in its wisdom, shall have distributed them properly, and in such a manner as is consonant to our earliest and deepest convictions."

At Manila, on Thursday evening, the newly organized Federal party gave a dinner in memory of Washington, to which the authorities, civil and military, were bidden. What must have taxed the ingenuity and sorely strained the gravity of the after-dinner speakers was to find any analogy between "the day we celebrate" and the surrounding conditions. It was a question of making Washington a great benevolent *conquistador*, instead of the great peace-loving defender of his country—of that, or of leaving Washington alone. Fortunately, there was the usual recourse of being vague and general. It was only when the speakers particularized that the situation grew difficult. When Judge Taft "likened the resistance of the American colonies to royal and patrician injustice to the resistance of the Filipinos to similar injustice," we wonder if he explained that he spoke in the remote historical tense, and not of existing conditions. Perhaps not, for Gen. MacArthur had already supplied the exegesis that, "under the American flag, injustice and oppression are impossible." Gen. MacArthur also dwelt naturally on the fact that Washington went in even more for "stable institutions" than for "independent republicanism." The native chairman evidently knew where "stable institutions" were coming from, for at the end of his speech, showing a creditable familiarity with a peculiarly American rite, he declared that Washington was "first in the hearts of the Filipinos." After dinner, and especially at a love feast, no man is under oath, but if the command had come, "All whose tongues are in their cheeks will please rise," would not that entire assemblage have been found ready for the toast—the President?

The secret history of the negotiation of the Paris treaty is gradually leaking out. The latest and largest contribution is found in various documents which the President has recently sent to the Senate in response to its request for information, though he still keeps back certain papers on the plea that it would be "incompatible with the public interest" to give them out now. Going back to the question of the relations between the representatives of the United States and Aguinaldo during the period following Dewey's victory at Manila, there is an important dispatch from Judge Day while the treaty was under discussion at Paris, in which he says: "Gen. Anderson, in correspondence with Aguinaldo in June and July, seemed to treat him and his forces as allies and native authorities, but subsequently changed his tone." Judge Day was at first strongly opposed to the seizure of the whole archipelago, and sent this dispatch to the President on October 25, 1898:

> "I am unable to agree that we should peremptorily demand the entire Philippine island group. In the spirit of our instructions, *and bearing in mind the often declared disinterestedness of purpose and freedom from designs of conquest with which the war was undertaken, we should be consistent in our demands in making peace.*"

Judge Day added the pregnant remark that "only experience can determine the success of colonial expansion upon which the United States is now entering." Senator Gray of Delaware was of the same mind, and sent this earnest protest to Washington:

> "The undersigned cannot agree that it is wise to take Philippine Islands in whole or in part. To do so would be to reverse accepted continental policy of the country declared and acted upon throughout our history. Propinquity governs the case of Cuba and Porto Rico. Policy proposed introduces us into European politics and entangling alliances. . . . It will make necessary a navy equal to the largest of Powers, greatly increased military establishment, immense sums for fortifications and harbors; multiply occasions for dangerous complications with foreign nations, and increase burdens of taxation."

It was alleged at the time, and has been believed ever since, that when President McKinley sent the Commissioners to Paris, he had not developed the idea that Duty required us to seize all the Philippine Islands in the interest of humanity. There also seemed good reason to believe that it was not until after he made his trip to the Omaha Exposition in the autumn of 1898, and decided that the people at railroad stations applauded his speeches the more loudly the more strongly he declared for Expansion, that he made up his mind that Destiny required us to take all. The truth of this theory is established by the papers just given out. In his original instructions, Mr. McKinley went no further than to say that "the United States cannot accept less than the cession in full right and sovereignty of the island of Luzon," and

that this country must also have the right of entry for vessels and merchandise belonging to citizens of the United States into such Philippine ports as should not be ceded, upon the same terms that might be granted to Spaniards. It was not until the 26th of October, after the trip to Omaha, that the President sent orders to take the entire archipelago. Even after that, Judge Day interposed a further protest, while Whitelaw Reid advised against taking the Suius. Senator Davis was for taking everything without paying a cent for it, and Senator Frye wanted to include the Caroline Islands, giving Spain $10,000,000 for both groups. This was on the 11th of November, and the President's reply, which finally settled the question, was as follows:

"You are instructed to insist upon the cession of the whole of the Philippines, and, if necessary, pay to Spain $10,000,000 to $20,000,000; and if you can get the cession of a naval and telegraph station in the Carolines, and the several concessions and privileges and guarantees, so far as applicable, enumerated in the views of Commissioners Frye and Reid, you can offer more."

It is fortunate that the House has concurred with the Senate in striking out of the Naval Appropriation Bill the proposition for two cruisers and two battle-ships. The ostensible reason for this was the overcrowded condition of the shipyards of the chief instigators and beneficiaries of the large-navy policy, the ship-builders. The real reason may have been alarm at the growing extravagance of Congress, but, whatever the cause, the action is to be heartily applauded. Thus ends, for this session at least, the attempt of the Naval Policy Board to force us into a competition in ship-building with the German Emperor, and every delay is a gain for those who believe that the limit of a proper defensive fleet has already been passed. We have before us the letter of a prominent naval officer, conspicuous in the war with Spain, protesting against any further increase as needless and extravagant. This is a most encouraging sign, and confirms us in the belief that the policy of a huge American navy is indefensible professionally as it is economically and morally.

We have frequently pointed out that a fortified Isthmian canal is indefensible from the strictly military point of view, as well as from that of international peace and good will. Last week Col. Peter C. Hains of the United States Engineer Corps, in which he has served forty years since his graduation from West Point, showed in detail, in a paper read before the American Academy in Philadelphia, the correctness of this contention, and came to the natural conclusion that the nation which controls the adjacent seas will control the canal, no matter how large the canal garrison may be. He examined one by one all the possible enemies of the United States, those of inferior naval strength, those of equal strength, and those of superior fleets, and showed that in each case where the canal might be seriously menaced, as by France and England, the neutrality of the canal would be of the greatest aid to this country in the event of war. This calm consideration of the question by a military man of high standing, himself a member of several Canal Commissions, should make any further ravings for an "all-American fortified" waterway impossible. Quite incidentally to the theme of the discussion, and perhaps unconsciously, Col. Hains also showed that the Philippines are a source of military weakness to the United States, being within easy striking distance of Russia, China, and Japan, and also being the natural naval objective for Italy, in Col. Hains's opinion.

A resolution was introduced in the Wisconsin Assembly urging the State's Representatives in Congress to vote against the Ship-Subsidy Bill, and there was an interesting discussion, of which this was the most striking passage:

"Mr. Hall now took the floor and made a telling speech against the bill and for the resolution. At this point Mr. Dodge interrupted to inquire if it was not true that the national platform of the Republican party provided for the passage of a ship-subsidy law. Mr. Hall said that it did, but the bill was a bad measure, nevertheless, and he was glad to see that ten Republican Senators in Congress had at last broken away from the element that favored the bill, and that Senator Spooner was one of the number. Mr. Hall said that the terms of the bill were unjust. Under its provisions it would be possible for a company practically without capital, but with good backing, to borrow money, build ships, and in ten years get enough revenue out of the Government to pay for the vessels and have a profit besides. The principle was wrong, said Mr. Hall, and, if it were applied to all branches of trade, it would result in revolution and socialism."

The resolution was finally passed by the overwhelming vote of 78 ayes to only 15 noes, in a body which contains 83 Republicans and 17 Democrats. There is a warning in such action from such a source which Hanna and Frye will do well to heed.

The steel trade combination, regarding which Wall Street has been wondering and guessing for a month past, has at last been arranged. Representatives of the syndicate and of the outside steel companies came to terms on Sunday night, and the charter of the new company was at once filed at Trenton. There seems to be no doubt that the aggregate capital of the new concern will actually exceed a thousand million dollars, and that its issue will involve creation of a much larger amount of new securities than the existing capital of the companies about to be united. How much of this new capitalization will be "water"—that is to say, securities issued directly or indirectly as a bonus to shareholders to induce them to come in—depends very largely on the plans of the company's organizers regarding the minority interests in the properties acquired. The advantages expected from this immense combination—the largest company, as to both nominal capitalization and actual property controlled, which has ever been organized—is that towards which all the recent industrial combinations in this country have been directed, viz., economy in production, in transportation, and in acquisition of raw materials. We do not suppose that the organizers have ever entertained the idea of advancing prices arbitrarily, and holding them at an artificial level through the absence of competition. Such a policy would not only invite the most formidable attacks on the enterprise in the courts and legislatures, but would seriously impair and unsettle the very industries on which the company must rely for its own prosperity. It is far more likely that the new concern will, sooner or later, reduce the price of steel products below the previous general average. But, in view of the power for arbitrary work with prices which undoubtedly exists under the new conditions, we have no doubt that the charter filed at Trenton sounds the knell of the steel and iron tariff.

Massachusetts has made a thorough trial of arbitration by State authority in labor disputes, and the Board which has the matter in charge is constrained to confess that it is a good deal of a failure. Nearly two-thirds of the cases which it has investigated during the past year were cases which it took up of its own accord, 26 per cent. being on the petition of one side and only 11 per cent. on the joint petition of both. The Board frankly admits that "the prevailing opinion concerning arbitration is, that it is an excellent thing in all quarrels but one's own." Some Massachusetts newspapers draw the moral that, as voluntary arbitration does not succeed, the compulsory sort should now be tried. But nobody yet meets the fundamental difficulty of adopting or enforcing compulsory arbitration so long as the labor organizations maintain their present attitude of implacable opposition to it.

Tammany has shown its hand promptly. The telegraph had hardly announced Gov. Odell's signature of the Police Commission Bill before Mayor Van Wyck had appointed Michael C. Murphy as the single head of the Department, and the new Commissioner had named Devery as his First Deputy. "Mike" Murphy, as the Mayor himself called him, in speaking of his action, is a thorough-going organization man, and he will take orders from Croker as obediently as anybody else. As Pres-

ident of the Health Board, he lent himself to the raid on the elevated railroads two years ago, and repeatedly gave out statements about "microbes" which made him a laughing-stock. His appointment of Devery as First Deputy Commissioner shows exactly what may be expected from him in his new place—the unquestioning execution of whatever policy the organization concludes to enforce. The Republican managers have been driven to the conclusion that there is nothing which they can do offhand to counter the first move of Tammany in the struggle over the control of the police under the new law. They were angry enough at first to talk about such crazy schemes of instant reprisal as the summary removal of the new Police Commissioner, or of the Mayor who had appointed him, or the passage of a State Constabulary law. But a little reflection showed that it would be the height of folly to do any one of these things. To remove Commissioner Murphy for making Devery the virtual head of the police force would not reach Devery; to remove Mayor Van Wyck for appointing Murphy would be too arbitrary a performance for Odell to contemplate once he had stopped long enough for reflection; to "jam through" a State Constabulary bill for the purpose of dealing with the police situation in New York city almost before the Governor's signature was dry upon the Police Commission Law enacted expressly to cover that situation, would be such a confession of stupidity in the past as would throw a cloud over any action in the future.

The report of the Tenement-House Commission is exactly what was to have been expected from so excellent a body. It is a document full of meat and of wise recommendations, coupled with definite and simple suggestions as to the reforms needed from Albany. The idea of creating another city department to be headed by a $7,500 Commissioner, and composed of over 200 officials and inspectors, was evidently repugnant to the Commission at first, for they went out of their way to answer any possible objections in their report. But a consideration of the enormous importance of the questions involved—of the health, well-being, and morality of the city's tenement population of more than 1,585,000 human souls—led the Commission to believe that they could be safely intrusted only to a separate department, and an official upon whom should rest all responsibility for tenement-house conditions. We are of the opinion that the extra expense to the city—at the risk, too, of placing such additional patronage at the disposal of Tammany Hall—will be repaid a thousand times even if the Commission's recommendations can be only partially enforced and carried out. Not one of the other conservative suggestions of the Commission will probably ever be questioned. No one will venture to doubt the wisdom of such measures as this body of experts, actuated only by the highest motives, recommends for the prevention of immorality and overcrowding, and as requisite for proper buildings. Gov. Odell is correct in saying that the enactment and proper enforcement of the laws proposed will do more to eradicate vice and benefit the morals of overcrowded communities than any other police law which could be framed. The Legislature should pass the necessary bills as rapidly as they did the defective Single-Headed Police Bill. The Republican party will profit as much by the one as it has lost by the other.

Count Waldersee's threat of a great punitive expedition has had the intended effect of hastening the Chinese court's response to the clause demanding the execution of the ringleaders in the rebellion. The court has requested the commutation of certain sentences from decapitation to strangulation, and reserves the notorious Prince Tuan for imprisonment for life. The envoys of the Powers have, we are glad to say, accepted the compromise, feeling that heads enough will still fall to make the executions exemplary. It should not be forgotten, however, that every hour of foreign occupation of Pekin increases the difficulties of the situation. Minister Conger already estimates that the total demands upon China will reach $400,000,000, although the most competent opinion holds that China cannot pay interest on more than $300,000,000. This great indebtedness increases with every delay. If it were an individual instead of an international transaction, no one would doubt that some of the parties were looking for Chinese territory at "sheriff's sale."

It appears that the Rev. Dr. Ament, whose reported exploit of collecting damages on a basis of thirteen for one so excited the admiration of Mark Twain and other advocates of the strenuous life, owes his renown in part to a cable error. He had, in fact, collected a third more than his own estimate of the damage inflicted upon missions and native converts—a very reasonable and most businesslike precaution against shrinkage, when the "voluntary" contributions were made in so fluctuating a value as loot. Meanwhile Li Hung Chang is persistently cheerful, intimating, indeed, that when the indemnity is brought down to actual figures, he may have something to say on the propriety of offsetting indemnity with loot. But this, we fear, was frivolously spoken, and in the spirit which prompted the great Premier to read our eighth commandment, "Thou shalt not steal, but thou mayest loot."

Continued reports of agrarian distress in southern Italy show plainly that the new Italian Cabinet has inherited all the difficulties of the old in aggravated form. The Minister of the Interior, Signor Giolitti, had promised the Socialists numerous reforms in the way of tax reduction and beneficiary legislation. He has already had the chance to put some of his theories in practice. Public kitchens are distributing food in three of the Apulian communes. Scores of famished workmen present themselves to the great landowners and agree to divide the wages of half-a-dozen men. Rioting has already broken out. The resources of the nation seem to be inadequate to meet the great need, and unless the immediate distress is met by private benevolence, it is hard to see how the Zanardelli Ministry can long stand. Talk of tax-reduction there has been from all parties, but no one has had the courage or the ability to show how the Government expenditures can be largely reduced.

The English War Office has issued, with refreshing frankness, an elaborate official table of the casualties sustained by its "Field Force in South Africa" from the beginning of the war up to and including the month of January, 1901. From this it appears that the total permanent reduction of the military forces has been by 15,929 officers and men, through 13,258 deaths, 1,734 discharges for disability, and 937 missing and in captivity. In addition, 14,914 men and 1,242 officers have been wounded in battle, and the losses for January, 1901, alone were 1,030 killed, wounded, and captured. Finally, it appears that 1,703 officers and no fewer than 39,095 men have been invalided home because of wounds and disease, 33,867 being credited to the sickness account. Such is the price—paid on account—of adding two more colonies to his Majesty's over-sea possessions! As we are learning our lessons in being a world-power from the other side, it is to be hoped that our War Department will follow England's example, and let the people know exactly what the price in human beings is which we are paying for our "tropic-sea gems." Surgeon-General Sternberg denies Senator Teller's statements that Gen. MacArthur has 10,000 more sick than he can handle, but gives no information as to the real number. It appears, however, from a statement of the Quartermaster-General that no fewer than 2,170 sick men were shipped from Manila on five transports between December 15 and February 17, in addition to the thousands who have already arrived at San Francisco. No wonder the War Department keeps mum.

BREAKING FAITH WITH CUBA.

The Army Bill is just the place for an amendment embodying the demands of the United States upon Cuba, as they are an assertion of stark force. They are, in reality, an act of war upon Cuban sovereignty; and, in the case of a nation not so pitiably weak, would be followed instantly by the mobilizing of troops. The amendment is, therefore, fittingly attached to the appropriation bill which enables the President to register the decrees of Congress by shot and shell. If might is to triumph over right, we cannot too carefully associate the provision for force with the announcement of our purpose to break our word. Thus it is altogether proper that our ultimatum to Cuba should be launched, as was our ultimatum to Spain, purely as a military measure, reposing wholly upon the law of the stronger.

That the amendment proposed by the Senate Committee on Cuba is in flat violation and repudiation of our national solemn promise to Cuba, we shall not insult the intelligence of our readers by assuming it to be necessary to argue. The Committee itself leaves out, for very shame, in its reference to the joint resolution of April 20, 1898, the words which would estop it, if it were composed of men of sensitive honor, from making such proposals as it now does. It authorizes the President to "leave the government and control of the island to its people" (using the phraseology of the Teller resolutions), but on conditions in sheer defiance of our pledge not to "exercise sovereignty, jurisdiction, or *control* over said island." "Control" could scarcely go further than what is now proposed. Cuba's treaty-making power is lopped off. Her power over her own finances is taken from her. Part of her territory is stripped from her, and she is to be compelled to grant us such naval and coaling stations as we may desire. Deceived and wronged Cuba might well exclaim:

> "Nay, take my life and all; pardon not that:
> You take my house when you do take the prop
> That doth sustain my house; you take my life
> When you do take the means whereby I live."

Yet the Committee, with fine incoherence or else hypocrisy outright, professes, in its proposed mutilations of Cuban sovereignty, to be protecting Cuban independence; to be guarding only against anything which may "impair or tend to impair the independence of Cuba." The Cuban Government is to make no treaty with "*any* foreign Power or Powers" impairing Cuban independence. That is section one. Then come six sections enumerating our successive impairments of Cuban independence, followed by an eighth requiring Cuba to embody them all in a "permament treaty" with the United States. The question arises, Is the United States a "foreign Power" as respects Cuba? The Supreme Court of the United States has just decided that it is. So what we get is a stern demand that Cuba shall, and at the same time shall not, make a treaty with a foreign Power impairing her independence.

It looks as if the Committee had tried to save its morals at the expense of its intellect; but all that it has done is seriously to "impair" both. It would have been much better to be frankly brutal; to say to Cuba that we had made her a sacred promise, but that we did not mean to keep it, that she might as well understand this first as last, and submit or be crushed. That would have been infamous, but it would have been intelligible. The course preferred is infamy heightened by obscure but false pretences, by more promises deliberately intended to be broken, by a playing fast and loose with words unworthy, we will not say of an honest nation, but of a nation that feels bound from the mere fact of being powerful to be plain-spoken and above-board. All these Committee juggles about "independence" are contemptible. Both word and thing are perfectly well understood in international law. Independence in a nation is like personal liberty in an individual—the right, under the obligation of general laws of morality, to move and think and speak and act freely. What the Senate and, of course, the "highly gratified" President propose is to shear away Cuba's right arm, to fasten chains upon her and lock her in a dungeon, all with the most polite assurances that we are doing this in order to make her perfectly free and independent. If Juvenal had lived to see the mockery, he would have thought it still more difficult than he did *not* to write satires.

Now that the mask is off our long hypocrisy in regard to Cuba, we see no reason why events should not move rapidly. After having once brought ourselves to say publicly to the Cubans, "Well, you see now that we lied to you, and that we always meant to take your island," there ought not to be great delay in proceeding to the work of spoliation. The Spanish Commissioners at Paris strongly urged us to take over Cuba, but we strenuously and virtuously declined. The reason is now clear. We did not want to pay anything for the island, and if we had taken it then, we should have had to allow a large sum for it as an offset to a Spanish indemnity. Moreover, we wanted to get hold of the Cuban army and disarm and disband it, as we have now done. That would obviously save us trouble. It was the diplomacy of a card-sharper, but it has been successful, and why should we hesitate to reap its fruits?

To us the whole thing seems a policy of sheer dishonor. And we hasten to say that, if there is bloodshed in Cuba, the guilt of it will stain the hands of the men who have consented to sign away our fair fame as a truth-loving and honorable people. Let them beware how they hereafter hold others responsible for the disgrace which they alone will have brought upon their country. It is their work, their glory which is and will be their shame. They are writing a page of American history over which their children will blush and hang their heads, just as we do now over the records of our armed aggression upon Mexico. The plan may succeed, but it can never be held in honor until nations begin to erect monuments to extortioners, and until the chaplains of Congress open the session with the Thieves' Prayer of Montserrat.

FALLING OVER THE TARIFF CRUTCH.

"We have quit discussing the tariff," said President McKinley, in an address to the Commercial Club of Boston almost exactly two years ago, "and have turned our attention to getting trade wherever it can be found." It appears, however, that we are not quite through talking tariff. We may be willing to cut it as we pass it in the street, but it insists upon greeting old friends effusively. As we are now disagreeably reminded by our tariff war with Russia, and our threatened tariff war with Germany, it is precisely our own tariff laws that get in our way at the very moment we are going after "trade wherever it can be found." The tariff has been a crutch to American manufacturers all these years. They have hobbled along with it contentedly in their beloved "home market," but now that they feel strong enough to enter the world's all-comers' race, they cannot throw the pesky thing away. It trips them up, barks their shins, and leads to all this indignant profanity which is now being visited upon Secretary Gage's head.

But the simple fact is that it is our fiscal laws which are at fault. They were not made for the world's trade. Exclusion, isolation, retaliation, are written all over them. They were designed for the express purpose of setting our hand against all the world, and all the world against us. Cunningly devised clubs to beat the heads of foreigners are stuck here and there in our tariff legislation, and it is one of these which Mr. Gage has been compelled to draw out to belabor Russia. If not Russia, his apologists explain, it would have had to be Germany. As it looks now, it will be Germany in addition, with Belgium thrown in to make the scrimmage more interesting. In other words, just as our manufacturers were boasting that they had the world's trade at their mercy, along come our clumsy and antiquated tariff

laws, whose sole intent was to have nothing to do with "abroad," and threaten them with serious crippling in their plans of universal commercial conquest. The Chicago steel men swear at the loss of their Russian market, just as the Chicago provision men curse at tariff interference with their French and German market; but what is it, after all, but their own tariff chickens coming home to roost? After elaborately drawing laws for forty years for the purpose of making foreign commerce impossible, we find that the thing actually works as it was intended, and sit down lamentably to tear our hair in surprise and rage.

A giant attempting to wear boy's clothes could not cut a more ridiculous figure than does the United States garbed in a ragged and outgrown protection. It is a very Bourbonism of tariff ignorance and selfishness which now blocks our way. No one knows this better than President McKinley. He has not "humbly held his ear to the ground," as Sumner said, without hearing that it is high time to kick down the ladder by which he climbed into the Presidency. He is ready for reciprocity, or free trade in any guise, provided it is made sweet by some other name. But he finds a brute protectionism squatting in his path, and saying, *j'y suis, j'y reste.* He is in a case very like Louis-Philippe's when asker to pardon Barbès. "He has my pardon," said that very limited monarch; "now I will see if I can get him that of my Ministers." President McKinley has given his consent to a piercing of the tariff barrier all along the line by reciprocity treaties and trade agreements and what not; but, alack, the Senate has thrown all that into the waste-basket. And the Senate, in this, represents protection, fed fat by Government favor, and grown insolent in its sullen selfishness. These protected interests, intrenched in our laws, are filled with a fine disdain when told about the necessities of our expanding foreign commerce. "What have you been telling us," they say to Mr. McKinley, "all these years? Was it not that the foreign market, to quote your own words, was the 'poorest' of all and wholly 'delusory'? Did you not advise us and help us to pass laws taxing our fellow-citizens so as to make ourselves rich? Well, we have got the laws we want, and it is your business to enforce them, not to try to get around them by reciprocity treaties." Strange that the cold selfishness which the President did more than any other to make triumphant, now refuses to become considerate and generous at his request!

We have no wish to gloat over mortified and angry protectionists. We shall not even remind them that free-traders were always predicting that they would fall into the very pit where they are now floundering. As the man said whom Charles Keene overheard in a tavern (a "pot-house Ruskin," he wickedly called the fellow), "I ain't a arguin' with yer, I'm a tellin' of yer." What we tell the dazed protectionists is that this country has now got into the situation in which England was when, according to them, free trade was her wisest policy. "Oh, if we were like England," they used to say scornfully, "able to beat the world in manufacturing, and needing to draw free raw materials from all nations, then we would listen to you." But it needs no arguing that such is now our manufacturing supremacy. We boast of it; foreigners reluctantly admit it. And notice, too, that we have waked up the most wrong of all passengers in the person of Russia. She is about where we were twenty years ago—on the eve, that is, of an immense industrial development. M. de Witte jumps at the chance to "mobilize Russian industrial forces," as he puts it. We have, in short, affronted a proud, expanding nation, perfectly willing to try tariff conclusions with us. It was a piece of stupidity as huge as it would have been in Great Britain to vex our exporters when the McKinley tariff was pending.

Yet, as we say, the blame must rest ultimately upon our protective legislation. That is the petard with which its own framers are now hoist. Our tariff was planned for international jealousy and the *lex talionis*, and it is working beautifully as designed. We made our fiscal legislation a storehouse of projectiles, and now that they are bursting about our own heads, we have no right to complain. We are swaggering about as a world-power, with laws fitted only to some pent-up Utica. We send our agents abroad to get contracts, and then issue orders at Washington to render their execution impossible. We could not, as we now see, more cleverly have followed Franklin's "Rules for Reducing a Great Empire to a Small One."

REFORM FOR THE BALLOT.

When the so-called Australian ballot was introduced into the United States a decade ago, it was confidently assumed in many quarters that a definite, workable plan had been found which could not be improved upon. Unfortunately for this theory, the Australian ballot, instead of being adopted, was adapted, and to its detriment. In this State it was imposed upon the people by a complicated and obscure law which, by the year 1896, contained no fewer than one hundred and sixty-seven sections. The Court of Appeals declared in 1898 that, as a result of this, a citizen could not then vote so as to get his ballot counted, particularly if he desired to vote for candidates of a minor party, without familiarizing himself with these one hundred and sixty-seven sections of the statute law, "some of which we have found quite difficult ourselves to understand."

If this were the only drawback to the existing ballot law, it might be patiently borne, in the hope that the Legislature would in time come to the rescue and simplify the present ponderous statute. But in the same opinion the Court of Appeals laid great emphasis upon the fact that, "under the present system, the result of elections is not to be always determined by the will of the majority," and that the dangers to free government from it, earnestly dwelt upon by the court below, are so grave as to "*demand* the attention of the Legislature." These dangers primarily arise from the large number of ballots rejected as void in each district. One court believed that the void ballots in the Mayoralty election of 1897 averaged five to each election district, and pointed out that if this were a correct estimate, some 10,000 votes would be lost in a State election, "a number over five times as great as the plurality of the successful candidates for electors in the Presidential election of 1884." "If an election," the Appellate Division said, "were close, and the action of the district canvassers throughout a large territory were to be brought in review before the courts, we are entirely clear that the judicial machinery for their determination would *break down* by the weight and number of the issues to be decided." The court also stated that the evil and disorder resulting from such a state of things at the close of a Presidential election could scarcely be exaggerated.

One particular evil of a party-column ballot which the court did not touch upon, is the frequent loss of votes to candidates for certain offices. Thus, in 1897, the candidates for Chief Justice of the Court of Appeals in New York city alone received 90,000 fewer votes than were cast for the Mayoralty candidates. With the existing ballot, too, the judicial duty of passing upon the validity of ballots is forced upon the election officials, although these are only ministerial officers and not judges in the eyes of the law. Their guesses at the legality or illegality of votes are in turn likely to be passed upon by the courts. The notoriously eccentric ballot markings show how difficult it often is to arrive at a decision, and how the courts themselves may differ as to what constitutes a valid voting mark under the law.

To remedy these plainly serious defects of the existing law, some public-spirited citizens have devised a new ballot. They have sought not to render straight-ticket voting more difficult and independent voting more easy, but primarily to simplify the present ballot and to save the thousands of votes now lost at every election. The names of candidates are placed in alphabetical order under the office for which they are standing, according to the Massachusetts system, and each name is preceded by

the emblem of the party or parties whose standard-bearer the candidate is. To indicate his choice, the simplest process conceivable is demanded of the voter; with a stamp provided in the booth he has merely to obliterate a white circle in a black square in front of a candidate's name. If the voter desires to record his choice of an independent candidate not on the ballot, he has but to write the name in the blank space left for that purpose.

"Any other mark will make this ballot void," the directions read. But not the whole of the ballot, as is the case under the present law, for the simple device of printing each set of candidates upon a detachable coupon prevents this. The face of the ballot is never seen as a whole, for the proposed law will provide that, when removed from the ballot-box, it is to be placed face down on the table and the coupons for each office detached and canvassed seriatim. In case, therefore, the voter has spoiled one coupon for any office, the others are not affected, there being no mark or indication to connect the void coupon with any others. This form of ballot offers obvious advantages over the present one in facilitating the process of counting and recording the vote. Every official would rather handle a small ballot with one unmistakable mark upon it than be forced to inspect a bulky paper and decide upon the legal effect of various marks which may occur in some hundred or more spaces.

Some of the other distinct advantages of the proposed ballot are the following: The impossibility of marking a ballot for identification; the simplicity of the directions to voters, comprised here in six lines, instead of the present complicated rules, which cannot be put on the ballot; the voting of illiterates made easier; all voters put upon an equality, and the canvassing simplified by a specially devised and remarkably simple tally-sheet. This makes every step in the counting of a district's vote so simple that an absolutely correct contemporaneous record of every vote appears upon it. As the courts have declared the tally-sheet the best evidence of the actual vote when it becomes necessary to go behind the returns, the importance of this is plain. The existing tally-sheet is so complicated as to lead the election officers into constant violations of the law in regard to it.

The bills embodying these necessary changes have been introduced in the Senate by Senator Elsberg and in the Assembly by Mr. Cooley. To further them, there is in process of formation a joint committee of a number of clubs and reform organizations throughout the State, including the City and Reform Clubs, of which Mr. John G. Agar is acting Chairman, and Mr. M. D. Rothschild of No. 32 Broadway is Treasurer. The committee is to be a permanent one, and is to urge the passing of the bills until its object is accomplished. It should have the aid of every voter, irrespective of party, who wishes to see the ballot law what it should be, and who desires to prevent the grave dangers to the State of which our highest courts have so earnestly pointed out the menace. The present election law makes the recording of the majority's voice uncertain and at times impossible. The proposed ballot makes its recording certain and infallible.

THE ALDERMEN AND THE CHARTER.

No legislatures whose achievements are recorded in history have such an evil reputation as the Boards of Aldermen or Common Councils of our American cities. They seldom attract the attention of the public except when they are discovered in some unusually flagrant iniquity, and their relation to the body politic has been compared to that between the human organism and the *appendix vermiformis*, whose only known use is to be the seat of disease. In typical performance the legislators of New York city have never been deficient, but of recent years their powers have been greatly curtailed, and the "aldermanic business" is not what it was when $40,000 was paid for a vote in favor of a single measure. When the Greater New York was created, the framers of the charter attempted to constitute a legislature of dignity proportionate to the size of the new city; but they are not thought to have succeeded. Some reasons for their failure are given by Mr. P. Tecumseh Sherman, who was for two years an Alderman, in a well-written and sensible little book entitled 'Inside the Machine.'

Mr. Sherman's experience with the charter began promptly, for as soon as he was elected, he found that it required him to take an oath of office and file it within five days with an official who did not exist, and who could not exist until the new government should be inaugurated, some two months later. However, he filed his oath with some existing functionary, and no questions were asked; and perhaps none would have been had he not filed it at all. After being duly, or unduly, inducted into office, he found that his activities as a legislator were more circumscribed than would have been supposed from a perusal of the charter. Familiarity with parliamentary law proved to be a needless qualification, and regard for the rules of grammar rather tended to diminish the influence of those who displayed it. Mr. Sherman once ventured to move that resolutions expressing sympathy, admiration, congratulations, etc., relating to persons and events outside the sphere of city government, be sent to a special committee for revision as to grammar and historical statements; but the proposal was resented as an insult. Its wisdom was proved in an unexpected way, for, had it prevailed, an innocent Irish Alderman would have escaped political ruin. He was betrayed into fathering a resolution providing that the City Hall and other public buildings should be decorated on the Queen's birthday, which was, in fact, promptly laid on the table, but which the mischievous reporters gave out as adopted. The Alderman's blunder was worse than a crime, and his political career came to an untimely end.

It may be thought that incidents like this are not germane to an account of the legislature of our great city; but in fact they are of the essence of its activity. So careful was the charter to guard against letting the Aldermen have too much power that it left them no serious occupation. There was, it is true, some pretence of empowering them to frame general ordinances of the nature of laws; but any attempt to exercise this power led to conflict with the departments, which soon showed that they had the whip-hand. One important ordinance—the Building Code—was enacted; but that came before the Aldermen with orders from headquarters that it must be passed. As to the most important subjects of bond issues, contracts, and public improvements, the ordinances were drawn by the departments and sent down by them to the Aldermen for confirmation. The charter said that the Aldermen might disapprove these ordinances; but it was soon found that that instrument provided a remedy for any such act of independence.

The remedy in the case of failure to approve an issue of bonds ordained by the higher powers was applied by the Corporation Counsel. The charter was not so careless of the welfare of the city legislature as to leave it without a guardian, and, to make sure that a proper person should be chosen, the selection was given to the Mayor. And that this guardianship might be carried on without ill-advised interference on the part of the wards, they were not permitted either to instruct their official counsel or to employ any other. For the members of the Assembly, as Mr. Sherman puts it, "alone, of all citizens, are exposed to the danger of having an attorney, in whose selection they have had no voice, in whose judgment and integrity they have no confidence, and over whose actions they have no control, vested with full and exclusive powers to represent them in court and to bind them in every way, while they are shut off from all other means of presenting to the court the facts and arguments upon which they base their rights and justify their actions." On one occasion the Aldermen found themselves required by a mandamus granted

with the consent of their counsel, to pass immediately an ordinance which had never been before them, and which they had not the power to originate. On this occasion the Corporation Counsel refused to present the arguments of his clients, the Councilmen, to the court, objected to the appearance of other counsel in their behalf, urged their punishment, and consented to an order punishing them for contempt of court. Thereafter the Municipal Assembly prudently abstained from the perilous business of legislating.

It by no means follows that the office of Alderman is a sinecure. On the contrary, it is extremely laborious. Every Alderman must consider, in harmony with the three Councilmen of his ward, the problems of street parades, the location of peanut-stands, the propriety of signs, awnings, and all manner of encroachments upon property. He must listen to applicants for such favors, morning, noon, and night; to appeals in divers tongues, accompanied with bribes, threats, tears, and hysterics. To him come those seeking bail, those about to be evicted, those demanding patronage. The distribution of free tickets sent to Aldermen in return for the permits granted for circuses, games, balls, and other entertainments, is a most invidious duty. On the whole, the lot of the Alderman, as described by Mr. Sherman, is so far from being a happy one that it is probable that the office might be abolished without resistance on the part of those who hold it, and certainly without protest on the part of the community.

AN OFFICIAL ESTIMATE OF MODERN ILLUSTRATION.

LONDON, January 18, 1901.

Since the Exhibition of Modern Illustration just opened at South Kensington Museum was announced some months ago, my expectations have been great. The Government, in an enterprise of this kind, is not influenced, like the dealer, by the question of profits, nor, like the private society, by the prejudices and preferences of individuals. It is free to select the best and reject the commonplace, without consideration for public taste. Besides, the Exhibition of Lithographs at South Kensington in 1898-99 was, for all its faults of overcrowding and hanging, satisfactory as an historical record, and seemed a proof of the capacity of officials to organize a new collection on a somewhat similar plan. In the case of the lithographs, the year of the invention of the art provided the necessary time limit. In the case of modern illustration, a line is not so definitely drawn, but every intelligent reason points to 1860 as the appropriate date. It was during the sixties that photography first came to the aid of the engraver, and so prepared the way for the modern mechanical processes; during the sixties that a group of the most accomplished illustrators who have ever appeared in England were winning for the decade its fame as the "Golden Age." A limit had also to be set to the scope of the collection, or the whole Museum would not have been big enough to hold it. The Board of Education, therefore, restricted the Exhibition to typographic work—that is, work that can be printed with type; and etchings, lithographs, steel engravings, and photogravures were thus excluded. So far, so good. But the Board of Education went lamentably astray when it determined that the Exhibition "should comprise reproductions and the original drawings." To hang both drawing and reproduction is excellent, especially at South Kensington, where the aim of any such show must be educational. But to give precedence to the reproductions seems rather like putting the cart before the horse, and has led to some curious and unfortunate results. For instance, Menzel, whose influence is so proverbial that it has gained for him the hackneyed title of "Father of Modern Illustration," and Mr. Sandys, one of the most distinguished of the 1860 group, are seen only in the wood-engravings after their designs; and some of the younger generation are represented chiefly or altogether by later processes. When the drawing was made on the wood block and disappeared in the engraving, it is our misfortune; but when the drawing survives, it is by comparing it with the print that the merits of the reproduction can be judged. When circumstances necessitate a choice between showing a print alone or a drawing alone, it is only a South Kensington official who could fancy that more pleasure and instruction are to be had from the print.

However, it is too late to alter the scheme accepted by the Board of Education. The only thing that remains is to see how well it has been carried out within its limits. I must confess that my first glance at the Exhibition was most depressing. The collection has been arranged in one of the galleries of the Indian section of the Museum, an improvement on the wretched sheds where the lithographs were seen. But the hanging is after the fashion that prevails at the Royal Academy. It is too late in the day to insist that half the success, half the interest, half the value of an exhibition, depends upon the hanging. Good work is simply lost in the chaotic medley dear to the British Academician. And yet, in a succession of alcoves, and on a long line of screens, the drawings and prints at South Kensington are packed together as close as they will go, with never an inch to spare; some so low, or so high, that you would have to sit on the floor, or stand on a chair, at times climb a ladder, to study them properly. This would be bad enough in a gallery of paintings; but it is worse in the case of drawings and prints, meant to be looked at from no greater distance than the book, or magazine, or paper you hold in your hand. It is only reasonable to suppose that the Exhibition, as it is given at South Kensington, has a purely educational purpose. But the greater part of the work, the reproductions at least, the student can examine with far more comfort in the National Art Library round the corner. Want of space is no excuse. It is wiser to show a few good things well than a mass of good things badly. It is judgment, not space, that has failed. The gallery is not very large; but, with careful selection and a high standard, numerous examples, now displayed in all the glory of Government patronage, would have been refused admission. There are too many illustrators nowadays, as every one knows, but that is no reason why they should be offered an asylum by the Board of Education. To be of use to any one, the Exhibition should recognize only the work of the masters. As it is, the rank and file have been cordially welcomed, excellent places and plenty of room found for them, to the entire confusion of the student and disappointment of the artist. A Bond Street dealer could not have been more indiscriminate. When you consider the mistakes of selection, and the abominable hanging, you cannot wonder that two members of the Committee of Advice—both illustrators, and possessing, therefore, some sense of proportion—resigned before the Exhibition opened, and that other members, of less zeal and more diplomacy, were careful not to attend the meetings.

The provoking part of it is that enough important work has been secured to prove how easily, with a little more trouble and intelligence and less red-tape, officials could have made the collection the complete success it ought to be. After all, the period is not so remote that exhausting research is needed to unearth its characteristic achievement. The 1860 group is by far the best, mainly because the task of rejection was lighter when there was question of the illustrators of *Once a Week*, *Good Words*, and the books that are now the delight of the collector—men of the distinction of Rossetti, Millais, Boyd Houghton, Holman Hunt, Ford Madox Brown, Leighton, Pinwell, Fred Walker, North, Keene, Du Maurier (in his early period), Mahoney, Arthur Hughes. They did not produce at the rate of the average illustrator of to-day, and but little slovenly work is to be counted against them. Even here, however, there are mistakes and omissions. If the engravings of Holman Hunt's and Millais's illustrations to Moxon's Tennyson are included, why not Rossetti's, or why not, for that matter, the engravings of Rossetti's illustrations to Allingham's 'Music Master' which mark the very beginning of the period? True, the book was published in 1855, but here is a case where a rule is made only to be broken.

I have said there is not an original Sandys—an inexplicable omission. And I saw at least one well-known print after Pinwell without the original which I know could have been had for the asking. Still, there is sufficient to repay the student, though he cannot possibly see half that has been hung. One thing he will learn, which should prove a useful lesson to-day, is the secret of the success of these artists, who gave as much thought and care to the smallest drawing as to the most elaborate painting. To them an illustration was not a trifle to be knocked off at any odd moment, a pot-boiler with no value save the money it brought in. Accompanying Leighton's illustrations to 'Romola'—engraved by Swain and Linton—are innumerable studies of drapery and sketches of scenery and subject. The proofs of Millais and Holman Hunt are scribbled over with endless and suggestive notes to the engraver. "You have cut *one* line into *two* round the little girl's shoes and face," Millais complains to the Dalziels in correcting his "Bridal Toilet" for the Tennyson.

"The eyebrows and lines below the eyes to be lightened," Holman Hunt tells the same engravers, in returning his "Lady Godiva." And so I might go on quoting other instances of their minute and unflagging attention to detail. Fortunately, the engravers were as interested and as keen about the work as the artist, and, as soon as photography made it possible, they photographed the drawing on to another block, and so saved the originals. There are several frames, contributed chiefly by the Dalziels or publishers of their work, that contain each the original design on the wood, the engraved block, and the print. To the same respect for the artist we owe also a most wonderful collection of drawings on the block by Boyd Houghton, perhaps the greatest illustrator of them all. Never have I seen such a fine series of his designs got together before. The next step was to allow the artist to draw on paper, and of the closing years of the sixties many originals remain. To compare these with the engravings is to understand only too well how much delicacy and strength and individuality was lost in the print, and to sympathize more than ever with the protest against the butchery of the engraver, even the most skilful, that fills more than one letter written at the time by Millais and Rossetti.

"Process," bringing with it greater freedom for the artist and a more perfect facsimile in the reproduction, was the growth of the following decade, only gradually superseding wood-engraving. As for the illustrators, after the sixties they increased and multiplied at such a rate that I can do no more than give a general idea of their interminable array. There are the men who made the *Graphic* in the beginning: Luke Fildes, Gregory, Herkomer, Small, to name but a few; there are the "war artists," with William Simpson, the very first, at their head; there are the "decorators," as they have been dubbed, William Morris and Burne-Jones, with borders and initials and designs for the Kelmscott Press; Beardsley, with the marvellous arrangements in black-and-white that impress one more with his genius now than when they were the sensation of the hour; the Birmingham School, hard, stiff, mechanical as were never the Primitives they ape; and every man, woman, or child, I might almost say, who has ever decorated a page, some accomplished, like Pissarro, Anning Bell, Miss Pitman; some but feeble, incoherent echoes of Morris or Beardsley. But, though the weakling has a place reserved for him, you look in vain for Shannon and Ricketts (there is one little drawing by Mr. Ricketts, to be accurate, but so insignificant it does not count), who have a sense of style all too uncommon in the vast multitude of exhibitors. And so you pass on to the illustrators of children's books—Randolph Caldecott, Miss Greenaway, Walter Crane; to the comic draughtsmen, Phil May their chief; to the contributors to weekly papers and monthly magazines—a saving remnant, really artists of note, Greiffenhagen, E. J. Sullivan, Hartrick, Hatherell; but the great horde—what am I to say of the great horde, whose drawings the students should never be allowed to look at on the printed page, but who are now brought forward by a kind and fraternal Government, and set up as models before an expectant world? There they all are, good and bad, jammed together anyhow, with absolutely no attempt to separate the wheat from the chaff, or to supply the student with a clue to guide him through the hopeless maze.

The process reproductions hang with the drawings, good and bad, accepted with equal graciousness; the names of the engravers sometimes appearing in the catalogue, sometimes forgotten. Nor is there the slightest attempt at the comparative classification that would explain the progress made since the tentative efforts of the seventies and the beginning of the popularity of the new method in the eighties. If you happen to know anything of the history of process, you will chance upon many things to interest you; if you happen to know nothing, you will come away in a state of bewilderment bordering on despair.

Indiscriminate acceptance is the fault of the British section; wholesale omissions the crime—it is scarcely less—of the foreign sections. Better not to admit foreigners at all than to do them such incredible injustice. In the French group, you ask, where are Forain, Caran d'Ache, Grasset, Lepère, Steinlen, and a score of others? And is it possible that no worthier examples were to be had of Willette, Renouard, Boutet de Monvel? In the German, you must conclude that the knowledge of the South Kensington official is limited to Menzel and *Fliegende Blätter*. Why show any Swiss work, if Florian, Carlos Schwabe, and Valloton remain absent? Why any Spanish if Vierge is classed with the French, Rico ignored, and no space spared for Fortuny, who also was at work in the sixties and seventies, who, with Menzel, was one of the principal influences of the century, and the reproduction of whose drawings was among the earliest triumphs of process? The Scandinavian section, rich in Tegners, Hansens, and Skovgaards, is more complete, owing largely to the labors of a Danish journalist who lives in London. But in the United States section disappointment awaits the American. He will find, it is true, four prints of Mr. Whistler's drawings for *Once a Week*—beautiful drawings for whose loss wood-engraving is responsible; he will find representative work by Mr. Abbey and Mr. Pennell, who are in England, within comfortable reach; he will find a fine set of Mr. Cole's wood-engravings after the old masters, lent by the Century Company. But, for the rest, he will be struck by the fact that, to South Kensington, American illustration means chiefly the American chapter in the "*Studio* Winter Number," which only the official could fancy an infallible guide.

A practical section is arranged in the hall, where several process men have sent proofs, and process blocks and plates in various stages, and where, I believe, ultimately, a press is to be set up. But, so far, whatever the student may have gained from the show, the critic has proved himself hopelessly befogged. He is now, on the insufficient data supplied, announcing to the nation with pride that it is in England process has reached its most perfect development. The truth is, however, that the two firms of photo-engravers who do the best work in the country, had to import American craftsmen to establish their business, while, for all fine reproduction in line or half-tone, publishers are sending to Angerer and Göschl in Vienna.

But, on the whole, perhaps the most unworthy feature of the Exhibition is the catalogue. My copy was obtained on Press Day, and "Under Revision" is printed on the cover. Therefore, the carelessness in the entries may be corrected in another issue—a carelessness that describes some of Mr. Cole's engravings vaguely as "Reproductions of Paintings," allows such an illuminating definition as "process colour print in tone and one colour," refers obscurely to "wood-engravings from special blocks," and is altogether unpardonable in an official publication published by the Board of Education. But nothing can alter the fact that the Introduction was intrusted to a man who had no technical knowledge of his subject. Laymen are not appointed to professorships in the art schools; why, then, should Mr. Henry B. Wheatley, who is not an artist, be chosen to instruct students and an ignorant public in the art of illustration? Mr. Wheatley is the editor of Pepys, but that scarcely qualifies him for his latest "job." Indeed, I can simply marvel how the writer of this Introduction managed to edit the Diary. Let me quote just one sentence to prove that I am not writing at random. Thanks to the invention of "half-tone process," he says, "the impressionist has a medium as satisfactory for his art as the artist who confines himself to pen-drawing has." The term *impressionist* has been a stumbling-block to many casual writers on art, but none has it brought to grief so completely as Mr. Wheatley. And it is the lack of intelligence he reveals in the use of it that characterizes the Introduction throughout. For some years past, South Kensington has been the subject of violent criticism, more or less deserved, but rarely has it exposed its inefficiency so deplorably. A great opportunity has been lost, and we must still look to the future for the Exhibition that will show us adequately the masterly work done by the modern illustrator. N. N.

THE SÈVRES NATIONAL MANUFACTORY AT THE PARIS EXPOSITION.

NEW YORK, December, 1900.

In a previous letter I made mention of the great frieze in hard pottery which stretches along the west front of the larger Palace of Fine Art. This facade, looking upon the Avenue d'Antin, has a huge archway of entrance in the middle, and on each side of this a continuous portico of Corinthian columns. Behind the columns, on the wall above the windows, is the great frieze, thirteen feet high and nearly three hundred feet long, but divided by the entrance gateway into two equal parts. Of this the general scheme and the drawings are the work of Joseph Blanc, though M. A. Thomas, as architect of the building, must have been heard as to its disposition. It represents or embodies the different epochs in the history of art. It is built up of bricks of stoneware each about ten inches high, each one carrying some part of the relief. It is to be understood that this is not a brick wall covered with a facing of tiles adorned in relief; the brick wall itself has its surface modelled in relief, which, even as that other brick wall bearing the archers of King Xerxes's guard in Persepolis, is brilliantly colored. It varies in thickness from four inches to nearly ten inches in the most projecting parts. The sculptured surface of this wall has been modelled by the sculptors Barilis, Fagel,

and Sicard, and it is invested with the most brilliant and also with softer and cooler colors by means of a newly devised enamel from which the most permanent as well as the most brilliant effects are expected. The official catalogue contains a most interesting discussion of this subject, the shortcomings as well as the triumph being recorded.

This great composition is dwelt upon here because it is the most important work of the Sèvres manufactory since new influences began to prevail in that ancient establishment. There have been many different things done within its walls during a century and a half, but never before have great architectural compositions and out-of-door colored sculptures been carried through. There are other works of the kind. One of these is a most interesting fountain which stands among the grass plots southeast of the smaller Palace of Fine Arts, not far from it, but unfortunately in a place so remote and tranquil that few visitors can have seen it, and fewer still have stopped to study it. There is also in the Esplanade of the Invalides a remarkable architectural frontal which is built into the southward facing wall of the northernmost building. This was intended as one window of a special Sèvres pavilion, to be built entirely of the new wares of Sèvres, but the idea was abandoned because of the obviously heavy cost of such an undertaking. This was unfortunate, for if that building could have been put up in a place where it could have remained permanently, there would have been a standing model of what might be done for the glorification of our architecture hereafter, by means of color applied to modulated and harmonized form. The single bay of it which was put into place consists of a great archway with double pilasters to flank it, and a horizontal entablature above with slightly projecting cornice supported on modillions, but all of this treated without close adherence to classical models or even to those of the more free and original work of the Renaissance. It is the extremely clever design of one who combines the knowledge and practice of an architect with a superadded spirit as of the decorative designer applying his art to modern requirements: the catalogue assigns it to the architect Risler.

The forms were designed for the colors—the colors for the forms, and the combination of free sculpture of vegetable subject in realistic friezes, and rondels filled with figure sculpture, on the one hand, with very formal lines, horizontal, vertical, and following the curve of an arch, on the other hand, is in the highest degree suggestive of the decorative architecture of the future. The figure sculpture is by Coutan: a round forty inches in diameter is occupied by the personification of Keramics; the frieze below has, in the middle, a projecting and larger shield-like member, containing a female figure representing Flame, and on each side of this a group of two children represent, one, the moulder with his wheel and the tender of the furnace, the other the artistic modeller and painter. The obvious intention was, when this bay was to form a part of the building, to bring this richly sculptured frieze just below the sill of the great window, and, therefore, not far above the eye of the spectator outside; while the circular bas-relief above described was to rise above the sill of the great window and show relieved against the comparative darkness of the space within—a doubtful expedient, for we have found in this country that the glitter of glass makes a hopelessly bad background for a piece of sculpture.

Within the buildings on the southern side of the Esplanade, and forming a part of the indoor exhibit of the Sèvres manufactory, is a superb chimney-piece designed by Paul Sédille. The architectural composition is intended to reach the ceiling of a lofty room. All parts are covered with elaborate decoration, that of the broad band surrounding the arched opening being in natural flowers and leaves in full color as rich as the "palette" of the keramic painter could make it, and a similar colored decoration in vine-leaves and fruit carried around the fireplace below; but the greater part of the decoration is left in the natural gray of the glazed stoneware. It can hardly be said that the life-size nude figures, the work of the sculptor Allar, are of the highest merit as works of modern sculpture; they have a perfunctory look, as if the artist were worried by a doubt as to how far sculpture used in so purely decorative a fashion should be ideally good. With this exception (and even this exception hardly applies to the great central figure, a nude female form personifying Flame), the decoration of the piece gives little opportunity for unfavorable criticism. Unquestionably if this superb style of decoration should obtain and should have permanent results, the details could be bettered. Unquestionably the figures could be more interesting, as well as more decorative and more sculpturesque; the conventional ornaments of the pilasters could be fresher in design, and the flowers and leaves of the great band could be more effective if there was less attempt to make them absolute copies of the natural blossom and leaf. A study of the best of the potteries of the Renaissance, and a study of Nature herself as to her real meaning, and not her surface forms, would show a way to greater achievements, even, than this very creditable, very admirable piece.

Around and near this chimney are the vases, large and small, the dishes and platters, the cups and bowls, the keramic display of the Sèvres factory; and on the tables near are a series of sculptured pieces for the decoration of the dinner-table—pieces worked in white biscuit and modelled after the studies of some of the first sculptors of the day. Frémiet, Gardet, Moreau-Vauthier, Allouard, Chaplain, Joseph Chéret, Paul Dubois are all represented here, some of them by reproductions in small of well-known works, but others in designs made for the occasion and never seen before; they were carried out in white paste and fired for this exhibition. These are pieces of sculpture to be classed as sculpture, to go in a catalogue along with terracottas, and not especially characteristic of the decorative work of the manufactory at the present day, except in so far as they point to the artistic directors of the establishment having a free and large sense of their duty as possible guiders and formers of the public taste. The pieces which show what the art director at Sèvres is in search of are his own vases, large and small—his own pieces of daily utility. This director is a man well known to the art world of New York, that Alexandre Sandier who worked here as architect and as decorator between 1868 and 1880. He has been for four years in charge of the Sèvres manufactory as Directeur des Travaux d'Art, working along with Georges Vogt as Directeur des Travaux Techniques, and with Émile Baumgart as Administrateur or business manager, and aided by admirable and highly trained chiefs of departments, secretaries, and foremen. On the great principle of not speaking to the man at the wheel—of not interfering with the ideas and plans of the man whom you have decided to put in a place of trust—the French Administration of Fine Arts, with Roujon as Directeur des Beaux-Arts, leaves free the hand of their well-chosen chief of the Sèvres works. There has been a change, and some veteran keramists complain of it; but it is to have way. The cases are filled and the tables are covered with pieces which are in no respect like the traditional Sèvres vases of the auction sales of London and Paris. There is no *bleu de roi*, there is no *rose de Pompadour*, there are no smooth white vases covered with little *rinceaux* of gold in slender lines, there are no pictures in medallions, round, oval, square-cornered, or framed in rococo scroll-work. The principle of the new Administration is, Not to repeat the old achievements. What was done was well done, and the world knows it; it is not for a great national institution to repeat what it has done and to keep perpetuating for ever even an admirable artistical achievement. To do that would be commercialism, and to do only what a private manufactory might do and would be justified in doing; it is for a Government-supported institution to go on from one achievement to another, and to see what the world has to offer to the bold seeker for fresh triumphs.

Accordingly, the general character of the decorations of Sèvres ware to-day may be expressed somewhat as follows: In the first place, the forms of the vases are very carefully chosen—chosen rather than designed anew. They are chosen and then modified, for the recognized and recognizable types of vases are known by their names of long standing—Vase de Beauvais, Vase de Rouen, Vase d'Albi, Vase de Bourges, Vase de Dijon, Vase de Sceaux, Vase de Creusot, Vase de Chatan, Vase de Villebon—three-score of forms designated by the names of as many cities, and, again, by certain names taken from rivers, and even, in a few cases, from men who have lived and have been known in the world of art. These forms are capable of a certain modification, and the very catalogue of the exhibition points this out in stating that No. 84 is a "Vase de Bougival, première grandeur, forme de M. Sandier." That is to say, M. Sandier has modelled a vase in slight divergence from the recognized form known as "Bougival," and we may imagine that that form will hereafter be known as Bougival-Sandier, or perhaps as Bougival of 1900. With greater freedom, Mr. Sandier and his assistants, the designers and modellers, have designed the new forms for tableware, whole services, and, as the modern taste requires, plates by the dozen, and of many different forms, plates and fruit-dishes, *compotiers* and *raviers*, cups and saucers, and the like. For the decoration of these pieces, natural forms have been drawn upon with great freedom, but likewise handled with great freedom; and here comes in the one point which one is inclined to speak of without hearty commendation. As to everything else in this new departure, it either is evidently very good, or presents all the

appearance of having great good within it. It is either a brilliant success already, or it is evidently leading to success. As to this one point, however, the matter of the extreme rigidity of the floral and floriated designs, the present writer cannot but urge certain considerations which seem to make against it.

If we consider a vase eight inches high in delicate porcelain of a creamy white, and decorated by six sprigs of formalized leafage, each of which rises from the bottom of the vase, expands upon its body, and diminishes in size toward the neck, we shall note that these sprigs are exactly like one another, and that they are spaced one from the other with rigid accuracy. It is evident that the compass has played an active part in the work of the draughtsman who first laid out this sprig, and of him who applied it six times upon the body of the vase. The extreme neatness and accuracy of the Sèvres wares are known to all collectors, and to many who, not being collectors, are still able to see and study the porcelains of this famous fabrique. A piece not perfectly circular in plan, not perfectly true in the horizontality of its lip, with the curve as seen here not absolutely balanced with the curve as seen on the opposite side of the vase, or as it is looked at from any point of view—such a piece is rejected, its Sèvres mark on the bottom is cut across with a file, and it is turned out of the factory to be sold as recognized second-class ware. It appears that such pieces are never painted or gilded in the factory, but are sold in the white. If, now, to the perfectness of manufacture in quality of paste and in exactitude of form be added a severity, a uniformity, a rigidity of design caused by this precise balancing of part with part of the painted decoration, the result is a piece so exact that it becomes harsh, and if not repulsive, at least a little annoying. The student of keramics wearies of such precision, and longs for the swing and dash of the Chinaman who, two centuries ago, carried his sweeping curves around a vase with the intention of making them repeat one another, and with the desire to make one-sixth of his vase like each other sex-partite division, but who trusted to his hand and eye, and would have been more worried by the directions to use a compass and an exact measurement than the French designer would have been by orders to throw his own tools of precision into the drawer and turn the key upon them.

The writer holds in his hand such a Chinese vase as is familiar to all students, and notes upon the shoulder a frieze with six repetitions of a flower (never mind what flower it is), with four petals shown in the massive body, and four others curling over below, and notes that each of these six flowers is meant to be just like the others. It is, however, entirely certain that if one were to trace the outline of one of these flowers he would find that it would not fit upon any other without very marked discrepancies. And yet those are the same flowers: that simplified peony, and not another, is represented six times; though its colors vary, its forms do not. All that is insisted on is that it is drawn free hand, and that precise accuracy, the accuracy of hair's-breadths of a thickness of painted lines, is nowhere desired—would have been even repulsive to the Oriental artist. It does seem that the new adornments of Sèvres ware err in this, that a vase six inches high or six feet high is painted with a precision so perfect that the possessor would never leave off trying experiments with it, and measuring this leaf and that to see if, in fact, they were exactly the same on every side from which the vase could be viewed.

This reservation made, there is nothing but praise to be given to the work of Sèvres as displayed this year.

RUSSELL STURGIS.

Correspondence.

MARSHALL IN MARBURY VERSUS MADISON.

TO THE EDITOR OF THE NATION:

SIR: In the editorial article upon Chief Justice Marshall which appeared in the *Nation* of February 7, it is stated that the doctrine in Marbury versus Madison is *obiter*, that Marbury's application for relief was denied by Marshall upon technical grounds, and that this was properly all there was in the case, but that Marshall took the opportunity to state his view of the powers of the Supreme Court, and that his opinion affirmed the power of the court to declare void any act of Congress in contravention of the Constitution. This I understand to mean that the assertion in Marbury versus Madison of the power of the Supreme Court to declare void laws of Congress contravening the Constitution is *obiter*, and that the decision in the case went upon other and technical grounds.

The contrary is the fact. The case arose upon an application to the Supreme Court for a writ of mandamus to compel the Secretary of State to deliver an official commission. It was based upon a law of Congress which authorized the Supreme Court to issue writs of mandamus to any persons holding office under authority of the United States, without limitation to cases where the issue of such writ should be necessary for the exercise of appellate jurisdiction. The Constitution confers upon the Supreme Court original jurisdiction in cases affecting ambassadors, other public ministers, consuls, and those in which a State shall be a party. The decision in Marbury's case was that the original jurisdiction of the Supreme Court was, by the Constitution, limited to the cases mentioned; that the act of Congress conferring the power to issue writs of mandamus in cases of original jurisdiction other than those specified in the Constitution was void; and that, therefore, the court had no power to issue the writ to compel the Secretary of State to deliver Marbury's commission. The relief was denied, not upon technical grounds, but because it would necessitate the exercise of a power which Congress could not constitutionally confer upon the Supreme Court.—I am very truly yours,

H. E. SPALDING.

DETROIT, MICH., February 15, 1901.

[Our reference to the manner in which the question arose was *obiter dictum*, and intended merely to suggest that the right to a mandamus was conceded, while the application for it was refused as not properly made to the Supreme Court. The Judiciary Act authorized the Supreme Court to issue writs of mandamus "in cases warranted by the principles and usages of law," and a moderate exercise of legal ingenuity would have made this phrase answer the requirements of the situation; but Marshall chose to go further. Probably he preferred to raise the issue in a case where he claimed that Congress had extended the jurisdiction of the Court rather than in one where it was restricted. The point which we had in mind may be thus stated: Marshall might have simply said, "This is an Appellate Court. It is not in accordance with the principles and usages of law for an Appellate Court to issue writs of mandamus when it thus takes original jurisdiction." In other words, it required a forced construction of the statute authorizing the Supreme Court "to issue writs of mandamus in cases warranted by the principles and usages of law," to make it a violation of the Constitution. Congress did not specifically confer, and probably had no idea of conferring, power to issue these writs in cases of original jurisdiction other than those specified in the Constitution; but Marshall had to assume this intention as the basis of his argument.—ED. NATION.]

FALLACIES OF THE STANFORD ALUMNI.

TO THE EDITOR OF THE NATION:

SIR: As I perceive that the defenders of President Jordan intend to lay much stress on the report of the committee of the Stanford alumni, I think it important that a few facts respecting it should be remarked. First, it ought to be remembered that nearly all the alumni of Stanford are very young men. The oldest member of the committee was of the class of 1895; the chairman of the meeting, of 1899. Secondly, it appears from the San Francisco paper in which I first saw the report, that the meeting in which it was adopted was a small one; it was carried by less than forty affirmative votes. Thirdly, the committee, as was pointed out at the meeting, report in the main, not pertinent facts and evidences, but their own conclusions. The academic public, and that larger public whose interest in the controversy has been so gratifying, would gladly barter these conclusions for one piece of evidence which should answer the plain but pointed question: Why did Mrs. Stanford, four years having peacefully passed since the campaign of 1896, require the dismissal of Professor Ross shortly after the speeches in question, if it was not *because* of those speeches? That question has never yet been squarely met by President Jordan and his friends. The truth is, it admits of but one answer; and for that answer there are evidences before which the labored defence crumbles and collapses instantly. If I know anything of the historical students of the country, I could guarantee that these evidences would convince nine out of ten among those who have no personal interest whatever in the matter.

It is not worth while to take up much of your space with criticisms of the commit-

tee's report. It has been very neatly dissected in an editorial article in the Boston *Herald* of February 14. I make only a few comments. It is a natural question, why, if Mrs. Stanford's objections of 1896 were based not on economic, but on general grounds, it happens that in December of that year Dr. Ross's chair was changed from economics to social science. To say that Dr. Ross's willingness to remain at the University despite Mrs. Stanford's criticisms shows that he did not think his freedom of speech abridged, is to draw an inference by no means logical. Finally, if "a university rule against the participation in politics by a university professor of economics during the progress of a political campaign" would not "impair the proper right of academic freedom," what would? Might he vote?

The Stanford alumnus also quotes Vice-President Branner's remarks on Professor Howard's manly protest, which, after two months, was found to have been a mortal offence. They sound well. Academic propriety is a precious possession. To arraign the University management in the presence of one's class is a course of action which, in perhaps every sort of case but one, deserves severe punishment. But this case was of that one sort. There are some things more precious than decorum. When a fellow-professor is suddenly dismissed from his chair by a rich trustee, distinctly because of sober public pronouncements in the field of his science, in the face of so deadly a blow at the life of the University it is no time to be mindful of etiquette. In such a crisis, surely no one would wish to see Professor Howard tithing the mint and anise and cummin of academic propriety, and ignoring those weightier matters of the law apart from which universities are worthless.

As to Professor Flügel, a second reading of Professor Ashley's admirable letter in your issue of January 31 answers him sufficiently. Professor Ashley, in the plainest terms, declines to prejudge the case. He only says, what is perfectly true, that an honorable man who does not wish to countenance a species of iniquity fatal to the general good of his profession, ought to satisfy himself, by appropriate evidence, that Mrs. Stanford did right before he accepts a call to her university. If he is unable so to satisfy himself, he ought to remember Milton's resolve "to prefer a blameless silence before the sacred office of speaking, bought and begun with servitude and forswearing." J. Franklin Jameson.

Brown University, Providence, R. I., February 21, 1900.

[With this letter we must, for the present at least, take leave of this controversy. Since Professor Jameson wrote, a committee of the American economists who met at Detroit last December have examined all the evidence obtainable in the case, and have reported to the public at large (in the *Evening Post* of February 23, and through other mediums) their findings, which we lack the space to reproduce in detail. They acquit Professor Ross of "any defect in moral character," or of having given "occasion for his dismissal by incompetence" or "by any unfaithfulness in the discharge of his duties," or by having "violated any confidence reposed in him." On these heads they quote to the contrary from letters in President Jordan's own hand. They hold that the charge of defaming the late Senator Stanford, if true, was not a motive for the dismissal, again quoting President Jordan. In short, Mrs. Stanford was the promoter of the action which President Jordan could not prevail with her to stave off, and the determining consideration with her was Professor Ross's public utterances on silver, coolie immigration, and municipal ownership. The committee consisted of Professors E. R. A. Seligman of Columbia, H. W. Farnam of Yale, and Henry B. Gardner of Brown.—Ed. Nation.]

BLACKSTONE ON THE PHILIPPINE INVASION.

To the Editor of The Nation:

Sir: The following extract may be of interest to some of your readers. It is from Blackstone, book the second, "Of the Rights of Things":

"Upon the same principle was founded the right of migration, or sending colonies to find out new habitations, when the mother country was overcharged with inhabitants; which was practised as well by the Phœnicians and Greeks, as the Germans, Scythians, and other Northern people. And, so long as it was confined to the stocking and cultivation of desert, uninhabited countries, it kept strictly within the limits of the law of nature. But how far the seizing on countries already peopled, and driving out or massacring the innocent and defenceless natives, merely because they differed from their invaders in language, in religion, in customs, in government, or in color; how far such a conduct was consonant to nature, to reason, or to Christianity, deserved well to be considered by those who have rendered their names immortal by thus civilizing mankind."

Would that our war sprang from a prejudice against "language, religion, customs and government and color," for then we should excite only hatred among the Filipinos. But, as it is, with our glabrous pretences, threadbare sanctimoniousness, and coarse greed, we excite contempt in addition. Joseph Dick.

Toledo, O., February 21, 1901.

THE GARNETT ANTHOLOGY.

To the Editor of The Nation:

Sir: May I say that Mr. Louis N. Wilson's suggestion as to the probable character of the 'Universal Anthology' ('Garnett Anthology'), in your last issue, is a misapprehension? Publishers of a work of this sort are unfortunately placed for a public reply to public criticism, because the latter is welcomed and privileged as a literary service (fairly enough), while the detailed schedule and comparison which would be the only effective defence would be excluded as disguised advertising. I think it will come within admissible limits, however, if I say that the "slight changes" involve the cancelling of one-half the old matter and its replacement by new, besides the addition of as much more fresh matter; that several volumes have not a line of matter ever used before in that or any other anthology, and several others very little; that, in point of novelty and inaccessibility and consequent value to the purchaser, the new matter would itself constitute a very valuable as well as very large set; that several dozens of these articles are translations made specially for it; and, finally, that, as the new set contains nearly 4,000 pages more than the old, it is a matter of irrefutable mathematics that the former must have consisted of nearly a third new matter, even if none of the old had been thrown out at all—which is not the fact by some 5,000 pages.

The other portion of the letter, on the fictions of canvassers anent the "Pepys," does not directly concern me, but I may be allowed to say that a firm should be held responsible only for the advertising matter it itself prepares, and not the soaring imaginations of agents, which it cannot control, and that such a counsel of perfection would involve giving up agency business altogether, and, in fact, abolishing "drummers" in all trades. This very fact led a firm I know well to refuse to do agency business for a long time because it could not prevent agents' romancing and did not wish to be held responsible for the results. In this case I cannot see that the canvassers adorned the truth more than is the usual and thoroughly discounted custom in any trade; an *édition de luxe* of the only complete edition is fairly enough a part of that "only complete." The *emptor* may be reasonably bid *caveat* to the extent of knowing that such a work as 'Pepys's Diary' cannot be exclusively issued in a limited extra-illustrated edition. I do not defend the fiction, which certainly cannot have been authorized, but it is very tame and quixotically truthful compared with the representations under which works like the 'Encyclopædia Britannica' and the 'Century Dictionary' were habitually canvassed, and which no one dreamed of discrediting the publishers with.

Very truly yours, Forrest Morgan.

Hartford, Conn., February 23, 1901.

THE NAME HERSCHEL.

To the Editor of The Nation:

Sir: In a delightful review of Mr. Sime's 'William Herschel,' published in your issue of January 24, I note a singular etymology of the great astronomer's name. It has no connection, as there suggested, with the old High German *Hêr*, but is a diminutive of *Hersch*, which is a well-known variant upon the "common or garden" *Hirsch*, a stag.

Z.

Florence, February 8, 1901.

Notes.

D. Appleton & Co. will shortly publish 'Pleasures of the Telescope,' by Garrett D. Serviss; a revision of Gen. J. H. Wilson's book on 'China'; 'Some Ill-Used Words,' by Alfred Ayres: and a trade edition of Père Didon's 'Life of Jesus Christ' in two volumes.

Harper & Bros.' March announcements include 'American Engineering Competition,' sundry articles of recent appearance in the London *Times*; the New York *Sun's* articles illustrating 'The Progress of the Century'; 'The Bolivian Andes: A Record of Climbing and Exploration,' by Sir Martin Conway; vols. iii. and iv. of Justin McCarthy's 'History of the Four Georges'; and

'Ten Singing Lessons,' by Mme. Mathilde Marchesi.

Macmillan Co. have nearly ready 'The Romance of the Heavens,' a popular work on astronomy by Prof. A. W. Bickerton of the New Zealand University; and 'The Feeding of Animals,' by W. H. Jordan, Director of the New York State Agricultural Experiment Station at Geneva.

Houghton, Mifflin & Co. will publish directly Dr. Lyman Abbott's 'Life and Literature of the Ancient Hebrews.'

'Lessons in Law for Women,' by Walter S. Cox, formerly of the Supreme Court of the District of Columbia, and 'My Ocean Trip,' a book for tourists, are among forthcoming works of Brentano's.

Just two years ago we had occasion to notice with praise M. É. Levasseur's 'L'Ouvrier Américain.' This valuable work now comes to us in English dress, translated by Dr. Thomas S. Adams, and edited with abundant annotations, extending the sources of information and bringing up the statistics to date, by Theodore Marburg of Baltimore, in which city the handsome volume appears as one of the Johns Hopkins University Studies. An index has been provided for it. Under its new title, 'The American Workman,' it is thus qualified to prolong its useful career in the country to which it relates, and which was studied by the author upon the spot.

Another laudable work, dating from the first half of last year, namely, Paul Leroy-Beaulieu's 'La Rénovation de l'Asie,' has not been rendered stale by the rapid march of events in China, and may still be called timely, as we called it then. It now appears as 'The Awakening of the East: Siberia—Japan—China,' from the press of McClure, Phillips & Co., with a preface by Henry Norman. Here, too, an index has not been overlooked.

'Hans Memlinc,' by W. H. James Weale, in the "Great Masters" series (London: Bell; New York: Macmillan), is a book of the careful, catalogue order, containing descriptions of all authentic and most attributed works of the master, and but little in the way of biography or criticism. Indeed, as to biography there is next to none to be written, investigation having destroyed the Memling legend and put nothing in its place. The volume will prove valuable for reference, if not of great interest to the general reader.

'Girls' Christian Names,' by Helena Swan (E. P. Dutton & Co.), is the title of an attractive little glossary in which are given the history, meaning, and literary associations of women's names in vogue among English-speaking peoples. The volume might have been reduced to half its size by the omission of unimportant illustrations: *e. g.*, we read under the heading "Mildred" that there is a young artist in London named Miss Mildred Butler, and under "Sara," that one Sara Williams, a servant, was in the seventeenth century suspected of being possessed by the devil. The profuse quotations lend what literary interest can attach to such a book. It is hardly worth while to criticise the English of so trivial a compilation; still, we must deplore the use of such phrases as "she got mixed up with Anna." On p. 26, where we should have expected a reference to the Latin adjective, we are told that the Christian name Alma is derived from the famous battle of that name. The book will probably seem superfluous to most people, but, a hundred years hence, one who should be confronted with the recently christened "Modderina Belmontina Methuena Jones" would be justified in sighing for just such a glossary.

Of the thirteenth volume of Mr. Charles F. Lummis's illustrated *Land of Sunshine* (Los Angeles, Cal.), as of its predecessors, it remains true that the editor's contributions are the raciest and most readable; and to be noted among them are his characterization of two preëminent students of Indian life, the late Frank Hamilton Cushing of Zuñi fame, and A. F. Bandelier, who are also portrayed photographically. Mr. Lummis, too, has revised and made himself responsible for the accuracy of Mrs. Edward E. Ayer's translation of Fray Juan de Santander's memorial to Philip IV., 1630, while Mr. F. W. Hodge has annotated it. Besides the usual miscellany of this magazine, relating to the climate, natural history, scenery, and writers of the Pacific Slope, we may remark some facsimiles of old prints of early scenes in the American settlement on the coast. Nor has the editor failed to record the railway extension from the Santa Fé line to the Grand Cañon, abolishing the choking all-day stage ride.

The thirteenth report of the Massachusetts Commissioner of Public Records is notable for a revew of legislation in that State concerning public records from colonial times; a list of city clerks with their terms of service; and, of more general interest, accounts of the State standard ink, with formula, and of standard record paper. From the eleventh report is reprinted in an appendix the exhibition of the location of towns in counties, concluding with a long list of such as have been incorporated in more than one county.

'Phillips Brooks House' is the title of a privately printed pamphlet in which Mr. E. H. Abbot, a classmate of the famous preacher, gives an account of the building of this house, "dedicated to piety, charity, and hospitality," together with the addresses at the dedication (of which President Eliot's interesting reminiscences were the distinguishing feature), a list of subscribers, and photographic views of the exterior and interior. There is a large reception room for social uses on the ground floor, a hall named in honor of Prof. A. P. Peabody, with seats for 220 people, on the upper floor; the other two floors are devoted to rooms for the religious societies of the University.

A catalogue of books recommended for Sunday-school and parish libraries, issued by the Church Library Association of Cambridge, Mass., will be found useful to all interested in the reading of the young. About a quarter of the 1,600 titles are of books which bear directly upon church life, history, or doctrine. The remainder include carefully selected books from nearly every department of literature. The list is divided into subjects; the entries are by title, often with a brief characterization, and publisher and price are mentioned.

A welcome addition to Malwida von Meysenbug's 'Memoiren einer Idealisten' and 'Lebensabend einer Idealisten,' noticed in these columns two years ago, is her volume 'Stimmungsbilder,' of which a third and enlarged edition has just been issued by Schuster & Loeffler in Berlin. It is a collection of thoughts and reflections on various topics —the training of children, marriage, the possible political influence of woman, the social question, the rejuvenation of Italy, the uses of philosophy, the cultivation of the intellect in its relation to morals; and ends with interesting reminiscences of the Russian revolutionist Alexander Herzen, whose daughter Olga, now Madame Gabriel Monod, she educated and adopted. The author, who has now passed four-score years, bates no jot of earnestness and enthusiasm in the pursuit of her high ideals, whose ultimate realization she still hopes for.

The Department of Public Works of France has the advice and assistance of a commission of about one hundred scientists and engineers on questions relating to the properties of materials of construction. This commission was organized by the French Government in 1890, and its first report appeared in 1894. In June of last year a second session was held, whose Transactions have just been issued in the beautiful typography of the Imprimerie Nationale. The first volume gives official documents and the conclusions adopted; the second contains reports on metals, and the third, papers and reports on stone, timber, leather, and other materials. The methods of testing which are discussed include not only the physical ones of strength and ductility, but also microscopic and chemical work. Microscopic examinations of steel, indeed, have been so developed in the past decade that they have proved of great value in the study of the causes of physical properties, and are beginning to come into use in the laboratories of manufacturers. The structure of wood, the bacteria which produce rot, and the methods of preserving timber are also discussed at great length in these Transactions. The valuable work done by this French commission suggests the advantage of international coöperation of engineering associations in making experiments on various qualities of materials, so that standard uniform methods of testing may be finally established.

Gravitation and inertia are two fundamental properties of matter whose causes are entirely unknown, although they are supposed to be connected in some way with the mysterious ether of space. A book by Professor Bjerknes of the University of Stockholm, entitled 'Hydrodynamic Distant Forces,' has recently been published at Leipzig, which contains a novel and interesting contribution to this important question. He supposes that a number of spheres, which have the property of contracting and expanding in a rhythmic manner, are placed in an incompressible and frictionless fluid, and then ascertains by a mathematical investigation the force that each exerts upon the others. Such a pulsating sphere, he finds, either attracts or repels each of the other spheres inversely as the square of the distance between their centres; this being the same law as for magnetic poles. These spheres obey the law of inertia, remaining either at rest or in uniform motion unless acted upon by external forces; but the law of action and reaction is not always observed. While an ether of the assumed properties acting upon such assumed spheres explains some electric phenomena very well, it does not appear to throw especial light upon the question of gravitation, although the indications of the theory are so important that Professor Bjerknes promises a second volume of further investigations.

The beginning of the century has brought with it the first instalment of a work on

the Protestantism of the world, which, on account of the scholarly character of its contents, and the fine mechanical make-up, promises to be a significant addition to modern literature. It is entitled 'Der Protestantismus am Ende des Neunzehnten Jahrhunderts, in Wort und Bild,' and is edited by Pastor C. Merkshagen of Berlin, and published by the Wartburg house of that city. It is intended to be a scholarly survey of the Protestantism of the past and the present. The coöperation of nearly one hundred prominent scholars, representing the various Protestant countries, has been secured, and each one of the proposed fifty parts will discuss a leading phase or person of the general problem, by the aid of one or more of these writers. The first instalment, in folio form, and consisting of twenty-four pages, contains, from the pen of Prof. Dr. F. von Bezold of the University of Bonn, an excellent bird's-eye survey of the factors and persons that prepared the way for the great movement of the sixteenth century; the second instalment is devoted entirely to the person and work of Luther. The illustrations are simply admirable.

The German Parliament has adopted the resolution, offered by Müller-Sagen, which proposes the introduction of a uniform revised orthography for the whole Empire, This is the first time that the imperial legislative body has taken the matter in hand, the various systems of revised orthography now extant having been introduced by the leading States of the Confederation, with differences in minor details. No doubt one or other of these systems, probably that of Prussia, introduced by Minister von Puttkamer, would have gained the supremacy had not men high in power, especially Bismarck, taken a firm stand in opposition. The Chancellor permitted none of his subordinates to make use of it, and his example was followed by other Ministers. Nevertheless, the Prussian system has found wide acceptance. The "Boersenverein" of German publishers recently made inquiries as to the extent to which this revised orthography was used, and of 631 publication houses which sent in replies, 406 employed only this system, 58 only the old, 141 used both, while 8 used only the Austrian system.

Germany is again the principal subject in the Consular Reports, the February number containing an account of an organized effort, by the forming of a national association of manufacturers, merchants, and bankers, to secure the continuance of the present commercial treaties. At one of its meetings the statement was made in reference to the Agrarian opposition to their renewal, that only sixteen per cent. of the entire wealth of Germany represents the value of lands adapted to the cultivation of cereals. The Agrarians, on the other hand, insist that, in respect to food products and other materials, Germany is becoming altogether too dependent on the United States, asserting that, in the decade ending 1899, there was a net balance of $200,700,000 against the Empire in favor of this country. Other subjects treated in this number are American expositions in Constantinople and Guadeloupe, and a projected railway from the Great Lakes to Hudson Bay. The line, known as the Algoma Central, starts from Sault Ste. Marie, twenty-five miles being completed and in use. "It had its origin in the necessity of bringing supplies of pulp-wood from the far North to the Sault mills, but it opens up as well a region that is fabulously rich in minerals and timber." The capital has mostly come from this country, but the Ontario Government has aided in the construction of the railway by a large land grant.

The Quarterly Statement of the Palestine Exploration Fund for January contains reports of excavations, and a list of the numerous jar-handles with Greek stamps recently found at Tel Sandahannah, with conjectural readings of some of the inscriptions by different scholars. In an account of a voyage along the eastern border of the Dead Sea, some facts are given which indicate that this almost unknown region is rich in mineral wealth. "Along the shore we found pieces of pure sulphur as large as one's fist, and lumps of bitumen as large as a man's head." In another place, "oil poured out from the rocks and covered considerable areas of the sea. Instead of falling from the oars in drops, the water fell in filmy sheets as if it were pure oil." We are requested by Dr. F. J. Bliss, until recently Director of Excavations for the Palestine Exploration Fund, and still at Beirut, Syria, to print the following paragraph from the above Statement: "The Committee are glad to learn from Dr. Bliss that the state of his health has very materially improved during the last few months, and that he is now better and stronger than at any time since the excavations which are just completed were begun."

Petermann's Mitteilungen, number one, opens with an account by the veteran explorer, Dr. G. Schweinfurth, of a journey made in 1882 for the purpose of tracing the western limit of the Nile valley from Farshiut to the first cataract. In the course of it he discovered several places containing records of the past which are still awaiting examination. Among these is a cave which, from its inscriptions, was probably a place of refuge for Christians during the persecution of Diocletian. Dr. C. Martin contributes a beautiful map of southern Chili, with notes, which conclude with a confident prophecy that a prosperous future lies before this region and western Patagonia as soon as it has regular communication by rail and steamship with the rest of the world.

Prof. Ernst Haeckel, undisturbed by the battle which is still being fought at home over his 'Welträtsel,' is pursuing his researches in the islands and waters of Malaysia. He is not, however, bent upon unearthing further remains of Eugène Dubois's *Pithecanthropus erectus*, which newspaper reports make the main object of his journey, but rather, as he states in a first instalment of letters to the *Rundschau* for February, upon completing his protracted studies of pelagic organisms, including the "investigation and representation of the *beautiful forms* in which their life displays itself." He hopes thus to find additional material for his 'Kunstformen der Natur,' the publication of which was begun in 1899. The interest of the letters does not centre entirely in scientific subjects; the writer's observations often resemble those of the ordinary traveller, as when he compares the elaborate dinner of the Lloyd steamer with his frugal meal at Jena, consisting of Thuringian "Rostbratwurst" and a glass of beer. The occasional touches of sentiment and naïveté lend charm to the narrative.

—The United States Coast and Geodetic Survey has issued, as "Special Publication No. 4," a quarto volume of 871 pages containing an account of 'The Transcontinental Triangulation and the American Arc of the Parallel.' The completion of this great undertaking, the most extensive geodetic work ever attempted by any single government, marks an epoch in the history of science in the United States, and is regarded as a notable event in the annals of geodesy. The transcontinental triangulation, which was designed to connect the triangulation lines already executed on the Atlantic and Pacific Coasts, began in 1871 under Prof. Benjamin Peirce, third Superintendent of the Survey, and has been prosecuted by all of his successors. The terminal points are at Cape May, New Jersey, and Point Arena, California, and the intervening distance is 2,625 miles. In the present volume are brought together not only the observations themselves, but also a description of the instruments and methods employed. The gigantic scale of operations has necessitated the introduction of many improvements, and the progress of the work has been coincident with that of geodesy itself, so that the book is, in a measure, a history of the science during the last quarter of the nineteenth century. The nature of the country traversed has developed new ideas concerning signals and tripods; and the mounting of an instrument 152 feet above the ground and the erection of an observing pole to a height of 275 feet are features hitherto unknown in similar work. So are the calculation of geographical positions when lines of sight are 182 miles long, and the adjustment of the triangulation in a chain of 2,600 miles of continuous geometrical figures. Astronomical results obtained at an altitude of 14,000 feet demanded special treatment, on account of changed conditions in attractive and centrifugal forces. The ordinary formula for spherical excess required extension to meet the demands of the great triangles from Pike's Peak to the Sierra Nevada, and the great inequalities in the heights of the stations necessitated a modification of the laws of refraction applicable at lower and equal elevations. It is to be noted that, for the first time, corrections have been introduced for the variations of latitude. The results of this survey are of far-reaching consequence. Sixteen States have been given fundamental permanent points on which all their subsequent surveys may be based, and valuable material has been supplied for a more exact determination of the earth's size and shape. The volume contains over fifty illustrations and two folded maps.

—It is with a strong valedictory feeling that we notice vol. lxxi. of the 'Jesuit Relations' (Cleveland: Burrows Brothers Co.), for, apart from the index, which will occupy two volumes more, it marks the conclusion of Mr. Thwaites's work. We have followed this long series with much persistence from beginning to end because we have felt the undertaking to be a very considerable one and worthy the attention of scholars. Rarely has a set of historical documents covering so wide an extent of territory and so long a stretch of time been brought out with such rapidity, with such clear signs of editorial care, and in such handsome form. If by repeated recurrence to the subject, as the successive parts appeared, we may have wearied some readers, we trust that we have rendered a certain service to more by keep-

ing this valuable section of Americana before their eyes. For the North American Indians it is a *sine qua non;* it shows the deeds of the Jesuits at their best, and no records of American exploration awaken a more lasting interest. The history of the Order in Canada closes (until its modern restoration) with the death of J. J. Casot, who died at Quebec in 1800. He had at first been merely a lay brother, but was in 1766 ordained to guard against a complete extinction of the Society. The missions came to an end shortly after the Jesuits were condemned by the Parlement of Paris. In 1768 Father Meurin writes from the Illinois that he has collected no tithes for four years, and that he lives by charity or what he gets from saying masses. Under English rule the sole question of importance relates to the disposition of Jesuit property. It passed to the Government, and was held by the Province of Quebec when Mr. Mercier introduced his Jesuits' Estates Act, which awakened Canada in 1888 to a lively remembrance of the Black Robes. The task of index-making really begins in this volume with a double list, alphabetical and chronological, of the Jesuits who were connected with the Canadian mission from first to last. The total number is 320. There is another useful list of Governors and Intendants from 1608 to 1760, and the English Governors of Canada, 1766-1805, are also catalogued. The classified bibliography of "authors consulted" shows how the notes have been prepared. Here, finally, is to be found the attractive recently discovered portrait supposed to be of Père Marquette, as we have already related. Four years ago we began our reference to this series with a note of good-will; we conclude it with a word of congratulation to editor and publisher.

—Since Zotenberg published his epoch-marking 'Notice sur quelques manuscrits des Mille et une Nuits,' there has been no contribution to that study so useful as the bibliography of Professor Chauvin of the University of Liège, the first part of which has lately appeared. It forms volume iv. of his great 'Bibliographie des Ouvrages arabes ou relatifs aux Arabes publiés dans l'Europe chrétienne de 1810 à 1885,' a most laborious and praiseworthy work in continuation of the much less laborious and praiseworthy 'Bibliotheca Arabica' of Schnurrer. It is true that Professor Chauvin does not make as brilliant discoveries and fertile combinations as those which we owe to the industry and sagacity of Zotenberg; his hypothesis, *e. g.*, that the final editor of the Egyptian recension of 'The 1,001 Nights' was a converted Jew, and, perhaps, the figure known in Jewish literature as the pseudo-Maimonides, will probably not meet with much acceptance. But by his labors the bibliography of the 'Nights,' printed and in manuscript, Oriental and European, has at last been put on a trustworthy foundation. For this volume does not, by any means, limit itself chronologically or geographically within the bounds of its title. It takes account of the editions of Galland, his translators, supplementers and rivals, from the first and down to the present time, and includes as well the various Arabic texts and versions printed in the East. The known manuscripts, too, are reckoned with, and the fullest details given that Professor Chauvin could gather up, as to their characters and contents. He describes further the different imitations, in good and in bad faith, Oriental and European, and gives tables of the contents of these as well as of the texts, manuscripts, and translations of the great original. References, too, we find for articles on the 'Nights' and reviews of the principal editions: it is much to know where to look for what De Sacy, Rückert, A. Müller, Leigh Hunt, August von Schlegel, etc., had to say from their very different standpoints. Finally, when the second part has appeared, with analyses of all the tales, anecdotes, etc., accounts of their editions when published separately, and indices for the whole, we shall have a bibliographical thesaurus of the first rank.

—As an illustration of the width and interest of this book, the treatment given to Dr. Mardrus's "translation"—*sit venia verbo* —may be adduced. The volumes published are bibliographically described, and extracts are given from the preface, and from an article by Dr. Mardrus in the *Revue Encyclopédique Larousse*, on his own work and methods. It is evidently written in defence, and is amusing enough. The claim to literality is repeated. He has used all the printed texts, and also certain manuscripts, but has relied, above all, on a manuscript in his own possession, which had been the source of the first Bulaq edition. This brings out clearly the issue between Dr. Mardrus and the Arabists. When we consider that it is by no means the habit of Egyptian printers to trouble themselves with editing and abbreviating their "copy"—always excepting indices and such useful things which they regularly cut down or out—also that the Calcutta edition is certainly a complete reproduction of a MS. brought from Egypt and full sister to that which lies behind the Bulaq edition, it seems clearly "up to" Dr. Mardrus—with permission for the slang—to support his statements and translations by production of his MS. This matter of simple honesty is not to be confused with certain other points in which Dr. Mardrus undoubtedly has the right. His conception of a purely literary version, in which the idea of translating and the figure of the translator must remain in the background, and from which all apparatus of notes, learned or otherwise, shall be rigidly excluded, is the only possible one.

—On some few points Professor Chauvin can be corrected and supplemented. On p. 9, at the reference to De Wallemburg's 'Notice,' it would have been well to add a cross-reference to p. 224 of Müller's 'Sendschreiben' (19 J. on p. 6), where that 'Notice' is examined. On pp. 112 f., Professor Chauvin is somewhat severe on Burton for citing the Bourdin edition of Galland, as edited by De Sacy. His suggestion that Burton has misunderstood the title, "ne sachant pas assez le Français," is enough to make that eminently French linguist turn in his grave. Chauvin has himself misunderstood Burton, who (viii, 71) distinguishes between De Sacy's and Bourdin's parts. The gravamen of the accusation against the great Arabist is really that he, to all appearance, wrote his 'Mémoire' without consulting the Arabic original. On p. 116 Professor Chauvin has missed the 'Selection from the Writings of Henry Torrens, with a Memoir by James Hume. Calcutta and London. 1854.' It contains a reprint of all the verse and some of the prose in the single volume of the translation of the 'Nights' which Torrens printed in 1839. P. 197, it would be interesting to know what is the authority for ascribing an Egyptian origin to Galland's manuscript. Zotenberg does not do so in his 'Notice,' and an old note (A. D. 1548) in the manuscript itself is dated from Tripolis in Syria. The history of MS. C., on p. 198, may be pushed a stage farther back by reference to Humbert's 'Anthologie Arabe.' By comparison of pp. 9 and 157 of that book it can be established that the MS. in question—4678-9 in the Paris Library—is a copy of a certain "beau manuscrit de M. Sabbagh, actuellement [1819] entre les mains de M. Baudeuf." The original MS. was brought from Egypt (p. 9, "apporté d'Égypte"), was in the hands of M. Baudeuf, and has now vanished; a copy was made by Michel Sabbagh (p. 157) for Caussin de Perceval, *père*, and is MS. C. above. That there are so few points open to criticism shows how excellent a piece of work has been done by Professor Chauvin for students of the 'Nights.'

—The careful investigations of the Danish "kitchen-middens" that have been conducted during the fifty years since Japetus Steenstrup and Jacob Worsaae pointed out the significance of these monuments of the Stone Age, have found a fitting summing up in a work just published in Copenhagen under the title, 'Affaldsdynger fra Stenalderen i Danmark' (The Kitchen-Middens of the Stone Age in Denmark). This splendid volume, with its numerous illustrations by Magnus Petersen and others, consists of contributions by the seven scholars who, during the last eight years, have been making an exhaustive study of the middens in different parts of Denmark. The subject has been investigated from the standpoint of botany, geology, and zoölogy, as well as from that of archæology proper, and the credit of starting the movement is due to Dr. Sophus Müller, Director of the Museum of Northern Antiquities in Copenhagen. The most important single result of this investigation, as presented here, is the absolute confirmation of the theory that the Stone Age is represented in the middens in all but its latest subdivision. The middens all lie near the original water-line, and in all of them the principal element is oyster-shells, thrown there after eating by the prehistoric inhabitants. The Danish name means literally refuse-heaps. Oysters, together with other bivalves, and snails, and the flesh of some wild animals, formed the chief articles of food of these prehistoric Danish folk. The only domestic animal found in the middens belonging to the older Stone Age is the dog. Remains of many extinct animals and birds have been found, and at least two of the middens contain skeletons of human beings, sometimes in rude stone coffins. Thousands of stone and clay articles have been removed from the middens and deposited in Copenhagen. The early cooking-places also remain, but no trace of the dwellings of the settlers has been noted. Detailed information is given of the species of trees that flourished in prehistoric Denmark, based on examination of the charcoal. While the archæological discoveries of Greece and Rome have been followed with interest by the whole cultivated world, the important labors of these Danish savants have been practically disregarded by all but specialists. It is to be hoped that, in the not far-distant future, this record of their work may be put in a

language that will make it accessible to a larger public.

THE FIFTEENTH CENTURY IN LITERATURE.

The Transition Period. [Periods of European Literature.] By G. Gregory Smith. Charles Scribner's Sons. 12mo. Pp. xv + 422.

No country in Europe had, in the period surveyed in this book, a strictly national literature; there were no clearly defined dominant ideas, no great individual writers, and the only writings of the period at all approaching the first rank were, like the 'De Imitatione Christi,' the 'Amadis de Gaule,' or the 'Morte d'Arthur,' rather the late fruition of preceding ages than the characteristic product of the fifteenth century. But although Mr. Smith, in persistently emphasizing the importance and influence of the individual writer, refuses to take his stand with the literary Darwinians, and although he strives for "a generous uncertainty and see-saw of impression," he does contrive to present the essential, pregnant fluidity of his period in a clear and orderly fashion. He schematizes his material under four primary heads: the allegorical change in the general poetry of that time; the course of ballad poetry; the rise of the dramatic motive; and the elaboration of a formal prose.

The excellent Scotch poetry of James I., Henryson, Gavin Douglas, and Dunbar, is the subject of one of the best chapters in the book, which shows clearly how these able craftsmen saved themselves from the dulness which got hold upon the literature south of the Tweed, by conceiving a fresh idea of the poetic possibilities of allegory, by converting to a literary engine what had been a mystical cultus. Mr. Smith shows good literary judgment in differing from Mr. Courthope's opinion of Douglas, in emphasizing his position as a conventional court allegorist, and in minimizing it as an exponent of the new humanism. We must agree that Douglas, in his half-heartedness, is no such protagonist of the travail of his age as the more vigorous and original Dunbar. How Mr. Lowell could have written against the "dullest vulgarity" of this all but great poet, and complained of his "needle of wit in a haystack of verse," has long been a mystery. With the increase of our knowledge concerning him, and especially since the publication of Schipper's admirable volumes of text and biographical criticism, Dunbar has come to seem to the majority of students by far the most considerable British poet between Chaucer and Spenser. Mr. Smith's characterization of his vigor, melody, broad and mellow humor, and double gifts of pungent satire and elegiac pathos is discriminating and adequate. He makes the attractive suggestion that the "Complaint to the King," which has been something of a philological puzzle, was a bit of fifteenth-century whimsicality, a piece of nonsense verse analogous to "The Hunting of the Snark," or to any other ditty of the Topsy-Turvy muse.

The chapter on the course of ballad poetry is, in some sense, the crucial feature of the book. In it Mr. Smith defends a thesis which, although it is but a slight advance upon and codification of the most recent theories, differs so widely from the traditional opinion of scholars and general readers that it is likely to draw down upon him the reproach of heresy. His position is, briefly, as follows: Admitting, as we must, that there is no manuscript ballad extant of a date earlier than the middle of the fifteenth century, there is absolutely nothing to prove that the mass of ballad poetry existing in all European languages can be referred to a much earlier date. In other words, there is no solid ground for either of the generally accepted theories of ballad origins, that the original ballad was the work of that hypothetical person, the "ancient minstrel," or that, as the phrase goes, "it just growed." He holds, on the contrary, that the ballad was written, as a recognized art form, by minor poets, and sometimes, as we know in the case of Henryson and Dunbar, by the greater ones; that the ballad form is merely "the atrophy of the romantic tradition"; that the historical or romantic ballads were simply the redaction of the old material of the Chronicle, Romance, or Fabliau into the form which was made necessary by the general movement of the time toward curtailment, and toward episodic rather than compendious treatment. He admits that in the sixteenth and seventeenth centuries the ballad in its decadence became something very like a popular genre, but he denies that it was such in its origin. His argument is fairly convincing. The evident rhetorical trickiness of the characteristic ballad style, with the inversions and refrains, which struck the jaded eighteenth century as the very voice of nature, has seemed to some later students to savor strongly of the shop. Moreover, there is, as Mr. Smith says, "something in the timbre of the oldest ballads which is different from the mere voice of mediævalism. To quote his summary of "Chevy Chase" and "Sir Patrick Spence":

"The oftener one reads these admirable ballads, the more difficult it is to destroy the impression that they were not produced in the heat and scurry of the events. Mingled with their feeling of the past is a feeling for the past. . . . Even in pieces whose subject is of the fifteenth century—that is, strictly contemporary—we recognize this attitude, just as (to complete the heresy) there is, in their stir and naïveté, a pretty suspicion of artfulness. Nor are such things strange, for the fifteenth-century spirit was neither naïve nor original, and could not be so till it had passed through a gross and cynical materialism. A great part of its higher enjoyment was in a sort of historical reverie."

In the case of French popular song, the conscious art displayed in the handling of difficult and intricate forms, like the rondeau, clearly mark it as poetry of a rhetorical kind. So far as Spanish ballad-poetry is concerned, the greatest of all in bulk and in merit, Mr. Smith is in agreement with the historians from Ticknor to Kelly in regarding it as a late growth, coming only after Santillana had begun the Italianate poetry of Spain, and operating upon the material afforded by the disintegration of the *cantares*, or romance-poems. Italian *stornelli* and *rispetti*, which, in a rough way, correspond to the ballad poetry of the other nations, were, says our author, following Symonds, merely handed down by memory from literary originals, centuries old. The view of German *Volkslieder* as literary exercises only a little less trammelled than the conventional Minnesong, though it has the sanction of Scherer, is violently opposed to the trend of German scholarship in this field; and, as Mr. Smith himself admits, the evidence here is inadequate.

The most important contribution of the fifteenth century to the course of European literature was its development of the dramatic motive. Here France is taken as the starting-point of the investigation because there the drama emerged the earliest and progressed in the most orderly manner, through the various stages of mystery, miracle, and morality, or *sottie* and farce, until, with the help of classic models, it finally culminated in Augustan tragedy and comedy. In this section Mr. Smith is chiefly concerned with the secularization of the drama, but he does not forget the characteristic movement from the compendious cycle to the episodic single play, and from the abstract generalization to the concrete type. The general course of dramatic history is outlined much as it is by Ward or by Klein, emphasis being skilfully laid on the points most essential to the balance of the book. One is a little surprised that there is slight mention of the masques and mummings which arose in this century, and which, as recent scholarship has shown, played such an important part in the strictly theatrical phases of the Elizabethan stage.

The chapters upon the rise of prose as a literary medium are unusually informing. The chief tendencies are again found to be those so characteristic of the century, curtailment and rhetorical self-consciousness. Here the writings of southern Europe and Germany are of the lesser importance. The Italian *vite* and *novelle*, Spanish chronicles or romantic stories, and the German picaresque novel 'Till Eulenspiegel' are of some moment to the specialist, but they must yield both in individual and in historic interest to the work of Commines or of Malory. The story of the rise of English prose through the conscious labors of Fortescue and Peacock, the rhythmically modulated sentences of Malory, and the lively French-taught prose of that *obstetrix musarum* Caxton, is excellently told. As a whole, following his elect method of "generous uncertainty," our author has given that impression of the atmospheric prevalence of an artificial prose which is probably nearest to the truth. Particularly interesting to the reader is his comparison of the French and English prose of this period:

"None of the English writers whom we have just discussed made any claim to be considered as poets. In France, on the other hand, we shall see that the poets, and many of the best of them, not only wrote in prose, but inclined more and more to that medium, and at times, as with Chartier, produced their best works in that form. The separation between poetic and prose style in England has always been, at least in its later stages, well defined and more absolute than in France. This is obvious alike by general contrast and by comparison of each kind in any individual author—between the verse of the Elizabethan drama and the prose of the Marprelate pamphlets, or between the prose and verse of Milton, of Dryden, or of Coleridge. There is no such distinction of spirit and manner between the *conteurs* and poets of the fifteenth century, or between the prose and verse of Chastelain, or indeed between the prose and verse of any French writer from that time down to the generation of the author of the 'Travailleurs de la Mer' and the 'Chants du Crépuscule.' The interest of the matter to us is, that this national contrast is already discernible amid the very beginnings of modern prose style in the fifteenth century."

From the point of view of the scientific and carefully cosmopolitan student of Eu-

ropean literature it may seem that the present volume too often takes English letters as the central point of departure, and perhaps does not give Italy quite all the space she deserves, as the mother of the humanism which was spreading throughout the latter half of this period, and was soon to transform all literary art. To the English reader, however, this is a manifest advantage, and, so far as the scholarly balance of the series is concerned, this patriotic bias will doubtless be offset in the succeeding volume upon the earlier Renaissance, by the general editor, Professor Saintsbury, who is never so well content as when invading an alien literature.

In general make-up the book, like all its series, is admirable. The convenient marginal analysis, and the full and accurate bibliographical material—relegated to the proper place, the footnote—will facilitate the use of the book by the students for whom, primarily, it is intended; on the other hand, the brisk style of it will render it tolerably comfortable to the lay reader.

JOHN PAUL JONES.

Paul Jones, Founder of the American Navy. By Augustus C. Buell. 2 vols. Charles Scribner's Sons. 1900.

John Paul Jones, Scottish peasant lad, British merchant seaman, American colonial naval officer, Commodore (at least by courtesy) in the Continental navy, French Chevalier, Russian Admiral, and citizen of the world, as well as of the United States, still remains one of the most striking figures ever connected with the history of our country. No individual of or since his time has aroused so much bitterness of feeling and wounded English pride so keenly as this impetuous man and brilliant sea fighter. Quite recently we have had an exhibition of this feeling in several English magazine articles, one, by so well-known a naval historian as Professor Laughton, being entitled "Paul Jones, the Pirate"—a title reflecting little credit upon this author's fairness or upon his knowledge of the proper definition of the word so freely used.

Born in 1747 by the north shore of Solway Firth, John Paul, so widely known afterwards as Paul Jones, was one of six children of John Paul, a Scotch gardener and fisherman. Four of the six children, including Paul Jones, emigrated to America, making Virginia for a greater or less period their home. William, the eldest, according to the author of this book, had been adopted in 1743 by a well-to-do and childless Virginia planter named William Jones, a distant relative of the Pauls, and as a result of this adoption he took the name of Jones, which in turn was taken by the younger brother when he succeeded to the elder brother's estate. At the age of twelve Paul Jones was said to be as well knit and hardy as a boy of sixteen; with a sea aptitude and skill beyond his years and fellows. It was at this age that he made his first deep-water voyage to Virginia, and before he attained his majority he became a shipmaster in the American and African trade. In making his last trip to Virginia as a merchant seaman, he found his elder brother at the point of death, which, following soon, caused the younger brother to give up his ship and take the place of his elder brother, both in name and in plantation.

Of his life for the following two years as a Virginia planter but little is known or recorded, and that little is mostly found in his published letters to Mr. Joseph Hewes, afterwards a member of the Continental Congress from North Carolina, and at all times until his death a close friend and correspondent of Paul Jones. In the events preceding the outbreak of the war of the Revolution, Jones identified himself with the Virginia and North Carolina patriots, and in his journal he states that he availed himself of the occasions that offered to assure Colonel George Washington, Mr. Thomas Jefferson, and all the rest that his services would be at the disposal of the Colonies whenever their cause should require such services upon the sea. On the 24th of June, 1775, the Naval Committee of the Continental Congress, of which Mr. Hewes was a member, invited Paul Jones, gentleman, of Virginia, master mariner, to lay before the Committee such information and advice as might seem to him useful in assisting the said Committee to discharge its labors. Upon reporting to the Committee, Jones was at once placed upon a commission, of which Robert Morris was ex-officio Chairman, to report upon the condition, availability, and expediency of purchasing certain vessels for the navy then lying in the Delaware River. Of the vessels thus referred to, six were purchased upon the commission's recommendation, and in this manner, as well as in other ways to be mentioned, John Paul Jones became identified with the founding of the American Navy.

With respect to the naval personnel needed, Jones addressed a letter to one of the members of the Naval Committee in answer to interrogatories, in which he set forth at length the necessary qualifications for officers of the navy. This letter is very wisely reprinted at length by our biographer, and must be considered as sound and as applicable to the present day as it was to the times in which it was written. Mr. Hewes, the member to whom the letter was addressed, states that Washington upon reading it said that "Mr. Jones is clearly not only a master mariner within the scope of the art of navigation, but he also holds a strong and profound sense of the political and military weight of command on the sea. His powers of usefulness are great and must be constantly kept in view." In regard to the question of building frigates and ships of the line, Jones wisely said that at the stage under consideration it was unwise to attempt building ships of the line. Their use, he stated, was mainly strategical, for which purpose, he reasoned, they must operate in fleets and squadrons, calculated to fight ranged battles, to make extensive demonstrations, or to protect military expeditions over the seas. The plan was, with the presentation of Jones's sagacious arguments against it, abandoned, and the programme of construction presented by him was, with a few changes, adopted by Congress.

Jones was appointed in 1775 a lieutenant in the navy, his short residence in the Colonies being one of the reasons given by Mr. Adams for not making him a captain at once. He was assigned to the *Alfred* as its first lieutenant, and in her took part in an expedition under Commodore Hopkins against Nassau. He afterwards was given command of the little sloop *Providence*, in which he made his maiden cruise as commanding officer of a naval vessel along the coast of Nova Scotia. This cruise was so successful as to add much to his reputation as a skilful seaman and as a naval officer who at once grasped the salient points of the situation before him, not only when it was within sight and touch, but when it became known to him upon the broader field that lay beyond his immediate vision. Upon his return from this cruise in the *Providence*, he received two important pieces of information. One was the receipt of his commission as a captain in the Continental navy, duly made out in accordance with the resolution of Congress; the other was conveyed in letters from his trustees and agents in Virginia, and informed him that, during July, an expedition of British and Tories, under Lord Dunmore, had burned all the buildings of his plantation, killed his live-stock, destroyed his growing crops and fruit trees, and carried off all his able-bodied slaves of both sexes to Jamaica to be sold. We find little stress laid upon this ravaging in the English lives of Paul Jones, while Jones, in his letter to his friend Hewes upon the subject, says, most temperately:

"Another most serious concern to me is that this destruction cuts off my source of revenue. During the three seasons of my ownership, 1773, 1774, and 1775, the net income from the agriculture, trade, and milling of the plantation was nearly 4,000 guineas in the aggregate, over and above all necessary outlays. Since my coming to Philadelphia, a year ago, I have lived on this surplus, having drawn from the public funds only £50 in all that time, and this not for pay or allowances, but to reimburse me for expense of enlisting seamen."

As a result, Jones had no fortune left but his sword, and no future except what would follow from his success in warfare. He certainly had additional and personal incentive to warlike effort against Great Britain from the destruction of his property in Virginia.

After a short but successful cruise in command of the *Alfred*, Jones was appointed by act of Congress to the command of the ship *Ranger*, and on the 1st of November, 1777, was under way in command of that ship, bound to France, where she arrived early in the next month. His cruise on the *Ranger* in the following spring included the landing at Whitehaven and the capture of the sloop-of-war *Drake*. After the ending of this short but eventful cruise came a delay before Jones was able to sail in command of the long-promised squadron composed of his own ship, the *Bon Homme Richard*, the frigates *Alliance* and *Pallas*, the brig *Vengeance*, and a coast-guard cutter called the *Cerf*. The concordat signed by Jones and his fellow-captains at the request of Franklin made the little squadron as weak in discipline as it was motley in composition, and the engagement of the *Bon Homme Richard* with the *Serapis* stands out not only as the great and brilliant engagement of the cruise of the squadron, but practically as the only successful feature of its troubled existence. But it was enough. This famous action, as the author well says, shines as the first instance in history of the surrender of a British man-of-war to a ship two-thirds of her force. To this must be added the remarkable fact that the surrendered ship had practically first destroyed her antagonist, and that the flames of the *Bon Homme Richard* were extinguished by the water that was rapidly filling the hold

from her leaky hull. This extraordinary state of affairs was accentuated by the desperation of the combatants and the indomitable spirit and leadership of Paul Jones, making it as a sea action unexampled in modern naval history, and fit to be perpetuated in a ballad like that of the *Revenge*. John Paul Jones and Richard Dale should have their names perpetuated in the navy of the United States by the appropriate battle-ship, for this action alone.

The return of Jones to France brought him high praise, but few honors, and still more sparingly was opportunity afforded him for further service under the flag he served so well and distinguished so greatly. The intrigues centring about Arthur Lee, one of the American Commissioners to France, were not only antagonistic to Franklin, but adverse to Paul Jones, whose friend he was. As actual war was developed against Great Britain by France, the regular forces and regular officers came into play, and the desire seems to have been to relegate Paul Jones to the rôle and ranks of the privateers. This rôle he would not take.

Notwithstanding his distinguished service, he could obtain only the command of the *Ariel*, a twenty-ton corvette; the command of the *Serapis*, his own prize, being withheld from him. His failure to obtain a new squadron was to him a bitter disappointment, and the controversy, stirred up by Arthur Lee, that awaited him upon his return to America, did not soften the disappointment. Finally, the tide turned, and the praise and honors awarded him included what promised to be the best of all in the passage unanimously of a resolution by Congress appointing him to the command of the seventy-four ship, the *America*, then building at Portsmouth, N. H.—the largest ship of her armament in construction at that time. This, however, proved in time to be but another disappointment, as state policy led to the presentation of the *America* to France, where in time she was received and renamed the *Franklin*.

Upon the conclusion of peace, with its consequent reaction, physical and general, Paul Jones, now known to contemporary history and since as Commodore Jones, although but thirty-six years of age, showed signs of breaking down, and went to Bethlehem, Pa., for the rest and the tonic he found in the bracing air of the Lehigh valley. On the 1st of November, 1783, he was appointed a special agent to collect the prize-money due in France to the American seamen who had served under his command. Leaving Philadelphia again on the 10th of November, he reached Paris by the way of London on the 7th of the following month. He revisited London more than once later, and his reception was far from being unfriendly or inhospitable.

A personal description of Jones, given by English contemporary sources, is found in a London letter, written in 1786, to a Whitehaven paper, the latter place certainly not a locality that would call for flattering descriptions of Jones. Speaking of his visit to Lloyds in 1786, it says: "In appearance he is of middle stature, slender build, has delicate features, a swarthy complexion, his attire is of the most faultless make-up, and his bearing martial and imposing to the last degree." Jones returned again to the United States in 1787, and, by resolution of Congress, was awarded rather tardily a gold medal for his services while in command of the squadron, of which the *Bon Homme Richard* was the senior ship; he also parted with his Rappahannock plantation, and, while this visit was the last made to America, it was doubtless the most pleasant he had experienced in the matter of public and private appreciation and distinction.

Upon his return to Paris, he was informed by Mr. Jefferson, then the American Minister to France, that the Russian Ambassador to France had requested him to lay before Jones a proposition looking to an engagement in the Russian navy. No answer was given by Jones at that time, but when it was definitely renewed by the Russian Minister at Copenhagen, he accepted the commission of Rear-Admiral in the Russian navy. It was not his intention to renounce his citizenship of the United States in entering the employ of the Russian Empress, but, as he was without employment from his own country, his active temperament as well as his professional ambition determined his decision. The navy proved to be far from what he expected, and though his service was of a creditable nature, it was satisfactory neither as a career nor in its results. This step of Jones's did not meet with the approval of Franklin or Washington, both of whom blamed Jefferson for his part in promoting it.

Returning to France, with broken health, Jones became identified with some of the foremost spirits of the French Revolution, and undoubtedly had hopes of holding a leading place in the organization and control of the new French navy. It was not so to be, however; the rule of the Jacobins was destined to come to an end, but even sooner was the career of Jones to terminate. On the 11th of July, 1792, at a supper given by the members of the Central Jacobin Club, he was toasted as the coming Admiral of France, and one week later he was found dead in his bedroom.

We commend the book under review as the best life of John Paul Jones that has been printed in any language. The author has utilized the recent work in French of Doniol and the publication, under the direction of Congress, of the diplomatic correspondence of the American Revolution, to throw much light upon the earlier career of Jones in France during the Revolutionary War.

With Hoops of Steel. By Florence Finch Kelly. Indianapolis: The Bowen-Merrill Co.

Appearing opportunely at the end of the Victorian era, 'The Mantle of Elijah' (a novel that discusses national politics) assumes an interest both historical and contemporary. To contrast ideals of the middle Victorian period with ideals of the last decade is to give a fiery imagination a swing, and a novelist may legitimately seize the moment, heedless of conscientious scruples that forbid hasty judgment and premature conclusions. In a vein of despondent unbelief comparable to Matthew Arnold's, Mr. Zangwill reviews the England of Liberalism triumphant in politics, the England whose conceptions of happiness were based on Free Trade, Free Speech, Free Education, and most conspicuously on Peace. He has lived to know profoundly and perfectly what Mr. Arnold foreshadowed, and his revelation is an England where the Philistines, having reaped a handsome profit out of their dull, hypocritical preachments, have embraced the Barbarians, and have set up their old gods, their only true gods, Gold, Lust, Tyranny, and War. What sincerity and moral beauty there may have been in the earlier ideals are personified in the Liberal Cabinet Minister, Mr. Majorimont, or, as he preferred to write his family name when he had cut loose from the aristocratic traditions of which it was a symbol, Mr. Marshmont. "His soul," says the author, "was of the old, eternal pattern, that seeks the Kingdom of God, and is jarred by Ahabs and Jezebels, but his coloring was according to his epoch." Later on, the mob, as unappreciative of such fine spirit as ignorant of Biblical phrase, hooted Marshmont out of political existence with the sordid epithet, "Petty cash." Marshmont (Elijah) went out of office on the question of the Novabarbese war, a name that does not conceal an acute phase of the long-standing trouble between Great Britain and the Transvaal.

A vigorous and astute Elisha snatches the Prophet's mantle, and assures legitimate succession by marrying (*en secondes noces*) Allegra, Elijah's daughter, in whose youthful and beautiful breast her father's faiths are flaming. The name, "Bob Broser," is as thin disguise as is "Novabarba." There can be no doubt about what statesman is thus publicly pilloried, nor any hesitation in deciding that when to his strong personality there is added Mr. Zangwill the composite portrait is not an alluring one. About Broser, as he soars, there is always an aroma of the prize-ring, and Mr. Zangwill's characterization is best described as powerful slugging. Broser has neither public virtue nor private honor, and the most cynical of Tory Cabinets would conceivably beg its bread rather than pick him up with tongs. For the Marshmont family Mr. Zangwill appears to us to have had models born in a class where there would have been no need to mutilate a name as a declaration of principle. The Duchess is, we imagine, pure *chic*. Duchesses are, of course, rather hard to get at for study from life. Mr. Zangwill's Duchess is not in the least like any of Mr. Browning's Duchesses, and he had a rather varied assortment. She is a unique Duchess, and we are inclined to think that Mr. Zangwill has taken too great liberty with her species. In the delineation of Allegra, Broser's wife, he seems to have gone wide of probability, to show no instinct

about Englishwomen. After living a score or so of years with Broser (completely disillusioned), she resolves to leave him. The decisive influence is that of a pessimistic, journalistic Jew, accidentally picked up on a mountain top. What he offers Allegra in compensation for Broser is not so clearly passion for her as an opportunity to abandon herself to him in a sort of romantic experiment, promising certain emotional results, eagerly desired by him. For Broser's idols, material splendor and brute force, Dominick offers a German-Jewish abstraction, unwholesome, negative, incomprehensible in English; for Broser's pomp and palaces, an easily computed income and the existence of a pariah in slums at home, in dismal inns abroad. Such are not the prospects likely to seduce an English Allegra verging on middle age. But these are minor matters. Mr. Zangwill's first intention was to speak his mind about the Victorian English, and especially about Mr. Broser. This he has done very liberally, with the spirit of a pessimist, the judgment of an alien, and in a smashing, whacking style.

The imperishable longing of the human spirit for happiness which has inspired countless legends, allegories, and tales of heroic or fantastic adventure, is set forth with a very agreeable originality by Mr. Fuller in his Sicilian romance called 'The Last Refuge.' The theme is as old as the race; the moral, or morals (for there is a moral to suit every case), have all been drawn before, but the personages of the romance are modern, and the desires, ambitions, yearnings, which prompt them to seek a fabled City of Happiness, lying by a Southern sea, are not those of a primitive or unsophisticated society. The plot and adventures are as fantastic as a fairy tale, frankly beyond reconciliation with probability—a process which the author has gayly disregarded as not pertinent to his aim. The people, on the other hand, are very real, types of our world, genially satirized and sharply enough individualized to conceal for the moment their general significance, so the atmosphere of romance is not chilled by the suspicion that we are considering abstractions. The quality and variety of the author's purely literary equipment must be recognized as rare and effective. Separate from the gift of a whimsical imagination and the power to penetrate to the heart of things, there is an array of beautiful description, of vivid narration, of humor, of irony, of illuminative phrase and epithet—acquired graces that most adorn imaginative literature. Perhaps as good a proof as can be offered of Mr. Fuller's fitness is that, after one reading, certain situations, figures, passages, and phrases stick in the mind. The figure of conquering youth, for instance, has been done so often in every medium known to art that it would seem impossible to render it again with freshness; yet Mr. Fuller's description of Bruno de Brunelli entering a Roman ballroom, costumed as Bacchus, and making a confident way through the crowd with the sweep of his garlanded thyrsus, is memorable. And throughout the romance, Bruno is so well up to the standard of his radiant entrance that, though we may not quite agree with the Freiherr von Kaltenau gloomily declaring that youth is the sole divinity to whom belongs all, "beauty, love, the hope and glory of the world," we are quite of his more temperate view that "there are cases where the" years take from us more than they give. Yet, with all that may be justly said in praise of 'The Last Refuge,' one fears that it may not be widely read, and it is not as another tribute to excellence, but as a mild bid for popularity, that one further describes the tale as distinctly, at times broadly, funny.

The tragedy of 'The House behind the Cedars' is one for which the strongest literary presentation would fail to excite unquestioning sympathetic horror. A great many persons of kind and generous sentiment believe that a white man breaking his engagement to marry a woman who has left him to discover by accident that she has a strain of negro blood, is morally and rationally justified and without dishonor. Such an opinion does not necessarily shield itself behind law or custom, but may be rooted in natural antipathies and a belief that, for the happiness of the individuals and the good of society, such an engagement is better broken than kept. Within the limitations imposed by this point of view, the chief situation of Mr. Chesnutt's novel makes a strong appeal to emotion. While he leaves no doubt about his own judgment or feeling, he does not exaggerate iniquities or hurl recriminations. He probably has but faint hope of upsetting social beliefs, and indeed the catastrophe suggests that such tragedies as the sacrifice of Rena Walden seem to him inevitable, therefore all the more pitiful. As in his shorter stories of his own people, Mr. Chesnutt shows here frank recognition of racial differences, yet, seeing both black and white through a fine literary temperament, is not concerned to set one against the other either for praise or disparagement. He has an easy, educated way of telling a tale; and a special interest in the "negro question" is not at all necessary for enjoying his work, or for deriving an æsthetic pleasure from his sincerity, simplicity, and restrained expression of deep feeling.

The publication just now of novels dealing with the South African war may be enterprising from the publisher's point of view, but is more likely to destroy an author's good reputation than to make one. We are too close to facts, or at least to press reports of facts, and sympathy flows with passions and prejudices which are national, not personal. The English people don't need stories to justify their position, and won't tolerate stories that attempt to justify Mr. Kruger. Mr. Morley Roberts, in his tale, 'The Fugitives,' ranges himself unequivocally on his own side, thereby missing a perhaps commercially advantageous popular censure, and almost surely earning popular indifference. For he has nothing to tell that the man on the street does not already know, and his manner of reiterating heroic and sorrowful things already known has no quality that might revive a jaded interest. His love romance is obviously padding of a silly sort, and his descriptions of Mr. Kruger only confirm an established conviction (of no great importance) that though English gentlemen are obliged to fight him, they would (socially speaking) decline to meet him.

Mr. Lloyd Osbourne's tales of the South Seas, entitled 'The Queen versus Billy,' recall, not unworthily, the touch of a vanished hand and the sound of a voice that is still. The reminder of Stevenson is more in our mental association of the two authors, and in Mr. Osbourne's choice of subject and attitude towards the island races, than in a resemblance of manner or style. Whatever he may have learned from Stevenson, he is not a servile imitator, and has plenty of original force, shown most conspicuously in selection of incident and in expression of passion and of the more tender human sentiments. The tales are strong in conception and well told; and naked Kanakas appear in them more clearly to have points of affinity with those who have the clothes-wearing habit than they do in any of Stevenson's South Sea stories that we remember.

'A Semi-Detached House,' bound up with other tales and hailing from Montreal, has nothing distinctly Canadian about it except the publisher's imprint. It may be that Canada is emerging from colonialism in a literary way as well as in other more aggressive ways. The domestic experiment narrated in the title story involves too many perils and too much expense for common use, but the result in the case discussed has never been called a domestic calamity. An uncommon situation is ingeniously developed, and the workmanship shows a grasp of essential principles of the short story. Most of the volume, indeed, expresses an art well understood, derived from French models. Unfortunately, the moral qualities of French tales are seldom so admirable as their form, and what is gained from them in one way for English fiction may be lost in another. Mr. Try-Davies has gathered some sound wheat, but has not sternly rejected tares.

'Parlous Times,' by the late David Dwight Wells, appears to have been written before he had acquired the art of writing farcical comedy, so well illustrated in 'Her Ladyship's Elephant.' If this very long novel had been cut by half, incidents judiciously selected, and coherence given at least complimentary notice, it would have been readable, perhaps amusing. In its actual condition, it is like a savage wilderness, from roaming through which there is no pleasure except emerging and forgetting.

Perhaps authors, being mortal and subject to sudden death, should be as careful about memoranda of manuscripts to be burned as substantial persons are about their wills. Mr. Wells's literary reputation is damaged by 'Parlous Times,' and Mr. Crane's might justly be annihilated by 'Whilomville Stories.' It would be comforting to think that he meant to satirize one group of American children for the eternal good of all American children, but, on reflection, there is nothing to support such a kindly opinion. One of Mr. Crane's greatest defects was his capacity for admiring the wrong things, and at Whilomville there appear to have been no correcting influences or objects. No children in the world are good enough to read these tales without losing the bloom of their virtues.

Almost everybody who believes himself to be intelligent may be heard, at one time or another, expressing a regret that the age of conversation is past. An attempt to read the conversations between 'Dr. North and his Friends' is likely to stifle such regrets; indeed, to convert them into an ardent prayer that the art may not be revived, at least in our time. The excellent persons introduced by Dr. Mitchell do not stop at longing for conversation—they go in for it; there is never a moment when they are unready or unwilling to embark on

any subject, concrete or abstract, and to thrash it into shape or out of existence. It is improbable that any age ever provided conversation in greater quantity or of (let us say) higher quality. Nevertheless, the strongest impression made is that such conversation does not perceptibly mitigate the dulness of life; from which position one may even go on to reflect, with some thankfulness, that the whirligig of time relieves existence of certain terrors.

Miss Barlow's latest Irish tales will be satisfactory to those who have not read the earlier volumes. Miss Barlow has not deteriorated, perhaps, but she has added nothing to her many vivid and sympathetic sketches of the Irish peasantry. She does not escape that monotony which comes from the lack of new suggestion and always overtakes writers of tales of locality.

Since the alarming novel called 'With Hoops of Steel' comes to us from Indianapolis, foreigners might easily fall into the error of supposing that the coloring is local, not knowing that that city has long enjoyed the blessings of law, social order, and culture. It is certain, however, that the scene of action is in the United States, and that the free-born inhabitants of the region are badly in need of missionaries, soldiers, and every other civilizing influence that can be spared from foreign service. Exploits similar to those of the three ranchmen, who grappled their precious souls together in friendship's bonds (the better to murder withal), are too familiar to excite consternation, but the conduct ascribed to the citizens of Las Palmas, to the honorable court, and to political leaders, is encouraging to pessimistic critics who declare that the republic is a failure. Trying to put one or another of the desperadoes in jail is the serious occupation of one-half of the town, led by a Republican sheriff, while the frustration of such unfriendly action absorbs the energy of the other half, guided by a Democrat, Judge Harlin. Even the women, we are told, sometimes "felt the war spirit," and that "early in the day." There were, it is true, moments when the wearied town "rested on its arms and glared across Main Street, each party from its own side," when "there was no more talk of extreme measures, and no more threats of blood-letting." After such premonition of a truce Judge Harlin (Democrat) would "stroll leisurely across the street, nod to Col. Whittaker and Sheriff Daniels [Republicans], and the three men would go into the White Horse saloon and clink glasses together over the bar." These stately movements intimated that the Angel of Peace had temporarily descended on Las Palmas, "after which all the town put away its guns, and went quietly about its usual affairs." The word "usual" is misleading as applied to any affairs not referable to the arbitrament of "guns," but the statement is soothing and suggestive of a short rest for the wicked, like Pepys's frequent "and so to bed."

Sport and Travel, East and West. By Frederick Courteney Selous. Longmans, Green Co. Imp. 8vo, pp. 311, illustrated.

The sport here referred to consisted in the slaughter of large game—not a reckless, indiscriminate killing, but a careful selection of such as would furnish the desired heads for mounting as trophies, with an occasional individual for meat. The travel was done in the localities providing the sport. Nearly half of the book relates to Asia Minor, hunting for wild goats and stags; the remainder to the Big Horn Country near the Yellowstone, in Wyoming and Montana, in pursuit of elk, deer, sheep, and pronghorn antelope. Mr. Selous is very successful, both as hunter and author. While his stories contain no thrilling adventures or hair-breadth escapes, they are very good reading indeed, whether they concern the travel in and about the hunting grounds, or the chase and the habits of the game and the ways of getting it. No one will question the accuracy of description. The greatest enthusiasm appears in accounts of the climate and the scenery. After all his African and Asiatic experiences, the author can imagine no more perfect country in which to hunt than the Rocky Mountains must once have been, when game was still plentiful; yet the glorious air and the grand wild scenery remain, and some very fine animals of their kind are by no means yet extinct. His guns were a Metford .450 bore, a Lee-Metford of .303 bore, and a Mannlicher of .250 bore; the last most favored. Expanding, hollowpointed bullets were used. The greater number of the shots were at long range, a hundred and fifty yards or more, and most often the game was to be trailed by the blood, as from shots in the lungs, after shooting, because of the small calibre of the rifle. A number of expressions heard by the way among the Americans are put in quotation marks as amusing to English ears: "I guess," "clean crazy," "I think I can see sheep," "We're quite a small crowd here to-day," "Well, that's a pity." American readers will note in the text several phrases not commonly heard in this part of the world: the reporter "proved to be a very good sort," the elk "must have broken back" before he was quite prepared for "gralloching," they "successfully negotiated the eagle's nest," the ascent was not "too steep for an American pony to negotiate." Among the few scientific names, Neotoma is rendered Nestoma, Pediœcetes is spelled Pediocœtes, and Speotyto cunicularia is changed to Speotitis cunicularis.

ABYSSINIA

Through the Lion-Land to the Court of the Lion of Judah

By HERBERT VIVIAN, M. A.

Author of "Servia: The Poor Man's Paradise," "Tunisia, and the Modern Barbary Pirates," etc. With 79 illustrations and 2 Maps. 8vo, pp. xvi.-342, $4.00.

LONGMANS, GREEN, & CO.
91-93 Fifth Avenue, New York.

AMELIA E. BARR says: "LORDS OF THE NORTH is a distinct mental gain. It has taken me into an hitherto unknown country, and among men who are as veritable heroes as any 'nobility of the Sword,' and yet heroes of whom the world knows so little. It is a fresh, pure, breezy book, full of incident, and incomparably more deserving of a great circulation than some of the novels which have lately achieved it. Its literary quality is excellent, and the intense humanity of the story gives it a distinctive quality."

THE TURN OF THE ROAD

A Romance. By EUGENIA BROOKS FROTHINGHAM. 12mo, $1.50.

The romance of a singer who through love wins her crowning success. The hero is a resolute, high-minded American; the heroine is an ambitious, self-reliant American girl. She studies in Paris and becomes a very accomplished singer, and, after experience of the devotion and self-denial of the hero, becomes a superb woman. The story is effectively told and merits a wide popularity.

THE LIFE AND LITERATURE OF THE ANCIENT HEBREWS

By LYMAN ABBOTT, D.D., author of "The Life and Letters of Paul the Apostle," "The Evolution of Christianity," etc. Crown 8vo, gilt top, $2.00.

Dr. Abbott traces in the Bible the origin and development of the religious, political, and literary life of the ancient Hebrews, on the theory that this life was a gradual development like that of other nations. His treatment of the Bible is free, yet wholly reverent, and his book is of uncommon interest and value.

A PILLAR OF SALT

By JENNETTE LEE, author of "Kate Wetherill." 16mo, $1.25.

A striking story of the passion of an inventor for working out his dreams; the opposition of his wife, a practical New England woman; and his success. Through the engaging story is woven the life of the family and of "the Street" and the New England factory town in which the scene of the story is laid.

THE WOODPECKERS

By MRS. FANNY HARDY ECKSTORM. With 5 full-page colored designs by LOUIS AGASSIZ FUERTES, and many text illustrations. Square 12mo, $1.00.

Mrs. Eckstorm here gives a lively yet accurate and orderly account of woodpeckers, treating somewhat exhaustively five of the commonest, and less fully of the others. The book is finely illustrated and will delight bird-lovers.

A DICTIONARY OF AMERICAN AUTHORS

By OSCAR FAY ADAMS. *Fourth Edition*, much enlarged. 8vo, $3.50.

This valuable handbook now contains over 7,500 brief biographies of American authors, comprising statements of the life and writings of each author named.

Sold by all Booksellers. Sent, postpaid, by

SCRIBNER'S NEW BOOKS

Ten Months a Captive Among Filipinos

Being a Narrative of Adventure and Observation during Imprisonment on the Island of Luzon. By ALBERT SONNICHSEN. With portrait, 8vo, $2.00.

A peculiarly interesting account of an extraordinary experience. The story of the author's imprisonment in the insurgent capital, his captivity during the retreat northward, his trials in a native hospital and his final escape, is told with remarkably genuine and convincing effect. Incidentally there is a flood of fresh and novel light on the Filipino character.

A Literary History of America

By BARRETT WENDELL
Professor of English at Harvard University. 2d Edition. 8vo, $3.00

The Dial says: "Space forbids us to continue the subject any farther, but enough has been said to show how fruitful a formula has been applied by Professor Wendell to the analysis of our literary past. It remains to add that he has produced incomparably the best history of American literature thus far written by anybody, a history that is searching in its method and profound in its judgments, on the one hand, and, on the other, singularly attractive in the manner of its presentation."

The Disciple

By PAUL BOURGET. 12mo, $1.50.

"The Disciple" is M. Bourget's most characteristic work and the one in which he has best demonstrated his title to be called the most eminent of psychological novelists living. It is a deeply moving and dramatic study of the subtle demoralization involved in the philosophy of utter scepticism.

TWO ADDITIONS TO THE MUSIC LOVERS' LIBRARY.

The Opera, Past and Present

By W. F. APTHORP.
With Portraits. 12mo, $1.25 *net.*

"It is a capitally good treatise, written with such clarity that any intelligent lover of music can comprehend it, demonstrating with cogent force the philosophy of the evolution of this great branch of musical science and art, rich in wise and illuminating criticism. A livelier and piquanter style was never brought to bear by any professional English writer upon a theme the discussion of which must needs be scientific than that which sparkles and crackles through Mr. Apthorp's book."—Boston *Advertiser.*

Choirs and Choral Music

By ARTHUR MEES. With portraits. 12mo, $1.25 *net.*

"A history of choirs and choral music from the earliest times by the conductor of the New York Mendelssohn Glee Club. It is written in popular form, and is addressed to the amateur choral singer, who will find much information in it along the lines indicated by the chapter-headings."—*The Opera.*
